Mr. SMOOT. Mr. President, I fully agree with the Senator from Arkansas that the Senator from Oklahoma can offer his amendment by moving to strike out all after the enacting clause and inserting. There is no question about that. But that is not what the Senator from Oklahoma said. The Senator from Oklahoma said there were two ways to proceed with it; that is, to consider the House bill and offer the amendment to the House bill, or take his amendment and perfect that without offering it as an amendment to the House bill.

Mr. BACON. Mr. President, the principle is correctly recognized. I think, as stated by the Senator from Arkansas. At the same time I will suggest that there is possibly a simpler method of procedure which would recognize the principle the Senator

now has stated.

The familiar rule and the ordinary method of procedure is that where there is a substantive proposition, such as an original bill, and another substantive proposition is proposed to be substituted for it, as is this case, by striking out all after the enacting clause and inserting a substitute in lieu of it, the parliamentary body deals with each of those separate propositions separately, the friends of each having the opportunity to perfect each particular measure separately. Then one is put against the other, and the body chooses between the two. The simple method of procedure is this: It matters not, in taking that course, whether the body permits the friends of the original measure first to perfect it and lay it aside and then let the friends of the proposed substitute perfect that, and after each has had the action of the body in bringing it to the shape where those who advocate the one or the other prefer to have it, then the substitute, of course, is the first proposition voted upon by the body, and if it is carried, then the original proposition is displaced, and the substitute stands in lieu of it, and the body enacts it into law. But the important thing is that each proposition is dealt with separately, and the rights of amendment are all the rights which belong to an original proposition and not rights which are limited to the cases of amendments,

For illustration, here is the original bill. Under the rule recognized-and it is the universal parliamentary rule-only two amendments are permitted to be pending at a time. If the substitute were treated simply as an amendment, of course there could be only one amendment offered to the substitute, because an amendment can not pass the second stage. for purposes of amendment, the substitute is treated as an original proposition, there can be two amendments offered to any provision of that substitute. That is the way in which it

Of course the more usual plan is that the substitute shall first be taken up and, treating it as a substantive original proposition, proceed to act upon it by amendments which may be proposed to it, and in that way perfecting it. When that is done it is laid aside and the original proposition is then taken up as another original substantive proposition, and all the rights of amendment apply to that.

I will state, Mr. President, that there is a book in which that matter is clearly set forth, in a simpler way than in any other work on parliamentary law I have ever read. It is a little book which can be found in the Library, known as Mell's Parliamentary Practice, in which this particular subject is dealt with and stated with very much more clearness and conciseness than I have been able to state it. It is the easy, simple way in which a parliamentary body proceeds to deal with a question

when there is an original proposition containing many provisions and to which there would naturally be many amend-ments proposed, and another substantive proposition which it is intended to substitute for it, which, of course, must also go through the complicated processes of amendment. In other words, the two must be treated separately in order to avoid the difficulty of having to deal with the general rule of parliamentary law that only two amendments can be pending at a time. The substitute, when it is being perfected, is treated as an original proposition. The original bill, when being perfected, is also treated as an original proposition. So in each case the two amendments can be pending at the same time for any particular provision in them.

I am quite sure that that is not only the correct rule, but that it is the only practicable one under which the body can proceed without confusion and without difficulty in dealing with a bill where there is a substitute proposed for the whole of it,

especially where there are many sections to it, as in this bill.

Mr. CLARKE of Arkausas. Mr. President, I am not very familiar with the little book to which the Senator from Georgia referred, but I am familiar with Rule XVIII of the Senate. The only difference between the doctrine laid down in the little book referred to by the Senator and our rule is that the order cited by him is directly in conflict with the express provision of this rule. The rule says:

And motions to amend the part to be stricken out shall have prece-

Instead of amending the substitute and laying it aside, the specific language of the rule is that the original proposition shall be amended by its friends, so that when the vote comes that involves its life it will be perfected in its best form.

It is not the rule of the Senate and it can not become the rule of the Senate as long as the last clause of Rule 18 is in exisence, that a substitute shall be considered first. The proposition to amend the House bill will be the first motion in order, and in this particular case it obviously works out the most expeditious result. If it is a fact that the majority of the Senate first intend to dispose of the matter in that way, and are perfectly willing to stand by the comprehensive amendment or substitute, or whatever name you choose to apply to it, presented by the chairman of the committee, it is a very easy matter to dispose of an amendment offered by those who belleve that the text of the House bill should be amended. It may be laid on the table or otherwise disposed of in some regular parliamentary way. So when we reach the substitute, if no amendments are adopted to that, we then take the House bill as it came to us and the substitute as presented by the Senator from Oklahoma on behalf of the Committee on Banking and Currency. Our first business under this rule will be to deal with such amendments as are offered to the House bill, because the proposition then will be made to strike out all after the enacting clause and insert in solido the proposition con-tained in the report made by the chairman of the Committee on Eanking and Currency.

The observations of the Senator from Georgia are very generally correct, and I differ from him with much hesitancy, but I think the text of the rule is so plain that I am warranted in doing it in this case. He is exactly right about the fact that the text to be stricken out and the provision to be inserted in lieu of it constitute two parliamentary questions, and they are to be disposed of in order. Under our rule precedence is given to an amendment offered to the original text before it is competent for the Senate to consider the adoption of the substitute or its amendment. Really there is no room for serious dispute about it. The text of the rule is so plain that I think there will be no difficulty about it when we come to deal with it practically

Mr. HITCHCOCK. Mr. President-

Mr. BACON. If the Senator will pardon me a moment, the vital consideration in my mind is that the two shall be considered as substantive propositions in order that all rights of amendment which would apply to an original measure may be enjoyed by each. That is the vital thing about it.

The question as to whether the substitute shall be taken up

first and perfected or whether the original bill shall be taken up and perfected is not vital, and it is entirely agreeable to me that the bill shall be considered first for amendment.

Of course I do not know that the substitute which is to be offered by the Senator from Oklahoma will or will not be amended. I believe there are some amendments that he himself wishes to offer to it, and if so, he ought to be permitted to perfect his substitute before he offers the measure which he proposes by striking out all after the enacting clause and inserting it. He must perfect that before he makes his motion to strike out.

Mr. OWEN. That is right. Mr. BACON. That is the w That is the whole point in regard to that. So far as the question as to whether the original proposition is first considered for amendment or whether the substitute is considered for amendment, it is in practice not a matter of vital importance. It is, however, a matter of vital importance that the two measures shall be each considered as an original measure for the purpose of amendment. That is all I contend

for. I do not think there is any possible doubt about it.

The VICE PRESIDENT. The Chair will state what seems to be the state of the record. The bill was reported back from the The only amendment now pending is the amendment offered by the Senator from Oklahoma. But the ruling of the Chair will be that amendments may be proposed to the original House bill and after the original House bill has been perfected, then the amendment of the Senator from Oklahoma comes up, and the amendment of the Senator from Oklahoma is amendable. As many amendments may be presented to it as Senators see fit to offer.

Mr. HITCHCOCK. Mr. President, in order to make some progress and to clear up the parliamentary situation, I offer as an amendment to the House bill, the amendment to section 1, which appears upon the print authorized by the committee which, as I understand, has been practically accepted by the chairman of the committee. Am I correct in that?

Mr. OWEN. I understand that that is the case.

Mr. HITCHCOCK. As a matter of form, I first offer the amendment that appears in section 1.

The VICE PRESIDENT. The amendment proposed by the Senator from Nebraska will be stated.

The SECRETARY. On page 1, after line 4, it is proposed to in-

The terms "national bank" and "national banking association" used in this act shall be held to be synonymous and interchangeable. The term "member bank" shall be held to mean any national bank, State bank, or trust company which has become a member of one of the reserve banks created by this act. The term "board" shall be held to mean Federal reserve board; the term "district" shall be held to mean Federal reserve district; the term "reserve bank" shall be held to mean Federal reserve bank.

Mr. HITCHCOCK. Mr. President, as this amendment is substantially concurred in by both wings of the committee and has the approval of the Democratic conference, I presume that it may be adopted without any further discussion.

Mr. OWEN. I have no objection to the adoption of that

The VICE PRESIDENT. The question is on agreeing to the amendment proposed by the Senator from Nebraska [Mr. Hitchcock].

The amendment was agreed to.

Mr. WEEKS. Mr. President, I want to call the attention of the Senate to one phase of this legislation which I think has not been completely discussed and because I have some information which, it seems to me, will be of interest to the Senate.

One of the contentions which developed when the bill was originally proposed in the House was as to the character of the reserve board-whether the board should be made up of bank men or should be composed of men who are not in any seuse bank men, or should have some bank men and others who have had no banking experience but who have been engaged in general business pursuits. The changing sentiment was reflected in the different bills which came into the House. The first bill provided that three of the members of the reserve board should be bank men; the next bill provided that one should be a bank man; and the next bill provided that none of the members of the reserve board should be bankers. It was contended that there was a reason for this last solution of the question, in that the directors of European central banks were in no case bankers.

There is a material difference between the banker as we understand him to be in this country and the banker as he is understood abroad. Many men engaged in mercantile pursuits in Europe, especially in England, are classed as merchants, but they are really merchant bankers, especially those engaged in foreign trade. Therefore when it is said in England that the director of a bank is a merchant he may be a banker as well as a merchant. So the statement is not in any sense true that the great European banks have not on their boards of directors men who have been actively engaged in banking pursuits. It is true that, generally speaking, they are not actively interested in joint-stock banks, but there are banks of issue, there are banks of discount, and there are other classes of banks in Europe, which are represented on these boards. In order to indicate that this contention is sound and to have it in the record, I want to call to the attention of the Senate the character of the membership of the different boards of directors of the three great European central reserve banks.

I want especially to call attention to the fact that these directors of the Bank of England are either private bankers or are directors sometimes in one and sometimes in many other active business pursuits.

The bank directorate or board of the Bank of England is composed of the governor of the bank, W. Cunliffe, of Cunliffe Bros., merchants, a director of the North Eastern Railway.

DEPUTY COVERNOR.

Cecil Lubbock, director Withbread & Co. and Northern Insurance Co.

DIRECTORS.

C. G. Arbuthnot, of Arbuthnot, Latham & Co., merchants; a director of London Assurance Corporation.

O. Bonsor, chairman South Eastern Railway Co.; chairman Watney, Coombe, Reid & Co. (Ltd.); and a director of Northern Assurance Co. and London & Greenwich Railway.

Herbert Brooks, of R. Brooks & Co., merchants; chairman of Atlas Assurance Co., British Australasian Trust & Loan Co., United Planters' Co. of Ceylon; and a director of Colombo Electric Tramways & Lighting Co., Indemnity Mutual Marine Assurance Co., and the Peninsular & Oriental Steam Navigation Co.

W. M. Campbell, of Curtis, Campbell & Co., West India merchants; a director of the Commercial Union Insurance Co. and

the Merchants Trust Co.

Brien Cokayne, of Antony Gibbs & Sons, merchants and bankers; a director of the Fortuna Nitrate Co. and Pan de Aznear Nitrate Co.

A. C. Cole, a director of the London Assurance Corporation,

C. H. Goschen, of Frohling & Goschen, foreign bankers.

E. C. Grenfel, of Morgan, Grenfel & Co., bankers; vice president International Mercantile Marine; director of Indemnity Mutual Marine, Sun Insurance Office, and Sun Life Assurance

Sir E. A. Hambro, of C. J. Hambro & Sons, bankers.

L. H. Hanbury, of Wood, Field & Hanbury, hop merchants; director in Crompton & Co. and Guardian Assurance Co.

G. W. Henderson, of R. & J. Henderson, East India mer-

chants; chairman of Borneo Co.

W. D. Hoare, of Hoare, Miller & Co., merchants; chairman Belize Estate & Produce Co., Brazilian Trust & Loan Corporation, and London Trust Co.; director Alliance Assurance Co. and London & Brazilian Bank.

Lord Hollenden, of I. & R. Morley, warehousemen.
Right Hon. F. H. Jackson, of Frederick Huth & Co., merchants; chairman Indemnity Mutual Marine Insurance Co.; director in Acorn Trust Co., Eastern Telegraph Co., and Northern Assurance Co.

R. E. Johnston, of Edward Johnston, Son & Co., merchants; vice chairman of Guardian Assurance Co.; director in Sao Paulo Brazilian Railway Co. and the Thames & Mersey Marine Insurance Co.

R. L. Newman, of Newman, Hunt & Co., merchants; director North British & Mercantile Insurance Co.

M. C. Norman, D. S. C., of Brown, Shipley & Co., bankers. Sir Augustus Prevost, Bart., of Morris, Prevost & Co., merchants; director in Guardian Assurance Co.

Lord Revelstoke, G. C. V. O., of Baring Bros., bankers and financial agents; director in Arthur Guinness, Son & Co.

A. G. Sandeman, chairman of George G. Sandeman & Sons; member of council of the Corporation of Foreign Bondholders.

Tiarks, of J. H. Schroder & Co., merchants; chairman of Sao Paulo Coffee Estates.

H. A. Trotter, of Thomson, Hankey & Co., merchants; director Alliance Assurance Co., Cordova Light, Power & Traction Co., and United Electric Tramways of Montevideo.

C. Vickers, of Vickers (Ltd.), shipbuilders; director of London Assurance Corporation.

A. F. Wallace, of Wallace Bros. & Co., merchants. It is true that, generally speaking, those directors are not immediately connected with the management of joint-stock hanks; but, as indicated from the reading, they are, in several instances, directors of trust companies, and to say that Mr. E. C. Grenfel, of Morgan, Grenfel & Co.; C. H. Goshen, of Frohling & Goshen; Sir E. A. Hambro; F. H. Jackson, of Frederick Hugh & Co.; Cecil Lubbock; and Lord Revelstoke, of Baring Bros., are not bankers is simply to beg the question, because there are few as competent bankers in the United States as are those men. The assertion, therefore, that bankers should not be appointed on the Federal reserve board because bankers are not members of the board of directors of the Bank of England

is, in my judgment, entirely unwarranted.

Now, let us turn to the German bank and the French bank and in the same way demonstrate that their boards of directors are composed of material similar to that making up the board

of directors of the Bank of England.

The Reichsbank has three organs, which compose the administration. The first is the Reichsbank Kuratorium, of which the president is the chancellor of the German Empire, at present Bethmann Hollweg; the vice president is the secretary of state of Prussia, at present Dr. Delbrueck. The other members of the board are Dr. Lentze, the Prussian finance minister; Dr. Wolff, of the Bavarian ministry of finance; Dr. Hallbauer, privy councillor of Saxony; Dr. Predoehl, the mayor of Hamburg.

From this it will be seen that this is a body representing some of the States that comprise the German Federation, who are appointed to and stay in office for an indefinite time, quite independent of any party policy. It should also be remembered in this connection that the chancellor of the German Empire remains in office even though he may not be supported by a majority of the parties in power, so that the whole body of this portion of the directorate of the Reichsbank is strictly non-

The second branch is the Reichsbank Direktorium; president, Mr. Havenstein; vice president; Dr. Glasenapp; and six additional members.

The third branch is the Zentral Ausschuss, composed of Dr. Kaempf, president of the municipal council of Berlin; Mr. Hardt, a prominent business man; Mr. von Mendelssohn, member of the most important private banking firm of Berlin; Mr. Woermann, a prominent merchant of Hamburg; Dr. Salomonsolm, manager of the Disconto-Gesellschaft, one of the largest banks of Berlin; Mr. Hecker, a banker; Dr. von Schwabach, leading partner of the second largest private banking firm of Berlin; Mr. Delbrueck, partner of the third largest private banking firm of Berlin; Count von Doenhoff-Friedrichstein, apparently representing agrarian interests; Prof. Dr. Helfferich, one of the leading directors of the Deutsche Bank, the largest bank of Germany; Mr. Hugo Oppenheim, a Berlin private banker; Mr. Otto Braunfels, a Frankfurt private banker; Mr. Carl Fuerstenberg, manager of the Berliner Handelsgesellschaft, one of the four most prominent banks of Berlin; Dr. James Simon, a prominent Berlin merchant; Dr. von Oppenheim, a prominent private banker of Cologne. There are three deputies of this group and their substitutes, who are acting as constant consultants with the Direktorium when the Zentral Ausschuss does not meet. These are all bank presidents and two most important private bankers of Berlin, except Dr. Kaempf, who is now a retired banker and, as stated above, president of the municipal council of Berlin. They are Kaempf, Schwabach, Fuerstenberg, von Mendelssohn, Prof. Helfferich, and Dr. Salomonsohn, the six private bankers referred to in the reading.

There are local committees, composed of men of similar character, in Bremen, Breslau, Cologne, Danzig, Dortmund, Dresden, Frankfurt, Hamburg, Hannover, Kiel, Konigsberg, Leipzig, Magdeburg, Mannheim, Munich, Nuremberg, Posen, Stettin, Strassburg, and Stuttgart.

In those cities are branch banks, which may be compared with the branches which will be established through our regional banks under the provisions of the pending bill.

The Kuratorium, the government board, meets only four times a year. The Zentral Ausschuss is being called together once a month at least and every time when there is a question of changing discount rates. The deputies of the Zentral Ausschuss assist at the weekly meetings of the Direktorium. The actual management of the Reichsbank is in the hands of the Direktorium, which is recruited from members of the staff, all trained in business, and who remain in office irrespective of party policy and irrespective of political questions as long as they render good service, appointed for life.

I want to submit now the character of the directorate of the Bank of France. There is the governor, Mr. G. Pallain; the deputy governors, Messrs. Lem and Sergent; the regents, Baron Hottinger, Messrs. Aynard, Richemond, Loreau, Baron de Neuflize, Baron Davilier, Mallet, Baron E. de Rothschild, Dervillé, Bénard, Colomb, Cousin, Lariviere, René Laederich, F. de Wendel. Of these Baron Hottinger, Mr. Mallet, and Baron Rothschild, and Baron de Neuflize, all to be heads of important private banking firms of Paris, where, of course, the Rothschilds are the leaders. Mallet, Hottinger, and De Neuflize are also very important private firms. There are three censeurs, Messrs. Derode, Guillain, and Victor Legrand. The branches are in charge of local boards.

Senators should be, and probably are, aware of the fact that the regents are elected by the 200 largest stockholders.

The regents have a vote on the board, but they can not outvote the governor, who has to be in accord with them, in order to constitute a resolution.

It is important to state the fact that the bankers on the board of the Bank of France are, jointly with the governor,

running the business, because it has been publicly stated, not only referring to the directorship of the Bank of England and the Bank of Germany, but especially to the Bank of France, that no bankers were on those boards, and that was the reason why bankers should not be placed on the Federal reserve board.

As I have said before, it concerns me very little whether the President appoints the members of the reserve board or whether they are elected by the banks or provided for in some other way, if they are thoroughly competent men for those places; and in order to secure thoroughly competent men I submit to the Senate that we are likely to get better results if men are appointed who have had banking experience, but who have at the time of their appointment no entangling alliance with any private banking concern of any character, and preferably no business connections whatever.

I have put this in the RECORD, Mr. President, in order that there may be no misrepresentation or misinformation about this important question. The best banking men in Europe, other than those connected with the joint stock banks, are directors in the national banks of the respective countries, and I hope that when the places on our reserve board are filled it will be found that they have been filled largely by men who have had broad mercantile experience who understand and comprehend our foreign trade and its requirements and who have had actual banking experience, so that they may fill those offices to the satisfaction of all the people of the United States.

Mr. SHAFROTH. Mr. President, in answer to the Senator from Massachusetts, I wish to say that the writer, upon the Bank of England, at least, expressly says that no banker is upon the court of directors of the Bank of England; and he defines a banker as being one connected with a check-paying bank. Mr. Hartley Withers has written a book on the Bank of England, in which he expressly states that while there are upon it men interested in financial institutions, no person is upon the court of directors of the Bank of England who is connected with a check-paying bank.

The National Monetary Commission examined the governor of the Bank of England, and in his testimony he stated that no banker connected with a check-paying bank was upon the court of directors of the Bank of England. He further said that while there was no law which prohibited it, it was the univer-

sal custom and it never had been departed from,
Mr. Bagehot, in his book entitled "Lombard Street," which treats of the Bank of England, expressly stated that there was no banker, in the sense of a person connected with a check-paying bank, upon the court of directors of the Bank of Eng-land. Whether the list which has been cited by the Senator from Massachusetts defines the banks with which these persons are connected, whether they are check-paying banks or not, I do not know. Under the definition which has been given by these three writers upon the Bank of England itself, however, it seems to me to be clear, at least in the absence of a showing as to the character of the banks that have been described in the speech of the Senator from Massachusetts, that the word of these gentlemen who know so much about the subject should be taken as true.

Mr. WEEKS. I should like to ask the Senator from Colorado a question. Would he consider Mr. Schiff, of Kuhn, Loeb & Co., of New York, a banker?

Mr. SHAFROTH. I do not know enough about their business to state as to that.

Mr. WEEKS. Would the S J. P. Morgan & Co., a banker? Would the Senator consider Mr. Morgan, of

Mr. SHAFROTH. I do not know his connections. We generally speak of them as bankers, and yet they might come within the very definition which has been described by the

writers upon the Bank of England.

As I understand, a director of the Bank of England must have, as a qualification, stock in the Bank of England to the extent of £500, and must own a mercantile business to the extent of £20,000. That seems to have been laid down as the general qualification of a member of the court of directors. As to check-paying banks, the writers on the subject expressly say that they are not and never have been members of the court of directors of the Bank of England.

I think the Senator from Colorado is begging Mr. WEEKS. the question. There is no doubt about Mr. Morgan, or Mr. Schiff, or a long list of similar names in this country, being bankers. They are the leading private bankers of the United States. They are in exactly the same class as Lord Revelstoke, of Baring Bros., who is a member of the board of directors of

the Bank of England.

If there is going to be a differentiation between a joint-stock bank and a private bank, I am not going to discuss that thin, ing comment on the pending bill, the comment to be of a gener narrow, restricted point of view; but it does not admit of any nature. Probably I more immediately represent the layman—

question whatever that men who are acquainted with all the banking business of the country, who are familiar with every form of banking, foreign as well as domestic, are members of those boards, because I have read the names of men who to-day are actually members of the boards of directors of the three great banks of Europe.

Mr. SHAFROTH. I want the Senator from Massachusetts, then, to differentiate this language which is used by Mr. Walter

Bagehot in his book on Lombard Street:

In London no banker has a chance of being bank (of England) director, or would ever think of attempting to be one. I am here speaking of bankers in an English sense (of those who accept deposits subject to check). \* \* Not only no private banker is a director of the Bank of England, but no director of any joint-stock bank would be allowed to become such. The two situations would be taken to be incompatible. \* \* The mass of the bank directors are merchants of experience, employing a considerable capital in trade in which they have been brought up and with which they are well acquainted. \* \* The direction of the Bank of England has for many generations been composed of such men.

There is also a statement here from Mr. Hartley Withers, in which he comments upon this very matter, and says:

There is also a statement here from Mr, Hartley Withers, in which he comments upon this very matter, and says:

When we come to consider the bank's organization, its most striking features are the constitution of its court of directors and its system of government by rotation, and these are points on which the bank's critics have fastened with the keenest energy and determination.

The bank court is a committee recruited chiefly from the ranks of the accepting houses and merchant firms, and its members are nominated by itself, subject to the purely formal confirmation of the shareholders; and it is an unwritten law that no banker in the ordinary sense of the word—that is, no one connected with what we call the check-paying banks—can be a member of it.

At first sight, this is one of those anomalous absurdities so common in England, and so puzzling to the intelligent foreigner, who can not understand why we suffer them. A court of directors ruling the Bank of England, and so performing most important banking functions, and yet disqualifying for membership anyone with an expert knowledge of banking, is a tempting subject for an epigrammatically minded satirist. But, in fact, this anomally, like many of our others, not only works excellently well in practice, but is, when calmly considered, clearly based on sound common sense. For in the first place it would obviously be undesirable that a member of one of the outer ring of banks should have the insight into the position of his rivals which membership of the Bank of England court could give him, unless all the others were similarly privileged. But if all the outer banks were represented on the bank court, it would become a committee of unwieldly dimensions, perhaps reproducing or reflecting in the bank parlor the rivalries and jealousies that stimulate the outer banks were represented on the bank court, it would become a committee of unwieldly dimensions, perhaps reproducing or reflecting in the bank parlor the rivalries and jealousies that stimulate the outer ban

The governor of the Bank of England, who was examined by the National Monetary Commission, testified as follows:

Q. Is there any custom restricting the class from which the directors may be selected?—A. There is no legal restriction as to the class from which directors may be selected, except that they must be "natural-born subjects of England or naturalized," but in actual practice the selection is confined to those who are or have been members of mercantile or financial houses, excluding bankers, brokers, bill discounters, or directors of other banks operating in the United Kingdom.

It seems to me that when these three authors, and the governor of the Bank of England himself, say that no banker is upon the court of directors of that bank in the sense of a man connected with a deposit and check paying bank, it ought to be

conclusive of the question.

Mr. WEEKS. I stated that there were banks in England having different functions, such as banks of deposit, banks of discount, and banks of issue, but that so far as our definition of a banker is concerned there were such bankers on the board of directors of the Bank of England. Nobody will contend that from our standpoint Lord Revelstoke is not a private banker; and yet one of the authors called as a witness by the Senator from Colorado says there are no private bankers on the board.

There are certainly at least six men on the board who would come within our definition of a private banker in this country the class of bankers represented in New York by firms like Morgan & Co., Kuhn Loeb & Co., and similar firms in different

parts of the country.

To say that there shall be excluded from this reserve board men who have had banking experience is likely to remove from it the possibility of the very kind of experience which will make the board most efficient.

Mr. SHAFROTH. Nobody expects to exclude men who have had experience; but when they are upon the board they ought to have no connection whatever with the banks of the United

Mr. WEEKS. We provide that they shall not have.

## RECESS.

Mr. SHERMAN. Mr. President, I desire to make some passing comment on the pending bill, the comment to be of a general

Mr. SMOOT. Mr. President—
The VICE PRESIDENT. Does the Senator from Illinois yield to the Senator from Utah?

Mr. SHERMAN. I do.

Mr. SMOOT. I should like to ask the Senator from Indiana [Mr. Kern] whether it is worth while to compel the Senator from Illinois to begin his speech at 7 minutes before 6 o'clock. He desires to go on immediately at 8 o'clock, and I think if the Senate could take a recess now until 8 o'clock it would be justified.

Mr. KERN. I have no objection to a recess being taken now. Mr. SMOOT. I should like to have it done, because the Senator from Illinois expects to go on at 8 o'clock, and it is now

7 minutes of 6.

Mr. SHERMAN. I should prefer to begin at 8 o'clock.

Mr. KERN. I hope seven minutes more will not be consumed in an unnecessary roll call immediately after 8 o'clock; but whether that is done or not-

Mr. SMOOT. I can not agree to that, of course.
Mr. KERN. I say, whether that is done or not, I will move
a recess until 8 o'clock.

The motion was agreed to; and thereupon (at 5 o'clock and 53 minutes p. m.) the Senate took a recess until 8 o'clock p. m.

#### EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

Mr. SMOOT. Mr. President, I suggest the absence of a

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Gronna Hollis Nelson O'Gorman Overman Owen Page Robinson Smith, Ga. Smith, Md. Smith, S. C. Smoot Stone Hollis
James
Johnson
Johnes
Kenyon
Kern
Lane
Lea
Lewis
McLean
Martin, Va.
Martine, N. J. Brady Bristow Bryan Chilton Swanson Thompson Thornton Tillman Warren Clarke, Ark. Saulsbury Shafroth Sheppard Sherman Colt Crawford Cummins Dillingham Gallinger Shively Williams

The VICE PRESIDENT. Fifty-two Senators have answered to the roll call. There is a quorum present.

# AGRICULTURAL EXTENSION WORK

Mr. SMITH of Georgia. Mr. President, I will necessarily be absent to-morrow morning during the morning hour on business in some of the departments and I ask leave to present a report to-night from the Committee on Agriculture and Forestry.

The VICE PRESIDENT. Is there objection? The Chair hears none

Mr. SMITH of Georgia. From the Committee on Agriculture and Forestry I report back favorably without amendment the bill (S. 3091) to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture, and I submit a report (No. 139) thereon.

The VICE PRESIDENT. The bill will be placed on the , calendar.

# BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. STONE. Mr. President, I desire at some time soon to occupy not exceeding 30 minutes in submitting some remarks I wish to make while this bill is under consideration. tended to do that to-night, but I do not feel physically in form nor do I care to undertake it. I understand the Senator from Illinois [Mr. Sherman] desires to address the Senate. All I care for is to wedge in somewhere between these heavy guns who occupy hours in elaborating their views. I think perhaps I can arrange with the Senator from Ohio [Mr. Burton], who has given notice of his intention to speak to-morrow at considerable length, to let me in for a few minutes before he begins That would be far more pleasing to me. So I will not interfere to-night with the purpose of the Senator from Illinois. As far as I am concerned, I stand ready to listen to his enlivening observations.

Mr. CLARKE of Arkansas. Mr. President, I send to the desk telegram which I ask the Secretary to read.

The VICE PRESIDENT. Without objection, the Secretary will read as requested.

The Secretary read as follows:

LITTLE ROCK, ARK., December 10, 1913.

Senator JAMES P. CLARKE, Washington, D. C .:

Senator James P. Clarke, Washington, D. C.:

Copy of bill received and very carefully considered. Bill as a whole much improved. Serious objection page 67, reading "no member bank shall extend, directly or Indirectly, benefits of this system to nonmember bank." That would prohibit absolutely any nonmember bank, no matter what size, carrying account with member bank. Section 17 improved, but open to the same objections of clearing instead of collecting. This is all in favor of the large banks in the reserve centers. Possibly benefit the North and East, but serious detriment to South and West, Provision allowing banks to charge drawers of checks for checks cleared impracticable. Depositors of checks have heretofore assumed cost of collecting. This such a radical change that banks would be afraid to avail themselves of it, being afraid of interpretation by the State courts of the present law merchant of contract between depositor and bank. This could not compel nonmember banks to charge and would drive customers from member banks to nonmember banks. Provision allowing charges for sale of exchange, if that provision goes through, impracticable. No one would buy exchange if personal checks were cleared at a very minimum rate. Interest on funds while in transit would amount to more than collection charges. In my opinion, clearing of individual checks impracticable; of no benefit to the country. Cittles only would profit, to the detriment of the country, and would cause such a revolution in present methods of doing business and such criticism by individuals who would be charged who are not now charged that it would be not only a political blunder, but a political crime. I am a Democrat; I want to see the Democrats pass a thoroughly scientific—at least thoroughly practical—bill that will benefit the country and the party. Democrats have been in office two terms in the last 50 years. Don't let us legislate ourselves out of office again.

Mr. CLARKE of Arkansas, Mr. President, the author of that tolerane.

Mr. CLARKE of Arkansas, Mr. President, the author of that telegram is Mr. George W. Rogers, cashier of the Bank of Commerce, of Little Rock, Ark., one of the leading financial institutions of our State. He is a most intelligent gentleman and a banker of great experience. He has given much attention to this particular legislation, and I gladly admit I have profited

by frequent conferences with him.

I think his arraignment of the substitute hill is rather more sweeping than is justified. Independently of my own opinion about the matter, I have conferred freely with the Senators directly in charge of the preparation of the substitute which will be offered and to which he makes reference in his telegram, and none of them wholly agree that his criticisms are well taken. However, I have such respect for him personally, and such respect for his opinions on the general subject of this legislation, and such a complete knowledge of his familiarity with practical banking matters, that I felt I could not withhold his telegram from the RECORD. I believe that his opinion is worthy of consideration by the conferees who will ultimately consider the bill. Some of his objections seem to me to have merit in them. I feel sure he is sincere in what he has said about the defects in the substitute bill and that he is prompted to make the suggestions he does by his intimate knowledge of practical banking and not by a desire to be captious. I fear that he has not given due weight to the radical change of system that is involved in the adoption of the pending legislation, and has failed to make due allowance for the incidental compensations that will become apparent when the system has been tested by actual operation. The parliamentary stage has been passed when amendments may be offered without hope of adoption, and I trust that the conferees from the two Houses of Congress will carefully consider the objections indicated by Mr. Rogers before the final text of the bill is agreed to.

Mr. SHERMAN. Mr. President, I regard the telegram just now introduced in the RECORD as a most encouraging introduction. I have no technical knowledge of banking. The comments I shall make will be entirely nonprofessional. From the layman's point of view this bill presents, whichever section of it be considered, some very striking differences. I shall speak of one that appeals most favorably to me as the Hitchcock bill, if you will accept that expression, and the other as the caucus bill. This is by way of identification and shortening the record.

Last spring, if I had been called on to vote upon the cloture, in all probability I would have favored some reasonable modification of the present rule on that subject. I would not at this time do so. I believe the present practice is as conducive to sane legislation as if it were restricted.

The larger the legislative body the less deliberation, the less the individuality of the Member. The House with its 435 Members is less of a deliberative body than the Senate with its 96 Members. The reason is apparent. If everybody in the House talked to his entire satisfaction there never would be any legislation in that body; 435 Members would consume all the waking hours allotted to the average man. Therefore the rules of the House must close debate. The previous question there, or whatever may be equivalent to it in practice, becomes absolutely indispensable to the transaction of its business. As the number of men increases in a deliberative body the relative importance of those who lead that body increases by the same inevitable rule. That influence does not mean that the membership is extinguished; it only means that the representation of a large number of men is placed in the hands of a chosen few. That always happens. Government by the multitude does the same thing. It multiplies the temporary power of popular leaders and the public press. It needs no closing rule or cloture where there are but 96 men authorized to represent a coordinate branch of a legislative department. Ninety-six men can never talk each other into complete exhaustion nor unduly delay legislation. It makes no difference how political parties are divided, whether into two or more, a minority party can never prevent the majority party from having and exercising the power that is commensurate with the responsibility that naturally attaches to that power. Public opinion is after all a powerful remedy if evil result from unlimited discussion,

The Senate is the only open forum there is left in the United Out of 48 legislatures of as many States there is no such thing as an open forum. In the more numerous body of the State legislatures it is a closed forum all the time, and under express parliamentary rules the organization legislates. The larger the State the greater this truth. The House of Representatives is no longer an open forum where unfettered freedom of discussion prevails. The Senate is. It ought to remain so. If public opinion is not a sufficient corrective for a minority or does not have a sufficiently steadying influence on a majority, we can afford to take the time, even though in the opinion of some dignified and learned Senators that time may be wasted. I do not think it is. There never is an explosion so long as the steam escapes. It is only the imprisoned elements that destroy. Let a man talk himself empty, and it is the first step toward universal peace. To suppress him and imprison his thought is the most provocative of war of anything in the world. They did not use the guillotine in the French Revolution half as readily until gag rule had been applied to some of the

So I believe here, while we have been suffering from some verbal castigation, because we have taken some time, I am not sure but the time has been well spent. I do not expect to convince those who are already convinced the other way. some consolation sometimes in talking to the insensate timber in The lifeless thing is really sympathetic sometimes here compared with the human beings to whom the avenues of reason are closed. [Laughter.] We have not lost any time here, not even on the record of the majority party, as much as we have encroached on the working hours of the day. perfectly satisfied, if we must, to begin at 10 o'clock in the morning and to work until 11 o'clock at night and to keep it up all winter; some of us are used to it, but we have not wasted the

We had a lecture last night that was entertaining, edifying, full of information, full of kindly admonition that might bring up those who are not yet hardened in their ways in the nurture and admonition of the Lord. It pointed the way to better, higher, nobler things, an ideal state—some of it a beautiful air castle. I wish we could get to it. I wish it would harden into something substantial. I wish in the lifetime of the youngest man in this body, if he lived out the allotted time of the Scriptures, that we might reach that happy condition. I shall not live to see it; I doubt whether any of my colleagues will; but we can live in hope.

Remember that republican government, after all, is but an ideal. If it were not for that ideal there might not be any progress. We never reach all our ideals on this side of the Chamber. It remains for some of the Senators on the other side to do so, who happily think the millennium has arrived when there is a favorable verdict at the polls, to be in that beatific frame of mind where they think everything is as it ought to be, barring some things that we are preventing from early accomplishment, among which are some I now proceed to note, to see how

far we have yet to travel.

One is that there shall in due course of industrial justice be insurance against involuntary unemployment. I am in favor of that. I can tell you the best kind of insurance against involuntary idleness; I can tell you when the premium against that form of policy will be the highest. It will always be the highest after a Democratic victory and a threat of tariff revision. [Laughter.] That is the time when the premium will mount up to the highest, and it is the time when the greatest number of the unemployed will be found in the land. Unem-

ployment, involuntary idleness-the best insurance policy in the world against that unhappy state of affairs is to elect somebody who believes in building a wall high enough to keep our pay rolls at home and to let other countries shift for their own people. We ought to supply our home markets with the work of our own hands instead of bringing it from abroad. I am in favor of that kind of industrial justice first, Mr. Presi-

To prohibit child labor is another. We have prohibited it since 14 years ago in many of the Northern States along the Mississippi Valley; there is nothing new in that. The trouble is you have not kept up with the procession. The employment of child labor is a misdemeanor in many States. It is a matter some good authorities think entirely within the range of State jurisdiction. It makes no difference if the products of the labor should thereafter be introduced into the interstate commerce of the country; it is sometimes doubted whether an instrument of production can be reached under the interstatecommerce clause of the Constitution. However that may be, it has already received proper attention and will continue to do so in the future whenever needed.

A minimum wage is another one of these, and in that a great deal of experiment is now in progress. Barring constitutional difficulties, if they be removed it becomes an open question when and how a minimum wage can be applied to all localities in any given undertaking. It is very largely a local problem. What one public utility can pay another can not always pay in some other less-favored locality and rendering the service under less favorable conditions. In many places commissions are studying the question, and they are proceeding with all due expedition to find the best way in which the minimum wage scale can be worked out. Some think the better way is by an arbitration board, making each wage scale a problem of itself, and after hearing the evidence handling whatever controversy have arisen, which necessarily involves an examination into the production costs, including material, the labor employed, the conditions of the service, and the general state of the market to make an award or finding. Those things are in course of solution. Any cloture rule applied in this body would not hasten their wise solution 24 hours.

Women ought to be protected by laws governing the conditions of the service in which they may be engaged. I am happy to say that in many States of my acquaintance there are now such laws, reasonable ones, limiting the line of occupation. Women may not work in coal mines; they may not engage in insanitary work where robust physical strength is required or where the moral surroundings are such as to make it improper. That has been the law in several States of which I have personal knowledge for several years back-at least, as far as four years and six years ago. The number of hours of labor is always limited, together with the conditions surrounding their service as to seats, air, heat, light, and other matters that affect their moral and physical welfare.

Convict labor, it is said, ought to be abolished. Certainly it ought, and it has been abolished by State after State, both by constitutional amendment and by statutory enactment. The State where I happen to live abolished it many years ago and substituted a more humane way of employing her unfortunate convicts.

Industrial publicity ought to be given. This is another one of the alleged reasons why we should not be wasting time. It is said that these greatly needed reforms find in us a brake; . that we are standing in the way of industrial justice. Industrial We have had it in State after State where I have had occasion to transact business in the last 30 years-not for the 30 years; in some of them it is 2 years old, in some 4, in some 10, and in some States for 12 years back we have had industrial publicity, and we had industrial publicity in one 16 years ago. Industrial publicity extends to the remotest detail of industrial life. It extends to the surroundings under which the workmen render their daily service, their hours of service, sanitation, the mechanism for their safety in the places where they work, in mines, with machinery, and in other hazardous employments. All of these are matters embodied in written reports. time there is an accident of any kind, however trivial it may be, whether or not it result in death, through a State bureau the statistics are kept; they are published; they are accessible to all. So the industrial publicity on this score relating to the factory, to the mill, and to the mine is adequate and full for all purposes of industrial justice and a basis for remedial laws.

A bureau of labor statistics is found in many of the States, taking care in detail of all that can be done in this line. Whatever may be done in Federal legislation by act of Congress can be worked out, and I apprehend between now and the adjournment, next August, we will have ample time, even in an open forum here, with no cloture, to discuss abundantly and well all

such remedial legislation.

Factory laws, wherever they are extant, in the larger manufacturing States or the older ones, are of a kind that promote to a very high degree the sanitation, the life, the health, and the limb of the employee. Competent factory inspectors under State authority give to all employed in these undertakings a degree of safety not possible under the old order of things. Safety-appliance acts and limitation of hours of service on common carriers, State and interstate, have already been enacted.

mon carriers, State and interstate, have already been enacted.

A compensation act! The abolition of the common-law defenses has come along in due course. Compensation legislation would be further along at the present time, both in State and Nation, if there had been substantial agreement in the ranks of those who would most largely benefit by such remedial

legislation.

The Brotherhood of Locomotive Engineers were here last summer. From one city in the State, with the conditions of which my colleague and myself are quite familiar, there radiate many trunk lines of road. The engineers represent a highly skilled form of labor. It requires a well-developed type of man; the responsibility is heavy; the service is exacting; the life and property intrusted to the care of enginemen are incalculable. The engineers have not always agreed with other organizations. One reason why probably some delay has occurred in this body in advancing legislation in their behalf is because those benefited themselves are not in accord on compensation acts. Some prefer in case of injury to sue when the common-law defenses are taken away—the three that constitute the stock defenses under the common-law practice that prevails in many of the States. They prefer to sue so that they may receive what they think their injuries really entitle them to, while a compensation law providing a graduated scale, as it must, would enable them to collect less for injuries or death than under suit brought and tried before juries or one revised afterwards by the courts.

I think on this we are in an evolutionary stage. I do not

I think on this we are in an evolutionary stage. I do not believe industrial conditions in this country require undue haste, either in this body or elsewhere. The conditions are evolutionary; they are not reactionary or destructive. Many years ago the common-law defenses of the assumed risk of the business, the doctrine of fellow servants, and contributory negligence were the stock defenses that came down to us from the common law. One by one the States have abolished them. In some of the largest States in the Union, where the employer and the employee formerly had bitter and frequent litigation, they have had those defenses removed by statutory enactment, until now the employees can sue and recover the full measure

of damages free from them.

The removal of those defenses, the compensation law, and industrial insurance are steps; they are the evolutionary progress in the industrial world. These economic questions will be solved in due time, notwithstanding the criticism that this side of the Chamber has received, especially on last evening—that we are wasting time. The greatest waste known is haste. I have no objection to criticism; I welcome friendly criticism; and I regard that as friendly criticism. I am only taking the time here because those matters were placed in the Record, and I think it entirely proper for some review of the progress of the hour to be placed in the same Record.

Better roads legislation is coming as rapidly as we have accurate data as a basis. Many agencies are now gathering material from which intelligent bills can be framed. States are creating public sentiment and passing local laws which will be

part of the structure when the entire system is completed.

Public-health laws are proceeding with all due expedition,
Occupational-disease laws are already found in many States.
Their experience will light us on our way. No fear need be felt
here on that score. Congress will act within the limits of its
power. Many of us come from Republican States where those
problems are not new.

Parole laws for convicts are in operation in many States.

We have abundant time to consider them here,

Presidential primaries will require action by the States, for a majority of this Senate will not vote to send Federal election officers to the polling places in the several States. We can adopt the local machinery of State election laws; further, I submit, this body will not now go.

I think in due time we will come to industrial insurance. That is my own hope. Some may think that, too, is an air castle. I shall help make it a reality. I do not know, but I think the tendency of everything is to work out that way.

In 1911, by an act of Parliament, Great Britain established a scheme of industrial insurance. Practically it is insurance against injury; it is life insurance; it is accident insurance; it is sick benefit; it is out-of-work insurance. The employer pays a portion of it, the employee pays a portion of it, and the Government of Great Britain pays a part. The employee pays a very small proportion.

From their experience we will gain something. From our own experience under compensation acts we will gain something. From the statistics being gathered by bureaus in State and Federal jurisdictions we will gather something. So from year to year, coming along with due speed, we will have the enduring

basis for just legislation.

I have never seen in the time I have been here—a few months—any undue obstruction of legislation. The tariff bill came along from April to October. It embraced a great many items. Through the hot summer we sat here with considerable toleration of each other's frailties and listened to arguments to which our adversaries were always impervious, just as we were to theirs. We plodded through the dog days without any serious breaches of senatorial dignity. The bill is a law. It is on trial, along with the men who are responsible for it.

So I do not believe in the cloture just now. I think we are

getting along with a fair degree of speed.

It may seem like a solecism, but I want to talk to you, and I want to talk to the empty benches over on the other side and to such small percentage of them as are filled, about the morals of legislation. It seems not to have much place here, does it? I spoke about it to a friend of mine one day on a street car. He said, "Why, legislation does not have any morals." I said, "That is what is the matter."

How does that topic connect itself with the currency question? Because we are legislating on 7,500 national banks. When did they begin? A long time ago. The first act was passed in 1863. It developed gradually. Were they enterprises which made money at first? Not very much. Were they numerous at first? Not very. What created them? What was

the emergency?

In 1861 there were about 1,600 banks of all kinds—good, bad, and indifferent. There was in circulation about \$202,000,000 of all kinds of money—good, bad, and indifferent. In 1863 the germ of the present act concerning national banking associations was passed. If I turn back to the debates in both bodies in which that act was considered, I find some of the arguments offered.

I find that John Sherman, who was a Member of the Senate and of the House for a great many years, said it would create a market for Government bonds. Government bonds and Government obligations were going then at 73, at 60, and they were slow sales at that. If the note-circulating privilege were allowed the bonds, it was the opinion of the men who wanted money badly that it would enhance the price, enlarge the market, and make it easier to replenish an empty Treasury.

By the way, the Treasury was empty in 1861. We had not any revenue. We were in debt. For the three years preceding 1861 this Government of ours had been subsisting on borrowed money, just as it does every time the same party gets into power. It is inevitable. A deficit goes along with the air

castles.

So in 1863 a national-bank act was passed that would encourage the sale of bonds and provide currency for the needs of that time. It was born of the perils of civil war. No debate on earnings or profits attended its enactment. The question then was how to get money to arm, equip, and put soldiers in the field; so that was one of the methods adopted.

If it had begun and ended with the Civil War, nothing more could be said. It did not. It was amended in 1864 and amended subsequently several times. It was amended by a general revision in 1882 and by the subsequent act of 1900, all of them recognizing the same right in bonds with the note-circu-

lation privilege.

Let me read some of them. I am going to read them into the Record. I want them to stay there as an everlasting memorial of what ought to be alongside of some things that have been

said already, and in the same RECORD.

I want to preface that by saying that the morals of legislation are the basis of every enduring law. There is not a law which has survived and has come down to our time from the banks of the River Thames, from the days of English revolution, from Marston Moor or Naseby Field, from the days of the great charter of King John, that has not had back of it, below it, as its support, as its foundation, some inherent justice that appealed to human nature and to the ineradicable instincts of the human heart.

That is what makes laws; that is what makes them worth having and keeping; that is what makes them live and makes the statutes of a country instinct with justice.

A government may be legally right and may be morally wrong. It may keep within the strict letter of sovereign power and still violate the essential articles of good faith. It is the spirit always and not the letter of the law that stamps its validity for future years.

There is an aphorism that comes down to us from classical days that republics are ungrateful. It is true that the public service in a government of the people requires greater sacrifices, with fewer honors and less compensation, than in a monarchy. Those who serve a republic faithfully and well place themselves upon a high level of public duty.

This Republic of ours, and rightly so, confers no orders of nobility. Even its pensions are measured by the bread line. There are no great sums of money paid here to those who gave up their health, their strength, or their lives in the common defense. Neither wealth nor honor, save the gratitude of the people, mark the consciousness of things well done. monuments and memorial tablets are reared, it is true, at public expense, but many more from private means.

In this country we have no Westminster Abbey. We have no blazing jewels, decorations of the heroes and statesmen of our country, marking the signal recognition of their sacrifices. We have no spot where the statesmen, the scientists, the poets, the orators, and the dramatists of our country are gathered in consecrated ground. They are scattered on a continent, with graves unmarked save by the loving hands of those who mourned in private when they died. So in this country the only thing that is left is the consciousness of duty well done. And ought not a government to have some morals in legislating

for her own people and their descendants?

"Oh, well," it is said, "that applies to a bank, and who has any sympathy for a bank?" Well, it does seem a far call to connect what I have said with the banking system of the country. Along, though, after the Civil War closed there was an enormous interest-bearing debt. Bonds did not sell at par in the exchanges of the country. We went through the war on credit. Our ancestors fought it on voluntary credit and on enforced credit. They sold their securities on a falling market. After it was over we settled ourselves to the even more burdensome task of solving the problems of peace. Among them the most serious problem was how to pay our honest debts. Through good report and ill, in victory and in defeat, the Republican Party always stood for a dollar worth 100 cents in the counting houses of all the civilized nations of the world, and you can not always say as much on the other side of this Chamber, my friends.

To-day the gold standard exists in this Republic because the Republican Party existed first. It protected it. From the time this bill was born in the House, my Democratic brethren, the ghost of free silver has walked in these Halls. You may think we have a buil moose in our family closet, but you have a free-silver skeleton in yours, and its bones are clanking loudly. [Laughter.]

I bespeak your earnest and prayerful consideration of that subject. When we wanted to strike out the phrase "or lawful money," I have not forgotten, if you have, what excruciating shouts of agony went up from the other end of this building. We found out where the sore spot was, of which somebody spoke here to-day. That is one of them. It is about the best exercise of political discretion I ever saw exhibited. It is only political discretion that keeps it from breaking out in an acute form. It is discretion; it is not principle. There is an abundance of it there yet under the surface. Every once in awhile I touch it, and every time I touch it somebody flinches.

Let me read some of this that binds us to keep faith, Mr. President. The Revised Statutes of the United States contain this language. It is the act of 1864:

SEC. 5133. Associations for carrying on the business of banking under is title may be formed by any number of natural persons, not less in this title may be for

I ask leave to put this in without reading it, because all of you are familiar with it.

The PRESIDING OFFICER (Mr. Johnson in the chair). Without objection, permission is granted.

The matter referred to is as follows:

They shall enter into articles of association which shall specify in general terms the object for which the association is formed, and may contain any other provisions, not inconsistent with law, which the association may see fit to adopt for the regulation of its business and the conduct of its affairs. These articles shall be signed by the persons uniting to form the association, and a copy of them shall be forwarded to the Comptroller of the Currency, to be filed and preserved in his office.

Mr. SHERMAN. Then a copy of the articles is forwarded to the Comptroller of the Currency and filed, and that, in substance, is an act of incorporation. Upon this procedure—

The association shall become, as from the date of the execution of its organization certificate, a body corporate.

That is, one of these national banks. Those are some of the circumstances that attend its birth legally.

And as such and by the name designated in the organization certificate it shall have power-

Among other things, to continue for 20 years as a corporation. The following section, 5139, says:

The capital stock of each association shall be divided into shares of \$100 each

Now, here is a declaration:

And shall be deemed personal property.

That was in 1864, nearly 50 years ago. What does "personal property" mean? Just what it says. It is certainly used advisedly. Horses and cattle on the farm, merchandise on the shelf, cash in your pocket, mills, mines, factories, forests, fields, minerals severed from mother earth, all of them are property, and some, changing their form, become personal property.

What are the attributes of property of any kind? Ownership, private ownership, or public. I am talking about private ownership to-night, not public. I want to distinguish sharply between the two.

It says it shall be transferable on the books of the association in such manner as shall be prescribed by the by-laws of the association. Every person becoming a shareholder of such property shall in proportion to his shares succeed to all the rights and liabilities of the private holder. It is assignable. It is not merely that you own it and can not sell it, that you have to keep it; but it is like a promissory note or bill of exchange, it is transferable from hand to hand. It is like cattle or merchandise, capable of sale, an article of commerce. Shares of national banks are as transferable and as fluid in passing from hand to hand as any species of personal property in this country, and 50 years ago by the statute, by a solemn act of Congress, we have declared such shares to be personal property.

I know there is not anything more unpopular now than to defend private property. A man who has anything is an object of suspicion. Anything that is successful is to be attacked per se. If a man has anything, how did he get it? If he did not steal it, how? If a corporation has weathered the gales of bankruptcy and built up a business by the excellence of its products, by the efforts, ability, and sacrifice of its managers and its owners, and made a name for itself, by fair dealing, built up a world-wide market, it is a trust. Legislatures go after it. The "new freedom" of business makes it a shining mark for its own. If it is not a public enemy, how did it ever grow so big? It is a menace because it succeeded. be a government by failures apparently to hear some of our critics on the stump tell it. But they know better. When I get with them and talk it over with them, they say, "Oh, well, that is just campaign talk." We likely do not have any of that here on the floor of this Chamber. It is all "burnt and purged away," as the ghost of Hamlet's father said to him when he was walking at unseemly hours.

Personal property. Again, the act of 1882, which is a continuation and a revision of some 30 or more years ago, provides—

ation and a revision of some 30 or more years ago, provides—
That any national banking association organized under the acts of February 25, 1863, June 3, 1864, and February 14, 1880, or under sections 5133, 5134, 5135, 5136, and 5154 of the Revised Statutes of the United States, may, at any time within the two years next previous to the date of the expiration of its corporate existence under present law, and with the approval of the Comptroller of the Currency, to be granted as hereinafter provided, extend its period of succession by amending its articles of association for a term of not more than 20 years from the expiration of the period of succession named in said articles of association, and shall have succession for such extended period, unless sooner dissolved by the act of shareholders owning two-thirds of its stock, or unless its franchise becomes forfeited by some violation of law, or unless hereafter modified or repealed.

It shall then have succession for such extended period unless sooner dissolved by the act of the shareholders owning two-thirds of its stock, or unless its franchise becomes forfelted. What? By an act of Congress? No; by some violation of law.
Or unless hereafter modified or repealed.

Senators say because there is retained in it the right to modify or repeal it that thereby no rights attached under the 20-year extension. I will consider that later on.

It is provided further:

SEC. 4. That any association so extending a period of its succession shall continue to enjoy all the rights and privileges and immunities granted and shall continue to be subject to all the duties, liabilities, and restrictions imposed by the Revised Statutes of the United States

and other acts having reference to national banking associations, and it shall continue to be in all respects the identical association it was before the extension of its period of succession.

What do these banks do after having been given corporate life under these acts? It is provided:

Sec. 8. That national banks now organized or hereafter organized, having a capital of \$150,000 or less, shall not be required to keep on deposit or deposit with the Treasurer of the United States United States bonds in excess of one-fourth of their capital stock as security for their circulating notes.

That is a relaxation of a prior act where some larger amount of bonds was required, one-third, I believe.

But such banks shall keep on deposit or deposit with the Treasurer of the United States the amount of bonds as herein required.

And such of those banks having on deposit bonds in excess of that amount are authorized to reduce their circulation by the deposit of lawful money as provided by law: \*Provided\*, That the amount of such circulating notes shall not in any case exceed 90 per cent of the par value of the bonds deposited as herein provided.

SEC. 10. That upon a deposit of bonds as described by sections 5159 and 5160, except as modified by section 4 of an act entitled "An act fixing the amount of United States notes, providing for a redistribution of the national-bank currency, and for other purposes," approved June 20, 1874 and as modified by section 8 of this act, the association making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations, in blank, registered, and countersigned as provided by law, equal in amount to 90 per cent of the current market value, not exceeding par, of the United States bonds so transferred and delivered, and at no time shall the total amount of such notes issued to any such association exceed 90 per cent of the amount at such time actually paid in of its capital stock.

SEC. 11. That the Secretary of the Treasury is hereby authorized to receive at the Treasury any bonds of the United States bearing 35 per cent interest, and to issue in exchange therefor an equal amount of registered bonds of the United States of the denominations of fifty, one hundred, five hundred, one thousand, and ten thousand dollars, of such form as he may prescribe, bearing interest at the rate of 3 per cent per annum, parable quarterly at the Treasury of the United States.

This is quoted from the act of March 14, 1900:

This is quoted from the act of March 14, 1900:

And provided further. That under regulations to be prescribed by the Secretary of the Treasury, any national banking association may substitute the 2 per cent bonds issued under the provisions of this act for any of the bonds deposited with the Treasurer to secure circulation or to secure deposits of public money.

I read this parliamentary day what was written in 1884 by James G. Blaine on this subject. His spirit seems almost prophetic:

If a similar institution-

He is talking of the Second United States Bank, on which the distinguished Senator from Connecticut [Mr. McLean] gave us an illuminating address the other night-

were created to-day—1884—bearing a like proportion to the wealth of the country, it would require a capital of at least \$600,000,000.

It is hardly conceivable that such a power as this could ever be entrusted to the management of a Secretary of the Treasury or to a single board of directors with the temptations that beset them. (Blaine's Twenty Years, vol. 1, p. 486.)

Mr. Blaine says that Jackson's instincts on the bank were cor-As I remember, the total resources of the 4, 8, or 12 regional banks to be created under either of the bills in question will be from \$500,000,000 to \$700,000,000, ordinarily spoken of here as about \$600,000,000, the same figures that Mr. Blaine gave

This brings us to the question whether the morals of legislation are well founded on the attempt by what I call the caucus bill to subject the 7,500 national banks to its terms. We must remember that these national banks are the legitimate successors of those who preceded them. Some are the same organization continued by extension of their charters in a line of succession from their first organizations. Some of them have been organized since under subsequent laws. The Government, however, enacted these laws. All of them were ones that invited those who wished to go into the banking business to avail themselves of such laws. They went in, it is fair to presume, relying on those laws. They knew what the terms were. It was voluntary. But the Government, among other things, beginning in 1863 and continuing down to a very late date, attached to all of its interest-bearing obligations, commonly known among people as bonds, the note-circulating privilege. No other form of public indebtedness had this privilege. It was a high prerogative indelibly stamped upon the security. It helped create a market from the earliest times down to the last bond that has passed into the hands of a private holder.

This Republic has sold her securities either in bankruptcy or plenty for 20 years at the lowest rate of interest of any country in either the New or the Old World. Lately some of these bonds, it is true, have been selling on a depressed market. In is true, have been selling on a depressed market. Immediately the cry went up that there was a conspiracy among the holders. It is the same kind of conspiracy that is always formed when dangerous conditions affecting the desirability of a security appear. Whenever securities are in danger, whenever some of the desirable qualities are about to be withdrawn,

then, in every instance, the holders of that security begin to put them on the market in larger and larger quantities, and as the offerings increase the price inevitably falls.

Taking away the circulating privilege from the bonds necessarily detracts from their value. Because of that those holding the bonds affected by these bills naturally began to discuss the ways and means of turning them into some more stable security with a higher rate of interest. Two per cent is a very low rate. I do not know of anything that renders a 2 per cent Government bond desirable unless it would be the note-circulating privilege. There are on the market a thousand investments to-day that do not require a skilled broker to find that will beat in safety and in rate of interest a 2 per cent bond. You can not sell a 2 per cent bond unless it is to somebody who wants to use it for note-circulating purposes at par.

The government by law from early times attached to it the note-circulating privilege. And now arises a demand for currency legislation. Of course, the 7.500 national banks are the only ones that are within the legal grasp of Congress. are some 18,000 or more banks outside, over which we have no control, except that we may reach them in .. very indirect way that I will refer to after a while. But, nevertheless, to use

the language of one of Hamlet's characters, we-

By indirections find directions out.

I will refer to a paragraph of this bill—the caucus bill—that shows by what indirect methods you may reach those that you can not by the express letter of the law. It is proposed in organizing to utilize the reserves set aside to guard depositors, these banks to be known as reserve banks.

The first United States Bank and the second United States Bank were established with due regard to the right of private property. The second United States Bank, with \$35,000,000 capital, had 20 per cent of it subscribed and paid for by the The second United States Bank, with \$35,000,000 United States. The Government did not attempt to dragoon anybody into subscribing for shares. They offered the other 80 per cent to the general public, and the general public subscribed The shares of stock held in foreign countries denied liberally. to the alien holder the voting power attached to the stock. That was the sole restriction, and a proper one. It was a domestic institution, and it ought to be controlled by domestic But it was an honest bank. It is like Banquo's ghost and the ghost in Hamlet. They were honest ghosts, to say the least of it. They did not undertake to do something at somebody else's expense. The Government never undertook in the second United States Bank to take private property involuntarily for the purpose of establishing the bank.

It is proposed here by the sections in question in the caucus bill, first, to compel the national banks to subscribe to an amount equal to 6 per cent of their capital and surplus. Let me here advert, not with any degree of exultation but only noting as a matter of exact justice, the concrete benefits of the cloture, as it did not apply to us. House bill 7837 was introduced August 29, 1913, by Mr. Glass and was referred to the appropriate committee. Let me read on page 14 of that bill on this subject now under examination:

Any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinbefore stated—

That is the system of entering the reserve bank-

or which shall fail to comply with any of the provisions of this act applicable thereto, shall be dissolved.

What does that mean? It means a decree of corporate death is pronounced if that should be enacted. That is a strange basis for a just law. As an old-time country lawyer said, in asking a question of a monstrous legal proposition stated by his adver-sary, "Is this the law?" "No," he said, "it is iniquity intensi-fied and made horrible under forms of law." That adequately describes the House bill as it came to the Senate. But, nevertheless, it passed the tribunes of the people with glad acclaim. They trod upon each other in their haste to vote for it. They sent it across to us.

I now have the pleasure of referring to the same bill-House bill 7837-reported with amendments from the committee in the other House to the Committee of the Whole House on the state of the Union and ordered to be printed. In that bill is the same thing I have already read. I refer to it on pages 14 and 15 of the amended bill, in which no amendment is made whatever, and so it remains as in the original bill. It reads:

Any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinbefore stated, or which shall fail to comply with any of the provisions of this act applicable thereto, shall be dissolved.

law books say, for a long space of time, to wit, many days. On page 14 I read again:

Any national banking association now organized which shall not, within one year after the passage of this act, become a national banking association under the provisions hereinbefore stated, or which shall fall to comply with any of the provisions of this act applicable thereto, shall be dissolved.

There are three deliberate parliamentary legislative steps. The same bill in the Senate, under date of November 22, 1913. was ordered printed, showing changes proposed by the amendments of the Senator from Oklahoma [Mr. Owen]. I now turn to the same subject in the amended bill.

Between the time that this product of parliamentary delibera-tion came to the Senate from the House and November 22, 1913, there had been abundant time for mature reflection. I pay what I think is a deserved tribute to the members of the Committee on Banking and Currency, without regard to party affiliations. They labored long, faithfully, and well. I think the committee is composed of sincere, earnest men, trying to do what is best. If we had had cloture after the bill came in here, after much of the spirit had been exhibited that appeared so rampant last night. I am not sure but that about the time it came out of the committee on to the floor of the Senate a roll call would have been demanded in the interest of speedy legislation; but this is still an open forum. So on the 22d of November, 1913, the amended bill appeared here. I wonder what happened in the meantime. Did Saul of Tarsus come back to earth again, and was he stricken by a great light on the way, or what? On the same subject still, Mr. President, I read:

Any national bank failing to signify its acceptance of the terms of this act within the 60 days aforesaid shall cease to act as a reserve agent, upon 30 days' notice, to be given within the discretion of the said organization committee or of the Federal reserve board.

There is part of the flagellation of the unregenerate right there. You are to be taken out of the reserve-agent system if you do not give 60 days' notice of bowing your corporate neck to the yoke. Take due and timely notice now; but it goes on. This is not all of the perils in store for the unfaithful:

Should any national banking association now organized fail, within one year after the passage of this act, to become a member bank under the provisions hereinbefore stated, or fail to comply with any of the provisions of this act applicable thereto, all of the rights, privileges, and franchises of such association granted to it under the national-bank act or under the provisions of this act shall be thereby forfeited.

Here is what the cloture did by its absence; here is what the deliberation of these faithful gentlemen in the committee produced. I do not know where the ones who fell down in blind and idolatrous devotion to the House bill, I do not know where those who made sundry visits to the Chief Magistrate at the other end of the Avenue and received material and pleasurable information—I do not know where they got the information that led to this change; but, nevertheless, here it is. Mayhap they conferred with some distinguished lawyer of the realm, who told them that a corporate franchise might have about it the incidents and properties of private property rights. I do not know what secret conferences were held during delays in this Senate while debate was in progress, but the bill was changed to read:

Any noncompliance with or violation of this act-

They did not say that the bank shall be thereby dissolved, as in the peremptory language of those other three bills, but-

Any noncompliance with or violation of this act shall, however, be determined and adjudged by a proper circuit, district, or Territorial court of the United States in a suit brought for that purpose by the Comptroller of the Currency in his own name before the association shall be declared dissolved.

That begins to sound a little bit more like a civilized government; it does not sound so much as if a number of parlia-mentary destroyers were after the banks of this country. I hold no brief for the banks, but I would just as willingly defend a bank with \$200,000,000 of assets as I would defend the ditcher in his humble cottage. There are no classes at all in this country according to my way of thinking. If this Government becomes one that can not deal out justice to the great as well as to the weak, it is no longer a government of the people, but it becomes a destroyer of some and a promoter of others, and that is the beginning of the end. This language possesses to me something that sounds like justice, something that harks back through our love and reverence for the law of the land that comes to us from early times. It is a civilized instinct, it is true, but nevertheless by long years of training it has become an instinct in the hearts of liberty-loving and law-abiding men in this country. It requires a decree of court to take the corporate franchise away, even from any one of the 7,500 national banks.

I now take up the same bill. H. R. 7837, in the Senate under date of December 1, 1913, "ordered printed showing changes proposed by the modified amendment of Senator Owen."

This is the caucus bill, as I understand. I turn now to this mature product of government by the people, consisting of a majority of a minority, on the same subject, and read on page 6 as follows:

Should any national banking association in the United States or trust company engaged in commercial banking in the District of Columbia now organized fall within one year after the passage of this act to become a member bank under the provisions hereinbefore stated, or fall to comply with any of the provisions of this act applicable thereto, all of the rights, privileges, and franchises of such association granted to it under the national bank act or under the provisions of this act shall, within the discretion of the Federal reserve board, be thereby forfeited.

Here is another timely precaution born of the absence of the cloture. You see, Mr. President, how deliberation has produced a leavening sense of justice. Many of the bad laws of the country are the impulsive laws, the laws passed under the pressure of great public clamor. I do not criticize men who must go before the people for an election who sometimes bend to the before the people for an election who sometimes beld to the vigor of the supposedly popular breeze; but the virtue of the double character of the legislative body, one body having a longer tenure of office than another, is never exemplified fully for what it means except in time of stress and great public excitement in certain quarters, coupled with equally great absence of information on a subject. That is pretty generally true of many of the technical matters involved in currency legislation.

It is no reflection upon the multitude who compose the voting population of this country that they do not each of them fully understand these details. Neither do you nor I, Mr. President, understand architecture; neither are we sculptors; neither are we shoemakers. That is not our trade; it is not our business. Every man unto his calling. We have not time to learn it all. We are not like the pioneer grandfathers of old in the forest or on the plain, who made everything they had in the household and made their living out of the ground or caught it from the waters or on the plain or in the forest. Those days have passed away forever in this country. It is every man now specializing

in some branch of industry.

This is a good illustration of a great deal of error that comes up every time a public question becomes urgent. If you want to find out how to prepare a currency law, go to somebody who does not know anything about it. The less a man knows does not know anything about it. The less a man knows nowadays the more capable he is of giving you advice. If you want a law regulating architecture, do not go to an architect—no; go to a jeweler. If you want somebody to advise you about conducting a watch factory, go to a horseshoer. If you want to get advice how to frame a currency bill, to keep from wrecking the delicate mechanism of reserves and credit, do not go to a banker; bankers are public enemies; stay away from them. But, nevertheless, no cloture rule having been in full force and effect, and there being ample time in the committee to deliberate, the bank charter was at last made subject to forfeiture within the discretion of the Federal reserve board."

"While the That is another encouraging glimmer of reason. lamp holds out to burn" on that subject "the vilest sinner may

return."

Any noncompliance with or violation of this act shall, however, be determined and adjudged by any court of the United States of competent jurisdiction in a suit brought for that purpose in the district or territory in which such bank is located—

Here is another instance of how delay and reflection produce The other bill on this subject said that suit should be brought under the direction of the Comptroller of the Cur-

rency in his own name. Here it says:

Under direction of the Federal reserve board, by the Comptroller of the Currency in his own name before the association shall be declared

We, it seems, must point the way. it came over here, arbitrarily and harshly forfelting the franchise of every national bank that declined to enter the system, has been gradually modified, first, by putting it in the discretion of the reserve board, and then by introducing an order of a United States court declaring such forfeiture, so that now there are at least two features added that would serve in some degree to mitigate the original injustice of the bill.

I want to take up these features that compel even yet, even as mitigated, a national bank to become an involuntary subscriber to the shares of stock in the Federal reserve banks. It has been suggested here several times that the act concerning national banking associations has in it a section that reserves the right to Congress to alter, amend, or repeal the act. That is true. If such a provision did not exist, if it were found in none of the acts of Congress, the sovereign always has the right to recall an act creating a corporation. That is an act of original sovereignty by whatever authority granted. In this instance it was one that appertained properly to the Federal Government.

Let me call briefly the attention of Senators who think this forfeiture is proper and valid to the uniform administration of justice on this question. Where, by the act of the sovereign, whether a monarch as in older days by his letters patent created a corporation, or whether under a free corporation act, such as the bank act in this country, banks are created and charters are issued to them for a fixed time—20 years—investments are made, men risk their capital; their money is put in shares; and under the terms of the act under which they incorporate the bonds of the sovereign granting the charter are required, as in all these statutes, to be purchased and a certain per cent of the capital stock taken out in the form of circulating notes based on those securities, property rights attach; the act of incorporation can not be arbitrarily repealed; charters can not be then forfeited by mere legislative will so as to impair private property risked by its owners in the incorporated enterprise. The forfeiture of the charter retires the United States bond-secured circulation, returns the 2 per cent bonds to the bank with the circulating privilege written into them when the bank bought them stricken out, and leaves the shareholders of the bank to stand the depreciation of such bonds on the market.

I shall not stop here, as it is foreign to my purpose at this time to inquire into the legal status of those whose rights might be so affected. I am adhering here entirely to the moral aspects of legislation. The men who are the shareholders in the 7,500 banks, or their predecessors, invested their money on the faith of existing laws. Those laws gave them corporate life for 20 years. Subsequent acts gave them the right to extend their corporate franchises for 20 years more, and so on, until the banks to-day have come down, either directly or indirectly, from pres-

ent laws under that process.

These shareholders had part of their money invested in United States bonds because it was required by the act under which their banks were created and because the circulating-note privilege attached to the security. Very well. Over a thousand million dollars' worth of capital stock is found in those banks, and more than seven hundred millions of accumulated surplus is found there. All of it, both the surplus and the original shares, belongs to the shareholders. These shares are declared by the national-banking act to be personal property. Under the proposed caucus bill this personal property is forced to go into the reserve-bank system, or, in default, it faces in the discretion of the reserve board, backed up by the decree of a court of competent jurisdiction, a forfeiture of its right to be a corporation and to conduct a banking business under the law.

This means liquidation and the retirement of the bank from business. It is an involuntary commandeering of the shares of stock that belongs to various holders throughout the country in

behalf of the new freedom of business.

It may be that the courts would not declare this confiscatory. I shall not stop here to discuss that question. I am merely saying that when the Government for 50 years permits these corporations to be formed, permits them to renew their charters, permits them to continue in business, and permits them to invest until they have \$1.785 000,000 of investments, never, under whatever stress, in time of peace or even in time of war, ought a republican form of government, through attempted legislation to undertake to force these shareholders to subscribe for shares in a reserve-bank system such as proposed in this bill.

"O," It is said, "reserves are impounded now under the law."

"O," It is said, "reserves are impounded now under the law."
The Government reaches out and takes, in the reserve and central reserve cities, 25 per cent of the deposits. In the country banks it takes 15 per cent of the deposits and impounds them or segregates them in such a way as to be beyond your private

or personal control.

Let me tell you what the difference is. Every time five or more men agree to incorporate a national bank they find a law existing at that time requiring the segregation of these reserves. There is no bad faith in that. There is no change. A man is presumed in every instance to know the law, and in this instance he does. He has not only constructive but actual notice of the law governing the case. So when they undertake to embark in that enterprise the law is plain before them. They voluntarily submit themselves and their subscriptions of stock to its terms.

The shareholders in a reserve bank who by compulsory subscription are sought to be reached do not voluntarily submit themselves to the processes of this caucus bill. On the contrary, it is not made to depend upon their volition. It is coer-

cive and backed up by the penalty of dissolution.

It is said, however—I have heard it any number of times, and we all remember it—that the banks almost unanimously will agree to go in: that the whole 7.500, of one accord and with unanimous haste, will ruch to the office and subscribe the full amount permitted by the act.

If that is so and you have faith in it, why do you not take out the death penalty? I never knew anybody who would make a thing so attractive, so profitable, so desirable that everybody would rush to get some of the investment who had the headsman stalking behind with his ax, threatening instant execution if those menaced did not take some of the manifold blessings showered upon them. Still that is the way this bill is written.

The very terms of the bill belle the statement. The very

The very terms of the bill belle the statement. The very spirit that is sought to be written into the act says that if you do not force the banks to go into the system they will not

go in

I think there is a good deal of misunderstanding about the distinction between regulation and control. It is one thing to regulate the banking business of the country; it is another and quite a different thing to undertake to control it. Regulating is universally recognized as necessary and proper for both persons and property. It is one of the purposes of government to regulate both, and the right has been exercised from time immemorial.

It is an admitted and a universally applied means of enabling civil society to administer one of its chief purposes. Persons are regulated so as to restrain injustice, oppression, and fraud. Property is regulated so that the owners or possessors may not so use it as to interfere with the lawful rights of others.

Carrying out this principle are many of the most useful applied doctrines of our modern system of jurisprudence. No man can so use his property as to injure another. In regulation it assumes a wide scope, Civil and criminal codes are constant witnesses to the just exercise of public authority for the benefit of all.

There is a well-defined limit to regulation. It may not be distinct always, but in a specific case the average judgment of the well-informed man unerringly distinguishes the line.

A government ought never to regulate except in necessary things. To extend its regulatory power unless there is some useful and necessary end to serve is never justified. If no remedy is to be invoked, and if no mischief exists that can not be cured by natural laws applying to agriculture, industry, commerce, or finance, no statutery law ought to be imposed so as to become involuntary as to those to whom it is applied.

If an occupation can be conducted without regulation equally as well as with it, it is always the part of wisdom not to regu-

late but to leave it to private hands.

Control administers, orders, does, and tells others how to do. The conduct of the occupation is controlled. A man controls his business activities. He embarks in the pursuit of his choice. He acquires property. He controls it. He controls as agent of the owner. He owns land. With the title the control passes as an inseparable and an indispensable incident to the ownership. The farmer controls his acres. The owner of an office building controls, either through himself or his agents, his property. A merchant controls his merchandise. The owner of money controls it. He puts it in a vault, in his pocket, or deposits it in a bank. He hoards it. He gives it away. He squanders it. He spends it for pleasure or for those who are subjects of his care. He has control of it, in other words. That is what control means. In whatever form private property may be, control is essential and vital, and is an indispensable part of the ownership and title.

For most purposes, if control be separated from the holder of the title, there is a destruction of all the useful incidents of ownership. Without the control of what use is the land to the farmer? He can not choose the crop to be sown, the method of cultivation, when and how to harvest it, or at what price to sell by his voluntary act the proceeds of his toil. The same thing applies in a different form to merchants and to the owners of all other kinds of property. Deprive me of my control of my property, and I infinitely prefer that you confiscate

the title to my property.

I may not be keeping step with the procession; I do not know. I have some ideas that possibly are antiquated and old-fashioned; but I believe in the control of property as a necessary incident of the vesting of the title in it. Take away my control, and I prefer that you take my property and keep it forever; and I will sleep better, because I will cease to think of it when it is no longer mine.

It is unimportant by what agency the control is taken. Among all reasonable men acts are measured by their effects. The effect on me is precisely the same whether the control be absorbed by either public or private means against my consent.

It seems almost to require an apology to state these elementary maxims, but a m disposed to put them in the Record in order to perfect it. if nothing else.

We are now passing through an era when it is difficult to distinguish regulation from control in the minds of many. Some

publicists have a mania for invading individual rights by legislation. To them it is of no concern whether a law is adapted to the underlying conditions or whether it does violence to every human experience. The free coinage of language represents to many in this age the wealth of nations. [Laughter.] If it can be translated into laws, it represents the superlative wisdom of the sages and the tribunes of the people who do not think private rights concern us in legislation.

I hold no brief for the banks. I have not a dollar's worth of

bank stock in the world.

What is a bank? What is a banker? I wish to put in the Record here in this year of our Lord 1913 that at home your banker is your neighbor. Do you have a suspicion of him? Do you look upon him as a fit subject for police surveillance? Is he visited with obloquy and supposed to be a dangerous character? Without exception, in every well-regulated community that has a bank the banker is a man of character, of respectability, of substance, having the confidence of his neighbors. Why the individual banker who is your neighbor is all right and why an aggregation of banks and bankers are a menace to the public welfare is something I fail to understand. I have not heard it satisfactorily explained.

There are some few very large banks in the country. However, the greater part of their deposits come from private depositors. One of the largest banks in the country is a private bank. It enjoys no corporate franchise; it asks no special privileges or immunities from the Government, State or National. Some of the largest banks among the country banks are private. No charter intervenes between their private fortune and their liabilities. But where the large fortune does not exist, where it is necessary for several to assemble themselves, they incorporate

under State or Federal laws.

Now, what is a bank? A bank in every instance is a collection of men of character and responsibility. They assemble their personalities and their money. They incorporate not alone their personalities and their money. They incorporate not alone to protect themselves against liability, because in many in-stances I do not believe that is a material question. They incorporate to shield themselves against the mutations of death. With a partnership, whenever a partner dies it is a dissolution of the partnership, and difficulties ensue in winding it up. Therefore the succession for a number of years is preserved by incorporating the banking business. When their capital is invested by their subscriptions it forms the nucleus. Their character and their cash are assembled, and we call it a bank.

Up to this point no bank would ever run 12 months. It could not; it would not pay. The operating expenses would exhaust the income and leave at least but little margin to pay dividends on the assembled shares. In every instance the profitable and the large part of the bank is composed of the depositors.

out the depositors no bank could exist.

Therefore, when first 6 per cent of the shares of capital stock are to be coerced into joining the banking system proposed by this caucus bill, it is an involuntary taking of what the statute years ago declared to be personal property. Would you confiscate the farmer's herd? Would you take his cattle on a thousand hills? No; you know better. You know that for 500 years in the history of the English-speaking race even the sovereign can not take private property without compensation. You do, though, by the sections of this bill take the shares of stock declared by a solemn act of Congress to be the personal property of the owner involuntarily from him. If he has \$5,000 in shares of the stock, you compel him to subscribe \$300 worth of it at

In addition to that you indirectly compel him to take more If he is a depositor, a per cent of the deposits is taken, varying somewhat in these different amendments. I shall not quote the exact per cent taken, because it has fluctuated and is subject yet to change. It is enough to say that by the processes proposed in this caucus bill \$107,000.000 of capital stock is to be taken involuntarily-personal property coerced by an attempted act of Congress into a subscription to the shares of these proposed reserve banks by the owners

In addition to that a sum varying from \$400,000,000 to \$500,000,000, a percentage of the deposits of the 7,500 national banks, is to be taken and impounded, not in the banks that existed as reserve or central reserve banks when the national banks were incorporated, and to which they consented by applying when that was in the law, and knowing they should be required so to choose their place to deposit their reserves, but taking four or five hundred million dollars of their deposits without any show of voluntary action on their part and put-ting it in reserve banks controlled by whom? Well, one bill, the caucus bill, says by directors appointed by the bank. Just to summarize it without going into details, they are allowed to large collection of people.

appoint them all. Now, this, it is argued, is very generous and is extremely solicitous of the private rights of the banks.

The other, the Hitchcock bill, provides a divided board, part

by the banks and part by the reserve board. It makes no difference about the directors. That is not the essential point. I will come to that in a moment again. I do not want to go ahead of what seems to me the orderly development of this idea.

These directors of the Federal reserve banks are the ones who attend to the details on the ground, the actual management of the banks. It does not make any difference who appoints these directors if there is above them some supervisory power, some power that is even more than supervisory, a power that is essentially controlling or destructive, a power that may remove. Let me read that part of the caucus bill. In the subdivision on the powers that are vested in the reserve board it is provided how the board of directors of the reserve banks may be removed. On page 38 of the caucus bill, paragraph (f), as amended, reads:

To suspend or remove any officer or director of any Federal reserve bank, the cause of such removal to be forthwith communicated in writing by the Federal reserve board to the removed officer or director and to said bank.

I wish to read in this connection also the paragraph stricken out before the amendment was made:

To suspend the officials of Federal reserve banks, and for cause, stated in writing with opportunity of hearing, require the removal of said officials for incompetency, dereliction of duty, fraud, or deceit, such removal to be subject to approval by the President of the United States.

This only reached the officials of the reserve banks. amendment reaches both the officers and the directors of the reserve banks. It does not limit the power to remove for cause. It does not say that the reserve board may remove the directors for cause. It says they may "suspend or remove any officer or director of any Federal reserve bank, the cause of such removal to be forthwith communicated," and so forth.

There is a difference between removing a man for cause and removing him and then signifying to him what it was that caused him to be beheaded. One is an indictment with an opportunity to be heard, as the act was originally written, a chance for defense, a chance to show the injustice or the untruth The other, as written in the caucus bill, of the charges made. depends upon the arbitrary power, the willful caprice, the un-bridled discretion or indiscretion of the reserve board.

I care not how the directors of a bank may be elected. They may be all bankers; they may be all elected and chosen by the bankers; but if the power remains in the reserve board to remove them with or without cause, then the actual power of control and administering the affairs of the Federal reserve bank is not in any board of directors, but in the reserve board itself. This clause creates a powerful central bank, its capital and deposits enforced contributions from private property, controlled by political forces. All the elaborate framework is a pretense. The reserve banks are but branches of a vast centralized authority headed by the President. The power to resist inflation rests in the hands of the President. Greater power was never placed in any ruler, even in an absolute monarchy.

The methods of subscribing for capital stock, as I see it, are vital. The provisions of the Hitchcock bill offer the subscription first to the general public. It does not commandeer the national banks of the country. It only requires that they use their kindly offices. They underwrite the subscription, but the public are first invited to subscribe, and there is a 5 per cent cumulative dividend, nontaxable. It is a desirable form of

investment to an army of small investors.

But human nature is so constituted, Mr. President, that if by law, arbitrarily and unjustly, you undertake to force either bankers or individuals in private life not connected with banks to the involuntary taking of a 10 per cent investment they resent it; it is against human nature, with our strain of civilization, with our traditions and our practices. It is un-American; it is ungovernmental; it is unjust. The Hitchcock bill provides for voluntary subscription by the people.

It is argued here, though, that this is a bankers' bank and not

a people's bank. What is a bankers' bank? A bankers' bank is made up of the member banks; and who are the member banks? The shareholders who pledged their subscriptions and their character and assembled them as the nucleus of a bank. And the depositors. And who are the depositors? The people who do business with that bank, who have a surplus to deposit.

Therefore these member banks that subscribe, if it be said to be a bankers' bank, only subscribe for their shareholders and for the much larger sum represented by their depositors, and both of these-the shareholders and the depositors-form a The reserve bank, therefore, Mr. President, ought to be a geople's bank, and the Hirchcock bill makes it a people's bank.

The men of my generation can remember not many years ago when a great President of the Democratic Party found it necessary, following the usual practices that came along with those administrations, to berrow a considerable sum of money in order to preserve the public credit. He was criticized unstintedly. President Cleveland was criticized down to the day of his death because in offering his bonds he took them to the banks. He sold them in large blocks or in entirety to banks or large brokerage houses. He did not invoke the potency of a popular subscription. He sold them out en bloc and was criticized for it, but this day we witness his indorsement. It is a tardy recognition by the successors of his party when they limit this subscription to the banks and do not open it to the public generally.

If I have stock in a bank, if I have deposits in a bank, Mr. President, I do not want the bank to become my guardian; it is my debtor. The bank and its officers are the custodians of my stock and manage it, and I am trusting them for that. I deposit my money; the relation of debtor and creditor exists. But, nevertheless, I do not want to constitute them my conservator to subscribe for me, through the compulsory section of this caucus bill, a part of my share or part of my deposits in a

reserve bank.

That is the test in this case. The Hitchcock bill makes a voluntary subscription, the banks only who underwrite to take what the popular subscriptions leave untaken. That is voluntary, and there at the threshold is the difference, as I see it, a basic difference from a layman's point of view, in these two proposals. If it be a voluntary bank subscription, then there can be no complaint if the board of directors should be appointed by the Government through the President or a Federal reserve board. That is a voluntary act. When we subscribe all who go in know the law is plain. It is written so that they know when they make their subscriptions that it will be subject to the terms of the act. The caucus bill, however, is an involuntary subscription, followed up by the control of the Government after you are coerced and dragooned into the subscription.

I can vote for the Hitchcock bill, because it recognizes the right of private property. It recognizes the right of the bank to manage its affairs. After that has been done I care not what kind of control may be exercised after once the consent has been

given.

There is another undertaking here that from the standpoint of a layman can not be justified. I do not know just how violent this may seem to a banker, who is in reality the trustee for the shareholders and the depositors. He is surrounded by many rigorous laws that do not govern the ordinary relation of debtor and creditor; he is surrounded by criminal laws. State and National, whatever the form of his organization or if he be a private banker. Those laws do not apply to you or to me if we are debtors, but they do apply to a bank, and many a banker has become a felon simply because this rigid supervision and the restrictions placed upon him by the criminal code said so. Therefore, if we go a step further, what the banker does after he has organized a bank and has deposits, if we belong to the borrowing class we go through the process described by those who are entirely familiar with the banking business. We of the outside not intimately acquainted with this mechanism only see a part of it when we borrow, when we draw a bill of exchange, when we write a check, when we sign a note, when we put up collateral. In every instance after the bank is in operation it acts as a reservoir for the collection of the surplus money of the community that is subject, or that the bank influence or business reaches out and makes subject, to the laws of banking, It is not only the money that is actually in the bank, but it is the potential credit thereby created as well as the cash

This bill, known as the caucus bill—and I am not using that term in any critical or invidious sense, let me say—undertakes after this involuntary subscription is made, after men's money, shareholders and depositors alike, is coerced into the system of banks proposed—after that is all done, then it is proposed by an act of government to create and extend credit. I said sometime ago, and I am going to repeat it, for I am going to adhere to it, that I would just as lief undertake to wind a watch with a crowbar as to create and extend credit by governmental action. It is too delicate a piece of mechanism. You had as well undertake to control the pulsations of the human heart and the circulation of the vita! fluid as to lay the clumsy hand of governmental action apon the pulsating heart of the commerce and the finance of this country. It can not be done without public disorder. It never has been undertaken without disaster from the

time President Jackson removed the bank deposits and undertook to dictate the finances of the country, creating the panic that ensued down to the latest forms of perverted government action proposed in this bill. These efforts all work out in due time their legitimate results. Credit is a delicate operation. It can not be made by merely passing laws. Still here is a sovereign power proposed in this caucus bill. After all this involuntary subscription is made and deposits contributed, here is a governmental board sitting in Washington that has authority to require a reserve bank to rediscount the paper of any other

Federal reserve bank in the United States.

One great purpose, however, is found in all these bills. There is an organization of the credit power of the national banks. It has hitherto been unrelated save in clearing-house associations necessarily local in scope and limited in power. Both the Owen caucus bill and the Hitchcock bill assemble their credit power and mass the reserves of the country in a way that must be a permanent contribution to the financial legislation of the United States. The Illuminating report of the National Monetary Com-mission of date January 9, 1912, undoubtedly bluzed the way for the comprehensive structure of organized credit proposed in either of those bills. The caucus bill gathers a vast potential credit of half a century of national-bank development practically into a single board whose boundless powers are wielded in the last analysis by political force. No power will rise in politics above its source. Private credit, like private business, can not enter into a successful partnership with American politics. It ends in loss of confidence, scandal, and disaster. No board ought to possess such extensive and dangerous powers as proposed in the caucus bill. Unfinited inflation of a paper currency with no mechanism for its retirement, an immense expansion of credits, an arbitrary power to order all the reserve banks in the system rediscount paper, each other's paper, from any part of the Union-not in emergencies, but at any time-the ability to meet promises to pay by substituting new promises and prolong the day of final fiquidation, the easy avenue for creating note issues which are obligations of the United States to be paid in gold, the paradox of centralizing our credit resources by dividing them into from 8 to 12 parts of varying and unequal size, the jealousies thereby engendered between rival sections aspiring for the location of regional banks, the differences in the character of the security and methods of business between communities, sought to be thrust into business relations with each other by forcing credit creation by governmental action, the disparity in resources between the opulent centers of commerce and finance, the fertile and the barren areas, the resulting large capital and deposits of some regional banks will combine to make their accumulated money subject to the wants of speculators. The attack of predatory politics, ever restless when legitimate business may be looted, is a constant danger.

No one but a novice whose experience is limited to the perusal of books and the architecture of air castles expects numan nature to be other under this bill than with other legislation. All laws must be operated by human beings. The assaults on the public officers who hold the purse strings of \$600.000,000 by the impecunious, the adventurers, the borrowers without private credit, the men who mistake political influence for bankable collateral will be the most terrific and persistent in our history. Every man denied will carry his grievance to the ballot box. Has he not listened to the doctrine of the new freedom, and is not free credit a part of it? It is inevitable that a relaxation of the inexorable rules that govern the extending of credit to a borrower will become an issue in future campaigns. It has already become so with credit in private hands. How can it be less so when credit becomes a power attached to public officers who rise and fall with the fortunes

of partisan candidates for political office?

The foregoing neutralize the benefits arising from the concentration and organization of the credit power of the national

banks, as I am able to forecast the future.

I mention another feature I object to, and I do not wish to wound anybody's sensibilities and I do not think I shall. I object to a community in the corn-belt prairies that has plowed its money out of the soil by the sweat of their faces, dug it out of our mines, and made it in our factories, made it with our cattle, our sheep, and our corn, clover, and our hogs, our wheat, flax, barley, and forage, with our mills, our railroads, our traction companies, and our commerce and banking in the great Middle West and in the Northwest, in all that country that has developed since the Civil War, since the banks were first authorized to be created by acts reaching back half a century, in all that country where the virgin sod was never touched by a plow until in our lifetime, during all the developments of this national banking system, I object to that com-

munity's having taken against our will a part of the money that we have made in our country to promote those who have failed

to develop their own resources.

I object to a bank's taking en masse the resources from New York to the foothills of the Rocky Mountains and commandeering them in the interest of a section of the country that has not made money and wants to take it out there by law instead of attracting it there by the legitimate course of trade. That is what this caucus bill is trying to do. You are trying to legislate money from where commerce has placed it to where it can be loaned on bagged peanuts, on Angora goats, and on bales of cotton. I know what is the matter when I look at this bill. You have not made enough money there to promote your business, and you want to coerce the people elsewhere who have made it to loaning it to you by governmental action when you can not get it in any other way. That is the plain unadorned layman's view of this thing. That is credit by government. That is the new freedom. Dig for it, as we did. You have a good country. Develop it. You have free trade in many things under the new tariff. You can buy where you can buy the cheapest; the high cost of living ought to be constantly lowered; you can buy mackerel and codfish from Nova Scotia; you can feed poultry food to your hens and have cheap eggs; you have got Angora goats, and can raise raw material for mohair clothing in your warm country. [Laughter.] You have ostrich farms in Arizona; you can utilize your cacti and rattle-snakes and horned toads for the nutrition of those birds famed for vigorous digestion. Through them noxious and unsightly things are transmuted into waving plumes to adorn the chivalry and beauty of the world. Go ahead and make money; but do not try to come up into the country where they have made it, if you have not got it, commandeer it by an act of Congress, and take it, whether we wish you to do so or not.

There is one part of this bill now that, to my mind, is fear-

fully and wonderfully made. The Treasury is compelled to redeem in gold the reserve notes proposed to be issued by the caucus bill. The reserve banks are permitted to redeem in gold or lawful money. What is "lawful money"? That is the phrase that caused the excruciating agony at the other end of the Capitol when it was struck out. It is back here again, was struck out in a certain place. Lawful money! Supp an cloquent gentleman, at one time from the Platte River, were construing that phrase; suppose he were at the fountainhead of financial authority and were called upon to say what he thinks "lawful money" is, what would the answer be?

The great trouble here is that we misunderstand each other on terms. We mean money on this side in one way, and some of you mean it in the other way. There is a misunderstanding. Maurice Maeterlinck says that hell is a place of infinite misunderstanding. Now, let us understand each other at the outset, and not have any of it in this Chamber. There is but one kind of money in the world; there is but one kind of money in this country. Every other kind of money is a delusion. Do not get mixed up on the idea that anything that has the legaltender quality attached to it is money. The Government can make anything legal tender. At 75 cents a dozen, it could make "a setting of eggs," as my grandmother used to call it, legal tender if it wanted to, and it would be a good legal tender to What is the legal collection of a debt? It is suing the debtor, taking judgment, levying execution, and exposing his property above the exemptions to sale. Somebody bids money. The money that is bid when paid to the judgment creditor satisfies the debt, and that money has attached to it the legal-tender power. In voluntary payment it may be offered by the debtor to the creditor and its acceptance extinguishes the debt; if refused, the creditor can recover no more or different money than that tendered. Any Government can give legaltender quality to any kind of money. It may be called money. It may pay debts at its face. No law can ever fix its buying power. There is but one kind of money, and that money is the gold dollar of 23.22 grains of pure gold or 25.8 grains of standard gold with one-tenth alloy. It is equal in debt-paying and buying power everywhere in the civilized world.

Oh, well, somebody says, greenbacks are money. I do not think so. Do not misunderstand terms. Greenbacks are not money. Federal reserve notes will not be money. Greenbacks have legal-tender power; they can pay debts; they are worth their face now simply because the Government is able to pay them in gold when demanded by the holder. Federal reserve notes may by an act here, by the fiat of Congress, be given legaltender power; silver certificates, silver dollars, may be given legal-tender power, but the ultimate money is the gold dollar, and it has been money from time immemorial.

tain of it discovered in some part of the habitable globe, accessible to man, so that it would become as common as copper or iron, the ultimate redemption money would no longer consist of gold of the present standard. It is because universally and for centuries, from the dawn of recorded history, gold has continued to be the most stable of all the metals. Such money is merely a stable measure of value; it is in the greenbacks a promise to pay the money of redemption. The promise-to-pay money is made a legal tender. It was a declaration of the sovereign that its promise should be taken in payment of debts. Gold is a legal-tender coin. Men would universally take it in satisfaction of debts if the Government never made it so. When the sovereign compels anything to be taken that men would not take voluntarily in business, it embarks on an experiment the end of which no one can accurately predict.

Our lawful money is of various kinds other than gold. The Government, however, is compelled to pay gold, and the reserve banks are given the option of paying gold or any other kind of

money, providing it is lawful.

There is another feature of this bill that has attracted my attention. I am speaking now of the caucus bill. There is in it what I call the "boycott clause." I do not know whether much attention has been paid to it, and I am making my suggestions now for the purpose of provoking future discussion, although at the risk of consuming valuable time. This provision is found in the caucus bill. I am somewhat solicitous to learn the purpose of this provision on page 67, which reads:

Except as thus provided, no member bank shall keep on deposit with any nonmember bank a sum in excess of 10 per cent of its own paid-up capital and surplus. No member bank shall extend directly or indirectly the benefits of this system to a nonmember bank, except upon written permission of the Federal reserve board, under penalty of suspension.

There are 7,509 national banks, according to the last report of the comptroller which I have received, which is dated November 20, 1913. I find by the same report that the national banks' liabilities to State and private banks are \$578,216,313 and some cents. The liabilities of the same banks to the trust companies and savings banks are \$499,000,000 in round numbers. The total liabilities, therefore, of the national banks to other banks-State banks, private banks, trust companies, and savings banksare \$1,077,000,000. The list of the resources of national banks shows that the national banks have deposited in State and private banks to their credit \$242,000,000 in round numbers. total capital and surplus of the national banks is \$1,785,000,000. Ten per cent of this-and the requirement of this paragraph is that they shall not keep on deposit with any member bank in excess of 10 per cent of their capital and surplus-10 per cent is \$178,000,000 in round numbers. The national banks already have deposited in the State and private banks and trust companies \$242,000,000. One hundred and seventy-eight million dollars, the 10 per cent figure, would require the national banks to withdraw from the State and private banks some \$64,000,000 in round numbers. If this were to be regarded as an unfriendly act, the State and private banks could, on the other hand, withdraw from the 7,500 national banks \$1,077,000,000 of deposits or debts owing-and whether they be time deposits or demand liabilities they are debts in some form.

The purpose may be fair or otherwise—I impute no improper motive—but the effect of this paragraph is naturally to create two classes of banks in this country. One class is the member bank and the Federal reserve bank. They are for-bidden to place more than 10 per cent of their deposits in State or private banks. This naturally limits their business. naturally causes a withdrawal of deposits.

What I abhor in legislation is the creation of classes required by operation of law to become hostile to each other. This bill does unnecessarily and without serving any useful purpose create a class war between the two kinds of banks so created.

In that event the national banks would stand to lose, net, \$1,013,000,000 of their resources. This is, in substance, what happened to the second United States Bank. There was an incessant war between the second United States Bank and its branches and the State banks of the different States of the Union. The line was sharply drawn. Jackson in his political campaigns utilized the State and private banks as political agencies to make war upon, and to secure political power to prevent the extension or renewal of the charter of the second United States Bank.

Here is a direct invitation to a war of reprisal by the one

upon the other. It certainly can serve no useful purpose.

It may not be a very considerate kind of comparison, but I do not know how adequately to describe the discord that could be created, or the confusion and chaos, better than by I do not say there is any particular, unalterable commercial could be created, or the confusion and chaos, better than by status attached to gold. If suddenly there were to be a moun-likening this paragraph to the 300 foxes that Samson had, to

whose tails he tied firebrands and turned them loose. Here are about 18,000 private banks and State banks in the country, with 7,500 national banks, and we are turning one loose against

the other to engage in a war of retaliation.

There is yet another feature in connection with State banks. Nearly all the States, especially the larger States of the Union in point of population and in material, industrial, agricultural, and financial resources, have constitutional or statutory provisions for the chartering of State banks. I have had occasion in years past to examine the laws of some of the States, organic and statutory. The organic laws in some of them require all amendments, as well as the original banking laws, to be submitted to a vote of the people before they shall be effective. In pursuance of that constitutional power many of the States have enacted banking laws and submitted them to the people for confirmation. Some of the original acts have been amended Amendments in every case have been submitted many times. in like manner to a confirmation by popular vote. The acts under which State banks are chartered have provisions that are at variance with the requirements of the acts governing national banking associations,

One provision in the bill says that trust powers may be granted to banks, taking care, however, that they are not in contravention of the laws of any State. I do not know how that would operate. I do not know how it is possible for it to operate in some of the States. Some of the trust companies, outside of doing an investment business, do a very large business in accepting and executing trusts, as testamentary trustees, executors, administrators, receivers in bankruptcy, in the administration of trust funds, and in the handling of property in a multitude of fiduciary capacities. These trust companies by the statutes or many States are not required to give bond. The order of the court, or whatever authority appoints them, if a bond would be required from a natural person, is that no bond shall be given

Ly the trust company.

In almost every case where this is so, it is because the trust company before it begins business is required to put certain securities in the hands of the State auditor or the State banking superintendent, or whatever answers to a similar authority. The security so deposited depends in its amount upon the size of the city in which the trust company is located. In some cases the minimum in the smaller cities is \$50,000, and runs up, increasing with the size of the city, to \$1,000,000, and increases thereafter in proportion to the amount of money kept or the trusts that are accepted to be executed by the company.

These securities are taken from the trust company, put in the hands of the banking superintendent, and there impounded by the provisions of the banking law, to remain as long as the trust company shall continue to do business. This would require, under the State banking act, a segregation of that much of the assets of the trust company. If the trust company seeks to be made a member of the Federal reserve bank, it must comply with the provisions of the bill. In that event there are two conflicting authorities. No such requirements are in this bill and nothing in lieu of it. There are some securities in the hands of the State banking department. There are other securities and cash under the inspection of a Federal authority, and the reserves are segregated and put in a reserve bank under a Federal authority. If reserve notes are issued, some of the bank's paper is deposited with the comptroller as collateral. Such a bank serves two masters. Will not the usual result follow?

The methods of extending credit, of taking collateral, of establishing the worth of the names on notes or bills of exchange are different. The requirements of the State banking laws do not at all agree with the provisions of this bill, especially the caucus bill. There is at once a conflict of jurisdiction between the two authorities.

I do not think this part of the bill is well worked out. One or the other ought to be paramount. If they come in, the bill ought to provide that appropriate legislation shall be had by the State to permit the release of the trust company from all obligations to the State department, and thereafter the supervisory power of the reserve bank or other Federal authority should impound these securities and hold them for the protection of those who are the beneficiaries under the trust, so that no injury may result. If that is not provided, I do not see how any trust company can comply with the provisions of this bill and become a member bank unless it surrenders its State-created powers.

The acceptance and execution of trusts by a national bank change the jurisdiction of that immense volume of business built up under State laws and State court decisions from State to Federal control. It is an adventure on a vital subject into the unknown.

The method of making loans, for instance, is a vital point of difference. Some of the State banking laws will not permit any officer or employee of a bank who has access to its funds or securities to borrow money from the bank in which he is employed or for which he acts until the loan has been approved by the board of directors. There is no such provision here. This would be a matter of conflict in the making of loans. A bank examiner from Federal authority would pay no attention to this provision, whereas the bank examination made by State authority would require a strict observance of it.

So these conditions, as I say, would require some change in

this paragraph of the caucus bill.

Something has been said here about the large banks and about the New York banks. I hope I shall never become a victim of mere phrases. War cries signify nothing, although a nickname, an epithet, or a phrase will sometimes do much temporary execution. The mere fact that somebody may cry "Wall Street!" does not necessarily imply that the person so crying has the best of the argument. The mere fact that somebody may criticize the large banks of New York City does not imply that the merits of the controversy are with this or that bill.

I am not here to defend the New York banks. They need no defense. If they do, it can be made by much abler tongues than mine. The Senators from that State, men of great capacity and experience, of wide knowledge, both of law and of practice, can do so. I wish, however, in justice to some of those banks or their predecessors, not to let the occasion pass without one last word.

In 1862 or 1863 this country was without specie. We were in the midst of a great struggle for national existence. Secretary Chase was at the end of his financial resources. A large part of the Government of England looked with a critical and unfriendly eye upon the struggling Republic of the New World. They had acknowledged the beligerency of the Confederate States of America. Lincoln, in this Capital, was administering the duties of his great office in the midst of unparalleled difficulties. Our credit was constantly sinking. The future was dim and unrevealed. Many reverses on the field had happened. Our revenues were not sufficient for our expenditures. Every day of that unfortunate period of our civil life there went out in expenses \$2,000,000. Our bonds were selling below par at a high rate of interest. Our circulating-note obligations were at a discount in gold.

At this perilous time, when the Treasury was without gold, the predecessors of the New York banks did something that I will never forget. I was in my cradle at the time and have no personal memory of it, but I can read it, and I have a lively memory of what those men then did. Some of the boys of that time are the bankers of to-day in Philadelphia and New York City. They can remember the stress of that time among their elders. In that dark hour of public peril, I wish to record here for the banks of New York City that they came to the rescue, and they put \$150,000,000 in gold in the Union Treasury of this country, and still they and their successors are to-day objects of suspicion, and the dollar is called "a cowardly dollar."

It was not a cowardly dollar in the administration of Abraham Lincoln. It was an honest dollar and it was a fearless dollar, because it helped to keep the Union to-day where every one of the 48 States has two Senators sitting in this body. That is over, never to return; but let us not forget that the \$150,000,000 given to the Government by the New York banks drained them of their specie resources. The total circulation of all the banks of the United States at that time was only \$202,000,000, and the New York banks put up \$150,000,000 of gold.

Now, about the country banks. In the same report I note that out of total national-bank resources of \$6,260,000,000, in round numbers, the country banks, all outside of the reserve and cen-

tral reserve cities, have 52 per cent.

It is not the New York banks that are hit by this bill. They will survive and take care of themselves. They have wide markets for securities, their resources are large, their foreign trade extensive. We scarcely ever see a foreign bill of exchange in the inland cities outside of the city of Chicago, and they come largely from the ports of entry on the Atlantic coast. The cities that do business with foreign countries have a double chance to survive where the inland cities have not.

The country banks, comprising 52 per cent of the loans and discounts, are affected by this bill in a vital spot. Of the specie resources of the national banks, comprising a total of \$710,000,000, the country banks have nearly 30 per cent. Of legal-tender notes, they have about 33½-per cent. Of all the capital stock of the national banks, the country banks have 60 per cent. Of the surplus, they have more than 50 per cent. Of the national-bank notes outstanding, they have 55 per cent. Of

the individual deposits, the country banks have more than 60

I am quoting these figures only to show that the country banks are the larger proportion of the 7.500 banks affected by this bill. Their resources, their loans, their discounts, their specie, their legal-tender notes, are in every instance, in the larger items a majority running from 52 to 60 per cent.

Mr. President, it is nearly 11 o'clock, lacking but a couple of minutes of the hour. I have a few more points I should like to develop, but I will take the chance to get to them on some future occasion when we read the bill by paragraphs.

The PRESIDING OFFICER (Mr. Lea in the chair). The

hour of 11 o'clock having arrived, the Senate stands adjourned until 10 o'clock to-morrow.

The Senate thereupon (at 11 o'clock p. m.) adjourned until to-morrow, Thursday, December 11, 1913, at 10 o'clock a. m.

# HOUSE OF REPRESENTATIVES.

Wednesday, December 10, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

Eternal God, our heavenly Father. Thy loving heart pours itself out upon us in a thousand blessings day by day; blessings which measure up to our physical, mental, moral, and spiritual needs. And what dost Thou require of us but to do justly, love mercy, and walk humbly with Thee. Grant, O most merciful Father, that in all the relationships of life we may strive earnestly to do Thy behests and make ourselves worthy of Thy tender mercies and loving care. In the spirit of the Master.

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment joint resolution of the following title:

H. J. Res. 164. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House to pay the officers and employees of the Senate and House, including the Capitol police, their respective salaries for the month of December, 1913, on the 20th day of said mouth.

PRINTING OF HOUSE LOBBY COMMITTEE REPORT.

Mr. GARRETT of Tennessee. Mr. Speaker, I ask unanimous consent that there may be printed 1.000 additional copies of the reports (H. Rept. 113) that were read yesterday.

The SPEAKER. The gentleman from Tennessee asks unanimous consent that there shall be printed 1,000 copies of the two

reports that were read here yesterday.

Mr. MacDONALD. Reserving the right to object, I should like to ask the gentleman if there is any objection to having

2,000 copies printed?

Mr. GARRETT of Tennessee. I will state this to the gentleman from Michigan: I apprehend that there will be a request possibly for more copies than that, but I did not want to present a resolution for that until a little later, when the committee can determine with some definiteness about how many will be required. This thousand copies for which I am now asking is simply for the present use of the Members of the House and Senate. I think we should limit it at this time, and then I will present a resolution and let it go to the Committee on Printing, in order to get the number of copies which may be

found to be necessary.

Mr. MacDONALD. From the requests which I have received. I am satisfied that there will be a demand for a good many

copies.

Mr. MANN. Has the gentleman had an estimate of the cost

of printing this?

Mr. GARRETT of Tennessee. No: I have not an estimate of the cost. There were only 385 copies of the House print made yesterday. I had thought there would be a larger House print than that or I should have ordered a committee print, as I had the right to do.

Mr. MANN. The usual number was printed, of course.

Mr. GARRETT of Tennessee. The usual number.

Mr. MANN. And the House got 385.

Mr. GARRETT of Tennessee. The House got 385 copies, not enough for each Member to get a copy yesterday. I amperfectly willing that the request shall be for 2,000 copies. I have no objection to that.

Mr. BUCHANAN of Illinois. Mr. Speaker, I believe there was a resolution passed in the convention of the American Federation of Labor requesting that an effort be made to secure a number of copies of this report, as well as of the hearings. should like to ask the gentleman if he has had any requests from that source.

Mr. GARRETT of Tennessee. Does the gentleman mean from the American Federation of Labor as a body?

Mr. BUCHANAN of Illinois. Or any officials of it.

Mr. GARRETT of Tennessee. No; I have not had any such requests for it

Mr. BUCHANAN of Illinois. There is a desire on the part of the representatives of the labor of the country to have additional copies.

The SPEAKER. Is there objection?
Mr. BUCHANAN of Illinois, I object to the request for 1,000 copies. Mr. Speaker. If you will make it more than 1,000, I will not object.

Mr. GARRETT of Tennessee. I will reduce the request to 500, if necessary.

Mr. DAVENPORT. He wants a larger number. Mr. GARRETT of Tennessee. I explained to the gentleman from Michigan that I understand there will be a request for these copies later. It is my purpose, when I have ascertained about what number will be equired, to present a resolution and let it take the usual course, but this request I am making now is for the immediate convenience of the membership of the House, not for outside bodies or for general distribution. A number of Members were unable to obtain copies yesterday. I hope the gentleman will not object to that.

Mr. MacDONALD. Still reserving the right to object, I understand the gentleman to say he is willing that the request

shall be for 2000 copies.

Mr. GARRETT of Tennessee. I have no objection to 2,000. The SPEAKER. Does the gentleman ask for 2,000?

Mr. GARRETT of Tennessee. I will submit the request for 2.000.

The SPEAKER, The gentleman from Tennesser [Mr. GAR-RETT | asks unanimous consent to print 2.000 copies of the two reports that were read here yesterday and printed in the Con-GRESSIONAL RECORD. Is there objection?

There was no objection.

## LEAVE TO WITHDRAW PAPERS.

By unanimous consent, at the request of Mr. Roberts, of Massachusetts, leave was granted to withdraw from the files of the House without leaving copies the papers in the case of James Wood (H. R. 4277, 62d Cong.), no adverse report having been made thereon.

By unanimous consent, at the request of Mr. Austin, leave was granted to withdraw from the files of the House without leaving copies the papers in the case of Adam and Noah Brown (H. R. 6286, 62d Cong.), no adverse report having been made

# CALENDAR WEDNESDAY.

The SPEAKER. This is Calendar Wednesday, and the call rests on the Committee on Military Affairs.

The Chair desires to suggest to the House that Members can not sit in their seats and make any motion whatever; they can not sit in their seats and interrupt a Member who has the floor. The Chair understands that these things are done without due consideration and without any desire on the part of a Member to disturb the order of the House, but he does disturb it. The call rests with the Committee on Military Affairs.

The Clerk proceeded with the call of committees.

TENURE OF OFFICE OF THE MAJOR GENERAL COMMANDANT, UNITED STATES MARINE CORPS.

Mr. PADGETT (when the Committee on Naval Affairs was called). Mr. Speaker, by direction of the Committee on Naval Affairs, I call up the bill H. R. 10081, a bill to make the tenure of the office of the major general commandant of the Marine Corps for a term of four years.

Mr. MANN. Mr. Speaker, I make the point of order that this bill, which is on the House Calendar, should be on the Union

Calendar.

The SPEAKER. Upon what ground does the gentleman make that point of order?

Mr. MANN. A part of the bill reads:

And any officer appointed under the provisions of this act who shall be retired from the position of commandant of the Marine Corps by reason of age or length of service snail have the rank and retired pay of a major general; if retired for any other reason, he shall be placed on the retired last of officers of the grade to which he belonged at the time of his retirement: Provided, That an officer serving as commandant shall be carried as an additional number in his grade while so serving, and after his return to duty in his grade until said grade is reduced to the number authorized by law.

The latter provision provides for an additional officer in the Marine Corps, which, of course, carries with it the pay, making an additional draft on the Treasury. The first part fixes the pay of a retired officer, and that would involve an expenditure of money from the Treasury.

Mr. PADGETT. The last proviso says:

Provided further, That nothing herein contained shall operate to increase or reduce the total number of officers in the Marine Corps now provided by law.

Mr. MANN. That may be, but it puts them in a different

grade, and there is a difference in the pay.

Mr. PADGETT. But it does not increase the total number. The SPEAKER. If it increases the total appropriation it ought to be on the Union Calendar, and there is where it goes. The House will resolve itself into Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into Committee of the Whole House on the state of the Union, with Mr. Clark of

Florida in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 10081, a bill to make the tenure of the office of the major general commandant of the Marine Corps for a term of four years, and the Clerk will read the bill.

The Clerk read the bill, as follows:

The Clerk read the bill, as follows:

Be it enacted, etc., That hereafter when a vacancy shall exist in the position of commandant of the Marine Corps the President may appoint to such position, by and with the advice and consent of the Senate, an officer of the Marine Corps on the active list not below the grade of field officer, who shall hold office as such commandant for a term of four years, and who, while so serving, shall have the rank, pay, and allowances of a major general in the Army; and any officer appointed under the provisions of this act who shall be retired from the position of commandant of the Marine Corps by reason of age or length of service shall have the rank and retired pay of a major general; if retired for any other reason, he shall be placed on the retired list of officers of the grade to which he belonged at the time of his retirement: Provided, That an officer serving as commandant shall be carried as an additional number in his grade while so serving, and after his return to duty in his grade until said grade is reduced to the number authorized by law: Provided further, That nothing herein contained shall operate to increase or reduce the total number of officers in the Marine Corps now provided by law.

Mr. PADGETT. Mr. Chairman, under the present law the

Mr. PADGETT. Mr. Chairman, under the present law the commandant of the Marine Corps is appointed to hold during his official life; that is, he holds until he retires at the age of This bill intended to make the appointment for a specific period of four years. It is recommended by the department in a letter of the Secretary of the Navy, which is embodied in the report. Under the existing law when the commandant retires he retires as a major general. Under the bill as reported if he retires from the position of commandantthat is, if he retires from the service while holding the office of commandant-he retires as a major general; but if he retires from the office and not from the service, he goes back to the grade to which he was entitled in the line. So that his advancement to the grade of major general would have been for the period during which he has served. If he retires from the

service, he retires in the grade he holds in the line.

You will notice that the bill as reported provides that "if he retires as commandant of the Marine Corps by reason of age or length of service," but the committee this morning, upon recommendation of the Secretary of the Navy, has directed me to offer an amendment to insert in line 12, after the words "Marine Corps," the words "in accordance with the provision of sections 1251, 1622, 1623, Revised Statutes of the United States or," so that it would include a provision that he may retire on account of disabilities incurred in the line of service. For instance, under the bill as printed he could retire on account of age or length of service, but if he were wounded in battle and was retired, he would retire in the grade in which he belonged in the line, and not in the grade of major general, which rank and grade he held while serving as commandant. These sections of the Revised Statutes are the sections which provide for and regulate the retirement for disabilities in the service. So that if he retires from the office of commandant, he would have the right to retire for age and length of service and for disabilities incurred in the line of duty.

Mr. Chairman, will the gentleman yield? Mr. ADAIR.

Mr. PADGETT. Yes. Mr. ADAIR. Mr. Chairman, I would like to ask the gentleman if there is involved in this bill or proposition any increase of salaries or any increase of cost to the Government?

Mr. PADGETT. I do not think that it would involve any additional cost. Under the present law a commandant when appointed serves until his retirement at the age of 64. He is appointed to hold during the term of his official service; that is, until he retires at the age of 64 or until he should retire for other cause. When he retires, he retires with the grade and rank of major general. Under the provisions as reported in this bill he would be appointed for a period of four provisions of the bill as reported and existing law.

Of course, if they were to appoint a man who was Vears 60 years of age every four years, you would have a man retiring every four years, the same as under existing law. Under existing law, if the President were to nominate and the Senate confirm the appointment of a man 60 years of age, he would retire at 64 and another one appointed at 60 years of age would retire at 64, so that the same possibilities exist under the two laws. It would depend on the action of the President. If you appointed a man under 60 years of age and he served four years and retired, he would not retire as major general at all, and would never retire as a major general. So that if the President were to nominate and the Senate confirm a man under 60 years of age every time, there would never be a retirement. Therefore, under this law the possibilities are the same so far as the number retiring is concerned, and it might be less.

Mr. ADAIR. Does the gentleman think it would have a tendency to increase the retired list among the officers in the

higher rank?

Mr. PADGETT. I think not, if the President of the United States will not nominate men who are 60 years of age.

Mr. SLAYDEN. Mr. Chairman, will the gentleman yield? Mr. PADGETT. Certainly.

Certainly.

Mr. SLAYDEN. Is it not conceivable that a man may be chosen for the post of commandant of the Marine Corps under 60 years of age, say, 59 years, who would, after serving four years, be retired because of length of service and not because of age, and thus get added rank?

Mr. PADGETT. Yes. Mr. SLAYDEN. The statement that the gentleman made a moment ago was that if they appointed men under 60 years of

age that could not happen,

Mr. PADGETT. No; I did not say it would not happen. I was speaking of the age limit, and was explaining the age limit. That is also possible under existing law, and is taking place The present commandant of the Marine Corps has made application for retirement. He was appointed for an indefinite term, and he is not 64 years of age, but he has had the length of service required, and he is making application under existing law for retirement on account of length of service. It was just as I stated a moment ago.

Mr. SLAYDEN. He will retire with the rank of major

general?

Mr. PADGETT. Yes; under the present law. Mr. HAY. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Certainly.

Mr. HAY. What provision is there in this bill which would prevent the President from redetailing any officer who was detailed for four years as commandant of the Marine Corps?

Mr. PADGETT. None whatever. He can reappoint him. would then go to the Senate for confirmation, and, if confirmed, serve a second term; but if you got an inefficient man, instead of his holding for his official life, he would terminate in four years under the proposed bill and an efficient man could be

Mr. HAY. Does the gentleman know of an instance where a man has been detailed as the head of a corps where he has not been redetailed and kept in there until he was retired for Mr. HAY.

Mr PADGETT. It does not do that Whenever he is first appointed he is appointed for the full term until his retirement. Mr. HAY. Oh, no; under the provisions of this bill you can appoint a major who was 45 years of age and he could stay there for 19 years.

Mr. PADGETT. Yes.

Mr. HAY. And I want to say to the gentleman that the experience in the War Department has been that wherever a man has been detailed at the head of a corps as a brigadier or a major general he has been redetailed and redetailed again until the age for retirement arrives, and he is only retired on account of age.

Mr. PADGETT. The gentleman does not seem to get the existing law. Under existing law it is not a detail; it is an appointment.

Mr. HAY. I understand that.

Mr. PADGETT. It is the same under the present law and this proposed bill.

Mr. HAY. I understand that.

Mr. PADGETT. You can appoint to-day a major, and if a major is appointed to-day he would hold until he is 64 years

So that there is no change whatever in the

Mr. HAY. But the gentleman does not catch my point. My point is, while it is an appointment now, it will be an appointment then.

Mr. PADGETT. Yes.

Mr. HAY. The President has to appoint all of these officers.

Mr. PADGETT. Yes.

Mr. HAY. Whether they are appointed for four years or whether they are appointed for life or for the term which they would hold these offices. Now, I say in practice that men who have been detailed and appointed to the position of brigadier general-for instance, take the Signal Corps, the chief of which corps is a brigadier general-it has been the uniform custom to redetail this man and to reappoint him until he arrives at the age of retirement. Now, is there anything in that bill which would require this commandant of the Marine Corps to give up the position at the end of the four years?

Mr. PADGETT. There is nothing that keeps the President from reappointing him. The President can reappoint him until he becomes ineligible. Under existing law when he appoints him holds until he is 64. Under the proposed law he appoints him for four years, and the President has the opportunity to appoint somebody else. Whether he will do that or not. I do not know: but the law gives him the opportunity, the power, and the au-

thority so to do. Now, that is the difference.

Mr. SLAYDEN. Does the gentleman not think there ought to be a provision of law which would require a man detailed or appointed, whichever word you prefer to use, to the rank of commandant for four years, provided he does not reach the end of his official life before the four years of his detail shall have passed, to go back to the rank and position which he had held before he was detailed as such?

Mr. PADGETT.

And not be reappointed? Well. yes; I say not be reappointed. Mr. SLAYDEN.

Mr. PADGETT. This bill does provide that when he goes out at the end of four years he goes back to his rank in the line.
Mr. SLAYDEN. To the rank he held before. To the rank he held before.

Mr. PADGETT. Yes: it provides that-

Mr. SLAYDEN. But no provision against redetail?

Mr. PADGETT. None.

Mr. SLAYDEN. Does the gentleman not think there ought to be?

Mr. PADGETT. I do not. I think that the President and the country ought to have an opportunity to avail itself of the man who is the most available and the most useful.

Mr. SLAYDEN. And an opportunity for favoritism?

Mr. PADGETT. No. sir; I think not. I think that the President of the United States can be and must be trusted to exercise intelligently and patriotically the duty which Congress confides

Mr. HOWARD. Mr. Chairman, I want to propound this question to the gentleman from Tennessee: In effect, if this bill is passed, an officer 57 years of age, without the requisite length of service to retire from office, say he attains 63 years of age. instead of being retired because of the fact he had not the length of service goes back into the Marine Corps as a colonel?

Mr. PADGETT. Yes: he goes back to the grade he held. Mr. HOWARD. In the grade from which he was promoted to be major general commandant.

Mr. PADGETT. He may move up, in the meantime, in the

Mr. HOWARD. By promotion. That would put a man back in the service probably three or four numbers below the commanding position that he occupied as major general commandant

Mr. PADGETT. That is true.

Mr. HOWARD. With this scramble that is always in evidence when a commandant is to be appointed.

You take this man and put him back as a colonel, or probably as a lieutenant colonel or major, to serve the balance of his time before he retires?

Mr. PADGETT. That is true.

Mr. HOWARD. Now, I want to ask the gentleman, in all candor, to give an expression of his opinion to this House as to what he thinks the effect of such a law would be upon the dis-

cipline in the Marine Corps. Mr. PADGETT. I do not think there is any use of speculating on that, because we are doing it every day. Under the law as it now stands in the Navy any officer, even a commander, may be appointed chief of a bureau, and when he is appointed chief of a bureau he has be rank, pay, and allowances of a rear admiral, and when he roes out of the position of chief of bureau he goes back to the rank from which he was appointed And only within the last few weeks Admiral Twining, while serving as Chief of Bureau of Ordnance, had the rank, title. pay, and allowances of an admiral, but when he passed out of

that he went back and is now serving as a commander. Admiral Andrews was Chief of the Bureau of Navigation, having control and government of the whole personnel of the Navy. He passed away from the position of the chief of the bureau and went back into the position of commander, and since then has come up for promotion to captain. He has not yet been confirmed by the Senate, and is now serving in command of a ship as a commander. We have had that for years and years, and we have had multiplied instances of it, and instead of doing harm I think it does good. It gives an incentive to more men for opportunity to do something, and at the same time it gives an opportunity to the Government to place a man back in the ranks where his ability fits him, either up or down.

Mr. HOWARD. Now, Mr. Chairman, if the gentleman from Tennessee will indulge me just a moment further. I can see the logic of his statement if all those who sought to be commandant of the Marine Corps would, within the time that they were serving as major general commandant, be retired by virtue of length of service, but I venture the statement that not one man in ten to-day who is a colonel, a lieutenant colonel, or major in the Marine Corps would want to accept the position of major general commandant of the Marine Corps if he knew that during the time of his service as such he would not receive, as the gentleman from Virginia [Mr. HAY] stated a while ago, a reap-pointment to that office which would retire him within that

grade during his tenure of service.

Now, further than that, if the gentleman will permit, this hill seeks to put men in office from the line without any idea of

rank; that is to say, any man—

Mr. PADGETT. From the major up, and not below a major.

Mr. HOWARD. I understand not below a major. It means from major up.

Mr. PADGETT. But there are line officers below the runk of

Mr. HOWARD. But the captain and those folks never get anything, because they are swimming too close to the bank. [Laughter.] I am talking of folks likely to get these promo-

Now, I go back to the original proposition Does the gentleman think it would have a wholesome effect on the discipline of the Marine Corps, taking into consideration the fact that we have a picking board in the Navy and not in the Marine Corps—does not the gentleman think it would have an unwholesome effect to reduce a man to major general commandant after serving four years in the Marine Corps to that of lieutenant colonel?

Mr. PADGETT. I do not, and I want to say that Maj. Gen. Biddle, who is now major general commandant of the Marine Corps, and has been for the last two years, has recommended this legislation, and is to-day recommending it, for the efficiency of the service. He is the commandant of the Marine Corps.

I want to say further that we have instances of it and illustrations of the workings of it with all of the bureaus. bureau chiefs go back into their rank, and yet whenever there is an opportunity for appointment as chief of a bureau there are numbers of applicants who want it, knowing that when they retire-not longer than four years, and many of them do not serve as much as four years—they are to go back into the ranks and they take up the service patriotically and efficiently.

Mr. HULINGS. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Tennessee yield

to the gentleman from Pennsylvania?

Mr. PADGETT. Yes, sir. Mr. HULINGS. The gentleman says appointment under this bill is for four years. There is nothing to prevent a reappointment, is there?

Mr. PADGETT. Nothing whatever.

This bill provides that the President may Mr. HULINGS. retrieve his mistake at the end of four years if he has made one?

Mr PADGETT. That is it.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield?

Mr PADGETT. Yes, sir.

The chairman of the Committee on Naval Mr. GOULDEN. Affairs has so ably and so satisfactorily given the information which I desire that I simply want to thank him therefor and assure him of my appreciation of his courtesy in allowing me to make this statement.

Mr. OGLESBY. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from Tennessee yield

to the geutleman from New York?

Mr. PADGETT. Yes. Mr. OGLESBY. Does this make any change in the existing law as to the grade from which men may be selected to the post of commandant of the Marine Corps? Mr. PADGETT. None whatever.

Now, Mr. Chairman, I ask for the reading of the bill for amendment.

The CHAIRMAN. The Clerk will read.

The Clerk rend as follows:

Be it enacted, etc., That hereafter when a vacancy shall exist in the position of commandant of the Marine Corps the President may appoint to such position, by and with the advice and consent of the Senate, an officer of the Marine Corps on the active list not below the grade of field officer, who shall hold office as such commandant for a term of four years, and who, while so serving, shall have the rank, pay, and allowances of a major general in the Army.

Mr. MANN. Mr. Chairman, has the gentleman from Tennessee resumed his seat yet? Is this being read in the time of the

The CHAIRMAN. This is being read for amendment.

Mr. MANN. Not yet. Whenever the gentleman from Tennessee resumes his seat I desire to take the floor.

Mr. PADGETT. I will state to the gentleman from Illinois that I have no desire whatever to cut off debate. After I had concluded I looked around over the Hall and nobody addressed I will withdraw my request for the present.

Mr. MANN. Owing to the confusion, Mr. Chairman, we could not hear the gentleman from Tennessee, but we could see him.

It looked as though he still had the floor.

The CHAIRMAN. Does the gentleman from Illinois desire to be recognized?

Mr. MANN. Yes; I desire to be recognized in my own time.

The CHAIRMAN. The gentleman from Illinois [Mr. MANN] is recognized.

Mr. MANN. Mr. Chairman, there are two theories, upon either one of which you may appoint a commandant of the Marine Corps

Mr. PADGETT. Mr. Chairman, I reserve the remainder of

Mr. MANN. There are, I believe, 10 colonels in this corps, and when a commandant is retired the President appoints a new commandant, or head of the corps, from one of the colonels. Under the existing law the new commandant remains commandant until he retires or dies or resigns. For a number of years the Navy Department has been urging the passage of this bill. Under the existing law when the President appoints a new commandant he attempts to select from the colonels eligible for appointment the best man for the place, and I think in the main has been in the past singularly successful.

Now, the proposition comes up that a new commandant shall only be appointed for four years, and if we could be sure that when appointed he would serve four years, perhaps there would be no valid objection to the passage of the bill. Under the existing law the new commandant is appointed on merit, but if

this bill becomes a law what will be the procedure?

Here are 10 colonels, one of them eligible for retirement in January, one of them eligible for retirement in June next, one of them eligible for retirement in December next. If not appointed commandant, they will be retired in the grade of colonel and receive the pay and allowances of a retired colonel—very much less, by the way, than the pay and the allowances of a major general. Under this state of affairs every one of the 10 colonels would be in favor of the appointment as commandant of the colonel who would be retired in January next, and in January that commandant would be retired as a major general; and the colonel then who was to be retired in June would be appointed as commandant, and in June he would be retired as a major general; and the next colonel eligible for retirement would be appointed as commandant, and he would be retired as a major general when the time came. And if this bill becomes a law it is not improbable that every one of the 10 colonels, most of whom under existing law when they reach the retiring age will be retired as colonels, would probably be retired as a major general.

Now, I do not blame these gentlemen for wishing to be retired at higher pay. I have no criticism of the Army or Navy officer who wishes to be retired at the highest possible compensation. It is his business to look out for himself. It is our business to

do that which is best for the country at large.

Mr. TALBOTT of Maryland Will the gentleman yield? Mr. MANN. I yield to my distinguished friend from Maryland.

Mr. TALBOTT of Maryland. Could not the condition which you have described happen just as well under existing law as under this bill?

Mr. MANN. It could not.

Mr. TALBOTT of Maryland. Why not? Mr. MANN. Under existing law the President endeavors to select the man for commandant on merit; but under this lawthe instances are frequent-

Mr. TALBOTT of Maryland. Does the gentleman mean to say that under existing law if the President wanted to do what the gentleman has described he could not do it?

Mr. MANN. Oh, he could appoint these people; certainly. Mr. TALBOTT of Maryland. Yes. That is all I wanted to

Mr. MANN. Under existing law the President selects the man on merit, because he serves during his tenure of office. Only -and I do not mean to criticize what was donedistinguished general who was Chief of the Corps of Engineers of the Army retired in advance of the time when he was required to retire, after he was permitted to retire under the law, in order that another member of the Engineer Corps might be appointed Chief of Engineers, so that he might be retired as a major general.

It will always be done when it can be done. Now, the present

system endeavors to select the best man for the place.

In my opinion, the reason why this bill has been so urged for ears is because it offers an opportunity to retire officers at a higher grade, and I have heard no reason given for changing the system except the effect on the retiring officers. If the House is anxious to increase the burden and the load of the retired officers of the Army and the Navy, it ought to pass this bill. I do not find fault with the present system, but I do not believe it ought to be increased or enlarged.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentle-

man yield?

Mr. MANN. Certainly.

Mr. BUCHANAN of Illinois. I supported this bill in the committee, and I do not understand how it makes it possible to increase the number on the retired list at higher pay. gentleman has not made it clear to me how it is possible to create more generals under this bill than would be possible under the present law, and he has admitted to the gentleman from Maryland [Mr. Talbott] that it might be done under the pres-

Mr. MANN. The reason is because the vacancies will occur

so much more often.

Mr. BUTLER. And they are bound to come.

Mr. MANN. It is inevitable, when you have a four-year period, that the opportunity to fill this position occurs that much more frequently than if you have a longer period.

Mr. BUCHANAN of Illinois. Will the gentleman yield fur-

Mr. MANN. Certainly.
Mr. BUCHANAN of Illinois. Is it not possible under the present system for the President to appoint a man 60 years of age, who in four years will be retired on account of age, or a man who may be retired on account of length of service? And can not the President reappoint every four years under this bill? This permits the President to appoint an officer who is the most efficient, and if he becomes inefficient it gives the President an opportunity to remove him. It seems that the opportunity is greater under this bill to create a greater efficiency than under the existing law, because at the present time there is no power to remove a commandant if he becomes inefficient.

Mr. MANN. I take it that if any commandant becomes in-efficient Congress has the power to change the law-to cut off his term. As far as that is concerned, I think no one of them has ever been charged with inefficiency up to date. But if you pass this law, every four years comes the temptation to appoint a man solely for the purpose of giving him pay at a higher rank. Everyone in the House who is familiar with the practice knows that it has been a common practice to promote generals in the Army and officers in the Navy for the sole purpose of having them retired at higher pay, and it has very often been announced that that was the reason for the promotion.

Mr. FOSTER. I should like to ask my colleague a question.

Mr. BUCHANAN of Illinois. Will the gentleman yield further?

Mr. MANN. Certainly.

Mr. BUCHANAN of Illinois. I do not understand how this makes it possible to increase the number more than under the present law. The gentleman has not made it clear to me yet, although he is a very able Member of the House.

Mr. MANN. Because the opportunity comes that much oftener. It is not customary now to appoint a commandant who is within four years of the retiring age, and hence the opportunity does not come every four years under existing law to run these people through this conduit into higher retired rank; but if you put in a new commandant every four years, you give the opportunity that much oftener for this temptation to be availed of.

Mr. BUCHANAN of Illinois. I believe the gentleman has admitted that the practice is here now. What would be the incentive on the part of the President to take advantage of the opportunity under the new law any more than under the present

Mr. MANN. Well, I think it is perfectly patent. I have given an instance of where the officer was to be retired in January or June. Of course that is not the way the retirement comes. Usually several officers are eligible for retirement at the same time. If it happens to come at a four-year period

under this law, they will all be retired through the conduit of this system as major generals.

Mr. FOSTER. I have yet failed to understand—it is probably my fault—how these officers will be retired at the high rate. If a colonel serves four years as commandant and goes back to his command he takes the same grade, and if he should be 64 years of age, eligible to be retired at the end of his service as commandant, does he retire at a higher grade than he served

before he was promoted?

Mr. MANN. If he goes back as a colonel he would be retired as a colonel, but if he is retired while he is commandant he is retired as a major general.

Mr. FOSTER. If he is 64 years of age, eligible to be retired while serving as commandant, he retires at the pay of a major general?

Mr. MANN. I do not think he is required to be 64 years of age. I do not think a man has to be 64 years of age to be retired in the Marine Corps service. He is compulsorily retired at the age of 64, but if he can retire as a commandant, as a major general, within the term he retires as a major general because he has served for 30 years. Then the next man would do the same thing. You will never, in my judgment, see a commandant at the head of this corps who will ever go back in the corps to a position as colonel. He will be retired as a major general. The retired pay of a major general is higher, I think, than the pay of a colonel. While the bill provides in reference to them, as a proper precaution, no one familiar with the service ever expects that to be done. I do not think anybody desires it to be done. The man who has been a commandant ought not to be put back in a subordinate position.

Mr. FOSTER. The reason I asked my colleague the question is that I understood the chairman of the committee to say that he was retired at the rank which he held before being advanced to the rank of commandant.

If he is retired while commandant, no matter MANN. what his rank was before, he is retired as a major general. If his term runs out while he is commandant and he is foolish enough not to retire, he would go back to his former grade of Then if he is retired after that he would be retired as a colonel. But if there is anybody in the Marine Corps so foolish as to do that he ought to be dismissed for inefficiency.

Mr. FOSTER. Under this bill-and I think the gentleman is correct-his contention is that there would be more men advanced who would be entitled to be retired at a higher grade?

Mr. MANN. Undoubtedly; a man who is commandant and can retire as a major general and let his friend come in as a commandant and retire as a major general would be very unkind, both to himself and his friend, if he did not avail himself of the opportunity.

This is not the first time this bill has been before Congress. When the last vacancy occurred, at the time Gen. Biddle was appointed commandant, and before his appointment, the Navy Department recommended the passage of this bill. Congress declined to pass it. I do not believe that this House, which I think is not any more favorable to retiring officers at a higher

pay than the previous Congress, ought to favorably consider it.

Mr. PADGETT. Mr. Chairman, I want to make one or two
observations. This is my ninth year in service on the Committee on Naval Affairs, and if this bill has been before the committee at any time, I fail at this time to recall it. I do not
remember that the department has ever recommended this bill before. It is true that Gen. Elliott, the former commandant, did advocate such a law. Gen. Biddle, the present commandant, has advocated it, but if the department has ever heretofore recommended it, I fail at this time to recall it. I have asked the gentleman from Maryland, who sits by me, Mr. Talbott, a member of the committee, and I have also asked the clerk of the committee, and neither one of them recall that this matter has been before the committee heretofore.

Mr. MANN. Will the gentleman yield?

Mr. PADGETT. Certainly.

Mr. MANN. Does not the gentleman recall the fact that when Gen. Elliott was retired the appointment of a new commandant was held up for a long time in order to let Congress act on the recommendation of the Navy Department, making a fixed term of four years?

Mr. PADGETT. I do not. Mr. MANN. Well, I do.

Mr. PADGETT. I do not recollect that there was such recommendation made, nor do I remember that it has ever been before the committee

I desire to call attention to other statements of the gentleman from Illinois. Take his illustration about the 10 colonels. very thing that he says about the colonels that can be done under this proposed law can be done under existing law to-day. The President, if he wanted to, could select men who are 63 years of age and nominate them to the Senate, and the Senate could confirm them. They would serve one year and would retire as major generals, and whatever the age of the oldest man was, he would nominate him, the Senate could confirm him, and he would pass out at 64 years of age.

Mr. HAY. I call the attention of the gentleman to the fact that that is not true in the Army.

Mr. PADGETT. I do not know anything about the Army. I am talking about the Marine Corps.

Mr. STAFFORD. Mr. Chairman, I would like to have the chairman's view as to whether or not the President would be open to criticism for that character of practice?

Mr. PADGETT. He would. I want to say this, that when the gentleman from Illinois speaks about the present law he says, first, that under existing law the desire and the practice and the inclination is to seek men of merit and nominate them and have them appointed, but he says that if you pass this law that practice will not prevail, and he imputes to the President the possibility—yea, the probability—that instead of following the custom that has characterized the Presidents in the past the present President or future Presidents will select men simply for the purpose of augmenting and piling up the retired

WITHERSPOON. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Certainly.

Mr. WITHERSPOON. Assuming that the President of the United States is the kind of officer that they claim he is, can not he do that very thing now?

Mr. PADGETT. That is what I say; yes.

Mr. WITHERSPOON. Can not he pick out men in the Marine Corps who for length of service or for age will retire in a month or two months or a year and under the present law just appoint that class in order to increase the retired list, if he so desires?

Mr. PADGETT. He could increase and multiply it just as fast as he could find men who would reach 64 years of age or who will soon have 30 years of service. That is the existing law, and yet they say the President and the appointing power of the Senate are moved by good principles and purposes under existing law, but that if you enact the law and make it four years, so that the President will have an opportunity to bring better material in, if he has inefficient men in the service; therefore the President will pervert the functions of his office and will appoint men who are not reliable and competent.

Mr. HAY. Is it not a fact that the officers of the Marine Corps are appointed under the same law as the officers of the Army?

Mr. PADGETT. Yes; they have the same general regula-

Mr. HAY. And the same general law. As I understand the law, as it applies to the Marine Corps it will be impossible for the President to do what the gentleman has said.

Mr. PADGETT. The gentleman means for the Army?

Mr. HAY. Or the Marine Corps. They are appointed, as I understand, under the law which governs appointments in the Army and they draw the same pay and allowances.

Mr. PADGETT. They have the same organization?

Mr. HAY. Yes. Mr. PADGETT. But under the law the commandant of the Marine Corps is appointed for his official life, until 64 years of age, and not for a definite term.

Mr. HAY. What I am coming at is this, that under the law that prevails in respect to promotions in the Army, a man can not be promoted to the grade of brigadier general two months before he arrives at the retiring age. The law provides that a man must serve one year in the rank of brigadier general before he can be retired. I just want to call attention to that, and to what I believe to be the case, that that would apply to the appointment of a major general of the Marine Corps.

Mr. PADGETT. Well, there is this difference, there is no grade of brigadier general in the Marine Corps.

Mr. HAY. But applied to major general, too.
Mr. PADGETT. If it applies to major general, the result could not take effect.

Mr. HAY. In other words, an officer appointed to the rank

of brigadier general of the Army can not be appointed to this

position two or six months before he arrives at the retiring age, because the law provides that he must serve one year; so that a colonel 63 years and 6 months old could not be made

a brigadier general.

Mr. PADGETT. As far as a law to prevent, it could be done. I do not know of that law, but the thing I want to call attention to is this, that in this respect it does not change the law one particle. The existing law and this proposed till are the same. Mr. GARRETT of Texas. Will the gentleman yield?

Mr. PADGETT. Yes. Mr. GARRETT of Texas. If I understand the situation, boiled down it is that the gentleman simply proposes by this bill

to change the law from a life tenure to four years' service?

Mr. PADGETT. That is the sum, substance, and merit of it. Now. Mr. Chairman, if there is no one else desiring to address the House, I will ask for a reading of the bill.

The CHAIRMAN (Mr. GARD). The Clerk will read the bill

for amendment.

The bill was rend.

Mr. PADGETT. Mr. Chairman, I offer a committee amendment.

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Amend, line 12, after the words "Marine Corps," by inserting the words "In accordance with the provisions of sections 1251, 1622, and 1623 of the Revised Statutes of the United States or."

The question was taken, and the amendment was agreed to.

Mr. HAY. Mr. Chairman, I offer an amendment.

The CHAIRMAN. The Clerk will report the amendment. The Clerk read as follows:

Amend, line 8, page 1, after the word "years," by inserting the words "unless sooner relieved."

Mr. HAY. Mr. Chairman, the purpose of that amendment is to permit the appointing power to relieve this officer sooner.

Mr. PADGETT. That is all right; we have no objection. The question was taken, and the amendment was agreed to. Mr. HAY. Mr. Chairman, I offer a further amendment, to come in at the end of the bill.

The CHAIRMAN. The Clerk will report the amendment. MESSAGE FROM THE PRESIDENT OF THE UNITED STATES.

The committee informally rose; and the Speaker having resumed the chair, sundry messages, in writing, from the President of the United States were communicated to the House of Representatives by Mr. Latta, one of his secretaries, who also informed the House of Representatives that the President had, on December 8, 1913, approved and signed joint resolution of the following title:

H. J. Res. 155. Joint resolution extending time for completion of classification and appraisement of segregated coal and asphalt lands of the Choctaw and Chickasaw Nations and of the improvements thereon, and making appropriation therefor.

TENURE OF OFFICE OF THE MAJOR GENERAL COMMANDANT, UNITED STATES MARINE CORPS.

The committee resumed its session.

The Clerk read as follows:

Insert at the end of the bill, page 2, the following: "Provided further. That no person shall be eligible to redetail as commandant of the Marine Corps until be shall have served two years in the Marine Corps."

Mr. HAY. Mr. Chairman, the committee in its report referred to the appointment of the Chief of Staff of the Army, and they stated they wanted to bring this appointment in line with the tenure of the office of the Chief of Staff of the Army. der the law the Chief of Staff can not serve as Chief of Staff except for four years, until he has returned to the line and served two years there, except in time of war or in case of If that is what the gentleman desired to bring about, to put the Commandant of the Marine Corps on the same basis as the Chief of Staff of the Army, the amendment which I offer effects it.

Mr. PADGETT. Mr. Chairman, I do not think that is a wise amendment or that it should be agreed to. I think that the President should have the power and the authority to reappoint an efficient man if he thinks that it is proper to do so. This amendment would require that the commandant should pass out of the service as commandant for two years before he could be reap-pointed by the President, and I think that this should be left with the President to say whether or not the services of a man are such that he would be justified in reappointing him. The reappointment has to go to the Senate for confirmation, and to say that a man could not be reappointed I do not think would

be proper legislation.

Mr. HAY. Mr. Chalrman, it will not prevent a man from being reappointed after serving two years in the Marine Corps.

Now, the Chief of Staff of the Army is a very much more important officer than the Commandant of the Marine Corps. He is the chief of the Army, consisting now of 90,000 men, and the law provides that he should only serve four years, and that at the end of the four years he shall return to the line of the Army. Now, the report made by the gentleman and his committee calls attention to the fact that they desire that the Commandant of the Marine Corps should have the same tenure of office as the Chief of Staff of the Army.

If that is what they desire, this amendment accomplishes that purpose. It does seem to me, if the purpose is to have a man serve four years as Commandant of the Marine Corps, the way to accomplish that is to embody in this law the provisions which are contained in the law with regard to the Chief of Staff of the

Army.

Mr. PADGETT. I ask for a vote, Mr. Chairman.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Virginia [Mr. Hay].

The question was taken, and the Chair announced that the ayes seemed to have it.

Mr. PADGETT. Division, Mr. Chairman.

The committee divided; and there were-aves 5, noes 26.

So the amendment was rejected.

Mr. PADGETT. Mr. Chairman, I move that the committee do now rise and report the bill to the House as amended, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. GARD, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10081, and had directed him to report the same to the House with amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass,

The SPEAKER. Is a separate vote demanded on any of the amendments? [After a pause.] If not, the Chair will put

them in gross.

The amendments were agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill as amended was ordered to be engrossed and read a third time and was read a third time.

Mr. MANN. Mr. Speaker, I move to recommit the bill to the Committee on Naval Affairs.

The SPEAKER. The gentleman from Illinois moves to recommit the bill to the Committee on Naval Affairs.

The question was taken, and the Speaker announced that the noes seemed to have it.

Mr. MANN. Mr. Speaker, I ask for a division. The House divided; and there were—ayes 35, noes 79.

So the motion was rejected.

The SPEAKER. The question is on the passage of the bill. The question was taken, and the Speaker announced that the noes seemed to have it.

Mr. PADGETT. Division, Mr. Speaker. The House divided; and there were—ayes 81, noes 32.

So the bill was passed.

On motion of Mr. PADGETT, a motion to reconsider the vote by which the bill was passed was laid on the table.

## PETITION FOR AMENDMENT TO CONSTITUTION.

Mr. HOBSON. Mr. Speaker—
The SPEAKER. For what purpose does the gentleman from

Alabama [Mr. Horson] rise?

Mr. HOBSON. Mr. Speaker, I rise to ask unanimous consent that at 3 o'clock to-morrow one hour may be set aside for the purpose of presenting a petition that was brought to-day by a committee of 1,000 from all the States of the Union, with the view to an ultimate constitutional amendment for prohibition in the United States. And I would like to say in this connection that it is simply a courtesy which I wish to have extended to this great committee, and not a matter of consideration of the

merits of the question.

Mr. BARTHOLDT. Mr. Speaker, regular order.

The SPEAKER. The question is on the request of the gentleman from Alabama [Mr. Hosson] for unanimous consent to set aside an hour to-morrow, beginning at 3 o'clock, to present

a petition from a committee of 1,000—

Mr. HOBSON. With appropriate remarks.

The SPEAKER. With appropriate remarks, and present a petition of a committee of 1,000 from a convention recently held in Columbus, Ohio, looking to country-wide prohibition. Is there objection?

Mr. BARTHOLDT. I object.

Mr. HOBSON. Before the gentleman objects—
The SPEAKER. The gentleman has objected.
Mr. HOBSON. I want to ask the gentleman to reserve his right to object. I am sure he will do it out of courtesy.

Mr. BARTHOLDT. I will.

Mr. HOBSON. I want to have the gentleman understand that the proposition is not for a discussion of the merits of the bill.

Mr. DONOVAN. Mr. Speaker, the regular order.

The SPEAKER. The regular order is the objection to the request of the gentleman from Alabama [Mr. Hobson].

Mr. BARTHOLDT. I reserved the right to object.

Mr. HOBSON. The gentleman reserved it. The SPEAKER. But the gentleman from Connecticut asked for the regular order.

Mr. HOBSON. Was that the gentleman from Connecticut

[Mr. Donovan]

The SPEAKER. Yes, sir.

Mr. HOBSON. Mr. Speaker, I wish to give notice that at 4 o'clock to-morrow I shall move to adjourn, and those who care to stay here will hear remarks on this question.

Mr. MANN. It is so seldom the gentleman is here that we would like to hear what he has to say. [Laughter.]

TENTH INTERNATIONAL VETERINARY CONGRESS (H. DOC. NO. 462).

The SPEAKER laid before the House the following message from the President of the United States, which was read and, with the accompanying documents, referred to the Committee on Foreign Affairs and ordered to be printed:

To the Senate and House of Representatives:

In view of the provision contained in the deficiency act approved March 4, 1913, that-

Hereafter the Executive shall not extend or accept any invitation to participate in any international congress, conference, or like event without first specific authority of law to do so—

I transmit herewith for the consideration of the Congress, and for its determination whether it will authorize the acceptance of the invitation, a report from the Secretary of State, with accompanying papers, being an invitation from the Government of Great Britain to that of the United States to send delegates to the Tenth International Veterinary Congress, to be held at London from the 3d to the 8th of August, 1914, and letters from the Department of Agriculture showing the favor with which that department views the proposed gathering.

It will be observed that the acceptance of the invitation will involve no special appropriation of money by this Government.

Woodrow Wilson.

THE WHITE HOUSE, December 10, 1913.

REPORT OF THE COMMISSION OF FINE ARTS (H. DOC. NO. 461).

The SPEAKER also laid before the House the following message from the President of the United States, which was read and, with the accompanying documents, referred to the Committee on the Library and ordered to be printed:

To the Senate and House of Representatives:

I transmit herewith for the information of the Congress the report of the Commission of Fine Arts for the fiscal year ended June 30, 1913, with accompanying illustrations. WOODROW WILSON.

THE WHITE HOUSE, December 10, 1913.

ENBOLLED JOINT RESOLUTION SIGNED.

Mr. ASHBROOK, from the Committee on Enrolled Bills, reported that they had examined and found truly enrolled joint resolution of the following title; when the Speaker signed the

H. J. Res. 164. Joint resolution authorizing the Secretary of the Senate and the Clerk of the House to pay the officers and employees of the Senate and House, including the Capitol police, their respective salaries for the month of December, 1913, on the 20th day of said month.

CHANGE OF REFERENCE.

By unanimous consent, the Committee on Appropriations was discharged from further consideration of the bill (H. R. 9822) establishing the Mammoth Cave National Park, and the same was referred to the Committee on the Public Lands.

NAVAL MILITIA.

Mr. PADGETT. Mr. Speaker, by direction of the Committee on Naval Affairs, I call up the bill (H. R. 8667) to promote the efficiency of the Naval Militia, and for other purposes, on the Union Calendar, No. 26.

The SPEAKER. The House resolves itself automatically

The SPEAKER. The House resolves itself automatically into Committee of the Whole House on the state of the Union, and the gentleman from Illinois [Mr. Foster] will take the

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 8667, with Mr. Foster in the chair.

The CHAIRMAN. The House is in Committee of the Whole

House on the state of the Union for the consideration of the bill H. R. 8667, which the Clerk will report.

The Clerk read the title of the bill, as follows:

A bill (H. R. 8667) to promote the efficiency of the Naval Militia, and for other purposes.

Mr. PADGETT. Mr. Chairman, I ask unanimous consent that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Tennessee [Mr. Pap-GETT] asks unanimous consent that the first reading of the bill be dispensed with. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

Mr. PADGETT. Mr. Chairman, I do not wish to consume much time in explanation of this bill, as I do not deem it neces-

I may say that at the last session of the last Congress the Committee on Naval Affairs favorably reported a bill which is the same as this, with the exception of a few amendments, mostly verbal, which have been made in the present bill.

Mr. MANN. Mr. Chairman, will the gentleman yield for a

question?

Mr. PADGETT. Yes.

Mr. MANN. Is the bill now reported with these changes practically what was known as the Foss bill that the House voted on?

Mr. PADGETT. Yes, sir; it is almost identical. I was going to add that in the Congress preceding the last the Naval Committee reported substantially this bill, with only verbal changes, and the House passed the bill, but it was so late in the session that it did not receive consideration in the Senate. At the last session of the last Congress the Senate passed the bill, but it was so late in the session that the House did not have opportunity to consider it; so that this bill, with but few changes, not material or substantial, has been passed by both bodies.

Mr. COX. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Tennessee yield to the gentleman from Indiana?

Mr. PADGETT. Yes. Mr. COX. What is the proposed maximum to which the Naval Militia can be extended?

Mr. PADGETT. There is no limit. The Naval Militia is

organized under the States.

Mr. COX. Do the States have any limit of law regulating the number of men who can join the State Naval Militia?

Mr. PADGETT. They have no regulations, as I understand,

limiting the number. They have regulations as to the organization, as to qualifications, as to examinations, professional and physical, and along that line, but there is no limitation, as I understand, as to the number the State may from time to time authorize.

Mr. COX. This bill proposes, as I understand, to take all the State Naval Militia and coordinate and make it a branch of the Navy?

Mr. PADGETT. Yes; substantially. But we limit the total appropriation in the bill to \$200,000.

Mr. COX. That is to meet the present requirements?

Mr. PADGETT. No; that is the limitation that is fixed. It will require legislation on this bill to enlarge it hereafter.

Mr. COX. Oh, yes; but I say that only meets the present requirements-\$200,000. There is nothing in that to keep a future Congress from increasing the appropriation from time to time as the number of men might be added to the various Naval Militias of the States?

Mr. PADGETT. Yes.

Mr. COX. How many men now belong to the Naval Militia? Mr. PADGETT. The report gives it exactly—8,126 officers and enlisted men. The gentleman will find that on page 3 of

Mr. COX. Do I understand the gentleman to state that the sum total of the cost contemplated by the proposed bill for the

next year can not exceed \$200,000?

Mr. PADGETT. Without legislation of Congress it can not, at any time, be other than the amount carried in the annual appropriation bill.

Mr. COX. I take it that if the bill becomes a law the Committee on Appropriations will very likely follow out the man-

dates of the law and make the appropriations.

Mr. PADGETT. But anybody could make a point of order against that. There is to-day in the annual naval appropriation bill an appropriation of \$125,000 toward defraying the expenses of the Naval Militia as it exists now, and that has been

carried for a great many years. It was authorized a good

many years ago.

Mr. COX. That amount of money, as I understand it, is expended to pay the expenses of the Naval Militia at Naval Militia

maneuvers each year.
Mr. PADGETT. Yes; that and repairs and fittings and fur-

nishings and things of that kind.

Mr. COX. Do you mean that only \$125,000 is paid out for all those things?

Mr. PADGETT. Yes. The appropriation reads-

Arming and equipping the Naval Militia, \$125,000.

When this bill came to the committee, speaking personally, I insisted that there should be a limitation upon the cost, and it was upon my initiative that the \$200,000 limit was fixed. will state that a board of officers of the Naval Militia of the several States and the Navy Department have been working upon this bill for several years.

Mr. COX. Very actively? Mr. PADGETT, Yes.

Mr. COX. Doing their best to get Congress to pass this kind

of legislation.

Mr. PADGETT. They have been trying to perfect the measure, and this measure puts it upon the same basis as the Dick bill relating to the land militia, so far as it can be adapted and adjusted to the Naval Militia.

Mr. COX. Do these officers in the State Naval Militia draw

any salaries now?

Mr. PADGETT. Not in time of peace.

Mr. COX. Will they get any part of this \$200,000 appropria-

tion in the way of salaries?

Mr. PADGETT. Nothing in the way of salaries. They get pay when they go upon the maneuvers, the same as the land militia get allowances and pay at such times.

Mr. COX. Does that only cover expenses, or is it anything in

addition to that?

Mr. PADGETT. They get pay, as I remember it.

Mr. COX. When they are engaged in the maneuvers.

Mr. PADGETT. During the few days that they are engaged in the maneuvers each year.

Mr. COX. They will be drawing a salary during that time.

Mr. PADGETT. Yes.
Mr. COX. So that future appropriations will be governed entirely in their amount by the number of men who enlist in the various States from year to year.

Mr. PADGETT. If they were to enlist; but the number in the Naval Militia is now as high or higher than it ever has been, and it has never exceeded 8,000 or 9,000 men.

Mr. COX. Does not the gentleman believe the moment this bill becomes a law and they see inducement held out to them, to the end that they can draw salaries and have a good time at the public expense, the number of enlistments will rapidly increase largely all over the United States, and in a very few years we will be appropriating not less than \$1,000,000 per year?

Mr. PADGETT. No, sir; the expense will be very little. want to say to the gentleman that I do sincerely hope and the

department sincerely hopes that it will increase.

Mr. COX. What—the number or the expense?

Mr. PADGETT. The number of men. There is nothing that would yield so large a benefit to the Navy as to have an organized militia in reserve that could be put upon our ships, as the department says, as an organized force in 48 hours.

Mr. BUTLER. In 36 hours. Mr. PADGETT. They say 36 hours, but I say 48 hours after the danger signal appears.

Mr. BUTLER. Well-equipped men.
Mr. PADGETT. Well-equipped men, trained and organized, and at a trifling expense.

Mr. COX. I am aware of the fact that that argument is al-

ways used.

Mr. PADGETT. And for the trifle it would cost the Government there is nothing that would yield so great a profit and benefit to the Government as to have an organized naval

Mr. COX. Where are you going to have room to put the men of the Naval Militia, if the number of men in the Navy

is now up to the maximum standard?

Mr. PADGETT. We are up to the maximum standard of authorized enlistment, but we are about 30,000 men short of the enlistment necessary to equip on a war basis the vessels that we now have.

Mr. COX. In the event of an emergency, is it designed that the Naval Militia shall take the places of these sailors?

Mr. PADGETT. Yes; and it is made compulsory that they

shall come in in advance of future enlistments.

Mr. CALLAWAY. Will the gentleman yield?
Mr. PADGETT. With pleasure.
Mr. CALLAWAY. There is no provision in the bill for paying the militia, but there is a bill pending now in Congress providing payment for the land militia.

Mr. PADGETT. Yes. Mr. CALLAWAY. What probability is there of its passing? Mr. PADGETT. I can not tell the gentleman. I do not know what the future may have in store for it.

Mr. CALLAWAY. This bill provides for an increase in the

naval militia?

Mr. PADGETT. It provides for an organization of it.
Mr. CALLAWAY. If that bill I spoke of should pass, providing pay for the Army Militia, does not the chairman think that this organized Naval Militia would immediately and with some show of right clamor for payment?

Mr. PADGETT. I think if they organize a Naval Militia

and Congress should pass the bill to pay the land militia, they ought to pass the same provision for the Naval Militia. As to

what will be done, of course, I do not know.

Mr. CALLAWAY. Is it not a fact that when organizations are perfected they will immediately go to work to get on the pay roll, and when you provide for an increased Naval Militia and an organization in Washington they will immediately go to work to make themselves a buffer back at home to induce the Congressmen to put them on the pay roll, and then this Congress will do what they think the political exigencies at home demand?

Mr. PADGETT. No; I think the gentleman has made his

statement too broad.

Mr. CALLAWAY. I have been here three years, and that is about what I see.

Mr. MOORE. Will the gentleman yield?

Mr. PADGETT. Certainly.
Mr. MOORE. Does the gentleman know of any considerable number of his fellow citizens who are willing to serve in the

Army and Navy for nothing?

Mr. PADGETT. No; we have a good many enlistments in the State of Tennessee. We have a good National State Guard We have always been proud of the fact that in every call that has been made by the President of the United States for volunteers the State of Tennessee always sent more than she was asked for. For that reason she has become known and has been given the name of the "Volunteer State."

Mr. MOORE. Does the gentleman think that any body of citizens should enlist in the Army or the Navy to perform

service without some return?

Mr. PADGETT. This is not an enlistment. This does not enlist them, but it organizes the militia and provides for some help in training, furnishing them ships, officers to train them, and limits the total appropriation, as stated in the bill, to \$200,000 a year.

Mr. MOORE. Will the gentleman consider this phase of it? To train men on a battleship, whether voluntary or in the regular service, will also tend to equip them for service in the

merchant marine. Mr. PADGETT. Yes; and give them much valuable military

service, which could be available in the Army.

Mr. MOORE. Is it not a fact that we are at a loss to obtain sufficient men to man the ships now engaged in our merchant marine?

Mr. PADGETT. Yes. Mr. MOORE. Would it not be an inducement to the young men of the country to equip themselves so that they might be of value in serving either on land or sea?

Mr. PADGETT. Yes; but I am not looking at it collaterally, but for the direct benefit of it. We need the men; we are 30,000 short of enlisted men to-day upon a war basis. It would be a very expensive matter to enlist these 30,000 mea to equip all our ships in full commission. We have a large number of battleships and cruisers, and others that are in reserve, with only a skeleton crew. If we had a large body of trained men, who each year had some practice, so organized with a very triffing expense that upon the breaking out of trouble who could, within a few hours, go on the ship ready to serve effi-ciently and take the place of enlisted men and become enlisted men, it is apparent to me that we should derive a benefit beyond expression.

Mr. MOORE. The young men who enter the Naval Militia

are not confined to any one State or coast line?

Mr. PADGETT. No, sir.

Mr. MOORE. I observe that, on page 3. a statement is made of the strength of the Organized Militia in the country, and

that Chicago is third on the list, with 505 men enrolled as petty officers and seamen.

Mr. PADGETT. Well, Chicago has the Great Lakes avail-

able to her.

Mr. MOORE. I should say Illinois, not Chicago. Mr. PADGETT. Chicago has a naval militia, also.

Mr. MOORE. Massachusetts stands at the head of the list

and California second.

Mr. PADGETT. And all of the lake States have naval

militia.

Mr. MOORE. I wanted to call the gentleman's attention of the fact that while Massachusetts does stand at the head of the list, with 640 men reported for this volunteer service, the State of Illinois, which is interior and might not be affected by this coast-line question at all, is second in rank so far as en-rolled men are concerned, and has 505 men on the list.

Mr. PADGETT. Yes; and it has been the practice and is to-day the practice of the Navy Department to furnish to these men ships to train upon, and each year in the summer season they go out under charge and control of naval officers, and it is no junket trip. They go there, and in connection with the en-listed force and the regular men upon the ships they do the work and take the training that the regular enlisted men do.

Mr. COX. How long do these cruises last?

Mr. PADGETT. From two to three weeks.

Mr. COX. Once a year?

Mr. PADGETT. Yes. Mr. GOULDEN. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Certainly. Mr. GOULDEN. I simply desire to ask whether the Naval Militia is on the same plane as the National Guard as to benefits, advantages, and so forth?

Mr. PADGETT. Just as far as it was able to adapt and adjust the Dick bill to the Naval Militia it has been done.

Mr. GOULDEN. There is no special advantage of the Na-

tional Guard over that of the Naval Militia, so far as the National Government is concerned?

Mr. PADGETT. Nor of the Naval Militia over the National

Guard.

Mr. HULINGS. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Yes. Mr. HULINGS. I would like to call the attention of the chairman of the committee to the language that is used in line 5. on page 4, as to the service which may be exacted of the Naval Militia-

to serve during the term so specified, either within or without the territory of the United States.

This Naval Militia is but a part of the Organized Militia, according to the first section of the bill.

Mr. PADGETT. Yes.
Mr. HULINGS. And I am told, or I find by the report of the
Attorney General of the United States, that the Dick bill, under which the Organized Militia is provided, is unconstitutional in that part of it which requires service outside or beyond the boundaries of the United States. I would like to ask the gentleman if he has taken that into consideration in the framing of that part of his bill?

Mr. PADGETT. If the gentleman will read the whole bill and get the scope of it, he would see that that service takes place after they enlist and at the breaking out of hostilities. They then come in and become a part of the naval force, and the gentleman's objection does not apply. This training is of the Naval Militia, but when hostilities break out and the President calls upon them they come in then and are mustered into the service of the United States, and their character as militia

Mr. HULINGS. I do not so understand the bill. Section 3 of the bill seems to cover that question. That section provides that the President may call them into service without further enlistment, and without such enlistment the bill is open to the charge of the Attorney General of unconstitutionality. The only authority we have to call any portion of the forces of the United States the "Organized Militia" is through the Dick Act, and this bill starts out by prescribing that the Naval Militia shall be a part of the Organized Militia; and if the Organized Militia can not be sent abroad, how can the Naval Militia, which is a part of the Organized Militia, be sent abroad?

Mr. PADGETT. No; the "Organized Militia" refers to the

States.

Mr. HULINGS. The bill reads:

That of the Organized Militia, as provided for by law-

And so forth.

Mr. PADGETT. That is the State law and the State organi-

Mr. HULINGS. To continue:

such part of the same as may be duly prescribed in each State, Territory, and for the District of Columbia shall constitute a Naval Militia.

If it is true that the Organized Militia can not be sent abroad, how under this bill can you send the Naval Militia abroad?

Mr. PADGETT. Certainly; and the organization is under the State law, and we take up that organization and bring it in and recognize it and deal with it. But the organization in the first instance is through the State law.

Mr. HULINGS. But the State law does not know anything about the Organized Militia. The term was originated in the Dick law, and that is where you get it. However, I only wished, Mr. Chairman, to call the attention of the gentleman to this

part of the act.

Mr. PADGETT. If the gentleman will get the report, he will see that it is set out at great length in the report. law of the State of Massachusetts is illustrative of the laws and an example of laws of other States wherein the militia is organized. Does anyone else desire any general debate?

Mr. MANN. I would like to ask the gentleman a few ques-

tions about the bill.

Mr. PADGETT. Yes, sir.

Mr. MANN. On page 5 there is a proviso:

Provided, however, That any officer or enlisted man of the Naval Militia so qualified who shall refuse or neglect to present himself for such muster upon being called forth as herein prescribed shall be subject to trial by court-martial and shall be punished as such court-martial may direct.

Is the effect of that to provide that if the President calls upon the Naval Militia that any enlisted man in the State militia who refuses to go into the Government service is to be court-martialed?

Mr. PADGETT. Yes, sir.

Mr. MANN. Is that same provision in the Dick bill?
Mr. PADGETT. It is in the Dick bill; yes, sir. If they are to receive the benefits, then, when the Government needs them, it should have some power to compel them to come in.

Mr. MANN. The point that occurred to me was that it might be much more difficult to get men into the Naval Militia in the States if, when they went in, they were told that at any time they might be compelled to go into the field and leave their work at home. Here is a boy, for instance, who has a mother dependent upon him. He is quite willing to enlist in the Naval Militia, quite willing to enlist for the Government if conditions are so that he can, but he might be wholly unwilling to be forced to go away from home.

Mr. PADGETT. What will be the advantage or good to the

Government to enlist him and train him if when the Govern-

ment needs him he refuses to go?

Mr. MANN. Well, that is the case with all of our naval officers now. What is the advantage of having them if they do not go when they are needed? Nobody knows when we will need them and nobody knows whether they will resign—

Mr. PADGETT. But a naval officer can only resign with the

consent of the President.

Mr. MANN. That is true, but if he has resigned you can not pull him back in. The point raised in my mind was whether it may not affect disadvantageously the raising of the Naval Militia-

Mr. PADGETT. I think not.

Mr. MANN. And getting men to enlist. Mr. PADGETF. The officers of the Naval Militia who have been giving very great study and pains to this approve of that provision, and it was put in here with their approval.

Mr. MANN. I notice on page 11, where it refers to the appro-

priations, line 19, it says:

But no payment to the Naval Militia under the provisions of this section and no allowances for mileage shall be made from appropriations made from the Navy, but shall be made solely from the sums appropriated for such cruise, maneuvers, field instruction, or for the Naval

Now, as I understand this bill, although the gentleman has stated several times that this bill limited the amount appropriated to \$200,000, I think possibly the language is not quite accurate. If I understand the bill correctly, this bill makes a permanent appropriation of \$200,000 a year?

Mr. PADGETT. Yes, sir; and then such other amount as

Congress may provide in the annual appropriation.

Mr. MANN. I know; but it limits the expenditures, does it not?

Mr. PADGETT. To \$200,000, section 20.

Mr. MANN. Two hundred thousand dollars a year?

Mr. PADGETT. Yes; it limits the appropriation.

Mr. MANN. That is on page 18. So, in fact, there will be additional appropriations for cruises, maneuvers, and field instruction carried in the naval appropriation bill?

Mr. PADGETT. Well, we are carrying now \$125,000, and have been for a number of years.

Mr. MANN. That is not to be cut down by the permanent

appropriation of \$200,000?

Mr. PADGETT. I can not say whether it is or it is not, because we have not had the hearings. I do not yet know what the estimates and needs will be. We will take into consideration the \$200,000 provided here, and if a smaller amount is needed, added to that, why we would, of course, cut it down.
Mr. MANN. Well, that \$125,000 now appropriated is appro-

priated in the main, is it not, for items which are covered by

Mr. PADGETT. This bill covers the items that are covered by that appropriation; but that appropriation does not cover

everything that is provided for in this bill.

Mr. MANN. There are several places in here where things are limited, as I suppose, to this permanent appropriation?

Mr. PADGETT. Yes, sir.
Mr. MANN. I feared that there was a conflict between that
and other appropriations that apparently contemplated an

annual appropriation.

Mr. PADGETT. The matter has been gone over very carefully and I do not think there is any conflict. It was submitted to the Navy Department and they have approved it, and that same language was in the bill under the last administration, and was very earnestly and cordially approved by that administration.

Mr. MANN. I am sure that my distinguished friend from Tennessee has learned by this time that as far as making appropriations is concerned, and the form of them, it is not safe to rely on any department of the Government.

Mr. PADGETT. I understand; but I said the committee

itself had given very careful consideration to this.

Mr. MANN. But the truth is that the committee has not been giving very careful consideration to it. This bill is a heritage to the present committee. I think the gentleman from Tennessee [Mr. Padgett] and I have supported a good many bills like this

A good many of the committee have-the subcommittee. We took it up and went over it carefully in the We reported the House bill, and when the Senate bill came to us we reported the Senate bill out, so as to have the Senate bill upon the calendar.

Mr. COX. Mr. Speaker, I would like five minutes.

I yield five minutes to the gentleman from Mr. PADGETT.

Indiana [Mr. Cox].

Mr. COX. Mr. Chairman, I can not remain idly by without registering my protest against this bill, although I imagine I will not change the opinion of any man so far as the bill is concerned. But I am opposed to it for several reasons, which to me are valid and sufficient to justify me in my opinion that the bill ought not to become a law.

We are told by the chairman of the great Committee on Naval Affairs and by many of the Members on the floor of the House to-day that this is a great measure—one of the most beneficial and important bills that has come upon the floor of the House for. lo, these many years. As the gentleman from Texas [Mr. Callaway] put it a while ago, if I remember correctly, this bill has sought to force its way upon Congress for the last four or five years in different forms, in a different way, and a different manner, and from different committees, in some shape or other.

Mr. PADGETT. Will the gentleman permit?
The CHAIRMAN. Will the gentleman from Indiana yield to

the gentleman from Tennessee?

Mr. COX. Yes; I yield.

Mr. PADGETT. As to forcing its way, I want to simply state that the committee of this Congress reported it, the committee of the last Congress reported it, and the committee of the Congress before reported it. In the Congress before the House passed it, but too late in the session for the Senate to take

That was a good thing.

Mr. PADGETT. And in the last Congress the Senate passed it and sent it over here just before the adjournment, which was too late to reach it under the call of committees. So it has passed both bodies, and it has passed in the same form substantially

in which it is now.

In my judgment it was a happy solution of the measure at those times. The reason why I used the expression "forced its way in" is, as I started to say a moment ago, that I believe the gentleman from Texas [Mr. Callaway] struck the keynote of the situation by saying that there is somebody back home who wants this measure. In reading the report from my own State, I see 17 officers from Indiana; petty officers and enlisted men from Indiana number 202. While I have not religia [Mr. Edwards] is recognized for 10 minutes.

ceived any communication from any of those men that I recall asking me to support the measure, yet I imagine that their influence, whatever it has been, has been felt somewhere along this line in order to force this bill through.

Now, let us not be deceived at all in this matter, gentlemen. Where is the good in it? What makes it the great and important bill that it is claimed to be? The chairman of the Committee on Naval Affairs announced a moment ago that the intention was to limit the appropriation to \$200,000 a year. I am going to venture a prophecy here that in less than five years from now instead of this appropriation being held down to \$200,000 a year it will be costing the American people not a penny less than \$1,000,000 a year, because if you will read section 20 you will find in it substantive law sufficiently broad and sufficiently strong to enable the Committee on Naval Affairs to make an additional appropriation beyond the \$200,000. In section 20 it is provided, in addition to the provision appropriating \$200,000, "except such additional expenditures as may be authorized by the annual naval appropriation act."

Mr. MANN. Mr. Chairman, will the gentleman yield for a

question?

Mr. COX. Yes. Mr. MANN. Does the gentleman think that provision would authorize an appropriation in the naval bill?

Mr. COX. I do.
Mr. MANN. Oh, clearly not.
Mr. COX. I do.
Mr. MANN. Oh, no.
Mr. COX. Why would it not?

Mr. MANN. That is not an authorization. If the naval appropriation bill does authorize additional expenditures, of course they would be in order anyhow. That is simply surplusage in this bill.

Mr. COX. Well, the gentleman is a mighty good authority

on parliamentary law—

Mr. MANN. I do not think there is any question about the proposition-

Mr. COX. But in my judgment that would be substantive law, sufficient to justify the Committee on Naval Affairs in making an appropriation and would prevent a point of order being made against such an appropriation if it was made on the naval appropriation bill.

Mr. MANN. Clearly not, and I hope the gentleman will not express his opinion so strongly. If an improper appropriation is recommended by the Naval Committee on the subject, I shall expect my friend from Indiana to make a point of order against it and have it sustained on the ground that it is not an authorization.

Mr. COX. I always yield to the gentleman from Illinois when it comes to a question of parliamentary law. I might be wrong upon this, but even if I am wrong on my proposition that that provision of law is sufficient upon which to base an appropriation in the naval appropriation bill, the same still holds true. People in the department and elsewhere will find some way to induce Congress to amend the bill so as to increase

the appropriation.

Where in the world are these appropriations going to stop for the Army and Navy? Where is this extravagance going to cease? I want to call the attention of this House to the planks in our last platform concerning economy and to a plank in the Democratic platform of four years ago. If I had them here, I would read them at this time. Why fasten this charge upon the American people? Why lay the foundation now, so that in the next Congress or in a very few years several thousand additional State militia may be taken on, all piling up the cost

Oh, yes; we are told on the right hand and on the left hand that it is the best and most important measure that ever came before the American Congress. I do not believe that the bill ought to pass, and while I do not believe for a moment that it will be defeated here, yet I hope something will turn up between now and the time it reaches the Senate and the Senate gets hold of it, so that it will be defeated over there. plause.]

It is but another branch of militaryism fastened upon the backs of the toilers of the country. With more than half of the total revenues of the Government each year being paid out for support of the Army, Navy, and other military branches of the Government, it is time to call a halt upon these expenditures, and I can not bring my mind to support this bill under any conditions whatever.

Mr. PADGETT. Mr. Chairman, I yield 10 minutes to the gentleman from Georgia [Mr. EDWARDS].

The CHAIRMAN (Mr. SABATH). The gentleman from Georgia

Mr. EDWARDS. Mr. Chairman, I appreciate the kindness of the chairman of the Committee on Naval Affairs in yielding to me 10 minutes. I wish to devote my time to the discussion of another matter, and I ask unanimous consent to extend my remarks in the RECORD. I yield back the balance of my time.

The CHAIRMAN. The gentleman from Georgia [Mr. ED-WARDS ] asks unanimous consent to extend his remarks in the

Is there objection?

Mr. MANN. What is the request, Mr. Chairman?

The CHAIRMAN. To extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. FOWLER. Mr. Chairman, I desire to make some inquiry as to some features of this bill. I wish to submit some questions to the chairman.

Mr. PADGETT. Yes, sir. Mr. FOWLER. I discover on page 3 of the report that the grand total number of State Naval Militia is 8,126. I desire to know if the gentleman has gone into the question of the limita-tion of the number of such State Naval Militia that can be organized in each of the various States of the Union.

Mr. PADGETT. No, sir. There is no limitation that I know of. There does not appear to be any necessity for any. We have been struggling and working and striving to get as many as we could, and we have not now a third as many as we need, and if we could have three or four times more than we have it would be just a three or four times greater benefit and blessing. They may provide for a given number of battalions, companies, and so forth, but the States can change these at pleasure.

Mr. FOWLER. Then, if there is no limitation upon the number that might be organized in the various States, might not this bill encourage a superabundance of State Naval Militia?

Mr. PADGETT. I do not think there is any possibility of it,

Mr. FOWLER. Then, if there should be a very large number, does this bill make any limitation as to the number that can be drafted into the United States naval service?

Mr. PADGETT. No, sir; there is no limitation upon it. They are not drafted in unless there is war, and, if war should come, we would need 30,000 more men than we have now enlisted, and there is no possibility of this ever reaching that number.

Mr. FOWLER. The provision of the bill does not confine the right to draft them in time of war, but it may be done if there is any impending danger in the mind of the President or to quell insurrection?

Mr. PADGETT. Certainly.
Mr. FOWLER. And he is the sole judge?
Mr. PADGETT. Yes.
Mr. FOWLER. As to whether there is impending danger?
Mr. PADGETT. That is the same provision that exists in reference to the land militia in the Dick bill.

Mr. FOWLER. The complement of the naval forces of the United States is about 57,000 men, is it not?

Mr. PADGETT. There is an enlistment of 51,500, including 3,500 apprentice seamen. Then comes the official list and the Marine Corps, making altogether, if I remember aright, something like 67,000 or 68,000 of the Marine Corps, the officers and enlisted men of the Navy, and the apprentice seamen.

Mr. FOWLER. That is fixed by law, is it not?

Mr. PADGETT. Yes. Mr. FOWLER. The provision which this bill adds seeks to increase the Navy, not by direct enactment, but by a system of drafting.

Mr. PADGETT. This does not add to the Navy in time of peace. It only provides for organizing the militia, and provides for their training and development and to make them qualified and fit for service if a condition should arise in which we would need them. And this authorizes them to be brought in to meet the exigencies that might arise, and we would be mighty glad to get them if the exigencies should arise.

Mr. FOWLER. Do you not think this might create the danger of an enlargement of the Navy without direct authority?

Mr. PADGETT. No, sir. Mr. FOWLER. You think not? Mr. PADGETT. There is no possibility of such enlarge-

Mr. FOWLER. Do you not think it might create the danger of an additional appropriation without direct authority?

Mr. PADGETT. No, sir; there can not be an appropriation without direct authority. It takes an act of Congress to appropriate every dollar.

Mr. FOWLER. Yes; that is true. You understand the import of my inquiry, I know.

Mr. PADGETT. I have answered it.

Mr. FOWLER. The appropriation for the payment of the

Navy is for the payment of the standing Navy.

Mr. PADGETT. Yes; and none of that can be used for this.

There is an express limitation here.

Mr. FOWLER. Yes; that is true; but is not this proposed system of drafting the very first step in the direction of doing what I have suggested in my inquiry?

Mr. PADGETT. No. As I stated before, I am trying to answer the question of the gentleman with the utmost good

faith and most perfect frankness.

Mr. FOWLER. I beg the pardon of the gentleman. I know that.

Mr. PADGETT. I want to say that the bill simply provides for the organization, training, and development of a Naval Militia that may be available and subject to call in time of emergency. If there is no emergency, they are no part of the Navy in time of peace. They are under State authority, and the Government is simply aiding them by providing for letting them have ships, officers to train them, and the equipments necessary for their training, so that they may be prepared for an emergency

Mr. FOWLER. There is one question that was sprung in the discussion a short time ago with reference to the drafting,

and a refusal to comply

Mr. PADGETT. That is in time of war.

Mr. FOWLER. A court-martial might follow. Mr. PADGETT. Yes; that is in time of war.

Mr. FOWLER. Not necessarily in time of war.
Mr. PADGETT. War, insurrection, or rebellion, I believe.

Mr. FOWLER. Or impending, in the discretion of the President

Mr. PADGETT. That is a time of war. If war is impending, is certainly a time of war, because we want to get ready for it.
Mr. FOWLER. I have read your bill hastily, not having had an opportunity to make an investigation of it, but it appears to me that some of its provisions are dangerous. I mean in the way of imposing hardship on the local man who is willing to enlist either as a soldier in the Army or the Navy-taken away from his own home and his own State to foreign quarters, away from his business and away from his people, without his consent.

Mr. PADGETT. Answering the gentleman in perfect candor and frankly, if that man is not willing to go to meet the necessities that may arise what is the use of the Government in a time of peace expending money to train him? Why should the Government train these men, furnish them ships, furnish them supplies and train them in a time of peace, and then when the Government needs them in an impending danger, in the time of war, they refuse to go? Would you not be absolutely wasting your energy and your resources in such an enterprise's

Mr. FOWLER. It is true that every man owes fealty to his Government; not only the man in the Army and Navy, but every able-bodied man in the land owes it as implicitly as the enlisted men in the Army or the Navy. You could say that of the indi-

vidual just as you say it of a member of the militia.

Mr. PADGETT. Except that, as far as the militia is concerned, the man has received a special consideration in the form of this contribution made for his training and development and furnishing him ships, and he has taken an obligation, specially, which the general citizen has not taken.

Mr. FOWLER. How much more does the Government pay for training a cadet at Annapolis than it does for a man in the

State militia?

Mr. PADGETT. The estimate is that this appropriation will young man at Annapolis costs from \$14,000 to \$18,000.

Mr. FOWLER. Yes. Now, the cadet at Annapolis can resign after his term of school is over. be about \$10 a man. It has been estimated that to graduate a

Mr. PADGETT. He can only resign upon the acceptance of

his resignation by the President of the United States. Mr. FOWLER. That is true, but it is never refused.
Mr. PADGETT. He can not resign of his own motion unless

the President consents to it. Mr. FOWLER. This bill does not provide for the resignation of Naval Militia men by virtue of the presidential consent,

does it? Mr. PADGETT. Oh, yes; it provides that he shall enlist for such a time, or during the continuance of the war, and the President, when he does not need them, can discharge them.

Mr. FOWLER. He has that authority, I suppose, as Commanding General of the Army, but there is no specific provision in this bill giving authority to any State naval enlisted man to resign?

Mr. PADGETT. I do not recall any specific provision. That exists, anyway. He is enlisted, and he becomes a part of the regular naval force, subject to its rules, and the President has just as much authority over them and the same authority that he has over the regular Navy.

Mr. MADDEN. There is no such authority given to a man in the Regular Army or Navy now.

Mr. PADGETT. No; there is not.
Mr. FOWLER. I was not speaking of the regular enlisted Army or Navy man. I was speaking of the naval cadet, those graduates from Annapolis. As I understand you, you seek the passage of this bill for the purpose of strengthening the Navy in its numbers and in its efficiency to meet the emergencies if they should arise?

Mr. PADGETT. Yes; at a minimum or nominal cost.
Mr. FOWLER. It is not for the purpose of increasing the size of the Navy uselessly, nor increasing the appropriations to maintain it uselessly?
Mr. PADGETT. Very far from it.

Mr. COX. Will the gentleman yield? Mr. PADGETT. With pleasure.

Mr. COX. I want to ask the gentleman for an explanation of the language found in section 2 of the bill. The first part of section 2, line 5, page 2, provides:

And the arms and equipment of the Naval Militia of the several States, Territories, and the District of Columbia shall be the same as, or the equivalent of, that which is now or may hereafter be prescribed for the landing forces of the vessels of the United States Navy—

Now, what arms and equipment are necessary for men on a vessel of the United States Navy?

Mr. PADGETT. Rifles, pistols, machine guns. Mr. COX. Anything else?

Mr. PADGETT. Cartridge boxes and the equipment for small arms.

Mr. COX. Then there is this additional provision:

and such other and additional arms, armament, and equipment, including vessels and stores, supplies, and equipment of all kinds for the repairing, maintenance, and operation of the same, as the Secretary of the Navy may from time to time prescribe for the training of the Naval Militia in duties afloat.

Mr. PADGETT. Yes; that is what we are doing now.

Mr. COX. I want to ask whether or not, under that language, the Secretary of the Navy would not have the power to build a vessel, a battleship, if he so desired, and turn it over to the State Naval Militia.

Mr. PADGETT. He would not have authority to build even

a cance.

Mr. COX. Why would he not have that authority under the

language?

Mr. PADGETT. Because to build a ship he must have specific authorization. That simply allows him to assign such vessels as we have in the Navy for use of the Naval Militia, which he is doing now under authority.

Mr. COX. Where does the gentleman get that language-that his powers are restricted to the assignments of such vessels as are now at his disposal to assign to the State Naval Militia?

Mr. PADGETT. In the language there-

Arms, armament, and equipment, including vessels and stores, supplies, and equipment of all kinds for the repairing, maintenance, and operation of the same.

Mr. COX. The first part of that language is very plain and would limit the kind of armament to be given to the Naval Militia of the State.

Mr. PADGETT. Yes.

Mr. COX. That it can only be of the same kind given to the landing forces, and so forth; but in the language in the paragraph that follows I fail to find wherein the Secretary of the Navy is restricted to assigning vessels already constructed and under his jurisdiction and control.

Mr. PADGETT. The Secretary has no power whatever to construct a vessel. He can not even repair a vessel where the cost of the repair exceeds 20 per cent of the cost of the ship.

Mr. COX. Is that under some law that is not stated here? Mr. PADGETT. Yes; that is under the general law, and every year for every ship that is built, from the smallest to the greatest, the gentleman will find that there is direct authority of Congress, with a limit of cost fixed, and he will find in the appropriation bill every year authority to the Secretary to repair certain vessels, limiting the amount that may be expended for repair, because of this general law.

Mr. COX. Under this language there will be no question, I take it, that the Secretary of the Navy would be permitted to turn over a part of these funds to repair vessels that are given over to the State Militia.

Mr. PADGETT. He would not turn over the funds to repair it, but he would repair it under his authority. He would not turn over the repair of the vessels to them. He would repair them as provided by law, which he is doing now.

Mr. COX. And use a part of this appropriation for that

Mr. PADGETT. Yes.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

Mr. PADGETT. Certainly.
Mr. WILLIS. I desire to ask a question for information. Is the purpose of this legislation to establish the same relationship between the regular naval forces of the United States and the Naval Militia as now exists between the Regular Army and the State militia?

Mr. PADGETT. Absolutely, so far as it can be done, and this is an adaptation of the Dick bill to the Navy, so far as it can be adapted. Neither has any preference over the other.

Mr. WILLIS. I understood the gentleman from Illinois [Mr. FOWLER] to be objecting to this upon the theory that it would increase the Navy. If it has the same effect in respect to the Navy that it had in respect to the land forces of the United States, it would have a contrary effect. That has kept men from enlisting in the Army and saves the Government millions of dollars

Mr. PADGETT. That is what I stated in the fore part of my statement, that this was an opportunity for the Government to receive the aid of these trained men when they are needed in time of war at a very minimum of cost. The Navy is to-day 30,000 short of its enlistment on a war basis to man the ships we now have.

Mr. MADDEN. In other words, it costs the Government \$10 per annum per man to insure a certainty of having a number

of efficient men in case of need?

Mr. PADGETT. When we need them on 48 hours' notice.
Mr. TEMPLE. Mr. Chairman, will the gentleman yield?
Mr. PADGETT. Yes.
Mr. TEMPLE. I would like to have some clear, comprehen-

sive expression concerning the course contemplated by this bill to be followed at the outbreak of war. Section 3 provides:

That in the event of war, actual or threatened, \* \* \* it shall be lawful for the President to call for such number of the Naval Militia of a State or of the States or Territories, etc., as he may deem neces-

In section 5 it is provided-

That every officer and enlisted man of the Naval Militia who shall be called forth in the manner hereinbefore prescribed shall be mustered for service without further appointment or enlistment.

But previous to that, in the section prescribing the manner of calling forth the Naval Militia, it is provided that when so called they shall serve either within or without the territory of the United States. Now, if they serve without further enlist-

Mr. PADGETT. Of course, in the Navy it is impossible for them to serve exclusively in the territory of the United States. Mr. TEMPLE. Well, for instance, on Lake Michigan or Lake Champlain.

Mr. PADGETT. There you get into the concurrent jurisdiction of the Dominion of Canada and England.

Mr. TEMPLE. What I want to call attention to is this: It provides that without further enlistment officers and men of the Naval Militia shall serve either within or without the territory of the United States.

Mr. PADGETT. But it provides, first, that the Secretary of the Navy shall provide standards and rules and regulations, and they must first pass these examinations and qualifications before they become part of the Organized Militia accepted by the Government.

Mr. TEMPLE. But the point I want to call attention to is this: The enlistment is for service in the State Naval Militia. That militia is called forth and mustered into the service of the United States without further enlistment, and then is called to serve either within or without the territory of the United States. Now, my question is—
Mr. PADGETT. He has first to become part of the Organized
Militia as authorized by this bill.

Mr. TEMPLE. But I have not asked my question yet. I am merely laying the ground for it. A man enlists and serves in the State Naval Militia. He is mustered into the United States service without any further enlistment, and then he is sent to serve outside of the United States. Now, in connection with the interpretation of the Dick law, I am told that the Attorney General has declared that without further enlistment a man who has enlisted to serve in the State Militia in the land service can not be sent outside the territory of the United States. Can it be done in the case of the naval service when it can not be done in the case of the military service?

Mr. PADGETT. I think so, because naval service is of necessity outside the territorial jurisdiction of the United States because, when you get beyond the three-mile limit, you are outside the jurisdiction of the United States.

Mr. TEMPLE. It is possible, however, for a naval man to serve inside the territory of the United States—say on Lake Michigan, which is all inside the United States. But I merely raise that question.

Mr. PADGETT. I think it is time enough to raise that when the man refuses to go. Let him raise it if he wants to do so.

Mr. TEMPLE. But it provides here that if he does refuse

or even neglects to present himself for muster he can be tried by a court-martial and punished as the court-martial may direct.

Mr. PADGETT. But, if it is not upon authority he can not be punished. If it is upon authority he has no right to refuse.

Mr. TEMPLE. My idea is this: That the same principle should prevail in the naval and the military service; and that if this is constitutional, then the Dick law applying to the land

service is also constitutional. Mr. PADGETT. I think if war ever got up it would be constitutional.

The CHAIRMAN. The time of the gentleman from Ten-

nessee has expired.

Mr. TEMPLE. I am glad to hear the gentleman from Tennessee [Mr. Padgett] say so. I know there have been instances when the opinion of the Attorney General was not followed by the President in time of war. I am very glad the gentleman agrees with that idea.

Mr. WILLIS. If the gentleman will permit another brief question. I have been examining the report, and I do not find any statement as to the number of States in which there is now an organization. Can the gentleman give that information?

Mr. PADGETT. If the gentleman will turn to page 3 of the report he will see it.

Mr. WILLIS. I thank the gentleman and beg his pardon for interrupting him.

Mr. PADGETT. If there are no further gentlemen desiring

to debate, I ask that the bill be read.

Mr. MANN. Mr. Chairman, at the time of the Spanish War, when no one knew where the Spanish fleet was and a great many people in the country along the coast were considerably worried, and no one knew how strong the Spanish fleet might develop to be, we had already been told that the United States was unprepared for war, that it had neither money, men, nor ammunition, I went to the Secretary of the Navy one day, at the request of the Naval Militia at Chicago, and I said to Secretary Long, "We have got a lot of boys in the Naval Militia at Chicago who would like to enlist in the Navy, and I understand you

I was told it was not practicable to enlist them. I believe the Secretary had had some little difficulty growing out of the enlistment of the very efficient Naval Militia of his own State of Massachusetts, which enlisted practically as a body, and the Navy Department had reached the conclusion, as I recall it, that it was not practicable to take in the Naval Militia with its officers as a body, and they thought they would not be willing to enlist and be assigned apart from their officers to the different

I said to the Secretary that the people of Chicago were not proud, that the boys there were willing to enlist in the Navy and go any place to which they were sent. They enlisted in considerable numbers. One of them, now a very distinguished man in the Government service, Dr. Stratton, Chief of the Bureau of Standards, if I recall rightly, was assigned on board of a vessel, spent his time in shoveling coal, and made no complaint of it. These boys were assigned to a large number of different vessels.

I think they were represented on pratically every vessel in the naval service in the Atlantic waters, anyhow. There were 60 of them on board the *Oregon*. The commander of that vessel stated that no more efficient service was rendered by anybody on board his vessel, or any other, than was rendered by these boys from the Naval Militia at Chicago.

Mr. Chairman, in my judgment it is impossible for us to keep at all times in the Navy a sufficient number of men on board the vessels to form a full complement in time of war. And when I have noticed, as I have at Chicago on a few occasions when I had the opportunity, the men in this service on board the training ship there, furnished by the Government, doing all of the work, including the dirty work that is per-formed on board a vessel, studying everything that should be studied on board the training ship, from scrubbing the deck to handling the ship and the guns on the ship, it has seemed to me that here was something worth while. It is possible some people consider that they are having a gay holiday. I would not consider the work that they do a holiday. Undoubtedly they get pleasure out of it or they would not be there, but they do the work until they are able to go on board a warship

anywhere and do a considerable amount of the work that an able seaman or experienced man in the Navy does.

What is the proposition here? To involve the Government in an expense of \$20 or \$25 or \$30 per man in this service, an expense

Mr. Chairman, will the gentleman yield?

Mr. MANN. Not yet. An expense, as I was saying, of no importance compared with the need for the men if war arises. We have reached that point where we depend in the main for our safety as a Nation upon the Navy. We do not maintain a large Army. We do not maintain possibly, or probably, an excessive Navy, but the Navy, spending a large amount of money upon the land militia, we may well afford, in my judgment, to spend the comparatively small amount provided in this bill in order that if we do have the need of these men in time of stress, we will have prepared throughout the country, in the Naval Militia, men qualified and willing to serve the Government on warships in any capacity, in any place, or at any time.

Now I yield to the gentleman from Pennsylvania [Mr. MOORE]

Mr. MOORE. Referring to the gentleman's tribute to the men in Chicago who enlisted for this service, I desired to call his attention also to their readiness, in addition, for work upon shore. Many of them were actually employed along the coast line, from Maine to Florida, doing Signal Corps service, and taking the rough as well as the smooth during the preliminary stages of the Spanish-American War.

Mr. MANN. There was not a vessel at Santiago, following the American flag, that did not have some of the Chicago boys on board doing the hard work, and I am proud of it.

Mr. PADGETT. Mr. Chairman, I simply want to state that the Naval Militia at the outbreak of the Spanish War actually furnished in that war 3,332 officers and men. And so efficient was their work during the war that they received favorable commendation from their various commanding officers of the Regular Navy. And the strength of the Naval Militia in the various States grew to about 5,500 men. The militia of the various States to-day numbers about 8,126 men. And I want to pay a tribute to the patriotism and the efficiency of the work of the Naval Militia in the Spanish War. They went in a few hours after the call was made, and it took six weeks, as I remember, to get 5,500 men by enlistment from the body of [Applause.]

Mr. Chairman, I ask for the reading of the bill under the rule for amendment.

The CHAIRMAN (Mr. FOSTER). The Clerk will read. The Clerk read as follows:

The Clerk read as follows:

SEC. 3. That in the event of war, actual or threatened, with any foreign nation involving danger of invasion, or of rebellion against the authority of the Government of the United States, or whenever the President is, in his judgment, unable with the regular forces at his command to execute the laws of the Union, it shall be lawful for the President to call forth such number of the Naval Militia of a State or of the States or Territories, or of the District of Columbia, as he may deem necessary to repel such invasion, suppress such rebellion, or to enable him to execute such laws, and to issue his orders for that purpose, through the governor of the respective State or Territory, or through the commanding officer of the Naval Militia of the District of Columbia, from which State, Territory, or District such Naval Militia may be called, to such officers of the Naval Militia as he may think proper: Provided, That from and after the issue of such call it shall be unlawful for the governor of any State or Territory, or any other State or Territorial officer, or any official of the District of Columbia, to discharge from service in the Naval Militia any officer or man except by reason of the expiration of his term of enlistment.

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Amend, page 3, line 18, by striking out, after the word "proper," the colon and all of the proviso up to and including line 23.

The CHAIRMAN. The question is on agreeing to the committee amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The Clerk read as follows:

SEC. 4. That whenever the President calls forth all or any part of the Naval Militia of any State, Territory, or of the District of Columbia, to be employed in the service of the United States, he may specify in his call the period for which such service is required, and the Naval Militia so called shall continue to serve during the term so specified, either within or without the territory of the United States, unless sooner relieved by order of the President: Provided, That if no period be stated in the call of the President, the period shall be held to mean the existence of the emergency, of which the President shall be the sole judge, except that no officer or enlisted man shall be required to serve more than two years under such call: And provided further, That no commissioned officer or enlisted man of the Naval Militia shall be held to service beyond the term of his existing commission or enlistment: Provided further, That when the military needs of the Federal Government raising from the necessity to execute the laws of the Union, suppress insurrection, or repel invasion, can not be met by the regular forces,

the Naval Militia and any existing Naval Reserve shall be called into the service of the United States in advance of any volunteer naval force which it may then be determined to raise.

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Amend, page 4, by striking out, after the word "judge," in line 9, the semicolon and the remainder of the line and all of line 10 and the words "such call," in line 11.

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Amend, page 4, line 15, by striking out the word "raising" and inserting in lieu thereof the word "arising,"

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I wish to offer the committee amendment which I send to the Clerk's desk.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Section 4, page 4, line 18, after the word "Militia," insert the words "qualified as herein provided."

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer another amendment. The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Section 4, page 4, in line 18, after the word "reserve," insert the ords "now or hereafter organized."

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, I offer another amendment. The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

Page 4, section 4, in line 20, after the word "raise," change the period to a colon and add the following proviso: "And provided further, That nothing herein contained shall prevent the Secretary of the Navy, when vessels are purchased or otherwise acquired by the United States for a war, from manning such vessels by all or part of the officers and men then serving on said vessels."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The CHARMAN. The Clerk will read.

The Clerk read as follows:

Sec. 5. That every officer and enlisted man of the naval militia who shall be called forth in the manner hereinbefore prescribed shall be mustered for service without further appointment or enlistment, and without further examination previous to such muster, except for those States and Territories and the District of Columbia, if the case may so be, which have not adopted a standard of professional and physical examination prescribed by the Secretary of the Navy for the naval militia, and whose officers and petty officers shall not have been examined and found qualified in accordance therewith by boards of officers which shall be appointed by said Secretary: Provided, however, That any officer or enlisted man of the naval militia so qualified who shall refuse or neglect to present himself for such muster upon being called forth as herein prescribed, shall be subject to trial by court-martial and shall be punished as such court-martial may direct: Provided further, That when in the service of the United States, officers of the naval militia may serve on courts-martial for the trial of officers and men of the Regular or Naval Militia Service, but in the cases of courts-martial convened for the trial of officers of the Regular Service; the majority of the members shall be officers of the Regular Service; and officers and men of the navai militia may be tried by courts-martial the members of which are officers of the Regular Service; the majority of the members of the Regular Or Naval Militia Service, or both: And provided further, That when vessels commanded by naval militia officers coperate or act in conjunction with vessels commanded by officers of the Navy, the exercise of command over such combined force shall be determined by the rank which such commanding officers hold, except that, for the purposes of this proviso, naval militia captains, commanders, and lieutenant commanders shall be junior to lieutenant commanders of the Navy, unless speciall

The CHAIRMAN. The Clerk will report the first committee amendment.

The Clerk read as follows:

Amend, page 5, by inserting, after the word "vessels," in line 21, the following words: "In the service of the United States."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.
Mr. PADGETT. I offer a committee amendment.
The CHAIRMAN. The gentleman from Tennessee offers an amendment, which the Clerk will report.

The Clerk read as follows:

Amend, page 4, in line 24, after the word "further," by inserting the word "professional."

The amendment was agreed to.

The Clerk read as follows.

SEC. 6. That the Naval Militia, when called into the actual service of the United States, shall be governed by the Navy regulations and the articles for the government of the Navy.

With the following committee amendment:

Amend, page 6, in line 7, by striking out the word "actual."

The amendment was agreed to.

The Clerk read as follows:

SEC. 7. That the Naval Militia, when called into the actual service of the United States, shall, during their time of service, be entitled to the same pay and allowances as are or may be provided by law for the Regular Navy.

With the following committee amendment:

Amend, page 6, in line 11, by striking out the word 'actual."

The amendment was agreed to.

The Clerk read as follows:

SEC. S. That when the Naval Militia is called into the actual service of the United States, or any portion of the Naval Militia is called forth under the provisions of this act, their pay shall commence from the day of their reporting in obdience to such call at their local ship, armory, or quarters; but this provision shall not be construed to authorize any species of expenditure previous to arriving at such places which is not provided by existing laws to be paid after their arrival at such places.

With the following committee amendment:

In page 6, line 15, strike out the word "actual."

The amendment was agreed to.

The Clerk read as follows:

The amendment was agreed to.

The Clerk read as follows:

SEC. 10. That the Secretary of the Navy is hereby authorized to procure, by purchase or manufacture, and issue from time to time to the Naval Militia such number of United States service or other arms, accessories, accoutements, equipment, uniforms, clothing, equipage, and military and naval stores of all kinds, under such regulations as he may prescribe, as are necessary to arm, uniform, and equip all of the Naval Militia in the several States, Territories, and the District of Columbia in accordance with the requirements of this act without charging the cost or value thereof or any expense connected therewith against the allotment of such State, Territory, or District from the annual appropriation for the Naval Militia in the annual appropriation for the Navy, or in any other general appropriation for the Naval Militia that may hereafter be made, nor requiring payment therefor, and to issue from time to time ammunition suitable for such arms as the Naval Militia of the several States, Territories, and the District of Columbia may be equipped with, and to exchange said arms, accessories, accouterments, equipment, equipage, stores, and ammunition when the same shall have become obsolete, without receiving any money credit therefor, for other arms, accessories, accounterments, equipment, equipage, stores, and ammunition suitable for the Naval Militia: Provided, That said property shall remain the property of the United States, except as hereinafter provided, and be annually accounted for by the governor or other proper officer of the States, Territories, and the commanding general District of Columbia shall, when and as required by the Secretary of the Navy, urin in to be Navy Department, or other proper officer of the States, Territory, and the District of Columbia shall, when and as required by the Navy, without receiving any money credit therefor, and without expense for transportation or otherwise, such or all property theretofore issued under the prov

With the following committee amendment:

Amend by striking out all after the word "act." in line 24, page 8, down to and including the word "allowance," in line 10, page 9.

The amendment was agreed to.

The Clerk read as follows:

The Clerk read as follows:

SEC. 11. That when it shall appear by the report of inspections, which it shall be the duty of the Secretary of the Navy to cause to be made at least once in each year by officers detailed by him for that purpose, that the Naval Militia of a State or Territory or of the District of Columbia is sufficiently armed, uniformed, and equipped for active duty, the Secretary of the Navy is authorized on the requisition of the governor of such State or Territory or of the commanding general District of Columbia Militia, to pay to such officer as may be properly designated and appointed by said governor or commanding general so much of its allotment from the annual appropriation for arming and equipping the Naval Militia in the annual appropriation for the Navy as shall be necessary for the payment, subsistence, and transportation of such portion of said Naval Militia as shall engage in actual service or instruction afloat or on shore; and the officers and men of such Naval Militia while so engaged may be paid therefrom the same pay, subsistence, and transportation or travel allowance as officers and men of corresponding grades of the Regular Navy are or may hereafter be entitled to by law, and the officer so designated and appointed shall be regarded as a disbursing officer of the United States and shall render

his accounts through the Navy Department to the proper accounting officer of the Treasury for settlement, and he shall be required to give good and sufficient bonds to the United States, in such sums as the Secretary of the Navy may direct, faithfully to account for the safe-keeping and payment of the public moneys so intrusted to him for disburgement.

With the following committee amendment:

Amend, page 10, line 5, by inserting after the word "authorized," in line 5, the words "in his discretion."

The amendment was agreed to.

The Clerk read as follows:

The Clerk read as follows:

Sec. 12. That the Secretary of the Navy is authorized to provide for participation by any part of the Naval Militia of any State or Territory or the District of Columbia on the request of the governor of said State or Territory or the commanding general of the militia of said District, in any cruise, maneuvers, field instruction, or encampment of any part of the Regular Navy, afloat or on shore. In such case the Naval Militia so participating shall, if so requested by the governor or commanding general and allowed by the Secretary of the Navy, receive the same pay, subsistence, and transportation as is provided by law for the officers and men of the Regular Navy, and no part of the sums appropriated for the support of the Regular Navy, shall be used to pay any part of the expenses of the Naval Militia of any State, Territory, or the District of Columbia while engaged in such cruise, maneuvers, field instruction, or joint encampment of the Regular Navy and Naval Militia, but no payments to the Naval Militia under the provisions of this section and no allowances for mileage shall be made from appropriations made for the Navy, but shall be made solely from the sums appropriated for such cruise, maneuvers, field instruction, or for the Naval Militia: Provided, That officers of the Regular Navy in command of vessels upon which Naval Militia may be embarked, or in command of camps, navy yards, or other places in which Naval Militia may be encamped or be, shall remain in command of said vessels, camps, navy yards, or other places in which Naval Militia may be encamped or be, shall remain in command of said vessels, camps, navy yards, or other places in which Naval Militia may be encamped or be, shall remain in command of said vessels, camps, navy yards, or other places in which Naval Militia may be encamped or be, shall remain in command of the Naval Militia so under his commanding officers of the Regular Navy may, in the exercise of their discretion, place upon any duty to which his rank o

With the following committee amendment:

Amend, page 11, by inserting after the word "authorized," in line 3, the words "in his discretion."

The amendment was agreed to. The Clerk read as follows:

The Clerk read as follows:

SEC. 15. That each State or Territory or the District of Columbia furnished with material of war under the provisions of this or former acts of Congress shall, during the year next preceding each annual allotment of funds, have required every ship's company, engineer's, navigator's, and other divisions or units of its Naval Militia not excused by the governor of said State or Territory, or the commanding general District of Columbia Militia, to participate during at least five consecutive days in such form of military or naval exercise as may have been prescribed by the Secretary of the Navy, and in default of such prescribing by the Secretary of the Navy, then in some form of Naval Militia exercise during at least five consecutive days to be prescribed by the governor of the said State or Territory, or the commanding officer of the District of Columbia Naval Militia, and shall also have required said divisions to assemble for drill and instruction at armories or other places of rendezvous or for target practice not less than 24 times, and shall have required during such year an inspection of each of said divisions or units, to be made by an officer of said Naval Militia, or by an officer of the State service, or by an officer of the Regular Navy.

With the following committee amendments:

With the following committee amendments:

Page 14, line 17, insert, after the word "funds," the words "in order to participate in such annual allotment of funds,"

The amendment was agreed to.

Also, the following committee amendment:

Page 14, line 22, after the word "militia," insert the words "for reasons satisfactory to the Secretary of the Navy."

The amendment was agreed to.

The Clerk read as follows:

The clerk read as follows:

The actual and necessary traveling expenses of the members of such board, together with a per diem to be established by the Secretary of the Navy, shall be paid to the members of the board. The expenses herein authorized together with the necessary clerical and office expenses of the Division of Navai Militia Affairs in the office of the Secretary of the Navy, shall constitute a charge against the whole sum annually appropriated under the appropriation for the arming and equipping of the Navai Militia in the annual appropriations for the Navy, and shall be paid therefrom, and not from the allotment duly apportioned to any particular State, Territory, or the District of Columbia; and a statement of such expenses shall be submitted to Congress by the Secretary of the Navy in connection with his annual report.

Mr. COX. Mr. Chairman, I move to strike out the last word. I want to ask the gentleman in charge of this bill whether or not the Navy has any regulation fixing the per diem of its officers while traveling on duty.

Mr. PADGETT. I do not know.

Mr. COX. In the closing paragraph of page 16 you provide-Together with a per diem to be established by the Secretary of the Navy.

Mr. PADGETT. To be established.

Mr. COX. Yes; to be established. That is what prompts my inquiry as to whether or not there is any per diem allowance now made by the Secretary of the Navy to any of the officers of the Navy while traveling under orders.

Mr. PADGETT. I do not know.

Mr. COX. Does not the gentleman think there ought to be

some limit on this per diem?

Mr. PADGETT. The Navy Department will fix the limit.
Do you mean that you think it ought to be fixed in this bill?

Mr. COX. Yes.

Mr. PADGETT. I think that can be left to the Secretary of the Navy. That is a detail that can be left to him.

Mr. COX. Of course, that could be left to him; but could not Congress fix it?

Mr. PADGETT. Of course Congress could fix it, but I do not think it would be wise.

Why not? Mr. COX.

Mr. PADGETT. Because the Secretary might see fit to reduce it or to increase it as exigencies might arise. It is a very small item, which will amount to only a few dollars a year.

Mr. COX. Does not the gentleman think a limitation of not to exceed \$4 a day would be a reasonable limitation?

Mr. TALBOTT of Maryland. It depends altogether on the

rank of the officer.

Mr. COX. Does not the gentleman think that amount will be sufficient?

Mr. PADGETT. I do not know, sir; there might be circumstances where he would be giving too much or too little. There might be one place where he was giving too much and one place

where he would be giving too little.

Mr. COX. I take it that whatever per diem was fixed, it would be uniform; you would not fix one amount for one city and another amount for another, but it would be uniform.

Mr. PADGETT. There might be conditions where it ought to be varied.

Mr. COX. Does not the gentleman think that whenever the Secretary of the Navy has fixed the amount it will be uniform?
Mr. PADGETT. Off hand, I should say that I suppose it

would be, but at the same time I can see where he might want to change it.

Mr. COX. Mr. Chairman, I move an amendment by inserting, on page 16, line 22, after the word "diem," the words "not to exceed \$4 per day."

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

On page 16, line 22, after the word "diem," insert the words "not to exceed \$4 per day."

Mr. COX. Mr. Chairman, I think that amendment ought to be agreed to. I think Congress is as well able to fix this matter

as is the Secretary of the Navy.

Mr. PADGETT. I think that is a matter that should be left to the Secretary of the Navy. He may want to enlarge it or change it as conditions may arise or with reference to localities

or as the rank of the officer may justify. Mr. COX. Mr. Chairman, I want to say that this per diem question has been a serious question in all the departments for several years. For years and years, I do not know how long,

the post-office inspectors were allowed \$4 per day. I imagine if Congress had not taken up the matter and reduced it from \$4 to \$3 per day the department to-day would be recommending a straight \$4 a day. Some three or four years ago, under the administration of Mr. Hitchcock, he required a careful, itemized expense account to be kept as to whether or not

it would not be economy to reduce the per diem from \$4 to \$3 by putting them on the actual-expense basis. He found after three months' demonstration that by putting them on an actual-expense basis—which practically amounted to \$3 a day—it would save the Government of the United States from \$50,000 to \$60,000 a year.

When the Post Office Committee got that information it very quickly and promptly reduced the per diem of post-office inspectors from \$4 to \$3 a day, although as yet some inspectors are not satisfied with that amount.

Now, I do not care what regulations the Secretary of the Navy might make, they are bound to be uniform so far as grade is concerned, and they are bound to be uniform throughout the dominion of continental United States. I should rather trust Congress to fix this at \$4 a day than to risk that the Secretary of the Navy might fix it at \$5 to \$10 per day, because I believe that \$4 per day is a sufficient per diem for any of these officers who might be detailed for duty. This per diem only pays the board bills; in addition thereto the officer who travels gets 8 cents per mile for mileage,
Mr. STAFFORD. Will the gentleman yield?

Mr. COX, I will. Mr. STAFFORD. Is not the gentleman aware that the inspectors and supervisors in the postal service who do not receive a per diem are granted an allowance without limit for the expenses they incur while in discharge of duties outside of their respective homes?

I do not know any such thing.

Mr. STAFFORD. It is a fact.

Mr. COX. I very much doubt whether that is accurate. What I stated a moment ago I know to be true, for I got that information from the Post Office Committee. I am firmly convinced that a per diem of \$4 per day for this class of men will be a sufficient amount.

The CHAIRMAN. The question is on the amendment offered

by the gentleman from Indiana.

The question was taken, and the amendment was lost.

The Clerk read as follows:

Sec. 19. That when any officer, petty officer, or enlisted man of the Naval Militia is disabled by reason of wounds or disabilities received or incurred in the naval service of the United States in time of war he shall be entitled to all the benefits of the pension laws existing at the time of his service, and in case such officer, petty officer, or enlisted man dies in the naval service of the United States in time of war, or in returning to his place of residence after being mustered out of such naval service, or at any time in consequence of wounds or disabilities received in such naval service in time of war, his widow and children, if any, shall be entitled to all the benefits of such pension laws: Provided.

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

On page 18, line 6, strike out the word "Provided."

The amendment was agreed to.

The Clerk read as follows:

That all expenditures authorized to be paid by the Secretary of the Navy under the provisions of this act shall be paid out of the \$200,000 appropriated in section 10 of this act, except such additional expenditures as may be authorized by the annual naval appropriation act.

With the following committee amendments:

Page 18, line, 7, insert the words and figures "Sec. 20" at the beginning of the line,

The committee amendment was agreed to.

Mr. COX. Mr. Chairman, beginning with the word "except," in line 10, page 18, I move to strike out the remaining portion of that line and all of line 11, and also strike out the comma after the word "act," in line 10, and insert in place thereof a period.

The CHAIRMAN. The Clerk will report the amendment of the gentleman from Indiana.

The Clerk read as follows:

Page 18, lines 10 and 11, after the word "act," strike out the comma and insert a period, and strike out the words "except such additional expenditures as may be authorized by the annual naval appropriation act."

Mr. COX. Mr. Chairman, just a word on that amendment. It was contended awhile ago by the gentleman from Illinois that it was mere surplusage and would not be sufficient authority for the naval appropriation committee to base an appropriafrom the State of Illinois [Mr. Mann] almost exclusively on questions of parliamentary law. If that is useless, and mere surplusage, then it has no place in this bill. If it has no place in this bill, it ought to be stricken out, and if it has a place in the bill, then the only place and the only position it can possibly have is, as I said awhile ago, to give the naval appropriation committee a fundamental, basic law on which to make an appropriation. If it be the intention to hold down the appropriation for this concern that we are making an adjunct to the Navy of the United States, although we are now appropriating \$150.000,000 a year for the Navy—if it be the purpose of this committee to hold these appropriations down to \$200,000, and this provision is mere useless language, then we should strike it out of the bill; and if the chairman opposes the striking of it out, in my judgment it would be conclusive proof to any Member on the floor that he wants to use it as a leg on which to stand when it comes to making appropriations for the same

Mr. PADGETT. Mr. Chairman, I am afraid that the gentleman's judgment of my purpose is faulty, as well as it is in saying that it is useless surplusage in the bill.

Mr. COX. I did not say that it was surplusage. That was

the argument made by the gentleman from Illinois.

Mr. PADGETT. Mr. Chairman, the gentleman from Illinois said that it was surplusage, so far as being an authorization

for additional appropriations in the annual appropriation bill, in which statement he was correct; but it is necessary because of the provisions of this bill that it should be here. On page 13 of the bill, section 14, which has been passed, there is this language:

SEC. 14. That the annual appropriation made by Congress for arming and equipping the Naval Militia in the annual appropriation for the Navy shall be available for the purpose of providing for issue to the Naval Militia any stores and supplies or publications which are supplied to the Navy by any department.

In section 20 of the bill we provide that all expenditures authorized to be paid by the Secretary of the Navy under the provisions of this act shall be paid out of the \$200,000 appropriated in section 10 of the act, except such additional appropriation expenditures as may be authorized by the annual appropriation act. The annual appropriation is authorized for the purposes specified in section 10. We are carrying in the annual appropriation bill an appropriation of \$125,000

Mr. COX. For what purpose?

Mr. PADGETT. For arming and equipping the militia, for paying the expenses of handling these boats, maintaining them, and all of that sort of thing that I have heretofore explained. If you were to strike this out where it provides here this exception, then you would destroy the provision on page 13 which I just read to the committee. This is not an authorization for appropriations in the naval appropriation bill. That has been done heretofore by substantive legislation passed years ago in the legislation of Congress, and the appropriations under the naval appropriation bill do not require this language. It is put here for the purpose of harmonizing the provisions between section 20 and the section on page 13 which I read.

Mr. JOHNSON of South Carolina. Mr. Chairman, will the

gentleman yield?

Mr. PADGETT. Certainly.

Mr. JOHNSON of South Carolina. How much does the gentleman contemplate will be necessary to appropriate under section 10 of this bill and any other appropriation bill in order to carry into effect this law?

Mr. PADGETT. Section 10 limits all of the expenditures to

\$200,000.

Mr. JOHNSON of South Carolina. Except?

Mr. PADGETT. Except this.

Mr. JOHNSON of South Carolina. What are the exceptions and how much will that carry?

Mr. PADGETT. That depends on what Congress may from

year to year appropriate.

Mr. JOHNSON of South Carolina. What is the judgment of the gentleman?

Mr. PADGETT. I think it would be less than the \$125,000

which we have been appropriating.

Mr. JOHNSON of South Carolina. So that the entire expense of carrying this bill into execution will be less than \$350,000?

Mr. PADGETT. Three hundred and twenty-five thousand dollars, I think

Mr. ROBERTS of Massachusetts. It is going to reduce the \$125,000

I think so. It seems to me to strike this Mr. PADGETT. language out would be simply to confuse the bill and complicate

the provisions we have already passed.

Mr. MOORE. Mr. Chairman, I hope the limitation proposed by the gentleman from Indiana [Mr. Cox] will not pass. There is a good reason, it seems to me, why the language of the paragraph should remain as it is, without revision. I call the attention of the gentleman from Indiana and our friends on the other tide, to the fact that we are now preparing to consider a bill for the education of the farmers of the country. We take very particular pains to make appropriations for that purpose, and it is a good purpose, because we want the boys to understand the methods of tilling the soil, and we want to make their work upon the farm profitable. When that bill was considered here some time ago I stated that no way was provided by this Government by which a man could be trained to service upon the sea; it is due to that fact that seamanship is unpopular to-day, and we have a waning merchant marine. During the discussion of the peace question the other day I ventured to argue that the construction of battleships and the use of battleships tended to make men seamen and gave us a sort of training school for the American merchant marine. This is a legitimate method by which in times of peace, when we do not need fighting men, we can have them trained for the purpose of war, both upon sea and land, and still have them available for the purposes of the merchant marine. We have got to pay attention to the question of the merchant marine. If we provide here very large appropriations for the education of farmers' boys, as we are going to

do and as the gentleman from Indiana is very much interested in having us do, we must also provide for some other avenues of employment, from which the modern young man is drifting. We must educate the boy who goes down in the mine, educate the boy who goes upon the ships. Now, what is the proposal? To encourage some of our young men to go upon ships of their The proposition is to make them useful to the Government by having them prepared, so that when the Government calls upon them for war service they will be ready for the field or the ships. We are bound to have our Army and Navy, so why not train these boys for useful occupations upon the sea? We need them for the merchant ships.

It is not their ambition always to be upon fighting shipsthey are not well paid for that, but if they can learn the methods of navigation and understand the art of sailing or managing ships, by reason of their training under the inspiration of the Government of the United States, they will be useful in times of peace, when we need them as seriously as we do in

times of war.

You have a bill that will come up very soon, the seamen's bill, that I understand puts a limitation upon the men who serve upon the ships. It provides that no man can serve upon a ship who has not had three years' training. I challenge any man in favor of that bill to say how a boy will get three years' training in this country under any system we now provide. We take the foreign boy for this service, a boy who does not speak the English language, because he has served upon a foreign ship, and we qualify him as an able seaman. We have no method of training our own boys to be able-bodied seamen for the merchant service, and now propose a very trifling inducement of \$10 a year-

Mr. BUCHANAN of Illinois. I would like to ask the gentleman if he has read the seamen's bill, of which he speaks?

Mr. MOORE. I have read the seamen's bill.

Mr. BUCHANAN of Illinois. Then the gentleman knows it does not prohibit apprentices. The first year it provides 25 per cent shall be able seamen; the second year, 45 up to 55; and after the bill has been in effect for four years it is 65 per cent,

leaving then 35 per cent.

Mr. MOORE. How many men will be able to train for able-

bodied seamen under that system?

Mr. BUCHANAN of Illinois. Thirty-five per cent after four years and 65 per cent to start with.

Mr. MOORE. How many boys will enlist in that kind of

service and under that kind of encouragement?
Mr. BUCHANAN of Illinois. I do not know.

Mr. MOORE. That is my answer to the gentleman. are boys willing to do it, and we are asked to appropriate \$10 a year for each of them. This is a real training school for the merchant marine, and we ought to sustain it. [Applause.]

The CHAIRMAN. The question is on the amendment offered by the gentleman from Indiana [Mr. Cox].

The question was taken, and the amendment was rejected.

The Clerk read as follows:

The Clerk read as follows:

SEC. 20. That, for the purpose of securing a list of persons especially qualified to hold commissions in the Navy or in any reserve or volunteer naval force which may hereafter be called for and organized under the authority of Congress, other than a force composed of Organized Naval Militia, the Secretary of the Navy is authorized from time to time to convene examining boards at suitable and convenient places in different parts of the United States, who shall examine as to their qualifications for naval duties all applicants who shall have served in the Regular Navy of the United States or in the Organized Naval Militia of any State or Territory or the District of Columbia. Such examination shall be under rules and regulations prescribed by the Secretary of the Navy. The record of previous service of the applicant shall be considered as part of the examination. Those applicants who pass such examinations shall be certified as to their fitness for naval duties and rank, and shall, subject to a physical examination at any time, constitute an eligible class for commissions, pursuant to such certification, in any volunteer naval force hereafter called for and organized under the authority of Congress other than a force composed of Organized Naval Milita; and the President is hereby further authorized, upon the outbreak of war, or when, in his opinion, was is imminent, to commission in the Regular Navy for the exigency of such war such of the persons whose names have been certified as above provided as he may select: Provided, That no one shall be commissioned to a higher rank than the rank for which he may have been recommended by said examining board: And provided further, That the President may also commission or warrant as of the highest rank formerly held by him, or the present equivalent of such former rank in case the nomenclature or some of the specific duties of the same may have been changed, any person who having been formerly a commissioned or warrant officer of the United St

Also the following committee amendment was read:

Change the number of the section, page 18, line 12, from "20" to "21."

The CHAIRMAN. The question is on agreeing to the committee amendment.

The amendment was agreed to.

Mr. PADGETT. Mr. Chairman, there is a misprint in line 10, page 19. The word in the print is "was," and it should be "war." It reads "was is imminent," but should be "war is imminent."

The CHAIRMAN. Without objection, the word "was," on page 19, line 10, will be changed to "war."

There was no objection.

The Clerk read as follows:

Sec. 21. That all laws and sections of laws conflicting with the provisions of this act are hereby repealed.

Also the following committee amendment was read:

Change the number of the section from "21" to "22."

The CHAIRMAN. The question is on agreeing to the amendment.

The amendment was agreed to.

The CHAIRMAN. The Chair begs to call the attention of the gentleman from Tennessee [Mr. Pargert], the chairman of the committee, to the fact that in the report it says that on page 5, line 21, after the word "vessels," there should be inserted a comma. The Clerk has called the attention of the Chair to the fact that this comma has not been inserted in the printed bill.

Mr. PADGETT. On what page is it?

The CHAIRMAN. On page 5, line 21, after the word vessels.

Mr. MANN. No comma is required there.

Mr. PADGETT. No comma is required there. The report

may have indicated it, but there is none needed.

The CHAIRMAN. The Chair begs to call the attention of the gentleman to the fact that the report said that the comma should be inserted.

Mr. PADGETT. The report may have indicated it, but there

is no necessity for it.

The CHAIRMAN. The Chair has called attention to it

because the report so stated.

Mr. PADGETT. And I appreciate the kindness and courtesy of the Chair for so doing, but I do not think there is any necessity for inserting the comma. Mr. Chairman, I move that the committee do now rise and report the bill as amended to the House, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The motion was agreed to; and the Speaker having resumed the chair, Mr. Foster, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 8667) to promote the efficiency of the Naval Militia, and for other purposes, and had directed him to report the same to the House with sundry amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Is a separate vote demanded on any amendment? If not, the Chair will put them in gross.

The amendments were agreed to.
The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time,

was read a third time, and passed.

On motion of Mr. Padgett, a motion to reconsider the vote by which the bill as amended was passed was laid on the table.

## POSTAL . SAVINGS DEPOSITORIES.

The SPEAKER. The Clerk will resume the call of com-

Mr. MOON (when the Committee on the Post Office and Post Roads was called). Mr. Speaker, I desire to call up the bill (H. R. 9318) to amend the act approved June 25, 1910, entitled 'An act to establish postal savings depositories for depositing savings at interest, with the security of the Government for repayment thereof, and for other purposes.'

The SPEAKER. The Clerk will report the bill.

Mr. MOON. It is on the House Calendar.

The Clerk read the bill, as follows:

A bill (H. R. 9318) to amend the act approved June 25, 1910, entitled "An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes."

Be it enacted, etc., That sections 2 and 13 of the act approved June 25, 1910, entitled "An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes," he hereby amended to read as follows "SEC. 2.

as follows:

"Sec. 2. That provisions of section 3 of the act of July 5, 1884, entitled 'An act making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1885, and for other purposes, are hereby extended and made applicable to all official mail matter pertaining to the business of the postal savings system; and hereafter the board of trustees for the control, supervision, and administration of the postal savings depository system shall not be required to show in the annual report prescribed by section 1 of the act

of June 25, 1910, establishing such system, the amount of work done for that system by the Post Office Department and postal service in the transportation of free mail.

"Sec. 13. Postmasters, assistant postmasters, clerks, or other employees at post offices of the presidential grade, and postmasters at post offices of the fourth class, shall not be allowed or paid any additional compensation for the transaction of postal savings depository business."

Mr. MANN. Mr. Speaker, I reserve a point of order as to the calendar. This bill ought to be on the Union Calendar. Will the gentleman from Tennessee allow me a little time?

Mr. MOON. Yes; certainly.

Mr. MANN. Then I will not make the point of order.

Mr. MOON. Mr. Speaker, I will ask the Clerk to read the report. It contains a brief explanation of the bill.

The SPEAKER. The Clerk will read the report

The Clerk read as follows:

The Clerk read as follows:

Mr. Moon, from the Committee on the Post Office and Post Roads, submitted the following report, to accompany H. R. 9318:

"The Committee on the Post Office and Post Roads, to whom was referred the bill (H. R. 9318) to amend the act approved June 25, 1910, entitled 'An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes,' having considered the same, report thereon with a recommendation that it pass.

"The present statute requires that special stamps be affixed on all official correspondence transmitted through the mails which relates to the business of the postal savings system. The intent of Congress in thus requiring the use of special stamps was to assist in ascertaining one of the cost items of the new service, but it has been found that the plan was impractical for the reason that the rate of postage charged on official postal savings mail is the same rate that is required of the public. The actual expense of transmitting this mail is much less, and the figures which have been heretofore submitted on the subject have to a large extent been estimates. The use of a distinctive stamp is expensive and entails accounting difficulties which are unnecessary. There is no substantial ground for requiring different treatment of the postal savings mail than is given official mail matter from other divisions of the Post Office Department. If the special stamp is discontinued, it will follow logically that the annual report which the board of trustees is required to make to Congress respecting the cost of transacting business incident to the postal savings system is complex and difficult of administration. The amount that is allowable to a postmaster under its terms is inconsequential, while the expense of ascertaining and adjusting the matter is unwarranted. The volume of business done at fourth-class offices is so small that the continuance of the provision authorizing additional co

Mr. MOON. Mr. Speaker, it is hardly necessary for me to enter into any more thorough explanation of this bill than is contained in the brief report that has just been read at the Clerk's desk.

When the postal savings bank system was established, it was predicted on the floor of this House by the present chairman of this committee that this would probably be one of the difficulties that would confront us, among others. It now transpires that the department, in the exercise of the authority of the postal savings banks, has found that it is difficult of administration in this feature and expensive, and it recommends-and that is the purpose of this bill-the discontinuance of the distinctive stamp and a return to the franking privilege as provided for other branches of the Post Office Department.

Mr. JOHNSON of South Carolina. Mr. Speaker, will the

gentleman yield? Mr. MOON. Certainly.

Mr. JOHNSON of South Carolina. Is this the only change?

Mr. MOON. Yes.

Mr. MURDOCK and Mr. MANN rose.

The SPEAKER. To whom does the gentleman yield?

Mr. MOON. I yield to the gentleman from Kansas [Mr. MURDOCK ]

Mr. MURDOCK. In this connection, Mr. Speaker, I would like to call the attention of the gentleman from Tennessee to this circumstance, that when we passed the parcel-post law there was also a call for a distinctive stamp, and I think that that distinction was obviated by the department.

Mr. MOON. Yes; by an Executive order.
Mr. MURDOCK. The gentleman will remember that in the discussion of the Post Office appropriation bill a year ago, I succeeded in getting an amendment put on in the House which took away from the postmasters in the adjustment of salaries any salary based upon the sale of the distinctive parcel-post stamps. I believe that amendment was afterwards killed in the Senate. At the present time do postmasters receive salaries based on the sale of those stamps?

Mr. MOON. I believe they do.

Mr. MURDOCK. Does not the gentleman think that would be a good thing to correct along with this?

Mr. MOON. Does not the bill do so?
Mr. MURDOCK. This bill does not correct that at all.

Mr. MOON. It does correct the safary of postmasters based on the sale of these particular stamps, but not on those.

Mr. MURDOCK. It would not be corrected now, but there ought to be a readjustment of postmasters' salaries owing to that fact

Mr. MOON. I doubt, Mr. Speaker, whether I ought to commit myself too far to the gentleman on other matters now.

Mr. MURDOCK. I suppose that is true, but I think in view of the fact that the sale of the parcel-post stamps has been enormous, there ought to be a readjustment of the postmasters' salaries on that account.

Mr. MANN. Mr. Speaker, will the gentleman yield? The SPEAKER. Does the gentleman yield?

Mr. MOON. I yield to the gentleman from Illinois [Mr. MANNI.

Mr. STAFFORD. Just one moment. I think the chairman of the committee has committed an inadvertence in replying to the query of the gentleman from South Carolina [Mr. Johnson], to the effect that this bill has only one purpose. I think that the chairman overlooked the purpose carried in section 13, which is the second section of this bill.

Mr. MOON. Do you mean section 3 of this bill misnumbered

Mr. STAFFORD. I think it is properly numbered 13. seeks to amend section 13 of the postal savings-bank act, a copy of which I have in my hand. I direct attention to the first clause, which states that it is an amendment to sections 2 and 13 of the postal savings-bank act. I wish to direct the attention of the chairman to the fact that in section 13 we take away allowances to fourth-class postmasters for doing postal savings business.

Mr. MOON. That was the answer to the gentleman from Kansas. The gentleman from South Carolina [Mr. Johnson] was improperly answered in that respect, as suggested by the gentleman from Wisconsin [Mr. Stafford], for the thirteenth section of the postal savings bank act is amended by the bill.

Mr. JOHNSON of South Carolina. I wanted to ask the gentleman if the Committee on the Post Office and Post Roads had made any inquiry as to whether or not the postal savings banks

are yet paying expenses.

Mr. MOON. Oh, yes; very full inquiry has been made by the committee on that subject.

Mr. JOHNSON of South Carolina. Does the gentleman know how much the income exceeds the outgo?

Mr. MOON. The postal savings bank system has been in operation, I believe, some two and one-half or three years. Up to this time the balance of accounts shows a loss of about \$1,000,000 to the Government in operating the postal savings

Mr. JOHNSON of South Carolina. Is that loss still going on,

or does the income now equal the outgo?

Mr. MOON. No; the income is not equal to the outgo. That loss consists in the inauguration of the system, to begin with, and the fact that the expense attending it has been greater than the income from it. Practically, we borrow money from the people and place it in the savings depositories. The Government pays the depositor 2 per cent interest. That money is loaned on securities to the banks at 2½ per cent. Some of it, where parties desire, is covered into United States bonds at 2 per cent. I believe there is now about \$2,500,000 that has been so provided for. The balance of it is deposited under other provisions of the postal-savings law.

There are about 12,000 offices in the United States where these deposits are received, and of course the cost attending

that is a part of the expense.

Mr. JOHNSON of South Carolina. When may we hope that the system will become self-sustaining?

Mr. MOON. I can not express any opinion on that, Mr. Speaker. There are a good many who think it may never be self-sustaining. Probably that is the correct view of it.

There has been introduced into the House a bill, which I will call up before a great while, that provides for the taking off of the limit on deposits in the postal savings banks, which limit is now, I believe, \$500, and provides for making it unlimited as far as the deposit is concerned, and to limit to the sum of \$1,000 the amount on which interest is to be paid by the Government to any single depositor.

Mr. JOHNSON of South Carolina. Does the organic act limit the interest that the Government may charge on these postal deposits to 21 per cent when loaned to banks?

Mr. MOON. No; the law provides that it shall not be less than 2½ per cent.

Mr. JOHNSON of South Carolina. Not less than 21 per cent? Mr. MOON. Yes; but the Government might charge more.

Mr. JOHNSON of South Carolina. The Government might increase the rate to 3 per cent if it was thought to be wise?

Mr. MOON. Yes; and it may be advisable; but that is a matter of administration. It might be advisable for the Congress to direct that not less than 3 or  $3\frac{1}{2}$  per cent interest should be charged, because, as a matter of fact, under the system as it now exists the Government is operating a banking system in the United States for the depositing of money. It secures the deposits and pays 2 per cent interest, and loans the money to the banks for  $2\frac{1}{2}$  per cent interest, and the banks in turn loan the money to the people at from 6 to 8 per cent. It might be well to increase the interest to the banks or borrowers. I do not know; but those are questions that do not arise very properly on this bill.

Mr. JOHNSON of South Carolina. I understand that; but I thought perhaps the gentleman's committee, having charge and jurisdiction of the subject, might have inquired into this very

important matter.

Mr. MOON. We have inquired into it very definitely and very fully. The hearings have not yet been printed, but my friend from Wisconsin [Mr. Stafford] has some exact figures which he took down during the hearings, and if the gentleman desires any further information I shall be glad to yield to the gentleman from Wisconsin to read his figures.

Mr. MURDOCK. Will the gentleman yield to me? Mr. STAFFORD. If the gentleman will yield to

Mr. STAFFORD. If the gentleman will yield to me, I will follow this up with these exact figures.

Mr. MOON. I will yield to the gentleman from Wisconsin for the present.

The SPEAKER. How much time does the gentleman from Tennessee yield?

Mr. MOON. Ten minutes.

The SPEAKER. The gentleman from Wisconsin [Mr. STAF-

FORD] is recognized for 10 minutes.

Mr. STAFFORD. Mr. Speaker, the question as to the cost of operation of the postal savings bank system is of present interest, and one that has been given thorough consideration by the Post Office Committee during the past week, in connection with a bill recommended by the department that seeks to lift the limit of monthly deposits and of total deposits to \$500 each, so that there will be no limit whatsoever to the amount that may be deposited by a single depositor.

As you will remember, under the existing postal savings bank law passed three and a half years ago, there was a limit of amount of deposits in any one month to \$100, and not to exceed in the total an aggregate of \$500 at any one time, other than the amount that might accrue from interest in the investment of these funds. Numerous instances have been called to the attention of the administration officials of the postal savings banks that money has been sent abroad because of this limitation on the amount of deposit. Only recently in the city of Washington, when there was a flurry or run on the United States Trust Co., thousands of dollars were withdrawn and the money brought to the postal savings bank for deposit, but there was this arbitrary limit that prevented the Government

There are thousands of instances where foreigners have brought money from stockings and hiding places only to find that this arbitrary limit prevented the Government from taking it. There were some members of the committee, among others my friend from Kansas [Mr. Murdock] and myself, who at the time of framing the original postal savings bank bill, thought there was no reason why there should be any limit whatever placed on the deposits if any person had any reason to utilize the depository. Now the post-office officials come to us and ask and recommend that we lift the limit, and the committee is of the opinion that the limit should be lifted.

Now, as to the operation of the postal savings banks during the past three years: There are at the present time, or was on June 30 last, \$33,818,000 deposits. At the close of the year before, June 30, 1912, there were \$20,237,000, an increase in the last fiscal year of thirteen and a half million dollars.

In 1912 there were 243,801 depositors, with an average deposit of \$83. In the fiscal year ending June 30, 1913, there were

331,006 depositors, with an average deposit of \$102.

In the administration of this fund, as the chairman of the committee has stated, the Government under the law pays the depositor 2 per cent and receives from the banks 2½ per cent on the deposit. There is no limit on the discretion of the Government officials as to the amount of interest they may charge the banks for the use of these funds. I was surprised only recently to read a news item relating to New York banks engaged in savings bank business that there was no bank in the city of New York paying less than 3½ per cent, and many of them paid 4 per cent interest on deposits. Now, these deposits are more or less permanent in character, and if these private

institutions can afford to pay private depositors of small sums  $3\frac{1}{2}$  and 4 per cent, and in general throughout the country the banks pay not less than 3 per cent, why should not the Government, under the authorization of the savings postal-bank act charge the banks a like sum that they pay to the ordinary depositor when they deposit their individual accounts?

It is true that the system as carried on up to date has met with a loss, but that loss can be easily corrected by raising the rate of interest to be charged the banks. I am frank to say that the administration official, the Third Assistant Postmaster General, is considering the proposition to raise the rate on these deposits to be paid by the bank.

In the first six months when this system was in operation the total expenses for operating the banks, including the payment of clerks, payment of postage, all items of expense, was \$114,000. In 1912 it was \$619,000. In 1913, \$752,000, or up to date, \$1.486,000, or, in round numbers, one and one-half million dollars.

Against this there has been received interest on deposits paid by the banks of \$537,932, leaving a net loss to the Government of \$948,068, or, as the chairman said, in round numbers about a million dollars.

Mr. MADDEN. Will the gentleman yield to me right there? Mr. STAFFORD. I yield to my colleague on the committee.

Mr. MADDEN. The amount of expenditures expressed in the gentleman's statement, it is only fair to say, is in a large measure based on reports of various post offices, made by postmasters arbitrarily, showing the cost of transacting each item of business to be all the way from 2 cents up to 64 cents. That is, these statements of the postmasters, ranging all over the United States, arbitrarily estimate the expense from 2 cents to 64 cents, and they do not at all represent the actual cost of the transaction.

Mr. STAFFORD. The gentleman is correct; but that is on the side of maximum expense and not on the side of minimum expense. The administrative officials in estimating the expense took the maximum amount estimated. As they said, in one place the cost of operation was 64 cents, whereas the cost shown by the records for auditing a postmaster's account was only 19 cents; and one postmaster returned as high an amount as 64 cents as the expense for each deposit. Now I will yield to the gentleman from Minnesota [Mr. Steenerson].

Mr. STEENERSON. Is it not a fact that at the hearings it was stated by the Postmaster General that the additional expense in case the deposits were increased to fifty or sixty millions would be very small, and in that event it would be very likely self-sustaining?

Mr. STAFFORD. Mr. Speaker, the gentleman reminds me of one very important phase brought out in the hearings of the Third Assistant Postmaster General, and that is that the administrative force in the Post Office Department to-day is able to take care of twice the amount of deposits without increasing the administrative cost only slightly, and that is one reason why he recommends the lifting of the amount of deposits, so that they may be able to increase the total from thirty-three million dollars to fifty, sixty, or one hundred million dollars.

I was most earnest in the advocacy of this system in conjunction with my good friend from Kansas [Mr. Murdock] when it was first proposed. I wanted to see it established in all of the first and second class offices. We tried to have that limitation placed in the bill, but we were unsuccessful. We realized there was no great demand for the establishment of these postal savings banks in these small crossroad post offices, where the last administration went to the extreme in establishing them and where the figures show in many offices there are but one or two depositors. There was no call for the establishment of postal savings banks in that character of office. The demand came from large industrial centers, where there was a large foreign population. Statistics recently reported to the House by the Postmaster General, submitted this past week, show that the cities where the postal banks are most utilized are in localities where there are a large number of foreigners.

Mr. MURDOCK. Mr. Speaker, will the gentleman yield?

Mr. STAFFORD. Yes.

Mr. MURDOCK. At the time of the creation of the postal savings bank the gentleman will remember that I busied myself in particular, and I think he did, in providing for the small denominational bonds. I would like to ask the gentleman how many of those bonds are out?

Mr. STAFFORD. Mr. Speaker, the depositors have not availed themselves of the privilege of transferring their postal savings accounts into Government bonds.

Mr. MURDOCK. They have to some extent.

Mr. MOON. Two million and a half dollars.

Mr. MADDEN. Two million three hundred thousand dollars. Mr. STAFFORD. I was going to say to the extent of two and a half to three and a half million dollars, but they have not done so to as large an extent as we anticipated. I know the gentleman and the House will be interested in the compara-tive deposits in banks and with the Government of these postal savings funds. You will remember that the State banks made a strong protest through fear it would withdraw

The SPEAKER. The time of the gentleman has expired. Mr. MOON. I yield the gentleman three minutes more.

Mr. STAFFORD. It would withdraw the funds from the local banks and that the provision carried in the law giving the Government the right to invest 30 per cent of the funds in Government bonds would naturally draw out of those localities large amounts of money. Of the thirty-two and a half million dollars now in current cash 95.4 per cent is redeposited in the local banks, and in the Treasury there is but 41 per cent—one million and a half in money—though the law requires 5 per cent. So the fears of the State banks and those who opposed this law so vigorously at the time of its inauguration have not been realized. When we lift the limit of deposits, as the committee intend by the bill to be reported to the House, there will immediately develop twenty or thirty or fifty more millions of dollars available to be deposited in these banks, and the cost of administration will not be proportionately increased. Larger returns will come in, and if the local administrative official charges a reasonable rate. 3 per cent, to the banks for this money-as, in my judgment, I believe they should be chargedthere is no question but that the deficit will be immediately wiped out and a profit develop.

The SPEAKER. The time of the gentleman from Wisconsin

has expired.

Mr. MURDOCK. Mr. Speaker, I ask unanimous consent that the gentleman's time be extended for two minutes in order that I may ask him a question.

Mr. MOON. I control the time. Let the gentleman ask his

question.

Mr. MURDOCK. Are there any figures showing how hidden money was developed?

Mr. MADDEN. They have \$33,000,000 on deposit. Mr. MURDOCK. Is there any way of segregating that from money already in bank?

Mr. STAFFORD. The Third Assistant Postmaster General testifies that most of this money comes from the stockings and hiding places of these foreigners.

Mr. MURDOCK. The great protest of the banks was that it would take money out of the banks. Their fears did not

Mr. STAFFORD. As the gentleman knows, in his own district, where banks are safe and secure, there have been no with-drawals to speak of. The deposits have been generally by foreigners who were unacquainted with and doubted the safety

and security of our local banking institutions.

Mr. MOON. Mr. Speaker, the range of this discussion has gone pretty far, and really the suggestions here ought to come under the Post Office appropriation bill more properly than here; and in view of what has been said, I want to say that I regret my views do not fully coincide with some of the gentlemen ou this question. I believe it will be found upon a full investigation that there are more than 12,000 clerks, as shown from this proof, in the United States who give the greater part of their time every day to this work instead of a few minutes. I believe if we could get at it accurately that the loss to the Government under this postal savings-bank system to-day has not been a million, but more than two million dollars of money, and yet we want to give it a trial. Of course all of us who understand this bill know that the measure, in the first place, was ostensibly intended for the gathering in of that class of funds that would not go to the banks, for collecting the money of foreigners who had no confidence in American institutions, and yet while the opposi-tion existed on the part of the banks in the first place you will notice that has steadily, effectually, and permanently been with-drawn, because the United States is just a means of gathering in the money of the foreigners and other people, putting it in their depositories, transacting the business at a loss of a million dollars a year, in order that the banks might get the money at 2½ per cent and loan it to the people at 8. But I am not going to discuss this matter; it does not pertain to this bill.

Mr. PAYNE. Will the gentleman yield right there?

Yes.

Mr. PAYNE. It has been stated what the gross loss has been for three years previous, but I have heard no separate statement as to the comparative loss for each year.

Mr. MOON. I will say to the gentleman from New York that the hearings are not before us now; they have not been printed. believe my friend Mr. Stafford took a memorandum at the time, and I will ask him if his memorandum shows that exactly.

Mr. PAYNE. Last year, for example.

Mr. STAFFORD. I can not give offhand the exact amount, but with the increasing deposits it shows a corresponding reduction proportionately of loss.

Mr. MOON. I think it is one-third last year. Mr. PAYNE. Has the gentleman any estimate of what the additional deposits will be increased if this exceedingly small limit of deposits is taken off and the people are allowed to deposit what they wish?

Mr. MOON. I said a few minutes ago that I had introduced a bill which has been ordered favorably reported, and I will file that report in the House in a few days. It provides for taking off the limit of deposits entirely and fixing \$1,000 as the maximum upon which the Government will pay interest. It is hoped by the department that this will bring about such a readjustment of affairs of the postal savings bank as to prevent

Mr. PAYNE. I am informed by the postmaster at home that people come there with \$300 or \$400 or \$500 or more to deposit, and because they can not deposit the whole they will not deposit

at all and do not open an account.

Mr. MOON. Yes; that is true. I do not want to state anything that is not favorable to this institution, if anything can be found. The evidence is that in a number of instances several thousand dollars were offered for deposit at post offices, and because they could not deposit over \$500 none was deposited.

Mr. PAYNE. I am also told by him that a large share of the deposits were money that looked as if it had been folded and kept for a long time hidden away, perhaps slept on, under the bed, or something of that kind, that evidently it had been hoarded.

Evidently some has been hoarded, but now the great bulk of the wages of foreigners are deposited temporarily in these banks for the purpose finally of taking the certificate and carrying it to Europe. Does the gentleman from Illinois desire some time?

Mr. MANN. I wish 10 minutes, and I may desire a little more time.

Mr. MOON. I yield 10 minutes to the gentleman from Illinois

[Mr. MANN].

Mr. MANN. Mr. Speaker, every little while we are regaled with complaints about the use of the so-called franking system. The Post Office Department itself frequently has given enunciations of the idea that the franking privilege was a gross injustice to the Government and the Post Office Department, and I shall later call the attention of the committee to the annual report of Postmaster General Hitchcock of several years ago, which the gentleman from Kansas [Mr. MURDOCK] furnished to me a while ago when I suggested I would like to have him tell me specifically where that recommendation was.

The President's Commission on Economy and Efficiency has spent a good deal of time, and more paper, printing their recommendations that no service of the Government should have the franking privilege. That is to say, that a Member of Congress or a department of the Government, instead of putting on a printed notice or a franked signature, should put on a stamp. The proposition was seriously made to Congress on several occasions by these different bodies that every Member of Congress, for instance, should be provided with stamps and should stamp the envelopes which he sent out on official business, and that every branch of the Government which enjoyed the privilege of the so-called penalty envelopes without stamps should have a special stamp that it should put on the envelope. And they have argued for this in the interest of economy. Those branches of the public who want the pay of the postal employees increased or the rate of postage decreased invariably dwell upon the fact that the Post Office Department would be much more than self-sustaining if the franking privilege were re-moved. And I have been absorbing this information now for more than 16 years, and never have had a shock like I had this morning when I picked up this bill, reported to the House yesterday and brought in this morning with a report. Here was the great Post Office Department, which for years has been insisting that there should be no such thing as the franking privilege without a special distinctive stamp-and they insisted on it so much that a few years ago, when we created a postal savings bank, we allowed them to use a distinctive stamp with postal savings-bank matter so far as the trustees of the postal savings bank were concerned-saying, without having courtesy to apologize for their past opinion, that now it is

useless, extravagant, and unworkable.

Let me read you just, for instance, first, the report of the Postmaster General for the fiscal year ending June 30, 1910, about the time that the postal savings bill was passed. It was this opinion of the department which caused the insertion in that bill of a provision for a distinctive stamp on mail matter sent out by the trustees of the postal savings bank.
Mr. TOWNSEND. What report is it?

Mr. MANN. I will give it to you. This is the annual report of Postmaster General Hitchcock for 1910:

The unrestricted manner in which the franking privilege is now being used by the several Federal services and by Congress has laid it open to serious abuses—a fact clearly established through investigations recently instituted by the department. While it has been impossible without a better control of franking to determine the exact expense to the Government of this practice, there can be no doubt that it annually reaches into the millions. It is believed that many abuses of the franking system could be prevented, and consequently a marked economy effected, by supplying through the agencies of the postal service special official envelopes and stamps for the free mail of the Government, all such envelopes and stamps to be issued on requisition to the various branches of the Federal service requiring them, and such records to be kept of official-stamp supplies as will enable the Post Office Department to maintain a proper postage account covering the entire volume of free Government mail. As the first step in the direction of this reform special stamps and stamped envelopes have been provided for use instead of franks in the free transmission of the official mail resulting from the business of the new postal savings system. By properly recording the issuance of such stamps and envelopes an accurate account can be kept of the cost to the Government of handling the postal savings mail, which is certain to become an important item of expense and should be separately determined. In keeping with this plan it is hoped that Congress will authorize the substitution of special official stamps and stamped envelopes for the various forms of franks now used to carry free of postage the vast volume of departmental and congressional mail matter. During the last year methods of accounting similar to those employed in the most progressive of our business establishments have been introduced in the postal service, and nothing has so impeded the department's plans in this regard as the impossibility of determining with exactness ho

As the first step in the direction of this reform special stamps are going to be used in the postal savings-bank department, but this department, which for years has been insisting that the franking privilege used by Members of Congress and the penalty envelopes used by the departments for the transmission of official mail was an abuse and that they proposed to reform it, now say what? They say this, which is in the report accompanying this bill:

The use of a distinctive stamp is expensive and entails accounting difficulties which are unnecessary.

Now, my own judgment is that the opinion of the department now, after taking, is much more valuable than it was before taking. After trying it they found that they themselves could not make it work. It not only is more expensive, but they can not keep the account.

The Bureau of Economy and Efficiency of the President took a great deal of time to tell Congress how to run the Government without ever having discovered how to do much of anything properly themselves, so far as their own reports were concerned at least. [Applause.] And they insisted that it would be cheaper for the Government to have every bureau of the Government stamp its envelopes with a distinctive stamp than to have printed the penalty clause which is now printed upon them. I never took any stock in the old recommendation of Postmaster General Hitchcock or any of these recommenda-tions of that kind, because I know that it is cheaper for the Government to use this class of envelope without a distinctive stamp than with a distinctive stamp.

While the Post Office has frequently suggested that it was doing this great amount of business for other branches of the Government without pay, and ought to receive credit for that, I never have heard anyone in the Post Office Department suggest that it was using a great deal of Government property without rent and without charge for rent, and using a great deal of Government property, which was heated and lighted out of other appropriations, without any charge for that. truth is that the system now in operation, while it is abused sometimes by somebody sending out enormous quantities of matter which ought not to be frankable and which properly is not frankable, but which is nevertheless franked, the present system is much better than the system which was proposed by the Post Office Department, and I am extremely glad that the new administration of the department has reached the con-clusion that the distinctive-stamp idea is an expensive luxury, if not an unnecessary fraud. [Applause.]

Mr. MOON. Mr. Speaker, it is useless for me to say that I very fully concur in the views of the gentleman from Illinois [Mr. Mann]. I want now to yield to another gentleman from lies its continuation,

Illinois [Mr. MADDEN], who says he wants to talk strictly on the bill. [Laughter.] The SPEAKER.

How much time does the gentleman yield?

Mr. MOON. I yield five minutes.
The SPEAKER. The gentleman from Illinois [Mr. MADDEN]

is recognized for five minutes.

Mr. MADDEN. Mr. Speaker, the bill that is pending has two objects. One object is to authorize the Postmaster General to discontinue the payment of compensation to fourth-class postmasters for work done for the postal savings bank system, and the other distinctive feature of the bill is to do away with the use of the postage stamp or the envelope used in the correspondence of the postal savings bank system.

These are the two objects of the bill. The first reason why the Postmaster General thinks the use of the postage stamp ought to be done away with is that its use charges falsely to the postal savings bank system 2 cents for every envelope used, whereas it costs the Government a very small fraction of the 2 cents to make the stamp; and so if we were to enumerate all the postage stamps used in the correspondence of the postal savings bank system and were to ascertain just what they cost the Government, and then figure up what is charged against the system, the difference between the two would be the amount that ought not to be charged.

And then the other object, being to do away with the payment of compensation to fourth-class postmasters is sought for this reason: There are 4,000 fourth-class post offices in the United States in which the postal savings bank has been established. In only about 3,000 of these has there been any postal savings bank business, and the average compensation allowed according to law to each of the postmasters in the 3,000 offices where they do business would amount to only 27 cents per annum, and the auditing department of the Post Office Department is obliged to keep 4,000 accounts.

Mr. LLOYD. Mr. Speaker, will the gentleman yield?
The SPEAKER. Does the gentleman from Illinois yield to the gentleman from Missouri?

Mr. MADDEN, Sure. Mr. LLOYD. Would it not be a better way to discontinue the 3,000 offices?

Mr. MADDEN. No; because there is a possibility of their developing business.

Mr. LLOYD. But the gentleman says at the present time they are not transacting business.
Mr. MADDEN. I say 1,000 offices are not.

Mr. LLOYD. Why not discontinue the 1,000 offices?
Mr. MADDEN. Well, that is within the power of the Postmaster General, and that is being done more or less all the time. Wherever they find it is not essential to the welfare of the community to continue one of these offices they discontinue it.

Mr. LLOYD. Now, one other question.
Mr. MADDEN. I would like to finish the statement on the auditing first. At each of these offices they are obliged to keep an account, so that they have 3,000 accounts with 3,000 post-masters, each one of whom has coming to him within the range of a year 27 cents on the average, and, whether that account is closed or not, the account has to be audited every month. or whenever the audit is made; so that it has been discovered that the cost of the audit amounts to very much more than the amount which is coming to the postmaster whose account is being audited.

Mr. LLOYD. Now, in the 3,000 offices which the gentleman thinks ought to remain, why does he say that the postmasters should not be compensated for taking care of the business of the Government?

Mr. MADDEN. I say if it does not amount-

Mr. LLOYD. In the first, second, and third class offices there are clerks provided to perform the work. In the fourth-class office whatever work there is must be paid for by the postmaster himself, and it seems to me that he is the man of all others who ought to have compensation for the service that he renders to the Government.

Mr. MADDEN. But if on an average that compensation has not been more than 27 cents per annum, and it costs more to audit the account of the amount due the postmaster than the payment of the 27 cents amounts to, the gentleman from Missouri can well understand——
Mr. LLOYD. That those offices ought to be discontinued.

Mr. IMADDEN. That is all right. I am not making any argument as to whether they should be discontinued or not. I

really believe myself that no postal savings bank should be established in any post office where the business of the office does not justify it, or, if it is established, that it ought not to be continued unless the business transacted in that office justiMr. BURKE of South Dakota. Will the gentleman yield?

Mr. MADDEN. Yes.

Mr. BURKE of South Dakota. I should like to ask the gentleman if there are any great number of these fourth-class offices that do any considerable amount of business?

Mr. MADDEN. I am not prepared to say just what amount

of business any particular fourth-class office does. All I say is that the average compensation due to postmasters in the 3,000 local fourth-class offices where business is done has only amounted under the law to 27 cents per annum.

Mr. BURKE of South Dakota. Does the gentleman know what the average compensation would be in the other 1,000

offices?

Mr. MADDEN. There was no business done in the other

1,000 fourth-class post offices.

Mr. SMITH of Minnesota. Has the committee made an estimate of the cost to the Government of keeping track of the amount of stamps used by the postal savings department?

Mr. MADDEN. No; the committee has no knowledge of how many stamps have been used or how much it costs to keep track All the committee has is the information furof the stamps. nished by the Third Assistant Postmaster General, to the effect that it would be much more economical and more just to the institution known as the postal savings bank system to do away with the use of the stamp, because the charge of 2 cents per envelope used in that system is an unjust and arbitrary charge that is not warranted by the facts.

Mr. SMITH of Minnesota. It is nothing more nor less than a book charge. There is no consideration passing one way or

the other?

Mr. MADDEN. That is very true, but the book charge being made, Members of Congress read the statement of receipts and expenditures of the postal savings bank system; and if, perchance, by making an unjust, arbitrary charge, first for one thing and then for another, the expenses of the system are made to appear to be five times what the receipts are, the natural conclusion would be that the system is not justified in existing. What this hill color to do is to challed that only What this bill seeks to do is to abolish that arbitrary, unjust system of making charges against the postal savings bank system, so that the actual results may be shown on the face of the returns.

The SPEAKER. The time of the gentleman from Illinois has

expired.

Mr. MOON. Mr. Speaker, I move the previous question on

the passage of the bill.

The SPEAKER. The gentleman from Tennessee moves the previous question on the passage of the bill.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time,

and was accordingly read the third time and passed.

On motion of Mr. Moon, a motion to reconsider the last vote was laid on the table.

## PERSONAL EXPLANATION.

Mr. SLAYDEN. Mr. Speaker, I ask unanimous consent for half a minute or a minute in which to make a brief statement.

The SPEAKER. The gentleman asks for one minute to make personal statement. Is there objection?

There was no objection.

Mr. SLAYDEN. Mr. Speaker, just before the passage of the resolution commonly known as the Hensley resolution the other day I received a communication, through his secretary, from the gentleman from Virginia [Mr. MONTAGUE] requesting me to have him paired on that resolution as in favor of the resolution.

I am sorry to say that I forgot to discharge that duty to my friend, and I make this statement in order that he may be set right on the record.

## LOSSES BY POSTMASTERS.

Mr. MOON. Mr. Speaker, I call up the bill (H. R. 9321) to amend the act approved May 9, 1888, as amended by the act of June 11, 1896.

The SPEAKER. The gentleman from Missouri [Mr. BOOHER] will take the chair. The House resolves itself automatically into the Committee of the Whole House on the state of the Union.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill (H. R. 9321) to amend the act approved May 9, 1888, as amended by the act of June 11, 1896, with Mr. BOOHER in the chair.

Upon taking the chair Mr. BOOHER was greeted with ap-

plause.

The Clerk read the bill, as follows:

Be it enacted, etc., That the act authorizing the Postmaster General to adjust certain claims of postmasters for loss by burglary, fire, or other unavoidable casualty, approved May 9, 1888, as amended by the act of June 11, 1896, be, and the same is hereby, amended so as to read

other unavoidable casualty, approved May 9, 1888, as amended by the act of June 11, 1806, be, and the same is hereby, amended so as to read as follows:

"That the Postmaster General be, and he is hereby, authorized to investigate all claims of postmasters for the loss of money-order funds, postal funds, postal savings funds, postal savings cards, postal savings newspaper wrappers, postal cards, postal savings cards, postal savings stamps, and postal savings certificates belonging to the United States in the hands of such postmasters, and for the loss of key-deposit funds, funds deposited to cover postage on mailings, and funds received as deposits to cover orders for stamped envelopes, in the hands of such postmasters, resulting from burglary, fire, or other unavoidable casualty, and if he shall determine that such loss resulted from no fault or negligence on the part of such postmasters with the amount of any remittance of money-order funds, postal funds, or postal savings funds made by them in compliance with the instructions of the Postmaster General, which shall have been lost or stolen while in transit by mail from the office of the remitting postmaster to the office designated as his depository, or after arrival at such depository office and before the postmaster at such depository office has become responsible therefor: Provided, That no claim exceeding the sum of \$10,000 shall he paid or credited until after the facts shall have been ascertained by the Postmaster General and reported to Congress, together with his recommendation thereon, and an appropriation made therefor: And provided further, That this act shall not embrace any claim for losses as aforesaid which accrued more than four years prior to the date of approval of this act; and all such claims must be presented within six months after such date, and no claim for losses which may hereafter accrue shall be allowed unless presented within six months from the time the loss occurred."

Sec. 2. That it is hereby made the duty of the Postmaster Gen

Mr. MOON. Mr. Chairman, under the general law the Postmaster General is authorized to adjust the losses for money orders, stamps, and other funds, and the purpose of this act is to add to it the authority to adjust the losses affecting postal savings banks. I therefore ask that the report be read. It is very brief and states the reasons pointedly for the passage of

The CHAIRMAN. Without objection, the Clerk will read the report.

The Clerk read as follows:

[Report No. 116, by Mr. Moon, to accompany H. R. 9321.]

[Report No. 116, by Mr. Moon, to accompany H. R. 9321.]

The act of May 9, 1888, as amended by the act of June 11, 1896, authorizes the Postmaster General to reimburse postmasters for losses of certain funds resulting from burglary, fire, or other unavoidable casualty while such funds were in their custody or in transit to their designated depositories. There is no provision of law, however, for granting such relief in the case of losses of postal savings funds, postal savings cards, postal savings stamps and certificates, key-deposit funds, funds deposited to cover postage on mailings, and funds received as deposits to cover orders for stamped envelopes. The object of the accompanying bill is to remedy this anomalous condition and to authorize the Postmaster General to grant the same measure of relief as to losses of these funds, for which postmasters are equally responsible, as may now be accorded with respect to losses of funds covered by existing law.

Mr. MOORE. Will the gentlement from Theorem.

Mr. MOORE. Will the gentleman from Tennessee answer a question?

Mr. MOON. If I can.

Mr. MOORE. A loss occurred in my district recently due to a robbery. It was a small amount of \$150 in postage stamps, so that this would not apply. But suppose it had been postal savings-bank funds, would this bill authorize the Postmaster General, in his discretion, to settle it?

Mr. MOON. Postage stamps are covered by law now.
Mr. MOORE. Yes; I know; but I am assuming that the loss had been postal savings-bank funds?
Mr. MOON. The Postmaster General has no authority to adjust such a loss. The passage of this bill would give him that authority

Mr. MOORE. It would give him authority to adjust it without coming to Congress?

Mr. MOON. Yes; it places it on the same basis as the

general postal matters.

Mr. MOORE. To what extent does it give the Postmaster General authority to adjust these matters?

Mr. MOON. Up to \$10,000.

Mr. MOORE. He could settle claims up to \$10,000 without recourse to Congress?

Mr. MOON. Yes.

Mr. BURKE of South Dakota. Will the gentleman yield?

Mr. MOON. Certainly.

Mr. BURKE of South Dakota. Can the gentleman state to what extent there have been losses by reason of the larceny of postal funds?

Mr. MOON. No; I can not. There has been no evidence before the committee as to the number of cases or the extent of the loss

Mr. BURKE of South Dakota. As I understand it, if there is a loss under existing law of postal savings-bank funds, the only recourse of the postmaster would be, assuming that it was a loss without his negligence, by a special bill in the nature

Mr. MOON. That is true. Mr. Chairman, I ask that the bill be read for amendment.

The Clerk read the bill for amendment.

Mr. MOON. Mr. Chairman, I move that the committee do now rise and report the bill favorably to the House, with the

recommendation that it do pass.

The motion was agreed to; accordingly the committee determined to rise, and, the Speaker having resumed the chair, Mr. BOOHER, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill (H. R. 9321) to amend the act approved May 9, 1888, as amended by the act of June 11, 1896, and had directed him to report the same back without amendment, with the recommendation that the bill do pass.

The SPEAKER. The question is on the engrossment and

third reading of the bill.

The bill was ordered to be engrossed and read a third time,

was read the third time, and passed.
On motion of Mr. Moon, a motion to reconsider the vote whereby the bill was passed was laid on the table.

## PAYMENT OF POSTAL MONEY ORDERS.

Mr. MOON. Mr. Speaker, by direction of the Committee on the Post Office and Post Roads, I call up the bill (H. R. 9317) to regulate the payment of postal money orders.

The Clerk read the bill, as follows:

Be it enacted, etc., That under such rules and regulations as the Postmaster General shall prescribe postal money orders may be issued payable at any money-order post office, and on and after the date upon which such rules and regulations become effective all money orders shall be legally payable at any money-order post office, although drawn on a specified office; and that all laws or parts of laws in conflict herewith are hereby repealed.

Mr. MOON. Mr. Speaker, there is nothing in the bill except the proposition to change the law so as to allow money orders issued from one post office to another to be paid in any moneyorder office in the United States. I ask that the Clerk rend the

The Clerk read the report (by Mr. Moon), as follows:

The Committee on the Post Office and Post Roads, to which was referred House bill 9317, has considered the same and recommends that

referred House bill 9317, has considered the same and recommends that it do pass.

The purpose of the bill is to broaden the scope of the postal money order by making it payable at any money-order post office instead of at a specified office, as at present. There is an increasing demand that such orders shall be payable anywhere to meet the requirements of commercial usage. The limitation that a postal money order may be paid only at the office on which drawn has been a great inconvenience to patrons of the system, and the reason for this restriction ceased to exist with the discontinuance of the letter of advice. The facility with which money in this form may be transported and used in clearing accounts will be a distinct aid to commerce, and there appears to be no reason why money orders payable at any money-order office should not be absolutely safe when issued under rules and regulations prescribed by the Postmaster General.

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. MANN. Mr. Speaker, will the gentleman yield?

Mr. MOON. Yes. Mr. MANN. Was this bill referred to the Post Office Department for recommendation?

Mr. MOON. This bill, I will say to the gentleman, is the creature of the Post Office Department itself.

Mr. MANN. I suspected as much, and therefore I wanted to

have that fact go into the RECORD.

Mr. MOON. Mr. Speaker, I desire to say to the House, if it is not already so understood, the three bills acted upon this evening are propositions that come from the Post Office Depart-

Mr. MANN. Mr. Speaker, I am not certain, and I expect the gentleman is not certain, what the result of the bill will be or whether it will work satisfactorily, but I do not wish the Post Office Department to hereafter blame Congress for this legis-

Mr. MOON. No. The Post Office Department advised me

and the committee that it will work all right.

Mr. BURKE of South Dakota. Mr. Speaker, I would like to ask the gentleman if his attention has been called, in line 7, to the word "legally," appearing before the word "payable," and whether there is any necessity for that word—if it would not be better legislative form to leave it out?

Mr. MOON. I do not know that it would. It never hurts to put in the word "legally" anywhere.

Mr. BURKE of South Dakota. It seems to me that if Congress authorizes that something shall be payable, it ought to be

an inference that it is legally payable.

Mr. MOON. Money orders are now legally payable only at the office in which they are drawn.

Mr. BURKE of South Dakota. They are only payable.

Mr. MOON. Well, only legally payable there.
Mr. PAYNE. Mr. Speaker, as I understand it now, when a
money order is issued payable at a certain office there is a letter of advice sent to the postmaster at the paying office.

Mr. MOON. That was the law, but it has been discontinued. Mr. PAYNE. That was for the purpose of safety, I suppose?

Mr. MOON. Yes.
Mr. PAYNE. But if it has been tried and discontinued, and there is no necessity for it, there can be no objection to this.

Mr. MOON. The Post Office Department has not said to us what rules and regulations would be adopted in respect to this; but they do say they can provide rules and regulations that will make these orders legally payable at any office in the United States, with proper safeguards. It is an experiment, of course, but I think one in which there is no possible danger.

The SPEAKER. The question is on the engrossment and

third reading of the bill.

The bill was ordered to be engrossed and read a third time, was read the third time, and passed.

On motion of Mr. Moon, a motion to reconsider the vote by

which the bill was passed was laid on the table.

## REGENTS OF SMITHSONIAN INSTITUTION.

The SPEAKER. The Chair desires to announce that he has reappointed Mr. Pepper, of Iowa, and Mr. Ferris, of Oklahoma, Regents of the Smithsonian Institution, and Mr. Roberts, of Massachusetts, to take the place of Mr. Dalzell, of Pennsylvania. The Clerk will continue the call of the committees.

The Clerk proceeded to call the committees.

### RAILROADS IN ALASKA

Mr. HOUSTON (when the Committee on the Territories was called). Mr. Speaker, I am directed by the Committee on the Territories to call up the bill (H. R. 1739) to authorize the President of the United States to locate, construct, and operate railroads in Alaska, and for other purposes. This is a bill on the Union Calendar.

Mr. DAVENPORT. Mr. Speaker, before the House resolves itself into the Committee of the Whole House on the state of the Union for the consideration of this bill, I desire to state that there is an understanding between the gentleman from Tennessee [Mr. Houston] and myself, inasmuch as I am opposed to the bill, that there would be no agreement reached to-night as to time for debate, but that when the bill comes up on next Wednesday we would then make an agreement as to time to be consumed in the discussion of the bill.

The SPEAKER. The House will automatically resolve itself into the Committee of the Whole House on the state of the Union for the consideration of this bill, and the gentleman from

Mississippi [Mr. Harrison] will take the chair.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the consideration of the bill H. R. 1739, with Mr. HARRISON in the chair.

Mr. HOUSTON. Mr. Chairman, I ask unanimous consent that

the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Tennessee asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

Mr. MURDOCK. Mr. Chairman, reserving the right to object, will this keep the copy of the bill out of the RECORD?

Mr. MANN. It will not be printed in the RECORD unless it is read or ordered in.

Mr. MURDOCK. It seems to me that a bill of this importance and novel character ought to be put in the RECORD.

Mr. MANN. I suggest that the gentleman from Tennessee ask unanimous consent to dispense with the first reading of it and that it be printed in the RECORD as though read.

Mr. HOUSTON. Mr. Chairman, I ask unanimous consent to dispense with the first reading of the bill, and that the bill be printed in the RECORD.

Mr. GARRETT of Tennessee. You do not want the entire

Mr. HOUSTON. The bill as reported from the committee.
Mr. GARRETT of Tennessee. The bill technically i cludes all.

The CHAIRMAN. The gentleman from Tennessee [Mr. Houston] asks unanimous consent that the first reading of the bill be dispensed with and that the bill as amended by the committee be printed in the RECORD.

Mr. MANN. That the committee substitute be printed in the RECORD.

The CHAIRMAN. That the committee substitute be printed in the RECORD. Is there objection? [After a pause.] The Chair hears none.

The committee substitute is as follows:

That the President of the United States is hereby empowered, and therebed, and directed to adopt and use a name by which to design the thereby of the state of the property of the pr

and of all moneys received and expended in the construction of said work and in the operation of said work or works, and in the performance of their duties in connection therewith. The annual reports herein provided for shall be by the President transmitted to Congress. SEC. 6. That it is the intent and purpose of Congress through this act to authorize and empower the President of the United States, and he is hereby fully authorized and empowered, through such officers, agents, or agencies as he may appoint or employ, to do all lawful acts and things in addition to those specially authorized in this act necessary to enable him to accomplish the purposes and objects of this act.

Mr. HOUSTON. Mr. Chairman, I merely called up this bill to get the bill under headway, and I now move that the committee rise.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. Harrison, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 1739 and had directed him to report that it had come to no resolution thereon.

#### ELECTION TO COMMITTEES.

Mr. UNDERWOOD. Mr. Speaker, I desire to move the election of members of committees at the request of the gentleman from Illinois. I ask that the letter which I send to the Clerk's desk be read

The SPEAKER. The Clerk will report the letter.

The Clerk read as follows:

DECEMBER 5, 1913.

Hon. Oscar W. Underwood, Chairman Committee on Ways and Means.

Dear Mr. Underwood: I beg to make the following recommendations concerning appointment of Republican Members on committees to fill vacancies:

JOHN A. Peters, of Maine, to the Committee on Claims and the Committee on Insular Affairs.

Calvin D. Paige, of Massachusetts, to the Committee on Patents, Committee on the Revision of the Laws, and Committee on Railways and Canals.

Samuel Wallin, of New York, to the Committee on Industrial Arts and Expositions.

and Expositions.

Mr. Wallin resigns from the Committee on Railways and Canals, which leaves a vacancy there.

Yours, very truly,

JAMES R. MANN, JAMES R. MANN, Chairman Conference Minority.

Mr. UNDERWOOD. Mr. Speaker, at the request of the gentleman from Illinois, I move that the gentlemen who are named in the letter be elected to the committee places as named, and on that I move the previous question.

The previous question was ordered.

The question was taken, and the motion to elect was agreed to.

REPORT OF NATIONAL FORESTRY COMMISSION (S. DOC. NO. 307).

Mr. LEE of Georgia. Mr. Speaker, the chairman of the National Forestry Commission has made a report to Congress, through the Secretary of War, who asks that a thousand extra copies of that report be printed.

The SPEAKER. The gentleman from Georgia [Mr. Lee] asks unanimous consent that a thousand extra copies of the report of the National Forestry Commission be printed.

Mr. MANN. Mr. Speaker, reserving the right to object, when

was this submitted?

Mr. LEE of Georgia. It was submitted to-day.

Mr. MANN. Does the gentleman know what it will cost to

Mr. LEE of Georgia. Very little; it is a very short report, and there is a very great demand for the information which this report contains, and the Secretary of War requests it.

Mr. MANN. Has it matter that is illustrated? Mr. LEE of Georgia. I think not; there are no cows in it, or

Mr. HUMPHREY of Washington. Mr. Speaker, reserving the right to object, I would like to ask the gentleman what is the character of the report?

Mr. LEE of Georgia. It is the report of the commission for the past year, which report is required by Congress annually. This report is made through the Secretary of War.

Mr. HUMPHREY of Washington. Is this in relation to the

Appalachian Reserve?

Mr. LEE of Georgia. The Appalachian and White Mountain. The SPEAKER. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

## ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 2 minutes p. m.) the House adjourned to meet to-morrow, Thursday, December 11, 1913, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows.

1. A letter from the Secretary of the Interior, transmitting a statement showing in detail what officers or employees (other than special agents, inspectors, or employees who in the discharge of their regular duties are required to constantly travel) of the Department of the Interior have traveled on official business from Washington to points outside of the District of Columbia during the fiscal year ended June 30, 1913 (H. Doc. No. 464); to the Committee on Expenditures in the Department of the Interior and ordered to be printed.

A letter from the Secretary of Agriculture, transmitting information regarding the study and investigation of the boll weevil and hog cholera plagues, as directed in House resolution No. 254, dated September 16, 1913 (H. Doc. No. 462); to the Committee on Agriculture and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. FINLEY, from the Committee on the Post Office and Post Roads, to which was referred the bill (H. R. 3393) to authorize the carrying of mail by aeroplane or any similar device, reported the same without amendment, accompanied by a report (No. 126), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. IGOE, from the Committee on the District of Columbia, to which was referred the bill (H. R. 10158) to amend an act entitled "An act making appropriations to provide for the expenses of the government of the District of Columbia for the fiscal year ending June 30, 1895, and for other purposes," which act was approved August 7, 1894, reported the same with an amendment, accompanied by a report (No. 125), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

Mr. CLAYTON, from the Committee on the Judiciary, to which was referred the bill (H. R. 8734) to amend an act entitled "An act to prevent the disclosure of national-defense secrets," approved March 3, 1911, reported the same without amendment, accompanied by a report (No. 124), which said bill and report were referred to the House Calendar.

## REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, private bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the Committee of the Whole House, as follows:

Mr. ADAMSON, from the Committee on Interstate and Foreign Commerce, to which was referred joint resolution (H. J. Res. 165) for recognition of the services of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Com-mission, and for the relief of Mrs. Katherine Davis Gaillard, reported the same with amendment, accompanied by a report (No. 122), which said joint resolution and report were referred to the Private Calendar.

Mr. HAYDEN, from the Committee on the Public Lands, to which was referred the bill (H. R. 3638) providing for the issuance of patent to George W. Wolf, reported the same with amendment, accompanied by a report (No. 123), which said bill and report were referred to the Private Calendar.

# PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials

were introduced and severally referred as follows:

By Mr. LENROOT: A bill (H. R. 10233) for the purchase of a site and the erection thereon of a public building at Lady-smith, Wis.; to the Committee on Public Buildings and Grounds.

By Mr. BORLAND: A bill (H. R. 10234) to provide for the cost of street paying in the District of Columbia; to the Committee on the District of Columbia.

By Mr. HAYES: A bill (H. R. 10235) making appropriations for the printing and publishing of maps and reports relating to the kelp beds on the Pacific coast; to the Committee on Agriculture.

Also, a bill (H. R. 10236) providing for the payment of certain claims of the State of California growing out of the Indian wars; to the Committee on Claims.

By Mr. REILLY of Connecticut: A bill (H. R. 10237) ratifying the establishment of the boundary line between the States of Connecticut and Massachusetts; to the Committee on the

## BANKING AND CURRENCY.

Mr. HOLLIS. Mr. President, I desire to give notice that I shall address the Senate upon banking and currency on Friday evening of this week at 8 o'clock.

Mr. ROOT. Mr. President, I submit two amendments to the pending currency bill which I ask to have printed and lie on

I desire to give notice that with the permission of the Senate I shall speak to the amendments, not at any great length, on Saturday morning immediately after the conclusion of the routine morning business.

In submitting the amendments I wish to say that I regard as very good, indeed, a great deal of this bill. I think it will introduce a number of very valuable improvements in our system. I value very highly the assiduity and sincerity and public spirit of the members of the Senate Committee on Banking and Currency, as displayed in the work they have done in considering and preparing amendments to this measure. I think they are entitled to grateful recognition from us all upon both sides, both parts of the committee, and they certainly have it from me. But, sir, I think there are two exceedingly vicious provisions in the bill—one, what I regard as a greenback inflation provision, and the other the provision for the guaranty of bank deposits. Upon these I have submitted the amendments, and shall make some remarks.

The VICE PRESIDENT. The amendments will be printed and lie on the table.

## MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by D. K. Hempstead, its enrolling clerk, announced that the House had passed the following bills, in which it requested the concurrence of the Senate:

H. R. 8667. An act to promote the efficiency of the Naval Militia, and for other purposes:

H. R. 9317. An act to regulate the payment of postal money orders;

H. R. 9318. An act to amend the act approved June 25, 1910, entitled "An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes;

H. R. 9321. An act to amend the act approved May 9, 1888, as amended by the act of June 11, 1896; and

H. R. 10081. An act to make the tenure of the office of the Major General Commandant of the Marine Corps for a term of four years.

## PETITIONS AND MEMORIALS.

Mr. WEEKS presented a petition of the congregation of the Methodist Episcopal Church of Blandford and Russell, in the State of Massachusetts, praying for the passage of the so-called antipolygamy bill, which was referred to the Committee on the Judiciary.

Mr. WEEKS (for Mr. Lodge) presented a memorial of the Council of Jewish Women, of Boston, Mass., remonstrating against the proposed segregation of races in the Government departments, which was referred to the Committee on Civil Serv-

ice and Retrenchment.

Mr. PERKINS presented a petition of Typographical Union No. 21, American Federation of Labor, of San Francisco, Cal., praying for the enactment of legislation to make lawful certain agreements between employers and laborers and persons engaged in agriculture or horticulture, and to limit the issuing of injunctions in certain cases, and for other purposes, which was referred to the Committee on the Judiciary,

He also presented a petition of the Merchants' Exchange of Oakland, Cal., praying for the enactment of legislation authorizing the Secretary of the Interior to employ necessary architectural aid in the construction of public, buildings, which was referred to the Committee on Public Buildings and Grounds.

## BANKING AND CURRENCY.

Mr. STERLING. I send to the desk a letter from the president of the James Valley Bank, of Huron, S. Dak., and ask that

There being no objection, the letter was read and ordered to

lie on the table, as follows:

JAMES VALLEY BANK, Huron, S. Dak., December 8, 1913.

Hon. THOMAS STERLING, Senate Office Building, Washington, D. C.

Senate Office Building, Washington, D. O.

Dear Sir: I am in receipt of a copy of the currency measure as reported by the committee, and also the minority report, the first of which I received through your kindness and for which I thank you. It seems to the writer that by all means the stock in the Federal reserve association banks should be subscribed and paid for by the general public so far as possible. I firmly believe that a great many persons would myest small amounts in stock of this nature on a basis of 5 per cent earnings without any desire or expectation of having even a voting voice in the management, and it seems to me that it would be far preferable to do this entirely than to force the banks to take the stock first and then open the books to the general public for subscriptions.

It has seemed to me always to be unfair to the bankers of the country, who have put in a great deal of time and money in building up a business under a national charter, to practically compel them to surrender that charter within one year's time because they did not choose to be forced into an investment as is contemplated in the proposed bill.

With best personal regards and wishing you every compliment of the season, I remain,

Sincerely, yours,

R. E. Cone, President.

## BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. STONE:

A bill (S. 3625) to authorize the Missouri, Kansas & Texas Railway Co. to construct a bridge across the Mississippi River near the city of Hannibal, in the State of Missouri; to the Committee on Commerce.

By Mr. SHEPPARD:

A bill (S. 3626) for the relief of the estate of Lemuel Thomas, deceased; to the Committee on Claims.

By Mr. WEEKS (for Mr. Lodge):

A bill (S. 3628) granting a pension to Corda P. Gracey; and A bill (S. 3628) granting an increase of pension to Alvin Woodman (with accompanying papers); to the Committee on Pensions.

A bill (S. 3629) granting an increase of pension to Isabella H.

Dealing (with accompanying papers); and A bill (S. 3630) granting an increase of pension to Mary F. Chamberlain (with accompanying papers); to the Committee on Pensions.

By Mr. SHIELDS: A bill (S. 3631) to provide for the appointment of clerks of the courts of the United States, to fix their terms of office and compensation, and require them to make reports of funds received and disbursed by them, and for other purposes; to the Committee on the Judiciary.

By Mr. RANSDELL:
A bill (S. 3632) providing for the eradication of the cotton boll weevil; to the Committee on Agriculture and Forestry.

By Mr. SHERMAN:

A bill (S. 3633) for the relief of the legal representatives of Daniel J. Snow; to the Committee on Claims.

A bill (S. 3634) granting an increase of pension to William J.

Keen: and

A bill (S. 3635) granting an increase of pension to William Green; to the Committee on Pensions.

By Mr. HUGHES:
A bill (S. 3636) granting an increase of pension to Edgar A. Hamilton; to the Committee on Pensions.

#### EMPLOYERS' LIABILITY BILL.

Mr. OVERMAN submitted an amendment intended to be proposed by him to the bill (S. 959) to provide an exclusive remedy and compensation for accidental injuries, resulting in disability or death, to employees of common carriers by railroads engaged in interstate or foreign commerce, or in the District of Columbia, and for other purposes, which was referred to the Committee on the Judiciary and ordered to be printed.

## PROSECUTIONS UNDER WHITE-SLAVE ACT.

Mr. JONES. I submit a resolution and ask for its immediate consideration.

The resolution (S. Res. 235) was read, as follows:

Resolved, That the Attorney General of the United States be, and he is hereby, directed to advise the Senate what instructions, if any, have been sent to the United States district attorneys for the various districts in the State of Washington relating to the enforcement of the act of Congress, commonly known as the Mann white-slave act, and whether or not instructions have been given to the United States attorneys for said districts not to prosecute any cases under said act, except those of an international character.

The VICE PRESIDENT. The Senator from Washington asks unanimous consent for the present consideration of the resolu-

Mr. KERN. I object.

The VICE PRESIDENT. Objection is made, and the resolution will go over under the rule.

RECEIVER OF PUBLIC MONEYS AT SPRINGFIELD, MO.

The VICE PRESIDENT. The morning business is closed. Mr. MYERS. I did not hear the order of committee reports.

was called out of the Chamber for a moment. I ask leave that may submit a report from the Committee on Public Lands.

The VICE PRESIDENT. The Chair will receive the report out of order

Mr. MYERS. From the Committee on Public Lands I report back favorably without amendment the bill (S. 3403) to abolish the office of receiver of public moneys at Springfield, Mo., and for other purposes, and I submit a report (No. 140) thereon. I call the attention of the Senator from Missouri to the bill.

The VICE PRESIDENT. The bill will be placed on the cal-

endar.

Mr. STONE. If it goes to the calendar, it is all right; but I was about to ask unanimous consent for its consideration.

The VICE PRESIDENT. The Chair simply made the formal order, not observing that the Senator from Missouri had risen to the bill and therefore will recall it.

Mr. STONE. I should like to have the bill considered. Mr. MYERS. It is a very simple bill. I am satisfied It is a very simple bill. I am satisfied no one will object to it, and that it will not take half a minute to dispose of it.

Mr. STONE. I ask unanimous consent for the present consideration of the bill.

The VICE PRESIDENT. Is there objection?

Mr. NORRIS. Is this the bill relating to the Springfield, Mo., land office?

Mr. MYERS. It is. Mr. NORRIS. The bill has not been considered by the committee, and the report has been made without a meeting of the committee.

Mr. MYERS. This bill proposes to abolish an office. Being such an unusual bill, I think it ought at once to receive favorable attention from everybody. There is only one land office in the State of Missouri, and I am informed that the salaries of the officers and the expense of running that office are wholly unnecessary. The Senator from Missouri [Mr. STONE] can state how much public land there is now in the State of Missouri-I think about as much as you could put in your pocket. The bill provides that the land office shall be abolished by the end of this year. In order to do that we must get quick action on the bill and get it over to the other House. I admit that there was no formal meeting, but that the committee was polled.

I have been trying to get a meeting of the committee, but could not get one under the circumstances, until the currency bill has been disposed of. I desire to say that I do not favor polling committees on bills of any importance, and so long as I am chairman of the Committee on Public Lands I can assure Senators it will never be done on any bill as to which there can be any serious difference of opinion. Here, however, is a little bill to abolish a very insignificant office. It must be done, if done at all, by the 30th of this month; and I will admit that in this instance I polled the committee, and a majority of the committee indorsed the bill. These are the facts.

Mr. STONE. If Senators will pardon me, we could dispose of this matter by letting the bill go to the calendar. What the Senator from Montana says about it being necessary to pass the bill by the end of the month is all right, but we can amend the bill in that particular when we take it up. Just let the bill go to the calendar.

The VICE PRESIDENT. The bill will go to the calendar. Morning business is closed, and the calendar under Rule VIII is in order.

## HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred to the Committee on Naval Affairs:

H. R. 8667. An act to promote the efficiency of the Naval

Militia, and for other purposes; and H. R. 10081. An act to make the tenure of the office of the major general commandant of the Marine Corps for a term of four years.

The following bills were severally read twice by their titles and referred to the Committee on Post Offices and Post Roads:

H. R. 9317. An act to regulate the payment of postal money

H. R. 9318. An act to amend an act approved June 25, 1910, entitled "An act to establish postal savings depositories for depositing savings at interest with the security of the Government for repayment thereof, and for other purposes; and

H. R. 9321. An act to amend the act approved May 9, 1888, as

amended by the act of June 11, 1896.

## BANKING AND CURRENCY.

Mr. BURTON. Mr. President, I gave notice that I would address the Senate immediately after the close of routine morning business this morning, but as I understand the senior Senator from Missouri [Mr. STONE] would like to address the Senate for a time, I shall be glad to yield to him if he so desires.

Mr. OWEN. I move that the Senate proceed to the consideration of the banking and currency bill.

The VICE PRESIDENT. Is there any objection? The Chair

hears none.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. OWEN. Mr. President, I advise the Senator from Ohio [Mr. Burton] that the Senator from Missouri [Mr. Stone] is not

prepared at this moment to take the floor.

Mr. BURTON. The Senator from Missouri saw me a very few moments ago and stated that he desired to proceed. However, I am entirely ready to go ahead now.

Mr. OWEN. The Senator from Missouri stated just a moment ago that he was not ready to go on, as he did not expect to have the measure come up so early.

Mr. BURTON. Very well, then, Mr. President, I will proceed

in pursuance of the notice I gave on yesterday.

The VICE PRESIDENT. The Senator from Ohio is recog-

Mr. BURTON. Mr. President, I desire to address the Senate particularly on the question of regional banks as contrasted with a central institution.

Mr. President, I enter upon the discussion of this subject with some hesitation because of the conditions existing under the resolution adopted by the Senate for sessions lasting for 11 hours. Members of the Senate are wearied by long attendance. Much worse than this, however, is the inability to obtain that degree of attention which would be given in case normal hours were the rule.

I quite agree with those who have stated that the bill now pending presents questions as important as any which have received consideration from Congress since the Civil War. While I do not share the opinions of those who regard our banking system as altogether faulty, it nevertheless is deficient in essential particulars. It is difficult to command the interest of the people in this subject, which is technical in its nature, and requires the most elaborate consideration to avoid grave errors. These errors are liable to be crystallized into substantive law because of the insistence of selfish interests and the general prevalence of fallacious views on the subject of money and

From the very foundation of the Republic, and even before, there has been no topic upon which we have so frequently gone astray as upon that relating to currency and banking. worth while to quote frequently the words of John Adams in a letter written from Holland in 1787 to Thomas Jefferson, in which he said:

All the perplexities, confusions, and distresses in America arise not from defects in their Constitution or Confederation, not from the lack of honor or virtue, so much as from direct ignorance of the nature of coin, credit, and circulation.

Not only was this true then, but we have a most distressing record of errors in our financial policy all along the line, including various mistakes in legislation which now are universally recognized and find no defenders. Actuated by the necessity for financial reform and spurred on by the crisis of 1907, the National Monetary Commission commenced in 1908 a most elaborate examination of this subject. The result was a library affording a mine of information surpassing in comprehensiveness and value any previous list of publications on monetary and banking topics. No one who has read the hearings before the Senate Committee on Banking and Currency can fail to recognize the incalculable value of the information obtained or the industry and patriotic interest of the members of the committee. These hearings show the advantage of a discussion upon a definite, concrete proposition, such as was presented by the bill which passed the House. Almost every phase of opinions on monetary questions was represented. While no opinions on monetary questions was represented. doubt some of those who appeared before the committee presented little of permanent value, all the material obtained is valuable because it represents the viewpoint of American citizens anxious to aid in the solution of the important problems which are pending.

There are several propositions before the Senate which may be generally described as included under two classes: First, for a regional bank system, for which two bills have been introduced, one-the Owen bill-provides for not less than 8 nor more than 12 district or regional banks; the other-the Hitchcock bill-for 4, with authority to increase that number after two years. In the second class a bill has been introduced providing for a central bank with branches. In all pending propositions it is contemplated that an official board appointed by the President shall exercise a greater or less degree of

There is little question concerning the reforms which should be secured by banking and currency legislation. These reforms are based upon the defects and limitations of the system. They are, first, to provide means for the mobilization and utilization of reserves; second, to make provision for necessary expansion and contraction in the volume of circulating notes. To these I would add a third, which has not occupied so prominent a place in this discussion, namely, the regulation of international exchanges, especially the export and import of gold. For accomplishing proper results in this regard methods must be established for raising and lowering rates of discount in response to conditions and with a view to future contingencies. It must be conceded that in all three of these features our banking laws are notably lacking. Barring these defects we have a banking system which, in its general features, may challenge comparison with that of any nation. A credit structure has been established which involves the handling of \$25,000,000,000. Save in times of unusual stress, accommodations are extended to borrowers as freely as in any country of the world. There are certain distinctive features which characterize it. Our banking laws are based very largely on that idea of freedom of individual action and initiative which is characteristic of American business life. It has been regarded as desirable both in National and State legislation to allow the freest opportunity to those who may desire to enter the banking business.

As one result the rule has been the independent organization of separate institutions. The branch banking system has not been favored. There are in the United States, according to the recently issued report of the Comptroller of the Currency, 29,254 banks, of which 7,473 are national. Of the remainder there are 18,520 State banks reporting to the comptroller and 3,261 so-called nonreporting banks. It may be remarked in this connection that more than 20,000 State banks and credit institutions conduct their business under the divergent laws of 48 different States. As a consequence this country is confronted with a problem of banking and currency reform unique in the history of banking and unprecedented in the character and the number of complications to be dealt with.

Mr. President, in approaching this subject, we can not overlook the fact that in this country we have a great variety of banking laws, different rules for organization, different rules as to reserves, and varying laws as to rates of interest and penalties for charging illegal rates. In a country in which the banking business has been in some degree concentrated the

problem is much simpler than in our own.

In comparison with the very large number of independent banks in the United States there are in the Republic of France only 27 separate institutions, of which the larger banks have very numerous branches. More than half the capital belongs to four institutions, and perhaps four-fifths of the deposits are held by them. These are the Bank of France, the Crédit

Lyonnais, Société Générale, and the Comptoir d'Escompte de Paris. In Germany there are only 421 independent banks, many of them with branches. In Canada there are 29 chartered

banks, with 2,200 branches.

I am far from saying that the passage of either the so-called Owen bill or the Hitchcock bill might not be a benefit to the country and improve its banking facilities. Throughout each proposed measure there appears a careful recognition of the defects of our present system, a sincere and earnest desire to make our banking system what it should be. Nevertheless, it seems to me that both of these measures contain serious defects and fall far short of promising the beneficial results which could be secured. The success of either bill must depend in large degree upon two things: First, the extent to which existing institutions may become members under the plan, and, second, the quality of the men chosen as members of the proposed Federal reserve board. Should either of these bills become a law, or, indeed, any bill providing for a board of Government directors, the responsibility for the exercise of the appointive power resting upon the President will be greater than in any exercise of the appointive power since the time of President Lincoln. The making or marring of our whole financial system would depend very largely upon the men chosen, for the power lodged in them is enormous—I may say, almost limitless. It involves a degree of control over what has been regarded as private enterprise to be managed by the individual owners of capital invested far and away greater than anything ever yet attempted in this country. The plan seems to afford a prece-dent for the selection of Government officials to have super-vision and management of industrial and commercial enterprises. While this may make the conservative pause, it is fitting that every effort be made to pass the best bill possible.

In addition to the complications which arise from our diversified system of banking, there is serious difficulty from the motley quality of our currency. We have seven forms of circulating medium—gold coin, silver coin, gold certificates, silver certificates, United States notes or greenbacks, national-bank notes, and Treasury notes under the act of 1890 which were issued against purchases of silver bullion, only a small amount of which remain outstanding. To these must be added the subsidiary

silver.

Of gold coin there is, according to the best estimates in the country, between \$1,700,000,000 and \$1,800,000,000, the largest stock of gold of any nation on the globe. Of this amount about \$1,114,000,000 is deposited in the Treasury and is represented by gold certificates. Of the silver dollars there are approximately \$560,000,000, of which \$491,000,000 are represented by silver certificates. We have national-bank notes to the amount of approximately \$735,000,000. Of the Treasury notes under the act of 1890, there are about \$2,700,000. The greater part of the very large amount issued under this act, which continued in force from June or July, 1890, until the autumn of 1893, has been retired by the coinage of the silver bullion into silver dollars.

Mr. ROBINSON. Mr. President, will the Senator yield for a

question?

Mr. BURTON. Certainly. Mr. ROBINSON. What was the amount of silver certificates

stated by the Senator?

Mr. BURTON. My recollection is \$491,000,000. That is approximately the amount. I may say in this connection that it is very difficult to carry all of these figures in the memory, because successive statements show changes in the amounts, and when two different statements are found in different documents issued at different dates a confusion results which makes it very difficult to remember either with exactness

Mr. ROBINSON. What was the item of \$2,700,000? Mr. BURTON. About \$2,700,000 of Treasury notes. I have not the last statement before me, but I think that is the amount of Treasury notes issued under the act of 1890 which are now

Mr. O'GORMAN. Mr. President, the Senator from Ohio has quite correctly stated that the gold held in the United States aggregates almost \$2,000,000,000. Is it not a fact that that represents about one-sixth of the entire gold in the world?

Mr. BURTON. Yes; it represents at least one-sixth. Mr. O'GORMAN. I only venture to make this inquiry at

Mr. BURTON. I am much obliged to the Senator, because that fact emphasizes the strong position which we should occupy. Mr. SHAFROTH. Mr. President-

Mr. BURTON. If the Senator from Colorado will excuse me, I see that according to the latest statement the amount of Treasury notes outstanding is \$2,571,000, which is slightly less than the figure I gave.

Mr. SHAFROTH. That is correct. I was about to call attention to it. The statement of the amount of silver certificates outstanding is \$491,354,000.

Mr. BURTON. Precisely.

Of the greenbacks there are \$346,000,000 outstanding, sustained by a gold reserve of \$150,000,000. To all these must be

added the subsidiary silver.

The complexity caused by these different forms of money is still further accentuated by the different limitations and qualities assigned to them. Some forms are legal tender, while others very similar in their nature are not. For example, gold and silver dollars are legal tender, while gold certificates and silver certificates are not, though they are available for the reserves of banks.

What are the arguments in favor of a central bank? In the first place, there is an overwhelming argument from the practically universal policy of all the more advanced nations of the world, both in older and younger countries, whose people have considered these problems and passed through the same alternations of depression and prosperity, of depreciated currency and of sound money, which we have experienced. The adoption of a central bank by all of them has been an evolution, the result of trial of other methods. The principle has been adopted by nations so different in political institutions as Russia and Switzerland, so remote in locality as France and Japan, of such world-wide commercial relations as Great Britain, and of such small or limited operations as the Republic of Bolivia in South

It is idle to say that it is to any extent an incident of absolute government or kingly authority. The sturdy Boers of the Transvaal Republic established a central bank before the conflict with England at the close of the last century. Switzerland, with its well-established system of cantonal and private banks, voted on this subject by a referendum.

At first, on a vote on the 28th of February, 1897, it was rejected by a vote, I believe, of 255,000 against and 190,000 in favor of such an institution. It was afterwards adopted.

The following is a partial list of central banks, with the dates of their organization:

The Swedish Bank, established in 1668.

The Bank of England, established in 1694, with vital changes in the charter 150 years later, in 1844.

The Bank of France, in 1800. The Bank of Finland, in 1811.

The Bank of the Netherlands, in 1814.

Norges, or the Bank of Norway, in 1816.

The Danish Bank, in 1818. The Bank of Portugal, in 1822. The Bank of Spain, in 1849.

The Bank of Belgium, in 1850. The Imperial Bank of Russia, in 1860, remodeled in 1886

The Imperial-Ottoman Bank of Turkey, in 1863.

Notwithstanding the backward condition of this country and the unusual emergencies, political and otherwise, which have arisen within its borders, Turkey has a central bank suited to meet the usual conditions of trade. This has been of very great benefit, not only to the national credit of the country but to its business as well.

The Reichsbank of Germany, in 1876. The Austro-Hungarian Bank, in 1878. The Bank of Roumania, in 1880.

Japan, entering the family of civilized nations, established a central bank in 1882.

Persia established an Imperial Bank in 1889.

Italy, in 1893.

Switzerland, in 1905.

may say there has been no tendency in politics or business or in finance more uniform and more universal than that toward a central bank for the mobilization of reserves and the control of the note-issuing privilege.

The following countries also have the central-bank system: Abyssinia, Algeria, Argentina, Australasia, Bolivia, Brazil, Bulgaria, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Egypt, Greece, Guatemala, Haiti, Honduras, Mexico, New South Wales, New Zealand, Nigeria, Queensland, Salvador, Servia, Tasmania, Uruguay, Venezuela, Victoria, and another bank, the last of all, in West Africa.

The stock ownership and management of these banks present wide varieties. For instance, the stock of the Bank of Sweden is owned exclusively by the Government. The Reichsbank, or Imperial Bank of Germany, was preceded by the National Bank of Prussia, the stock of which was owned by the Government. In the case of the Bank of England and the Bank of the Netherlands, the stockholders select the directors and officials, with a minimum of governmental control, though each bank has practically the exclusive right of note issue in the country and carries the deposits of the Government.

The Bank of Switzerland, one of the most recently established central banks, organized within less than 10 years, has a directorate of 40 members. Fifteen are chosen by the stockholders and 25 by the Bundesrath, or executive council of 7.

Prior to the formation of the Imperial Bank of Germany 31 banks in the constituent States of Germany had the privilege of note issue. This privilege has been for the most part concentrated, so far as bank issues are concerned, in the national bank. There is a small amount of Government currency still outstanding in that country, a heritage from the note issues of the different States prior to the formation of the Empire.

The reason of this, however, was due to tradition, a recognition of existing conditions, rather than the result of any settled plan.

Generally speaking, we may say that a central bank in this country would be like an army mobilized at one point, its whole power is instantly available for defense. It would secure immediate action without the delay or red tape of officialdom, as illustrated by the action of the proposed Federal reserve board. A bucket of water instantly applied is more efficient in preventing a conflagration than a whole fire department in subduing it after the lapse of a little time.

Surplus funds received from one section may be applied to loans whenever needed in another section with no resultant strain. In such a case a central bank would be only the intermediary clearing house for one section having a surplus to lend to another which was in need. Spreading over a vast area in its operations, it permits this balancing of varying surplus and

A demand developing in one section would be met quietly and without arousing apprehension. The statements published would be a composite or resultant of the consolidated surpluses and deficiencies of the entire country. With several regional banks, any section in need would show a regional bank under strain, with apprehension aroused in the minds of those not trained to comprehensive views. Apprehension could easily cause a serious situation, difficult to meet, when actually no cause for distrust existed. Managers of a central bank, constantly viewing the conditions of the country as a whole, would have a broader training that would enable them to shape their policy with greater intelligence. With knowledge, too, of both national and international conditions, their course would be shaped with greater wisdom in the light of domestic as related to foreign conditions.

The control of foreign exchange and greater power to protect the gold supply, the greater credit and prestige abroad, would enable a central bank not only to better protect our commerce but also to furnish more aid to our Government if occasion should arise.

The unquestioned strength of such an institution would eliminate the contention for the Government guaranteeing the bank notes. A Federal reserve agent would not have to be chosen to hold the collateral of regional banks to assure the meeting of their obligations. The Secretary of the Treasury would not have to exercise the perplexing and possibly dangerous discretion of locating the Government deposits or shifting them at will with resultant danger of discontent and disturbing results. It would make easy of solution the complex problem of 2 per cent bonds and national-bank-note circulation; would assure general participation by banks because of their greater faith in the success of such a plan; would avoid the political pressure to be invoked, with regional banks to compel interlending, rendering unstable plans for maintaining reserves, the certainty of which can alone give such stability as will make an open dis-count market possible. With a central bank, a broad discount market would be assured, and nothing would be more helpful to commerce.

In the all-important point of mobilization of reserves there are manifest advantages in one institution. In every time of crisis and stress the most distinctive feature of American banking has been the eager, sometimes disgraceful, scramble of each separate institution to maintain a sufficient reserve for itself. Different localities have labored to fortify themselves at the expense of each other instead of working in harmony as they would under one central institution. This tendency would not be destroyed, even if it were somewhat mitigated, in case a plurality of institutions is still maintained, because the avowed object of the proposed regional plan is to provide facilities for different regions of the country and maintain the distinct and independent existence of a variety of institutions, each caring for a well-defined locality, and intended to carry the deposits and resources of that region.

I say, Mr. President, that the scramble between banks might perhaps be lessened by having 8 or 12 regional institutions; but I think, under the plan proposed, that even this statement must be made with a certain degree of reservation. As it is now, with our great multitude of banks, each institution works for itself, but with complete and voluntary control of its own busi-The pressure which is now brought by one bank to secure reserves by withdrawing funds from another will be in a measure transferred to the Federal reserve board, upon which, if human nature continues as it is now, an attempt will be made to bring political pressure to bear on behalf of one region as against another. It must be conceded that if you have these separate, scattered institutions there must be some authority to effect an adjustment between them. Perhaps the so-called Federal reserve board is the only way by which this can be accomplished, but it is in itself a recognition of the necessity for cen-It furnishes the strongest possible argument for one central bank, because it concedes in unanswerable language that they must all work together-if not by voluntary cooperation, if not by carrying out the ordinary laws of finance in the adjustment of balances, then it must be under compulsion exercised by a set of officials appointed by the President.

Mr. BORAH. Will it interrupt the Senator to allow me a

Mr. BURTON. I yield with pleasure to the Senator from

Mr. BORAH. If the proposition which we have before us is efficient, is workable, and accomplishes all its friends hope, it must necessarily work and be efficient by reason of the fact of its centralized power, and it becomes in fact, though not in name, a central bank.

Mr. BURTON. It has a certain similarity to it.

Mr. BORAH. In so far as it is successful and is a workable proposition it must be a central bank. That is to say, if the central board exercises the power as it should, and as efficiently as it should, it is the same as if it were a central bank oper-

Mr. BURTON. You can not make it the same as a central bank. Let me suggest a very simple illustration. Suppose there are two banks, one located at Chicago and one at New York, the leading financial centers of the country. Each is required to maintain a reserve. The New York bank calls on the Chicago bank for a balance, say, half a million dollars. The Chicago bank transmits that balance. That deducts the reserve from the Chicago bank, half a million dollars, and adds it to the one in New York. It weakens the position of the Chicago bank and strengthens that of the New York bank. Under a central institution that \$500,000 would count as a reserve of the whole institution. There would be no derangement; there would be no injury to any portion of the country.

This bill contains as its central idea regional banks to provide for different portions of the country, but in other provisions it seeks to overcome the defects which must inhere in distinct institutions with their separate organizations, their different interests, and, I may say, their rivalries. But the point is that when you establish these separate agencies you decentralize reserves. You fail to obtain that strength which would result from one central institution, one place where reserves could be mustered and where they would be available for use by the whole country as needed, and that, too, without friction, loss of time, or the exercise of compulsion.

Mr. WEEKS. The Senator does not object to being interrupted?

Mr. BURTON. No, sir; I do not. Mr. WEEKS. I should like to suggest one other difference which seems to me to be vital. If a single bank is organized. the operations of that bank will be limited by law. There will be a homogeneous practice by the officers of the bank. In the establishment of a number of banks bringing them under one head, as is proposed in this bill, by authorizing a reserve board we are giving to this reserve board certain qualities which are dependent upon the character of the board itself. In other words, we are placing in the hands of individuals vital functions connected with banking, which, if we had one bank, would be legal provisions and could not be deviated from in any way. Will not that very fact bring about dissatisfaction and quite likely injustice, which will subject the whole system to more or less discredit?

Mr. BURTON. I hope not, but I fear it will. I shall have something to say later on the subject of possible collisions between the different banks.

O'GORMAN. Mr. President-

Mr. BURTON. In any event, it would be best to have the management of our reserves, as far as possible, determined by substantive provisions of law, by universal rules easily understood, rather than by this method, under which there must be constant resort to the more or less arbitrary discretion of

As I understand the banking business, each bank desires to manage its own affairs. It does not like to have some official intervene and say, "You have been making loans in such and such amounts; you may be following a conservative policy, but you must take part of your assets and loan them to some other bank, managed by a different set of men, with different ideas, less regardful of those principles of caution and conservatism which will strengthen any bank."

I will be glad to yield to the Senator from New York.

Mr. O'GORMAN. I wish to make only this inquiry. were to have a central bank in the United States similar to many of the European central banks referred to, would the power of the officials regulating and controlling the central bank be any less than the power now confided by the pending bill to the Federal reserve board?

Mr. BURTON. It would not be less, at least in the language of any statute we might draw on the subject, but the conditions with which they would have to deal would be so radically different as to obviate the necessity for the exercise of arbitrary power. It would avoid the necessity of keeping track of 8 or 12 independent institutions representing different localities,

each with its various ideas.

Mr. O'GORMAN. But the Senator understands that under the provisions, surely of the Owen bill, and, I think, of the Hitchcock bill, the Federal reserve board has conferred upon it almost absolute power to control every phase of this proposed regional-bank system. Every act discharged by the officials of any one of the regional banks, whether there be 4 or 6 or 8 or 10, must secure the approval of the reserve board in Washington. Indeed, the power of the reserve board under both these bills is so broad and comprehensive that it is no exaggeration to say that either of these plans embodies the virtues of a central bank, because there is a centralized power dominating every phase of the entire system.

The only real difference that can be pointed out between the central banks of Europe and the plan proposed by either of these bills is that the reserve board sitting in Washington will not have the physical immediate possession of reserves; but it has the equivalent. It has the power to give an order to any one or to all the reserve banks, so that its control for purposes of regulation or supervision is absolute and untrammeled.

Indeed, the whole proposed plan might very well justify the statement that however it may be described in the bill, either plan contemplated is a central bank, because the great feature of a central bank is the centralization of control and of power, and that feature distinguishes either one of these bills.

Mr. BURTON. Mr. President, I can not agree with my friend the Senator from New York. His argument is virtually that, in effect, this is a central bank. How can you have a central bank when you have eight different regions, and when the very principle of your bill is to avoid centralization and to have separate institutions to provide for the respective needs of different parts of the United States; also where it is absolutely impossible, even with an all-powerful Federal reserve board, to make the reserves of any one bank count as reserves of any other?

The Senator then adds that the central board has a control by which it must revise each step taken by these different banks. Under such a system, Mr. President, where you have the various interests of each locality to look after, in which will be separate directors, with their diverse ideas as to lending and borrowing money and as to the management of banking business, you could never find men so gifted nor so able that they could control the system as they could with one central institution. A man with the eyes of Argus or the arms of Briareus would not be able to fulfill that task.

I may say in passing that if they are to be entirely under control of the Federal reserve board, why not say so in your bill and make the directors of regional banks mere agents for this central institution? Why give them any initiative or any control if they can only exercise their powers when it meets with the approval of a Federal reserve board?

Mr. O'GORMAN. May I answer your question?

Mr. BURTON. Certainly.

Mr. O'GORMAN. The plan devised would seem to me to be far more meritorious than the strictly central bank for which the Senator from Ohio contends, because with a central bank in Europe there is one central board whose word is absolute, whose aid throughout the system must come from employees and subordinates. This, I suggest, is an improvement upon that system, retaining all its virtues, because we have a central board in Washington which, as I have said, is absolute in its author-

ity; but that board has the aid and cooperation, under this system, of bankers, of representative business men, in each of the 4, 6, 8, or 10 sections of the country where a reserve bank may be located.

It does seem to me that the result of the cooperation of the reserve board in Washington, with the intelligent action of bankers and business men, not employees, throughout the country, will promise better results than if the whole system was to be dominated by a board in some central spot to be dependent for its information upon such reports as might come to it from time to time from its salaried employees.

Mr. BORAH. May I ask the Senator a question? Mr. BURTON. Certainly.

Mr. BORAH. I suppose the Senator's argument leads to the conclusion that in a conflict of power or judgment the ultimate power and the ultimate judgment rests in this central board. It is the centralized power to ultimately decide.

Mr. O'GORMAN. Yes.

Mr. BORAH. Then I get back to the proposition which I originally submitted. If this proposition works efficiently and accomplishes all that it is designed to accomplish, it must inevitably in the end come to be in its operation and in its effect a central bank. It is a central bank owned by the banks, but nevertheless in its operation and its power it is centralized under this board; and, according to the argument of the Senator from New York, whatever appears upon the statute, however it appears upon the face of the law, in its final working operation it must come to be a privately owned central bank-a bankowned central bank.

Mr. BURTON. Mr. President, that is impossible under the bill owing to the separate capital, the separate reserves, the bill owing to the separate capital, the separate reserves, the separate organization and line of action contemplated under this bill. The whole question, I will say, referring further to the remarks of the Senator from New York, is between that harmony and subordination, which would exist under a central bank, and independence and probably repulsion under such a plan as this. How valuable is the advice of these different directors going to be? Suppose a situation arises where the directors of our regional bank ask the Federal reserve board to require another regional bank to make them loans, and the directors of the second regional bank ask that they be not required to do so. Can it accept the advice of both? board must side with one and take a stand against the other. Its constant duty would be that of deciding disputes which, under a central organization, would never arise.

Mr. SHAFROTH. Mr. President

Mr. BURTON. I shall be glad to yield to the Senator from Colorado.

Mr. SHAFROTH. I should like to ask the Senator from Ohio whether the district system which is proposed in the bill has not this virtue? We know that wherever a bank is located the natural tendency will be to favor the locality to a large extent where the directors are. They magnify the importance of the questions there. Consequently, when you have one board located in New York or in Washington, for it would be in one of those places, we out West fear that they would overlook our portion of the country and not give us the proportion of discounts to which we might be entitled. In other words, when an application is made for discounts or currency the things that are uppermost in their minds are the conditions that immediately surround them. Of course, they have somewhat of an enlarged view, but, notwithstanding that, they naturally are interested more in the conditions immediately surrounding them. On that account we have feared that the accommodations of a central bank would naturally gravitate to its part of the United States, which would be to the detriment of the other sections of the country. But when you have separate reserve banks, absolutely loyal to the interests of the districts which they represent, clothed with the power to give discounts to the banks of their section, there is going to be no discrimination against those people in favor of some other section of the United States. I will ask the Senator whether there is not something in that consideration? Then I will ask him another question.

Let me answer that first.

Mr. SHAFROTH. All right.

Mr. BURTON. Do you suppose with a central institution there would exist any partiality for one section when a board is appointed representing all parts of the country and having in mind the interests of every portion of it? If you think there should be this equal right in all the several sections, why do you recognize varying rates of interest in the various districts or portions of the country? Why not frame rules that for the same class of loans the rate of interest shall be the same?

In the bill which I have introduced I have inserted a provision that up to 20 per cent of the capital of a member bank the rate of interest shall be the same. I believe that is fair. If we establish an institution of this kind, let it be a national institution. If the Government is to put its money into this bank, let that money be available on equal terms to every county and every hamlet in the United States if they bring in the proper security. But instead your plan breaks down at the very beginning. It contemplates different rules in the separate districts. It provides for various rates of interest in the different regions. It provides that money or credit shall be transferred not from a central reservoir, but through the cumbersome process under which one regional bank makes a demand upon another, to be determined by an arbitrary decision by an official board on that application.

I want to say further, in answer to the question of the Senator from Colorado, that in the countries in which central banks have been established there exists the most perfect provision for every part of the country. Take the Bank of France. That institution has some loans that seem to us absurdly small, even as low as 5 francs or \$1. It has in all a million separate loans. You do not hear any complaint in France that the bank does

not provide for the remote portions of the country.

Even if at the beginning the central bank system, like any new organization, might not work perfectly, nevertheless, with a central board responsible to the Nation and to all its people, an opportunity would be afforded for the most perfect provision for every State and locality in the Union simply, without repulsion and without the necessity for red tape, and the inevitable dissatisfaction which is sure to occur under this compulsory

Mr. SHAFROTH. I want to say just a word as to the answer which the Senator has made. Most of his answer has been as to the rate of discount being uniform. As to that the Federal reserve board has control, and it can make the rate of discount the same as to certain classes of security just exactly the same as a central bank. It may be that it may not watch interest rates as closely, but we have no right to suppose that the members will neglect their duty.

Mr. BURTON. Let me suggest to the Senator from Colo-

rado how they are handicapped under your regional system. Suppose you start out with eight regions. Some of those will be constantly debtor and others will be constantly creditor localities. You stake them off separately. Here are districts 1, 2, 3, where there is a surplus of funds most of the year, and districts 4, 5, 6, where there is a deficiency of funds. that separate organization, do you believe you can make the rates of interest the same as you would if this money were all in one central reservoir and went wherever it was demanded in the whole country for the same class of loans?

Mr. SHAFROTH. Inasmuch as the Federal reserve board has a right to compel a bank in a district that has a surplus

of funds to rediscount the paper of another reserve bank, with the additional indorsement of the reserve bank of the district, which would make it absolutely safe, I can not see that there is much difference between the situations in that respect.

Mr. BURTON. The trouble is you are starting off with a system which emphasizes those differences and divides the country up into debtor and creditor districts. Such an ar-

rangement is faulty on its face.

Mr. SHAFROTH. Yes; but there are other features which, it seems to me, emphasize the importance of those districts. One is the treatment of the district itself. It is human nature to magnify the conditions that immediately surround us. have a central bank, you can readily see that the result we have a central bank, you can readily so the people imme-will be that the necessities or the needs of the people immediately surrounding the central bank will be magnified. is where the securities are going to be discounted more liberally than they will be in the case of far-distant portions of the United States.

Besides, of course, the difficulty of coming from the Pacific coast to the eastern coast of the United States for the purpose of making discounts is something that is bound to be inconvenient. It may be that you may have branch banks; that is true; but a branch bank is always subservient to the interests of the central bank and to the policy of the central bank.

Mr. BURTON. It ought to be. In actual practice, the manager of a branch of a central bank is specifically authorized to look after the needs of his community. By uniform rules all

sections are treated alike.

Mr. SHAFROTH. That is all right; it ought to be. That is the reason I believe in a separate system, where the banks will be located in the various districts, which, in my judgment, will bring them in close touch with the bankers. One witness testified during the banking and currency hearings that he thought

there ought to be a Federal reserve bank within such a distance of every bank in the United States that the banker, on closing his bank in the afternoon, could take a train and go to the reserve bank, and by the opening of the bank in his town the next morning telegraph that he had the funds with which to meet all runs which might be made upon his bank. That would give safer and speedier action. When a central reserve bank exists, it seems to me it is plain and clear that, while the branches will have a disposition to relieve a condition of that kind, yet the branch bank is always subservient to the will of the central bank; and if the central bank says, "Oh, no; we need the money here," where this immediate surrounding sentiment prevails, and which makes an impression upon them, the far-off district bank is not apt to get justice.

Then there is always "red tape" necessary to be gone

through with in order to get direct communication with the headquarters where those banks exist. Personal contact, personal acquaintance, is the great equation in determining when discounts can be readily obtained, and a man out in the far West is not apt to know one man in the directorate of the central bank where he is likely to know all of them in a regional bank. It seems to me those are differences in favor of

the district system.

Mr. BURTON. Mr. President, I thoroughly believe that, with the present disposition of the people and with the grave responsibility resting upon it, the Federal reserve board chosen for a central bank would inevitably favor the weaker portions of the country as against the stronger. The Senator from Colorado says that those in the different regions know the interests of their respective localities and will assert them. Indeed, they know them too well and have too little regard for any of the rest. Suppose the regional bank, say in Denver, asserts its interest, the regional bank at San Francisco asserts its interest, the regional bank at Cincinnati asserts its interest. Is it an advantage to have a system under which preference is given to the one that makes the loudest claim for deposits and accommodations in its locality? Can you build up a perfect system where importunity is the paramount force and the insistent demands of every locality are to be listened to? No. The best way is to have one great central institution the directors of which, like those standing on a commanding eminence, can look over the whole country and take into account every part of it. If Denver makes its claims, let them be compared with the claims of San Francisco and of Cincinnati and of all the others, and especially let those in control act under general rules. I am afraid of government by importunity. I am afraid of government that comes from listening to the claims of one locality for which a board might have a certain degree of partiality. Why, you start at the very beginning with your separate regions and with an invitation for contests between them.

Mr. SHAFROTH. That is what I am afraid of. I am afraid that where the bank is located which controls the money all over the United States, the importunities will be there, and that the far distant people will not be able to reach it in the personal manner that people can who are immediately sur-

rounding the central bank.

Mr. BRISTOW. Mr. President— Mr. BURTON. Just one minute further. It seems to me the logical conclusion of the argument of the Senator from Colorado is that there should be no centralization of reserves. It is also a conclusion from his argument that you should not limit the number of your regional banks to 8 or 12, but should have one in every ambitious city or town so as to give all a chance to prefer their claims.

Mr. SHAFROTH. No; I think there are certain things that are necessary to the central reserve board. As to each bank, its limits are imposed by its organization and its reserves come from its own immediate territory. It is unquestionably going to be loyal to that extent, at least to the community it serves.

Mr. BURTON. No doubt it would be loyal to its community, but it is a far better thing to have a board that is loyal not to one specific community but to the whole United States.

Mr. BRISTOW. Mr. President—
The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Kansas?

Mr. BURTON. I yield with pleasure. Mr. BRISTOW. If it will not disturb the Senator from Ohio, I should like to suggest to the Senator from Colorado that in the Hitchcock bill there is a provision that gives every community in the United States the right to discount. It is not a question of privilege; it is a question of legal right, and is incorporated in the law which describes the security upon which the discount may be given. Would not that guarantee to every community fair play?

Mr. SHAFROTH. There are certain virtues in favor of the provision of the Hitchcock bill and there are certain evils that are bound to grow out of it. It is on that account that we in our bill have left it in the discretion of the bank itself, subject to review by the Federal board. You may have a community that wants too much money, it may be that they are weakening the banks in some way; and to say that any person who comes shall be entitled to discounts, no matter what the condition of the reserves of the bank may be, no matter how much money they have already issued, makes another evil that you have got to calculate upon. Therefore, we have placed in our bill a provision that the matter of discounts shall be subject to the review of the Federal reserve board, and that the right of discount, while it shall be exercised-and there is a provision that it shall not discriminate-it is not compulsory, as it is in the bill favored by the Senator. Under that bill he will find that that condition might arise which would make it absolutely absurd that discounts should be made.

Mr. BRISTOW. If I understand the Senator from Colorado correctly, he is in favor of regional banks, because from his argument it will enable the regional bank to supply the community where the regional bank is located; that it localizes the system is the argument in favor of the regional bank. His argument as against the central bank is that it does not centralize, but his argument in favor of his bill is that it does centralize; that is, he is giving all of the power of the central bank in the board, which is the dangerous power that he wants to avoid, and yet in his bill he gives that power to the central board.

Mr. SHAFROTH. In answer to the Senator I will say that it is necessary to have discretion vested somewhere, and we in our bill do not determine in advance what shall be done. Whenever you attempt to say that under all circumstances a man has the right to go to a bank and, no matter what the conditions of the reserves are, and no matter how much money has been issued by that Federal reserve bank, the bank shall continue to rediscount his paper, presupposes a condition that will always be favorable, when, as a mater of fact, it may be the reverse condition. On that account it is safer to give the power into the hands of the Federal reserve board to say whether or not under these peculiar conditions any more money shall be

Mr. BRISTOW. I shall not intrude on the time of the Senator from Ohio for further discussion, but will take this subject up when we consider the bill by paragraphs.

Mr. BURTON. Mr. President, when we take up the paragraphs for consideration I shall wish to discuss that provision which imposes a certain degree of compulsion on the Federal reserve board and gives to it the right to compel the regional banks to lend to all comers. I can not see quite what that means or how it will work out. The question arises in my mind, Suppose a member bank goes to one of the regional banks and, say, on the presentation of its paper, asks for a loan of \$50,000, and the regional bank says, "No; we can not lend that to you. The present or prospective demands from other customers make it impossible, or, at least, it would be bad banking." I understand that a provision in the bill means that I understand that a provision in the bill means that such member bank can go over the heads of the directors of the regional bank and appeal to the Federal reserve board. will not press the question now, but at a later time I should like to have that question answered. I should like also an explanation of this question: Does this bill intend to change the general law of banking under which those charged with the duty of granting credits can form their judgment and decide whether a loan should be granted, so that loans must be made to all comers, without taking care to ascertain their solvency and probable ability to pay?

Mr. SHAFROTH. Mr. President—
Mr. BURTON. I will not ask the Senator from Colorado to answer that question now, as it would perhaps interfere with the thread of my argument; but when we come to it, I hope we

may have a full discussion of that subject.

Panics and strain upon credit are characterized by scarcity of currency or a premium on gold. They have been attended by the inevitable hoarding process and by a necessary curtailment of credit. As was pointed out by the Senator from Massachusetts [Mr. Weeks] an analysis of the situation discloses a sharp difference in conditions here as compared with The same difference is manifested in France and in England, and it is not too much to say in all the countries having a ceneral bank. When the strain occurs, instead of curtailing credits, by further issues of circulating notes and by husbanding reserves they increase their ability to make loans. These measures can only be effectively managed by a central institution which can raise the rate of discount. This is a recognition of the principle stated by Mr. Bagehot in his work

on Lombard Street-that the way to stay a panic is to lend to those who come, letting the borrowing public understand that at some price money may be had.

In England the joint-stock banks, instead of withdrawing their funds from the Bank of England when a storm is impending, increase their holdings at the central bank so that they may be ready for all emergencies. The same results would obtain in this country if there were a central institution whose strength and resources would be available for all the country and not a part of it.

In the United States during the years 1873, 1893-94, and 1907 the hoarding of gold and currency was conducted on a large scale by banks and banking institutions and was accomplished in the first instance by the withdrawal of reserve deposits from other banks. In those times of distress a certain amount of withdrawals of gold and currency was by individuals, but this was insignificant as compared with the instant withdrawal under stress of reserve money by banking institutions. Fear controls the action of many of the banks, and their disposition has been to save themselves at all hazards, without regard for the welfare of their neighbor, or especially banks in other portions of the country.

With a central bank the inevitable policy is one of coopera-on between it and all other institutions. With a great numtion between it and all other institutions. ber of banks, or even with a dozen, the tendency is for each to save itself at the expense of all the rest. No system of regional banks can prevent competition to obtain gold and currency in time of strain.

The very argument of the Senator from Colorado would lead inevitably to this: He says that if you have a regional bank in a given locality, with directors who are mindful of the interests of that locality, the interests of that community will be served. Suppose there is a panic, suppose there is a demand for more reserves in a particular bank and for more loans by borrowers; is not that the very time when sole regard for that community would be effective and the principle of the "devil take the hindmost" would prevail? Yet that very demand for reserves and loans in one locality would have a tendency to wreck the credit of the whole country by causing apprehension, by showing weakness in certain sections, which gradually would extend

itself to all parts of the country.

The Owen bill carries upon its face a frank admission of the fatal defects of the regional system, because it gives power to a board of central control to effect a readjustment of reserves between regional banks and to require enforced rediscounts. The very act on the part of the Federal board in enforcing such rediscounts would accentuate the rivalry between sections for the accumulation of reserves. It would cause unlimited irritation and friction. No regional bank could make calculations for the care of its customers or the utilization of its resources, because any day it might be called upon to transfer its funds elsewhere. If the country is so vast in territory and its interests so varied as to require regional institutions to meet local conditions, why, then, require that they be linked together through the exercise of arbitrary powers which must be exercised in conflict not only with natural economic conditions but with all the principles of banking?

I want here to emphasize a little further something that I have already said. It is maintained that the regional banks provide for their respective regions. Everyone familiar with banking conditions knows that a manager takes account of his supply of money, his outstanding loans, and the probable demand for accommodation in the future. How unnatural is any system of regional banks-I care not what the number-where those ordinary calculations of the banker must be destroyed by the fact that at any hour of the day or any day of the week he may be called upon to transfer his resources to another regional institution? Why, I can conceive of nothing more destructive

of skillful banking.

Suppose a bank has a reasonable surplus and amount of reserves and a customer comes in and says, "I want a loan of The resources of the bank are ample to make that loan; the banker would like to accommodate his applicant; but he does not know but that by the next mail or by telegram an order will come from the Federal reserve board to lend the funds of his bank to some other regional bank.

Right here in this connection I desire to call attention to another phase of this compulsory lending from one bank to another. Some bank must take care of foreign exchanges, otherwise exports of gold will cause us the most serious embarrassment. How can any bank which is subject to these calls to provide for the domestic needs proceeding from other regional banks take care of foreign exchanges?

Suppose a time comes when gold begins to leave the country and prudence would require that some agency of our commercial republic should stay that export, should buy foreign bills of exchange, should provide in some way to check the outflow. How can this be done when it is not known at what time a demand will be made upon the bank from some other region of the United States to care for domestic needs?

This question is more serious than it appears, because in such times, when there is an unfavorable balance inducing the shipment of gold, there is almost always contemporaneously a degree of stress at home, so that the demands for transfer to other regional banks naturally would be contemporaneous with the time when the bank should provide for foreign bills of exchange or in some way prevent the shipment of gold.

It is said that our country is so vast that the rules which prevail in foreign countries can not be adopted here. ment ignores the vital fact that every country, whatever its area, has its distinct economic life, its own variety of interests and industries, its national spirit of rivalry, whatever may be its size. The Imperial Bank of Russia ministers to an area larger than that of the United States. The Bank of England The Bank of the extends its operations over the whole world. Netherlands, a little country of about 5,000,000 inhabitants, extends its operations into every country and to many islands

In the case of these banks the degree of complication arising from world-wide transactions is equal to that in our own country; and here in the United States, with the telegraph, the telephone, the immediate means of communication, there is the readiest opportunity for a centralization of management.

Our business, our commercial life, is becoming more and more national. Regulation of transportation is lodged in one board. We are demanding of the railroads that they interchange freight. We are demanding that when a bill of lading is received for a piece of freight, and it goes over half a dozen different lines, the responsibility shall center in one road. Every tendency of present-day progress in these United States is to bring us together in closer bonds, to create unity in our commercial and industrial life; and I most emphatically deny the idea that the size of the country—this country which is so capable, by reason of the quality of its population, of working together along these great lines—is an argument against a central bank. But there is a further argument. The very size of this country, and especially its diversity of climate and of productions, renders a central institution especially desirable, because with the different productions, especially those in agriculture, demands for an exceptional amount of credit arise in one section in one season and in other sections in other seasons. The very fact that we have this great diversity of demands, and in different months of the year, increases the desirability—yes, the necessity—of a central reservoir for all reserves and such concentration of the loanable funds of the country that they may be readily transferred from one portion to another under one central control, having in view the safeguarding of credit and the upbuilding of the whole

The very diversity of our interests, which causes a demand for money in one place in August and in another in September, and causes varying demands in different portions of the country in all the various months of the year, makes it all the more desirable that we should have one central institution. would we have under the plan of 8 or 12 regional banks?

Take a regional bank in the cotton district. At certain seasons of the year there will be great demands for money there. The banks will be pressed to the utmost to supply the demands. They will have to go to Chicago and New York or elsewhere and borrow. At another season money will be flush. Their banking relations with other parts of the United States have become well established. I think they have been getting along pretty well. Why? Because they are not separate and apart by themselves, where they have to take care of themselves alone, but they can call upon reservoirs of credit anywhere in this great country to help them out.

What are you proposing to do under this regional plan? Segregate them by themselves; deposit the reserves of that region in a bank there; cut off relations with outside banks except under the compulsion of an official board; make it virtually impossible to deposit reserves in Chicago or St. Louis or any

other great business center, and start them out alone.

Mr. President, I can not believe that any such plan as that is going to be permanently adopted. It is contrary to every economic rule. It is contrary to the custom in this country. Instead of adding to their facilities and to their prosperity, it diminishes their opportunities, and handicaps them in the greatest possible degree.

Fortunately it has been true in our banking system that ours

sections, but one great Union, in which every strong part has helped each weak part, and in which all have cooperated. Now this plan is proposed for making an artificial division, with which, I must say, I can have very little patience.

Mr. NEWLANDS. Mr. President—

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Nevada?

Mr. BURTON. Yes.

Mr. NEWLANDS, Would the Senator object to an interrup-

Mr. BURTON. Oh, no.

Mr. NEWLANDS. I should like to ask the Senator whether he does not think the purpose which he seeks, of mobilizing the reserves nationally, could be met by a modification of this bill which would authorize one-third of the reserves deposited in the regional or district banks to be deposited in a central reservoir at Washington, under the control of the national reserve board? Does he not think that under that system we would have, first, two-thirds of the reserves called for by this act mobilized in the different regions and the other third mobilized at Washington in such a way that it could be used in aid of any region that might be in stringency or distress?

Under such a system the regional banks, whether comprising one or many States altogether, would have about \$500,000,000 of reserves if all the banks, National and State, should come in; and of that \$500,000,000 one-third, or \$166,000,000, would be put in a central reservoir at Washington.

That I regard as a Federal system superior to the national system which the Senator desires and superior to the regional system called for by this bill. I will ask the Senator whether that would not serve the purposes which he so aptly describes in his speech?

Mr. BURTON. I should think a plan under which one-third of the reserves would remain in the vaults of the bank, onethird in a regional bank, and one-third in a central reservoir might and probably would be an improvement on this bill; but the objection to that plan is that it is based on no well-defined principle. We should rely either on the central reservoir or on some other kind of a reservoir. If we retain but a third of our funds in a local bank, the amount might fall below the limit of safety. It does not seem to me that a division of the reserves into three portions would be logical or best.

Mr. NEWLANDS. Will the Senator permit me to correct him? The Senator assumes that my proposal is that one-third of the average reserve, we will say of 12 per cent, of the banks, both National and State, is to be held by the member banks.

Mr. BURTON. Yes.

Mr. NEWLANDS. The other third by the regional banks, and the other third by-

Mr. BURTON. By the central reservoir at Washington. Mr. NEWLANDS. Yes. Now, that was not my proposal. Mr. BURTON. Then I beg the Senator's pardon. I understood him.

Mr. NEWLANDS. My proposal was that two-thirds should be kept by the member banks, which they could keep in their own vaults or of which they could deposit, as they are accustomed now to do, a certain proportion in reserve and central reserve cities.

Mr. BURTON. Oh, yes.

Mr. NEWLANDS. And that the other third should be taken from the member banks and deposited, in the first place, in the regional banks, and then that they, as members of the national bank or reserve bank at Washington, should deposit one-third of the third deposited with them in the central reservoir here.

Mr. BURTON. One-third of what-4 per cent?

Mr. NEWLANDS. One-third of the third deposited in the regional banks would be deposited in the national reservoir in Washington. Since the total reserves of all the banks in this country, National and State, aggregate about a billion and a half dollars, that would mean that one-third of that amount would be deposited in the regional banks, namely, \$500,000,000, and that of that \$500,000,000 one-third, namely, \$166,000,000, would be deposited by them in the national reservoir at Washington.

Mr. BURTON. And two-thirds in a regional bank?

Mr. NEWLANDS. Two-thirds of the third.

Mr. BURTON. In the first place, it is rather a violent supposition that there is a billion five hundred millions of reserves.

Mr. NEWLANDS. Under this system on the average all the banks would be compelled to keep, we will say, a reserve of 12 per cent, which would amount to about a billion and a half dollars. Of that billion and a half they would be compelled to turn over only one-third, namely, \$500,000,000, to the regional banks; and then the regional banks would be compelled to turn over one-third of that \$500,000,000 to this national reservoir. has not been regarded as an aggregation of separate States or lover one-third of that \$500,000,000 to this national reservoir at

Washington under the control of the reserve board, which would be organized, if you please, into a national reserve board. Then, in that case, you would have a billion dollars in the member banks

Mr. BURTON. Or their correspondents.

NEWLANDS. And \$333,000,000 in the regional banks and \$166,000,000 in the national reserve bank here at Washington.

Mr. BURTON. I think only experience would demonstrate whether or not that plan would work better than the one here. I regard it as very doubtful. It seems to me you must have one system or the other, and I should question whether that would be a benefit. Perhaps the chances are, there being a central reservoir of reserves of \$166,000,000 available for transfer immediately to any weak spot, that it would be helpful; but, on the other hand, it would diminish the reserves in the localities where money is immediately required, so that I question whether it would be of any benefit.

The Dominion of Canada, which is next to us and which, as the result of experience, has one of the most successful banking systems in the world, one which has withstood many storms during which we must admit we have suffered, does not organize its banking system along regional lines. If there is any country in the world where the regional system would be appropriate it would be in Canada, because they have the older settled regions, with a practical abundance of credit, and also the newer and, I may call them, developing regions. They have also a very large area, with not so ready communication with different portions of the country as we have in our own country.

What do they do? They do not establish regional banks. In fact, there is no other country in the world that has such a plan as that proposed in this bill. Not only is there no such plan in force now, but it never has been tried. I can not believe that such a system ought to be advocated here, when these problems have been considered in every advanced country on the globe, and if any proposition of this kind has been advocated, it has been rejected.

What do they have in Canada? In the evolution which has been manifest, and which affords so excellent a banking system, banks with ample capital are located at Montreal, Toronto, and Halifax, having branches all over the Dominion and even

extending into the United States.

One institution, holding all the reserves, will make every dollar of reserve money the property of every section available to every member, affording protection at all times to all the members, and this is true whether the money be lodged in the vaults in San Francisco, the branch in New York, or the main institution at Washington.

I have already stated that the bill unquestionably recognizes the principle of a central bank, but how is this plan of a reserve board to be worked out? According to both the House bill and the Senate bill, as presented by the chairman and his associates, money must be lent from one regional bank to another.

That was thought by the framers of this bill to be an absolute necessity. They had the fact to begin with that not only would certain regions be predominantly borrowers and others lenders, but that at certain seasons of the year the regional banks in different portions of the United States would be utterly unable to cope with the demands. So this provision for compulsory lending was inserted.

According to the House provision this can only be done when five of the directors are present and on the unanimous vote of all, a single dissenting voice placing a veto on the transaction. There is the further provision that the rate of interest shall not be less than 1 nor more than 3 per cent greater than the rate in the district in which the higher rate of interest prevails. According to the Senate provision there is no such limitation,

As the bill was originally proposed in the House, it contained straight provision for compulsory lending, but the complaint about this was so loud, it was said to be so unnatural and tyrannical to compel one bank, with its organization and its responsibilities, to lend to another, that the House committee inserted the provision that it must be by the unanimous order of a meeting of the Federal reserve board with not less than five members present.

It also contained the provision that the rate of interest should be not less than 1 nor more than 3 per cent higher than the high rate in either region.

Now, just pause and think a minute how that would work out. Only when a bank was in extremis could it afford to submit to such terms as that. Suppose it was generally reported that the central bank in Denver or San Francisco had to borrow money and had to pay not less than 1 nor more than 3 per cent above the prevailing rate in its locality,

The alarm would spread throughout the United States over night. It would be known that a prominent regional bank was so seriously embarrassed.

I think this bill is drawn with a certain amount of disregard of the factor of confidence in business. A great many people would think the psychological mood of the people was the one controlling factor in business prosperity or depression. I do not believe, as one writer has said, that we have depressions because of the periodical destruction of belief and hope in the minds of merchants and bankers. Panics usually follow some adverse circumstance, such as a sudden failure in the business world, a shortage of crops, or recognized overexpansion, but nevertheless the greatest importance attaches to the degree of confidence which exists. Every banking institution must be above suspicion or there is danger of a run upon it and the loss of popular confidence.

So, however thoroughly this House provision may have taken the teeth from that obnoxious provision, I do not think it ought to remain in the bill. It would be unworkable, or, rather, if it were workable, alarm would spread all over the United

States whenever such a condition was submitted to.

This provision for a transfer is particularly obnoxious. throws the door wide open for favoritism. Like the whole plan for regional banks, it is based on the idea of distinct and separate sectional interests. What would naturally occur would be that a bank in one region would be conservatively managed; its directors might foresee a storm, refuse new leans, and decline to renew those outstanding. Customers might be refused accommodation. In another, where a speculative spirit prevailed, loans might be made freely, and as a result undue expansion would follow and money would be scarce as a result of mis-management and lack of caution.

Mr. REED. Mr. President—
The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Missouri?

Mr. BURTON. Yes.

Mr. REED. I ask the Senator to permit me to interrupt him to call his attention to an error in his statement of a few moments ago, which grew out of the fact that the Senator has failed to notice the bill as reported by the Senator from Oklahoma [Mr. Owen]. He spoke of the discounting of the paper of one reserve bank by another reserve bank, and said that a reserve bank's credit would be destroyed if it was compelled to pay a rate of interest not less than 1 nor more than 3 per cent above the higher of the rates prevailing in the districts immediately affected.

The Senator was correct in his analysis, perhaps, but he was dealing with the bill before it had been amended by that branch of the Banking and Currency Committee which is headed by Mr. Owen. I call the Senator's attention to the fact that the language referred to has been stricken out, and that the clause now reads, under the powers given to the Federal reserve board, paragraph b of section 11:

(b) To permit or require Federal reserve banks to rediscount the discounted paper of other Federal reserve banks at rates of interest to be fixed each week or oftener by the Federal reserve board.

The language the Senator commented upon having been stricken out. I thought it was only fair to the Senator to call his attention to this fact.

Mr. BURTON. I have stated-perhaps the Senator did not understand me—that the bill as originally framed contained no such provision, but it is in the House bill. In referring to this 1 and 3 per cent provision I was referring to the House bill, not to the bill as it is in the Senate. I understand that that has been stricken out.

Mr. REED. Then I beg the Senator's pardon. I did not so understand him.

Mr. BURTON. It is possible that I did not make myself entirely clear, but I was, I think, definitely referring to the House bill.

Suppose in different regions a different spirit prevails, a speculative spirit in one, caution in another. The first bank would be ordered to transfer its carefully guarded resources to the other. With a central bank an even hand would be maintained by the directors everywhere requiring similar policies. In the one case, there would be only remote, and, consequently, ineffective supervision over the operations of different institutions; in the other case, the control would be immediate and

As regards the second object to be obtained-a more elastic currency—the fault of our present system is not so much scarcity as it is rigidity. An examination will fail to convince us of the necessity of any increase in the aggregate volume of money in circulation. With one exception, that of France, the quantity of money per capita in the United States is greater than any prominent commercial nation in the world. According to the report of a year ago the average per inhabitant in this country was \$34.54. The larger amount in circulation in France is principally due to the fact that with them the use of checks as substitutes for currency is much less. This per capita circulation does not include the one hundred and fifty million gold reserve or the Government assets of our National Treasury, which would largely increase the per capita amount.

I want to call attention especially to these facts.

An idea has been prevalent for nearly 50 years that prosperity depended on a very abundant volume of money, and sometimes the question of whether the money be good or bad has been disregarded. Thus I have called attention to the fact that our per capita circulation, with the exception of France, is the largest of any commercially prominent country. Some of the divisions of Australia—perhaps the whole country of Australia—have a larger per capita circulation than we. I think the Argentine Republic has. In a statement a few years ago a singular fact appeared. The country having the largest per capita circulation on the globe and that having the least were set side by side. Colombia had a circulation of \$250 a head and Venezuela had \$1,90. Venezuela had a great deal better system of the two, because its currency was based on metal, and the other had irredeemable paper that had very little value. I will make some comparison of this per capita circulation with other periods. This per capita circulation in the United State is greater by nearly \$15 than in the period of maximum inflation in the Civil War and greater by an almost equal amount than in the very prosperous years of 1880-81; greater also by approximately \$10 than 12 years ago; and this notwithstanding the constantly increasing use of checks and other substitutes for currency.

If we were now to frame an ideal currency system it is probable that five of the seven varieties of money now in circulation would be omitted. I refer to the silver dollars, the silver certificates based upon them, the greenbacks, the national-bank notes, and the Treasury notes of 1890. The use of a very large share of these forms of currency for circulation—and that, too, in bills of small denominations—and the necessity for a certain amount of money under any and all conditions, that is the requisite minimum for circulation, have been the most prominent factor in preventing embarrassment from our present motley and illogical monetary system.

The silver certificates are for the most part in small denominations. The greenbacks are largely in small denominations. They are used for pocket money. I hope to have opportunity to say something about the provision in this bill for denominations of Federal reserve notes as low as \$1. I think that would be a very grave mistake. We have enough of flat or semifiat money now, and the only way by which we can take care of it is in response to the needs for circulation.

For instance, we have \$346,000,000 of greenbacks, against which there is \$150,000,000 reserve. We have in one form or parather of the properties as \$150,000,000 of \$100.000 of \$100.0

For instance, we have \$346,000,000 of greenbacks, against which there is \$150,000,000 reserve. We have in one form or another, either as silver dollars or as silver certificates, \$560,000,000. That \$560,000,000 is semifiat money, while the greenbacks are like bank notes, redeemable in gold, which makes a total of \$900,000,000 and more of money outstanding, depending upon the credit of the Government, and I repeat, that but for the needs of circulation it would be very dangerous. Under present conditions we can take care of it. Greenbacks are redeemable in gold. The silver dollar has a certain intrinsic value, I have forgotten the latest quotations, but perhaps 50 cents of metallic value in the dollar and the other 50 cents depends upon the credit of the Government, and is represented by the motto on the dollar "In God we trust."

Now, if you emit a large number of Federal reserve notes of small denominations you swell the quantity of the circulating medium so as to create a serious embarrassment. I refer to that circulating medium which is required under any and all circumstances.

When the Bank of England renewed its charter in the year 1844, it was decided to put out approximately £14,500,000 of notes on the credit of Government stock, or, say, \$72,000,000. Every other note must be based upon gold in the issue department of the bank. That policy is continued to this day, although now by the abandonment of the circulating privileges of certain banks the quantity resting on Government stock has increased to something over £18,000,000. What was the theory upon which that £14,500,000 was allowed to rest upon Government stock? That it was the minimum amount which would be required for circulation under any and all circumstances, and that they could float it safely without a gold reserve or without it being based on coin in the treasury.

In our own country the fact that in ordinary years provision has been made for the maximum demands, though at such sea-

sons the amount required exceeds by perhaps \$300,000,000 the average requirements, proves that in slack seasons when demands are clearly diminished we have more money in circulation than is needed.

In this connection I want to say that no system which we can devise will be a perfect one unless it provides for the with-drawal or decrease in the quantity of circulating notes as

money as well as for their increase.

Ever since the Civil War there has been a sentiment, the strength of which can not be overrated, in favor of multiplying and increasing issues of paper or any other kind of money. There is a kind of obsession that the prosperity of the country depends on having a very large circulating medium. Prosperity does not depend upon the quantity of money in circulation. It depends upon the resources, the capital that can be utilized. An excess in the quantity tends to higher prices—though sometimes coupled with lower rates of interest—to the exportation of gold, speculation, and to panic; and unless this bill contains a brake that prevents undue inflation it will be dangerous.

I can not in too strong terms commend that provision in the bill, both as it passed the House and as reported here, that when notes come into a bank issued at the instance of another regional bank those notes shall be returned or retired. That illustrates the true nature of a bank note. It is a form of credit. It is not gold; it is a piece of paper, and when it has fulfilled its function it returns to the bank of issue.

Mr. President, it is hard to realize the extent to which the credit resources of this country can be increased by the issuance of bank bills. It is hard to exaggerate how much they are being increased now. We must realize that the \$5 note or the \$10 note that is carried in the pocket of a workingman is a credit which he has against a bank, just the same as if he had deposited the money there. One man has \$100 and takes it to the bank and deposits it. Another man wants money sufficient to pay his bills and have a little by him. He carries around \$5 or \$10 bills in his pocket, and has a credit instrument of the bank of the same nature as a deposit. They both alike are creditors of that bank. The nature of the transaction is not different in the two cases in that in each it is a credit.

Now, when that bank bill has been used and the time for credit has ceased and it goes back, it ought to be immediately withdrawn. It has performed its function just as a check has performed its function when it is presented to a bank and is

paid.

What is required, then, is to establish a currency system which will respond to the varying demands of trade, for the use of money, like the activities of trade and industry, varies in different years and in different seasons of the same year.

Our neighbors across the border, where conditions are in many ways very similar to our own, show how the volume of circulating notes varies when the issue is regulated in accordance with the demands of trade. On an average note circulation for 10 years (1898-1908) of \$59,793,637 there has been an average variation during the different months of each year of \$16,075,500, varying from \$12,000,000 in 1900 to almost \$23,000,000 in 1907, when an unusual quantity of notes was put out to meet crisis demands. The amount of notes outstanding is invariably largest in November and smallest in January.

What should be the basis for the issuance of currency, and what agency should issue it? In the earlier deliberations of the Monetary Commission a majority of the members, including especially the older Senators who remembered the disasters from bank failures prior to 1860, strenuously opposed a currency based upon commercial assets. It is a ground for satisfaction that not only were their views changed but the opinion of the country has changed in this regard, so that it is now practically conceded by all who have given the most considerate attention to this subject that commercial paper—liquid assets—afford the best basis for currency issues and a means which will be best adapted to cause supply to conform to demand.

There are several kinds of securities or bases for the issuance of currency and several theories as to the agency which should issue it. What is the best security or basis? Let us first consider a bond-secured currency. What are the objections to it? I refer in the first instance to bonds other than those of the Government. Among the objections to a bond-secured currency are, first, that conditions may arise in time of panic when a

ready realization upon them can not be secured.

In the year 1907 municipal bonds of excellent quality went begging in the market at 75 per cent. In the years from say 1837 to the beginning of the Civil War it was a policy of many of the States to allow banks to issue notes on municipal, State, and other bonds. The experiment worked very badly. A part of the damage that was done was due to the coming on of the Civil War. Bonds in many cases were either depreciated or

became entirely useless. The banks failed and note holders lost. So there is this potent objection to a bond-secured currency, a lack of certainty in value and more especially a lack of ready availability. A bond may be perfectly good, as were those depreciated in the crisis of 1907, but they were not available.

The next objection is that every bank, if this basis is adopted, must devote a good share of its capital to the purchase of bonds so as to be ready to meet requirements for an enlarged circulation, and if an effort is made to secure them as a means for the enlargement of the supply, the demand is contemporaneous with a scarcity of assets and large demands from their

That is, it is a serious handicap to carry them, and in the next place if there exists a necessity to meet an emergency in which they must be purchased by banks, it is at the very time when there is the greatest strain on their assets.

Again, such a policy would give to the older settled communities, where capital is more abundant, an advantage over the newer communities, where the demands for currency are more

fluctuating and more insistent.

Any provision which looks to the maintenance of the present quantity of currency based on Government bonds (about \$730,000,000) is open to grave objections. The total quantity of national-bank notes, when combined with other forms of money, is undoubtedly greater than is required at all seasons of the year. An artificial rate of interest is made possible by this means for the Government debt, and if this plan is to be continued it also involves the permanency of our national indebt-

The present provision for the withdrawal of bonds, under which the amount is limited to \$9,000,000 per month, is altogether inadequate, and the opportunity for expansion is also limited by the difficulty in obtaining bonds when needed.

The next question is, What agency shall issue currency? By the almost universal consent of the students of the question in all nations, circulating notes should not be the direct obligation of the Government, nor is it desirable that they should be issued at will by individual banks, partly because of the lack of absolute assurance of their validity and partly because there will be an unseemly scramble among a multitude of institutions as to which shall exercise the privilege.

One bank could issue more than its share and another less, and the tendency will be to put out too many of these bills and create serious inflation with all the resulting dangers of business derangement. Still another objection which, as well as the last, applies to the issuance by them or turning over to them of the circulating notes, is that no one bank has that broad horizon, that comprehension of conditions which would enable it to decide intelligently whether bills ought to be issued or not or for what amount.

Thus all the nations having a central bank have come to the conclusion that it was best to intrust this duty to one central association. The arguments are that it is desirable to center responsibility, to prevent confusion, and to have this privilege exercised by one strong, carefully managed institution with

ample credit.

The directors of a central bank may look forth on all portions of the country and intelligently determine the quantity of the circulating medium required. We should never forget that a circulating note is but one form of credit, though differing in many of its incidents. I do not wish to dwell longer upon this subject, to which, if time affords, I will later in my address give more attention, especially as regards the advantages of a central bank.

I was very much interested in the discussion the other evening in which the Senator from Nebraska [Mr. Norris], the Senator from Massachusetts [Mr. Weeks], and the Senator from New York [Mr. O'GORMAN] took part. I have already expressed some views on the subject of the nature of a circulating note, its similarity to a deposit, and the distinctions, and I may, with the kind consideration of the Senate, at a later time express some further views on the subject.

I can not pass from the subject, however, without expressing the opinion that the means proposed in the pending bill for retiring the proposed Federal reserve notes is worthy of the utmost commendation, and that allowing them to be used as

reserves to an equal degree deserves condemnation.

As our foreign trade increases and the world is becoming more and more one great commercial whole, the importance of controlling international exchanges can not be overrated.

The immediate basis for banking credit in every country is the quantity of gold. At present we have no adequate means for husbanding our supply. It seems to be a prevalent opinion that the principal factor in the export and import of gold is the balance of trade in merchandise. To this must be added

the amounts paid for freight and the expenses of American tourists abroad. It should be taken into account also that the balance of gold in a country is affected by transfer of securities and by the making of loans.

In the eager competition which has existed for several years, this question has been emphasized, and nothing is more clear than that it is necessary for one great institution in close touch with foreign trade and possessing foreign connections and abundant capital to provide against the turning of our gold supply to foreign nations, where more effective regulations are in vogue for maintaining their specie reserves.

The method most usually adopted when there is a strain is the raising of the rate of discount, and that is controlled in other countries by one great institution.

Mr. President, how does the raising of the rate of discount affect the situation? In dwelling upon this point I shall concede that the margin of profit in general in this country is larger than in the older communities, so that the regulation of the rates of discount would not have that controlling effect that it might have in another country. In Holland, if a man desired to make a certain investment and could borrow money at  $3\frac{1}{2}$  per cent, he might go ahead and make it; but if the rate were 41 per cent he would refuse to do so, while with our greater opportuni-ties for enterprise and with the larger profits usually realized from investments a difference of 1 per cent would very likely not have the same deterrent effect.

The general effect of raising the rate of discount is perfectly plain. In the first place, enterprise is curtailed and persons who have loans outstanding do not wish to renew them unless

they are compelled to do so.

In the matter of international exchanges there is another very great difference. Suppose the rate of discount both in the United States and in Germany should be 4 per cent on a certain class of paper and each country should have bills of exchange or credits payable in the other. The rate of discount in Germany is raised from 4 to 6 per cent. The investor in the United States having a loan in Germany, instead of calling it home where he can only obtain 4 per cent, leaves it there. would tend to prevent the outflow of gold. When the rate of discount is raised, investments in other countries are recalled, and that often means the importation of gold. We are absolutely without any means for the regulation of this great controlling influence on international exchange, while in foreign countries a system has been built up on which they depend more than on anything else. That is true in Great Britain, France, Germany, and most other countries.

It will be easy to point out that such control would not exist under this proposed regional bank system. I now wish to lay special emphasis on the point that along with the lack of a banking system which mobilizes reserves and which does not provide for elasticity of currency, there is this other most serious defect, that we have no means of controlling foreign exchange. That question becomes more imminent and important year by year as the volume of our foreign trade increases and as investments are becoming more and more international. Investment knows no mountain or river boundaries; it knows no political lines. France, notwithstanding a degree of repulsion toward Germany, has been a very large lender there, and Germany has been so at times in France. Money goes across the Channel almost as readily as a telegram is sent France to England and from England to France; and the exportation and importation of gold is determined more than anything else, at least so far as immediate needs are concerned, by the rate of discount in the respective countries.

We have in a measure supplied this want by the building up of great banking institutions which deal in foreign exchange, but their operations still have a quality that is local and for the benefit of individual firms and corporations. We have gone along in a happy-go-easy sort of a way in the last few years, and possibly an opinion rests with a majority of our citizens and even with some financiers that we may continue to do so and that our gold supply will take care of itself; but just as surely as there are alternations of depression and prosperity, just as surely a part of the \$4,000,000,000 or more of securities held

abroad will be returned to us.

Should there be doubt in the minds of foreign investors as to the soundness of our monetary and banking policies these securities would be thrown back on us in enormous volume. Whenever there is war in which, may God forbid, our country is involved, or one in which other countries are involved, the necessity for controlling this gold supply will be emphasized, and we shall suffer seriously if we do not have some adequate means to meet the situation.

Mr. SHAFROTH. Mr. President-

The PRESIDING OFFICER (Mr. BANKHEAD in the chair). Does the Senator from Ohio yield to the Senator from Colo-

Mr. BURTON. I do.

Mr. SHAFROTH. I recognize that perhaps the Senator from Ohio is better versed on the question of foreign exchange and also on the regulation of the flow of gold than perhaps any other Member of the Senate; and I want to ask him as to a condition which has been bothering me somewhat, as I myself have been studying the question. I find that when one country wants gold it raises the rate of discount; but as quickly as it gets gold, the country that has lost the gold raises its rate of discount, and then the third nation raises its rate of discount in order to get the gold back it lost. It is a regular seesaw operation which seems to be going on until interest gets so high that those desiring to borrow money for legitimate enter-prises will not borrow money; they will say, as the Senator has stated, where a loan at 3½ per cent is good, at 4½ or 5 per cent it is not good. The result has been in the last 12 or 15 years that the rate of interest in the Bank of England, for instance,

has run from 2 and 2½ per cent up to 4½ and 5 per cent.
Mr. BURTON. And even higher than that.
Mr. SHAFROTH. And even higher than that. Of this is all right for the banker, but how is it for the people who have to pay the increased interest? It seems to me that it is getting gold at a tremendous cost. If it involved only the question of the little amount of gold that would be obtained, it might be something of slight moment; but when you consider that the rates of interest for the entire country and the entire world rise upon that increase in the rate of interest fixed, it

seems to me that it is a great burden and that there ought to be some other way devised of getting gold cheaper. In this country we have not exercised that principle, and yet our imports of gold have been \$5,000,000 more a year on the average since 1878. The Government buys gold. In Denver the Government buys from \$12,000,000 to \$20,000,000 of gold every year. We pay for it \$20.67 an ounce. We have never paid a premium of even one-tenth of 1 per cent for it. The man who goes to the mint does not follow his gold and wait until it is coined and delivered to him; but he presents his bullion and he immediately receives a check for the same. Thus the Government is buying gold continually in this country to very large amounts without paying any premium whatever on it, and there has never been a deviation from that practice.

Mr. BURTON. It is virtually just a mere exercise of the

right of coinage

Mr. SHAFROTH. That is right; and that existed to an extent even in the year 1893, with all the depressions and drain on gold that then existed, for I know in our city there was gold purchased by the Government to the amount of more than

\$12,000,000 that year.

I want to ask the Senator from Ohio whether there is not some way of getting gold, even if you have to pay a premium for it, which would be less expensive to the people of this country, less expensive to the masses, than raising the rate of discount or raising the rate of interest to every borrower in the

entire world? Mr. BURTON. Answering first, perhaps, one or two other statements made by the Senator from Colorado, which it might be well to explain, he seemed to lay stress on the fact, or at least I gained the impression from what he said, that if all countries would raise the rate of discount at the same time no result would be obtained. In actual experience this is not the The rates are unequally raised in different countries. Suppose, however, that they should all raise the rate of discount

at the same time.

The tendency of the increase would be to put a brake on expansion. The Senator from Colorado asks is there not some simpler way of recouping our supply of gold than by raising the rate of interest. I do not think so. Different makeshifts have been employed to safeguard the gold supply. For instance, the Bank of France has a reserve, changing so frequently that I am not sure that I can give the proportions accurately, but four or five of gold to one of silver, say four-fifths gold and one-fifth silver. If a person comes in when there is an unusual strain on their gold supply, they will pay over silver instead of gold. Everyone knows that that is a makeshift. Here we would regard that as a refusal to maintain specie payments in the metal which is the coin of the commercial republic. Bank of France also purchases gold. What does it indicate when gold is at a premium; what is the condition that must be met? It might be a condition of overexpansion, certainly of danger from some source. People may have been going ahead too fast, engaging in injudicious enterprises, borrowing too for the banks to follow that practice, because they would like much, and perhaps indulging in extravagance. At such a time to get a high rate of interest, but it works to the injury of the

as that it is not harmful to a people, but rather is beneficial, when those who are in close touch with the situation sound a loud note of warning by raising the rate of discount, thereby putting a check on speculative borrowing and causing a quick

return to normal conditions.

Mr. President, I notice there is a great deal of complaint nowadays about the difficulty of obtaining loans. Seemingly, last April there was a warning of danger ahead, and loaning was somewhat curtailed. While it is always hazardous to venture any prediction upon future financial conditions, I think we are in a position in which in a few months the reserves of the banks will increase, rates of interest may be lower, and loans be more easy to obtain. What has brought that condition about? In divers lines we were going ahead too fast. There was

Mr. ROOT. Mr. President, may I interrupt the Senator from Ohio to say a word or two to the Senator from Colorado in

answer to his question?

The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from New York?

Mr. BURTON. Certainly.

Mr. ROOT. The Senator from Ohio kindly yields so that I may make a suggestion to the Senator from Colorado in regard to the question he has just put. It is not really an injury to the borrowers in a country which raises the rate of discount, for the reason that when a man goes to the bank and borrows money he gets bank credits or bank notes, or whatever the representative of value in actual use may be. The value of that which he receives depends upon the existence of a due relation between the total amount of currency in the country and the amount of gold which underlies that currency. When gold goes out of a country, it indicates an excess of currency, and so long as the gold remains out there is, in fact, less value to the cur-The currency is worth less, because there is not a due relation between it and the gold which underlies it. The borrower gets less, but when the rate of discount is raised the effect is produced of bringing back gold, and the increased value of the currency or other form of credit the borrower gets is exactly proportionate to the increase in the amount of interest he has to pay. The borrower gets just so much more for his increased rate of interest by reason of having the value of what he receives increased by the reestablishment of the due relation between the underlying stock of gold in the country and the currency of the country.

Mr. SHAFROTH. Mr. President, I have not any doubt that the Senator understands the subject very thoroughly; but the question with me is this: Take the rate of the Bank of England in the latter part of the last century, which was from 2 per cent to 2½ per cent, as compared with the rate now of 5 per cent. That may be all right for some people, but it is not for the borrower. His status by reason of what he gets is not increased in proportion to the difference between 2½ per cent and 5 per cent. On that account it does seem to me-inasmuch as the justification for the raising of these rates is that it is done for the purpose of getting gold—that there ought to be some easier way, some cheaper way. Would it not be better for the Government itself, if necessary, to pay a premium for gold than to have raised the rate of discount on all the people of

the United States or all the people of England?

As to the reserve banks getting gold, it seems to me they could do so at very slight cost at all times. I have never heard of gold selling in this country for the last 20 years for more than a rate of, I think, one tenth of 1 per cent. One of the reserve banks that does a business of a million dollars a day can take that million dollars coming over its counter and add to it one-tenth of 1 per cent and get gold in the market. For a thousand dollars it could get gold for redemption purposes to the amount of a million dollars. Of course, it could not consume that gold. An erroneous idea prevails that it takes a large amount of money to keep a gold reserve, but it does not, because, unless you use the gold in either governmental ex-penditures or consume it in some other way by purchases, it takes only a small amount of money. If you are going to buy gold to start a gold reserve, which a bank is required to have, then, of course, it has got to pay the amount of the gold reserve; but when the gold reserve is established and it is necesto keep it in existence, the receipts of the bank, coupled simply with one-tenth of 1 per cent, will maintain that gold reserve. For that reason, it seems to me, the fear we have that in order to keep this gold it is going to cost us so much and that it is necessary in order to keep it to raise the rate of discount in the nations' bidding for the gold from each other is not well founded. I have felt that it might be an advantage people; and for my part I would rather not see this bidding for gold going on in the present manner, but to let gold be bought in the open market, just as is done in Denver. We have no trouble in getting gold there.

Mr. ROOT. Mr. President, the Senator compares the conditions in England, for example, with interest at 5 per cent, with conditions there years ago when interest was 2 per cent. That

Mr. O'GORMAN. Mr. President, if the Senator will pardon me, the rate was from 2 to 2½ per cent two years ago, while

it is now gone up in excess of 5 per cent.

Mr. SHAFROTH. I think the Senator is mistaken in that. I have a table prepared by a French economist, who states that in the last two years the rate has increased considerably in England. According to the table, from June 30, 1911, to June 30, 1913, the rate in England increased from 3 per cent in 1911 to 4½ per cent in 1913, but since that time it has gone to 5 per cent.

Mr. O'GORMAN. Yes.

Mr. ROOT. Those increases or decreases in the rate of interest, running through a considerable period of time, are brought about by many causes; but the comparison, which is of importance to the question, which the Senator from Colorado puts so clearly, is a comparison between the condition of the country if the rate of interest is left as it is to-day and the condition of the country if the rate of interest is raised tomerrow. It is the comparison of immediate conditions; and I have stated the reason why the increase, changing from the condition to-day to the condition to-morrow, is not really a disadvantage to the borrower.

disadvantage to the borrower.

Mr. BURTON. Mr. President, it must be understood that whenever there is an abundance of gold to redeem notes and as a basis of credit, that is contemporaneous with a condition of trade when it is safe to extend accommodations. When there is a scarcity the contrary is true. As the Senator from New York [Mr. Root] has said, the purchasing power naturally goes up and down according to the quantity. Certainly, the value of a loan as an accommodation goes up and down in accordance with the index afforded by the supply of specie. I now wish to take up another question in this connection.

No system which divides the banking capital among 8 or 12 banks will be able to take care of the situation. Should that number be established, one of two things would happen. The first would be that all the regional banks, by reason of their comparative weakness and inability to tackle this problem, would abandon any effort to secure favorable balances in the shipment of gold. The other would be that one institution, presumably at New York, would stand out above all the rest, taking care of the gold supply, and thus obtaining a power and a prestige for this bank and for that city surpassing that which now exists. The latter result, however, could hardly be expected. Regional banks in localities from which there are exports, such as the one at New Orleans, where cotton is exported, or at Chicago, where meat is sent abroad, or at San Francisco, where there is trade with the Orient, would not have sufficient to cope with the situation. Their whole interest would be to provide sufficient reserves or resources for their own locality. Their action would be strictly sectional, not national.

I may say in this connection that in the collection of foreign bills from the eastern portion of the country there is an inevitable tendency to clear through New York City, largely because that is the greatest importing point in this country.

Without banking facilities, a man, say, in New Orleans, who sold cotton abroad, would have to have the money shipped back to him in payment, and would not have the use of it for many days. Under our present banking system, however, this would not be necessary, because New York institutions would purchase a draft drawn by the exporter of the cotton on the foreign bankers of the party to whom he sold the cotton, and would sell the exchange so made to importers who required it. New York City acts as the clearing house of the United States for foreign items, because it is the principal city of import, and so requires the exchange made by the exporter in order to furnish it to the importer to pay for goods he has purchased abroad. While other cities have some foreign business, yet New York City is our leading center in foreign exchange. No legislation can change it. It is due entirely to conditions of trade.

Foreign exchange bankers either hold time bills purchased by them to maturity or discount them, depending upon their requirements, and a regional system of banks would have to do the same, and often in conflict with each other. A central bank, however, would be able to base its operations upon the requirements of the country, and so would at all times stand between our business interests and those of foreign countries.

Suppose that a regional bank in New York wished to carry a large amount of foreign exchange to guard against adverse balances of gold or any shipment of money it would make taclculations and lay them out perhaps on a large scale. However, the moment a fund is accumulated which naturally would be appropriated for this purpose along comes the Federal reserve board and says, "You must lend that to the South, or the West, or the Northwest, or some other part of the country." It would be utterly unable to make its calculations. It could not cope with the situation.

That is one of the worst features of the regional-bank plan. Right in the very substance of it you recognize that of necessity these banks have to be tied together, because, as I have repeatedly said, some are in creditor and some are in debtor regions, and unequal demands at different seasons of the year require accommodations from one to the other, and by the very introduction of this feature you impose upon the regional banks all the duties that a central bank would have without any means of carrying them out. As a result of that you must say to every regional bank, "You can not go ahead on a large scale; you can not make your calculations in advance, because you must hold yourself in readiness at any time to turn over your resources to some other region to which we will compel you to transfer them."

This condition would be particularly applicable in the case of foreign exchange, because those operations must be on a very large scale. What would be the probable result of this plan? The regional bank in New York never would be able to undertake transactions in foreign exchange in such a manner as would most benefit the country. On the other hand, a great central institution like the Bank of England or the Bank of France, with great resources such as theirs, would take care of the problem easily and readily, and would do so because of its obligations as a public institution.

Let me state right here another disadvantage about the system of regional banks as compared with a central bank. It is assumed that under this plan commercial paper can be made more available than now for investment. A great deal of money in New York goes into loans on the stock exchange. What is the way to cure that situation? By building up a discount market in which there will be a great quantity of bills of a special quality which investors can buy. What is the means of building up that discount market? By establishing regulations under which, when a man discounts a bill, he may know that he can take it to his bank, which in turn can take it to a central institution or to one of these regional banks and rediscount it.

Suppose a bank has a certain amount of money that it does not need for a short time, but does need to have readily available to meet future contingencies. As it is now, in New York it lends it on the stock exchange or on securities; but with a discount market, where there was an institution available to which it could go and make its discounts, it could buy discount bills. The tendency would be to reduce the rates of interest to a point 1 or 1½ per cent lower than they are now.

Suppose you have this system, under which the regional bank is liable to be called on at any time to transfer its resources anywhere; suppose you have the further regulation that is put here, that every week or so the Federal reserve board may change the rate of discount; what is going to happen in that case? In the first place, the bank having the fund to invest will not dare to invest it, because it will not know but that the regional bank to which it would resort may be compelled to make other use of its resources. Also the banker does not know but that the regional bank will be commanded at the next meeting of the Federal reserve board to raise the rate of discount, so that he can not profitably take it there and discount it.

At least so far as a sufficiency of resources is concerned, except on the stock exchange, no such disadvantage as that would appear under the plan of a central institution. There the total amount required for a loan would be but an inappreciable part of the whole reserve. You would be dealing with an institution which would have the power and the capacity to meet such a situation.

I now desire to take up more in detail-

Mr. HITCHCOCK. Mr. President, before the Senator passes to the next topic I should like to ask him whether the evil he complains of and suggests in connection with a large number of regional banks, as proposed in the House bill and as still proposed in the Owen bill, would not be greatly diminished if the number of banks were made four, as provided for in the amendments reported by the section of the committee of which I am a member?

Mr. BURTON. Undoubtedly, because the resources of each bank would be so much larger. I should think, too, that if you had four banks the best way to arrange them would be to avoid having localities of similar demands included in one district, but to have as great diversity as possible. That is, do not make it all a cotton or a corn district, but have just as wide a diversity of interests as possible, with a consequent variation in the demands from month to month.

Unquestionably four banks would be far better, and yet I feel confident that if we started in with four-and I have still more confidence that if we started in with eight or a dozen-the disadvantages of separate action would be so marked

that the people would desire a central institution. It has been said here this morning, "Oh, well, this is about the same as a central bank, anyway." The pending bill is not

based on that principle at all.

The guiding principle and the idea of that bill is that separate sections can get along better if they have separate banks. It does not lead to a unity of action. It points rather toward a severance, the recognition of separate interests, and the idea that the country can be split up into a number of different districts and get along better independently than it can by working together. I think, however, that the disadvantages of such a system would after a time convince the people that they had adopted the wrong rule, and they would then come to the idea of a central institution. But why not do it now? Do not have any halfway imitation of cooperation and unity of action, but have actual cooperation and unity, with all its incidents and with all that is required to control this great problem.

I now desire to take up more in detail a comparison of regional banks with a central institution. In doing so I shall doubtless go over some ground that I have already partially covered, either from my prepared manuscript or, more probably, in

places where I have digressed from it.

In securing an adequate banking system one central bank, with branches, could be used more effectively to bring about currency reform and banking reform than a series of regional banks, 8 or 12 in number. The points of advantage are chiefly along the following lines:

First. Mobilization of reserves.

Second. Equitable, stable, and uniform discount rates. Third. Management, and sectional or partisan differences. Fourth. Uniform note issues.

Fifth. The gold movement.

Sixth. The credit of the Government.

Seventh. Refunding operations.

Eighth. Clearing functions and domestic exchange.

(1) MOBILIZATION OF RESERVES.

"Mobility" means "the quality or state of being movable, with extreme fluidity," and, as applied to banking reserves, it means the ability to loan money in one part of the country that is not needed in some other part of the country, with speed, without friction, and without expense. Mobility of reserves exists in a central bank with branches to a greater degree of perfection than it is possible to conceive in any other system. Reserves that may be held by any and all branches are still the reserves of a central bank. They may be shipped from the largest city to the smallest city, at distant ends of the country, and if held within the control of branches of the central bank they count as reserve for the central bank. It is possible, therefore, to loan money at any branch of a central bank, no matter how small that branch may be or where situated in relation to other branches. The loan would be proportioned from the total reserves of the central bank instead of from a small division of such total, such as would be represented in a regional bank. The percentage of effect in such a transaction, therefore, would be vastly less in the case of a central bank than in the case of regional banks. In the United States we have a number of districts clearly marked in their nature as to the kind of business. All of the banks in certain districts, such as those which grow corn, wheat, and cotton, are obliged to borrow money at approximately the same time of the year. A number of other districts have money to loan during this same period. Under our present system a series of banks in one district, say the cotton district, borrow from a series of banks in another district, say the New York district, involving vast transfers of actual cash. Under a regional banking system some of the demands of the cotton district would be supplied from the regional bank. But that bank would not have sufficient funds to supply all of these demands.

I shall endeavor, before the day is over, to give some figures showing approximately what would happen, what share of the money needed in that region would have to be borrowed outside, and what the reserves there would be.

The regional bank would then be forced to borrow from another regional bank-say that located at New York-in order to supply all of these needs. This is in theory the same course which is pursued under the conditions which prevail in this country to-day, where the banks throughout the country in these periods of crop movement and unusual demand turn to New York and such money centers for the funds necessary to accommodate their customers. This is the same course which would be pursued by the southern banks which did not enter this plan, but which would also turn to their New York correspondents for their additional funds. But the added handicap is presented that these southern members of the regional system would have their present connections in New York broken off by the necessity for them to deposit their money with the regional bank.

There is another feature of this question of reserves to which I wish to call attention. Some persons seem to have overlooked the existing law. Under the present law it is compulsory for a country bank to keep 6 per cent of its liabilities or deposits in its own vaults. It may deposit 9 per cent of the rest in a reserve or central reserve city. That leaves it the option to retain in its own vaults the whole of the 15 per cent reserve At the time of the year when it is probable that there will be large demands it will not send the money to Chicago, to St. Louis, or to New York. Under the law that is proposed here the quantity to be lodged in the regional reserve

bank is absolutely compulsory.

Much has been said here about how the banks refused to pay out reserves, in the panic of 1907. Suppose a country bank had 9 per cent in New York. It was claimed that New York did not pay over that 9 per cent when demanded. If they did not-I do not know whether they did or not-they were virtually repudiating a debt which they were under the most solemn obligation to pay. Very likely they were doing so because of inability to pay. But suppose you pass this bill, and a stress comes on, and you have those same reserves in a regional bank. It is like the boy's savings bank of the old style, built in imitation of a house, where you could put your penny down through a clutch, but could not get it out without destroying the bank. It stays in the regional bank, and the law says, "This is no longer optional, as it was under the old system; it is compul-You must now leave this money with us, without any withdrawal.

Mr. HOLLIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from New Hampshire?

Mr. BURTON. Yes. Mr. HOLLIS. If the Senator will pardon me a moment, do I understand his criticism to be that the banks must keep with the reserve banks a certain portion of their assets?

Mr. BURTON. Yes. Mr. HOLLIS. I think the Senator has not read the bill cor-If he will refer to page 28, he will find it provides that after the 24-months period has expired the reserve shall be held in the vaults of the member bank, or in the Federal reserve bank, or in both, at its option—that is, at the option of the member bank. That was the intention.

Mr. BURTON. This provision has been changed so many

times that I am frank to say that I am a little doubtful about any statement I have made concerning it, although I have tried

to keep track of it from the start.

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Nebraska?

Mr. BURTON. Yes. Mr. HITCHCOCK. I should like to have the Senator from New Hampshire read that provision. As I have read it, it requires absolutely that a certain per cent shall be kept in a reserve bank, a certain per cent in the vaults of the member bank, and there is a balance of the reserve which is optionalnot all of it, but only a part.

Mr. BURTON. That certainly was the provision of the bill as originally drawn, as I have stated.

Mr. HOLLIS. And that is true now. I inquired of the Senator whether he understood that all of it was fixed.

Mr. BURTON. Oh, no; only a certain proportion. Mr. HOLLIS. One-third of it is optional with the bank.

Mr. BURTON. Yes.

Mr. HOLLIS. That is what the bill says.
Mr. BURTON. The comparison I was making was this: Under the present law the whole 9 per cent is entirely optional, and you can withdraw it. Under this bill-I really am not familiar with the latest print-a certain per cent of the reserve must stay there. Am I not correct in that?

Mr. HOLLIS. Yes; that is true. The idea, if the Senator will permit me, is that as the Federal reserve banks depend upon the reserves that are put there by other banks, and as that is their working deposit, they should not be compelled to relinquish all of it at the call of a bank. That is part of the money they depend on.

Mr. BURTON. Of course that is part of the system. That is the idea of it; but will that work out?

In a central banking system notes that might be issued at its New Orleans, Galveston, Houston, Dallas, Atlanta, and other branches in the South would be based upon all of the reserves of a central bank wherever held and a perfection of mobility would be obtained not possible under our present system and not possible under a regional-bank system. Under a regional system each district bank would have to maintain a reserve against the notes issued to it. The power of the Federal reserve board to force the one regional bank to loan to another would not and could not place the reserves of the former behind the note issues of the latter. There would be, therefore, no greater mobilization of reserves under a regional-bank system than there is to-day, even though the number of banks in one district which borrowed from another would be reduced.

In connection with the mobilization of reserves, and preliminary to its successful operation, we must have concentration of reserves. In a central bank such concentration is again perfect. In a regional system such as has been proposed it not only lacks perfection but it actually extends the separation, for we are proposing to increase our system of 3 central reserve cities, which has been wanting in concentration, to 8 or 12 central reserve cities. The Owen bill is attempting to further centralize

by greater decentralization.

Harmony exists in the minds of practical bankers and economists upon the necessity of an effective assembling of the lawful money reserves of all of the national banks and the creation of an institution or institutions for this purpose which can be made available as a reserve depository for State banking insti-

I have already made reference to Germany, where a certain hoarding process has been noticed at intervals for the past two

There the phenomenon is quite different.

The Reichsbank is able to increase its discount account, meet demands for currency by increased circulation, and protect its store of gold, at least temporarily, by the judicious use of a discount rate which it makes effective in all parts of the Empire. The banks of Germany, which depend upon the Reichsbank in time of strain, are able to discount bills with that institution and have a strong incentive to cooperate with the policy of the bank in protecting their own and its credit and reserve position.

With whom or with what is the regional bank asked to cooperate? Shall it aid another regional bank? No. This plan was launched with the idea of giving each bank a separate existence and having it take care of itself and its area. They are to be absolutely distinct institutions, with no duty to any of the others, but created by a bill which makes it possible for a board to come along and lay its strong hand on any one of the institutions and say, "You must lend to another." There is no provision for cooperation or concentration. The spirit of the whole bill is that whatever concert of action there may be among them is to be forced through the agency of a board that can command them to violate every principle of banking. It takes away the voluntary control of their assets and exercises a function which, in the nature of the case, must be open to sectional differences and rivalries certain to hamper their use-

fulness from the very start.

In this country we can not hope by a stroke of the pen to bring about the character of cooperation with a central bank such as exists in Germany and to a considerable extent in The 20,000 State institutions can not at once be brought into cooperation with such new system as is established. State institutions are, however, so largely dependent to-day upon the national system—the national banks being their chief reserve depositaries—that sound currency legislaupon the national system—the national banks being tion which will strengthen the position of the national banks will in turn enable the national banks to carry the load which is now imposed upon them by the State institutions and which will continue for a long period under whatever system is adopted. No system of regional banks will prevent competition for gold and currency in time of credit strain as effectively as may be done by a central bank. With 8 or 12 regional institutions each section will seek the protection of its own district and the members of that district as distinguished from any other section and its members.

On account of numerous questions and interruptions, and be-

me, I realize that I have already stated what is treated later in the argument which I had prepared. Therefore I trust I will be excused for some degree of repetition.

Had there been eight regional banks in 1907 it is inevitable that an attempt would have been made to exercise the powers of a central board of control in order to effect a readjustment of reserves between the regional banks by enforced rediscounts, and the very act on the part of the Federal board of enforcing such rediscounts would have caused criticism and repulsion and would have accentuated the rivalry between these sections for the accumulation of reserves.

I have here a statement with regard to the compulsory nature of the requirements. Upon that I have already spoken. However, I wish to ask this question: How can requisite credit be afforded by a regional bank in a district where all members may wish to borrow at the same time? That would be the case if you had them divided up into a cotton region, a corn belt, a wheat area, and so on. They would all want to borrow at the same time. For one month, or perhaps for three or four months, the pressure might be very severe, and then it would let up. How much easier it would be if manufacturing districts, exporting districts, different kinds of commercial and mining districts were all joined to the agricultural districts, so that there would be such an alternation of demands as would

enable all to work in harmony!

A very important point in this connection is that our whole financial system has been built up on this idea. The aim of our banking structure has been to adjust to one another the claims and demands of different portions of the country. If Oregon wants a loan it sometimes goes to San Francisco. San Francisco can not supply its needs, it goes to New York. But this bill thrusts a sword into the structure which has grown up under a natural economic law and which is the best development of our whole financial system. It says: "No; you shall not work according to the lines of division which are natural and normal and have grown up through many years. We will appoint an organization committee and will divide up this system into branches."

Mr. President, if this bill passes, while it may confer doubtful benefits, while we may get on very nicely, it seems to me to be so absolutely false in its principles that I can not believe it is going to permanently remain upon the statute books.

In other words, in a large institution, such as a central bank, where the reserves held by every branch counted for all, there would never be any question as to its standing or its ability to meet the requirements of member banks. In other words, it would be far more valuable to member banks to be obliged to keep a portion of their reserve in such central bank. knowing that every other national bank in every part of the country was also required to keep a portion of its reserve in the central bank and was not able to draw it out, because it would have the advantage of being able to borrow against the reserves of every district in the country that were not being used in that district; whereas in a regional-bank system no such condition could exist, even on a compulsory discount basis.

(2) EQUITABLE, STABLE, AND UNIFORM DISCOUNT RATES

When the Reichsbank recently reduced its rate from 6 per cent to 51 per cent, that rate became effective to every one of the 70,000 customers of the bank in every part of the German Empire. The Bank of France has maintained unchanged a discount rate of 3 per cent for as long a period as seven years. The United States has no discount market, 28,000 different rates, as many usury laws as there are States, as many penalties as there are usury laws, and a range of rates extending from a condition where money is unloanable to a maximum of over 100 per cent per annum, notwithstanding the fact that this country has the largest store of gold, the greatest natural resources, the largest power of production, and the largest volume of banking capital of any nation of the world. Our 28,000 banks support the largest credit structure known in history. We are now attempting by the enactment of a bill to so read-just the fundamental conditions upon which this great credit establishment has grown as to bring about uniform rates of interest. It can not be done by the bill proposed, either safely or economically.

Without referring to the shifting and withdrawal of redeposited reserves required by the terms of the Owen bill, and assuming that that prodigious task can be accomplished without convulsion in the period of time allowed, how may it be expected that the surplus funds in the regional bank of the community where there exists a surplus of bank credits may be made available to the regional institution in the district where there is a deficit of banking credits by the natural economic law of supply and demand? So far as the regional institutions cause of frequently departing from the manuscript I have before are concerned, those in sections where there is a continual shortage of credit will always be borrowers; those in sections where there is a surplus of banking credit will always be seeking outlets for the surplus. If it is claimed that by the regional system the national banks of the district where the supply of credit is insufficient will still be able to borrow from their present reserve correspondents, how may this be done without imposing upon the banks of that district the necessity of carrying balances at unprofitable rates with reserve correspondents just as heretofore and thereby impairing their earning power? And, on the other hand, how shall the reserve bank in the district with the plethora of money employ its funds other than by the purchase of bills in the open market, thereby bringing about an undue and uneconomic depression of discount rates? It is difficult to see, under the terms of the Owen bill, how the country bank is benefited by having its reserves at home in a regional institution if it must still maintain a balance with its Chicago or New York correspondent for purposes of discount. Certainly such a condition would not exert an influence toward uniformity or stability of interest rates throughout the different sections of the country.

Mr. SMITH of Michigan. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Michigan?

Mr. BURTON. Certainly. Mr. SMITH of Michigan. If it will not interrupt the Senator from Ohio, what he has said about the credit of the Government and the resources of the country prompts me to ask this question of him: How is the value of the national bonds to be maintained under this Owen plan? I do not want to change the current of the Senator's argument, if he is going to come

Mr. BURTON. I shall later treat briefly of that.
Mr. SMITH of Michigan. I have been impressed with this idea: Suppose a large number of national banks fall to avail themselves of the privileges of this bill and retire to the State field, which has about as many attractions for banking as the national field now has, and surrender their bonds and their circulation, who is to buy those bonds and maintain their parity'

Mr. BURTON. I will say to the Senator from Michigan that at another time I want to discuss that question more fully, and with his kind permission I would a little rather postpone it, because it is a topic in itself. I shall, however, treat of it

Mr. SMITH of Michigan. It is a topic in itself, and one that

has given me a great deal of concern.

Mr. BURTON. I see that one member of the Banking and Currency Committee is present. I should like to have explained at some time just how much is meant by this provision allowing the use of United States bonds as a basis for circulation. is not altogether clear to me just what is meant by that. I do not care to bring it up at this time, but on another occasion would like to do so. If the Senator from Michigan will do me the honor to listen, I will touch on it briefly to-day, though at some later time I hope to discuss that subject quite fully.

Mr. SMITH of Michigan. I am very glad, indeed, that it is the intention of the Senato: to do so, because no one has a higher respect for his careful study of this question than my-self. He has been a student of finance for years and is an authority upon it. His judgment upon so important a question would be very valuable to his associates and to the country.

Mr. BURTON. This is a line of argument that I think it

would be valuable to develop. There has been nothing more marked in the history of securities in recent years than the decline of Government bonds the world over. The English consol reached a low record value just a few days ago. French rentes also reached a low record a few days ago. German securities and the French 3 per cents are also at a low figure. Our 2 per cent bonds have been kept up by the artificial stimulus of the circulating privilege. I think it would require a man of unusual prescience to state at just what rate of interest a Government bond of the United States not having the circulating privilege, not available for security for deposits. would fleat at this time. I desire to consider that somewhat further and to later formulate my ideas upon it.

The difference between the lending capacity of the creditor sections of the country and the borrowing needs of the debtor sections will necessarily fall upon the regional banks of the respective districts, and must be adjusted by the exercise of the rediscount function between the regional banks, thereby again introducing an uneconomic operation, likely to cause sectional difference of opinion, abuse of power, and distrust of management. With all the reserves in one institution, the credit of that institution may be directed, through its branches,

toward those sections where credit is needed without the intervention of arbitrary power. It may be claimed that the regional bank of New York, having a surplus, will welcome the opportunity to rediscount bills for the regional bank of New Orleans. How may this process be developed? Who shall fix the rates? Does this bill intend that every time a difference of opinion arises between New Orleans and New York, a hearing in arbitration shall take place in Washington-and who are the men who will hear and arbitrate these differences? May their time not be devoted to arbitration exclusively? And how may uniform rates be brought about by mandate or regulation of a board of control?

If there is anything to which I should think the banks of this country would now demur and which is contrary to all the laws and to every custom from the very foundation of the Government it is that of compulsory loans from one bank to another. Can anybody believe that we are going to establish a system by a board here at Washington that can compel a bank at San Francisco to lend to a bank at Denver without friction

and heartburning?

The Senator from Colorado [Mr. Shafroth] spoke this morning about somebody being provided to look after each particular region. Suppose Colorado demands a loan from California and its regional bank. May not California say, "We are looking after our region now; we are not prepared to take from our funds and put them into Colorado, and that, too, at a rate which is less than we can obtain in our own localities, and with the danger of being without the means of providing for our own cus-

tomers in their present and future demands"?

In contradistinction to the regional plan proposed, how simple would be the problem with a central bank. A rate of discount can be established with due regard to conditions and to the extent to which transfers of reserves, Government deposits, and the general fund is being affected, which will allow discounts to approximate the maximum seasonal fluctuation caused by the harvesting and movement of the crops, which has been estimated at \$300,000,000. The rate charged should be modified or determined by the proportion of its capital and surplus which each bank requires or under some similar rule. A central bank, by establishing a rate after consideration of all these factors, would automatically meet the fluctuation at the season when required, and its base or normal rate through an increase or decrease would control the extent to which all member banks would rediscount.

As the demands increased in any locality or as to any individual member, the rate would automatically increase to the ex-

tent that the demand was met.

I have suggested-and I make the suggestion again-that the best rule in determining discount rates in these regional banks is to extend a certain amount of loans to member banks in proportion to their capital. I am decidedly of the opinion, if we establish a bank having the deposits of the Government, there should be a chance for a member bank in Idaho, if it has a first-class loan, to discount it with such an institution just as cheaply as can a bank in Massachusetts.

At present the rates differ very materially. The difficulty would be to establish a standard by which you may judge and which you may compare. But the best standard is the capitalization of the bank. Twenty per cent is the amount which I

have suggested in the bill I have introduced.

Mr. BORAH. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yleld to the Senator from Idaho?

Mr. BURTON. I would be glad to yield to the Senator from

Mr. BORAH. As I understand the Senator, he is advocating a Government-controlled central bank. Is the Senator going to discuss, before he closes, the note-issuing proposition upon the part of this bank?

Mr. BURTON. Yes; I shall touch on that somewhat. Mr. BORAH. I will wait, then, until the Senator gets to it before I ask the question I have in mind.

Mr. ROBINSON. Will the Senator from Ohio yield to me? Mr. BURTON. Yes.

Mr. ROBINSON. If I understand the Senator's argument correctly as to rediscounts, the rates should be uniform throughout the United States.

Mr. BURTON. For the same class of loans.
Mr. ROBINSON. Does that imply that the rate of loans by
the bank to the borrowers throughout the United States should be fixed and uniform?

Mr. BURTON. For the same class of loans it should be uniform.

Mr. ROBINSON. Then the Senator's thought is that the tendency of the system should be to equalize it.

Mr. BURTON. Decidedly. Mr. ROBINSON. And to make uniform throughout the country the rates of interest, and that without regard to the varying demands of localities for loans?

Mr. BURTON. Both yes and no. A uniform rate for loans amounting to 20 per cent on the capital would have a tendency

in that direction.

Mr. ROBINSON. Just a moment. In some parts of the country, especially in the section from which I come, the rate of interest is very much higher than the rate in other portions of the country, for instance, in the East. I am somewhat infatuated with the suggestion of the Senator from Ohio, because the inevitable result of his proposal would be to reduce the

rate of interest in Arkansas.

Mr. BURTON. If you are going to have a bank of this character to receive on deposit the funds of the Government that are now in the Treasury, we ought to reduce the rates in almost every State in the country. We ought to say to them, if you present a good loan you shall get it at a lower rate of interest than you have been granted in the past. We will not recognize the differences which exist in banking facilities in different portions of the United States. We will treat you all alike provided you give the same security. Now, the best test of security is

Mr. ROBINSON. I take it for granted that any security that should be given to secure a loan through any system the Sen-

ator would approve must be adequate and safe.

Mr. BURTON. Certainly.
Mr. ROBINSON. I can not quite understand why the Senator makes a distinction as to security.

Mr. BURTON. Of course everybody says that loans must be well secured. That is a truism. We begin with that.

Mr. ROBINSON. The Senator is not contemplating that in

any Government-approved system loans shall be made that are

Mr. BURTON. Certainly not. I do not fancy that the Government will encourage that class of speculative loans which would establish high rates of interest. I hope we may later

have time to discuss that matter of rates of interest.

Mr. ROBINSON. Then the result of the Senator's proposal would be to give to the banks in every part of the United States a uniform rate, and at the same time give the member banks in parts of the country where the rates of interest are normally high the opportunity of securing loans at a low rate of interest from other banks throughout the country, and yet impose upon their borrowers the existing normal rates of interest prevailing

locally.

Mr. BURTON. I can not agree with the Senator. I have heard that argument before. If what the Senator has just said is correct, there is nothing under the sun in the law of competition. We might just as well repeal our trust laws and all that type of legislation, and say that the opinion to the effect that trade and prices are regulated by competition is all

a delusion.

Mr. ROBINSON. I do not quite understand the Senator's position in that regard. I will make an illustration: The rate of interest to be fixed for loans to member banks throughout

the United States, we will say is 5 per cent.

A member bank in Arkansas secures a loan at 5 per cent. The normal rate of interest in Arkansas is 8 per cent. Is it the Senator's idea that while giving to the member bank in Arkansas the opportunity of securing a low rate of 5 per cent itself it may still be permitted under the system to charge the existing normal rate of 8 per cent?

Mr. BURTON. As a matter of fact it could not do it.

Mr. ROBINSON. Why?

Mr. BURTON. Suppose you had a hundred banks in Arkan-

Mr. ROBINSON. The banks are there now.

Mr. BURTON. Of course; and if they can obtain funds at lower rates than now, in order to do business and to get customers, they will reduce their rate. The argument of the Senator from Arkansas carried out to its logical conclusion would mean that the Arkansas bankers were absolutely independent of the money rate all over the country. Suppose they have been paying at St. Louis or elsewhere 7 per cent and charging their customers 8 per cent, and under the plan of a central bank they are able to get money at 5 per cent. That becomes known to the public and to the world. The newspapers publish these rates periodically, whenever they are fixed. It becomes known that the bank at Fort Smith, the bank at Little Rock, the bank at this place and that place have been getting

some of that 5 per cent money. In the first place, a popular pressure would be brought to bear to force down interest rates places to approximately that level. You may think that banking business does not always yield to popular opinion, but competition would develop. Customers would come in and say: "I am not willing to pay 8 per cent, but if you have some of that 5 per cent money to give me at 61-6, it may be, or even 7-I will take it." The result would be a lower rate. As I said a few minutes ago, all our laws of trade and competition are a farce if this result would not obtain.

Mr. ROBINSON. Will the Senator yield for just one other

suggestion?

Mr. BURTON.

Mr. BURTON. Certainly. Mr. ROBINSON. I do not want the Senator to get the idea that I am objecting to the suggestion which he makes, because, as I have stated before, I am rather in sympathy with it. But my thought is this: I want to understand from the Senator whether he expects as an automatic result of what is practically the giving of a low rate of interest to banks in my State, which are now paying a high rate of interest, there will also come a low rate of interest to borrowers from those banks.

Mr. BURTON. Oh, no; not universally. That would be impossible. There would be a lower rate of interest to some under the plan I have suggested, and the general tendency would be downward. The general tendency of the whole system would be to bird the different portions of the country together and make the rates of interest lower. This would not, of course, affect rates on risky loans, for the necessity of insurance profit on such loans would hold up the rate to a certain extent.

Mr. ROBINSON. If the final benefit of a low rate of interest is not to accrue to the borrower—

Mr. BURTON. It will to the borrower, but he will not get the whole of it.

Mr. ROBINSON. Then the bank will get a part of it.

Mr. BURTON. The bank will get a part of it.

Mr. ROBINSON. The greater part of it. Mr. BURTON. I do not think so. There is a margin now between the amount that the bank pays and that which it charges to its customers. I do not know how much in the Senator's part of the country it is, but it is, say, 2 per cent. Suppose the rate a banker has to pay goes down 2 per cent; he would inevitably, under general principles and adjustments of changing conditions of price, get a part of that, but I think only the smaller part of it.

Mr. ROBINSON. I will state to the Senator that one of the great needs of the section of the country and State which I represent in part is an increased amount of capital wherewith to develop it. That fact is universally known among the citizens of that State, and I believe it is pretty well recognized among those who are well informed as to conditions throughout the United States. If the result of any system which may be adopted would be to increase the amount of capital which would become available in that section for the development of the country, I should be in sympathy with it. But the demand for capital there is so great that I very much fear the borrowing public would not receive a fair share of the benefits of a reduced rate of interest, which was guaranteed by law to banks themselves and left to the operation of the rule of supply and demand as to the borrowers.

Mr. BURTON. There is the rate of profit and a lot of other facts that must be considered. Suppose you get a certain amount of money into your State at a lower rate of interest. Your banker has been getting a certain rate of profit. The moment he can obtain money at a lower rate of profit, while every man looks out for himself, the people will get the benefit.

I want to say one thing on which it seems to me there is some confusion. I do not say the Senator from Arkansas has fallen into it, but I think some of those who have advocated this bill, not necessarily in the Senate but outside, are laboring under an erroneous impression in that they confuse investment banking and long-time loans with commercial banking, and they have sought to have injected into this bill some ideas that would be very good on investment banking, but do not belong in any bill of this nature.

Mr. JONES. Mr. President-

The PRESIDING OFFICER (Mr. BANKHEAD in the chair). Does the Senator from Ohio yield to the Senator from Washing-

Mr. BURTON. I do.

Mr. JONES. I do not desire to delay the passage of this bill at all, but I think we ought to have more than 12 or 14 Members present while the Senator from Ohio is presenting this argument on the bill. So I suggest the absence of a quorum. The PRESIDING OFFICER. The Senator from Washington suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Gallinger Smith, Ga. Smith, Md. Smith, S. C. Martine, N. J. Norris O'Gorman Overman Gore Hitchcock Hollis Hughes Bankhead Borah Brady Bristow Smoot Sterling Sutherland Page Perkins James Johnson Bristow Bryan Burton Chilton Clark, Wyo. Clarke, Ark. Colt Crawford Cummins Swanson Thompson Tillman Walsh Poindexter Reed Robinson Kenyon Shafroth Sheppard Sherman Shields Lane Warren Lea Lewis Williams Cummins Dillingham du Pont Lippitt McLean Shively Martin, Va.

Mr. SHAFROTH. I wish to announce that my colleague [Mr. THOMAS] is unavoidably absent to-day, and shall let this notice stand for the remainder of the day.

Mr. WEEKS. I wish to announce that my colleague [Mr. Lodge] is absent on account of illness, and to have that aunouncement stand for the day.

Mr. BRYAN. I wish to announce that my colleague [Mr.

FLETCHER] is absent on public business.

Mr. SMOOT. I desire to announce that the senior Senator from North Dakota [Mr. McCumber] is unavoidably detained from the Senate, and I will allow this notice to stand for the day.

Mr. ASHURST. I am requested to announce that the junior, Senator from Mississippi [Mr. Vardaman] is absent on public

business.

Mr. JONES. I desire to state that the junior Senator from Michigan [Mr. Townsend] is necessarily detained from the Chamber on important business.

Mr. SMITH of Maryland. I announce that my colleague [Mr. Jackson] is unavoidably absent on important business.

The PRESIDING OFFICER. Sixty-one Senators have an swered to their names. A quorum of the Senate is present. The Senator from Ohio.

Mr. BURTON. Mr. President, when interrupted I was speaking on the subject of equitable, stable, and uniform discount rates.

With no distinguishing mark upon the reserve money in a central bank, no question could arise respecting the extent to which any locality was impairing the reserves of the bank with reference to the needs of any other locality. No group of banks in one city by large borrowings could so affect the rate in that locality as to impose penalties upon a more conservatively managed institution which had been a more moderate borrower, for they would, under the central-bank bill, have to pay a higher rate of interest as they increased the proportion of their loans to capital. No one great institution, overshadowing a number of smaller institutions in one locality, could ever impose penalties in the way of increased discount rates upon its less powerful competitors or neighbors. Furthermore, those institutions whose credit was so high as to be able to borrow in the cheapest market would be able to rediscount paper through natural channels of rediscount in different sections of the country, so long as it was profitable to do so, at rates below the rate fixed by the bank. We can not expect for many years to bring about uniform, stable, or low rates of interest throughout this country. We can, however, establish an institution which, over a long period of years, will effect a gradual redistribution of credit and banking reserves, so that both uniformity and stability of rates may come about by the natural operation of economic law. Such uniformity and sta-bility must be based, first, upon the elimination of competition for bank reserves in times of strain; second, upon a discount market based upon a single reserve reservoir; third, upon the creation of an institution of sufficient power and of such singleness of purpose that it may exercise the same influence over international exchange as is now exercised by the three great central banks of Europe and the central banks of all of the princiindustrial countries of the world.

Mr. President, until we have those advantages which can be given by a central institution, I do not believe the advantages here enumerated and which are so essential can be secured.

A graduated increase in the discount rate on excess discounts over a normal uniform rate upon a minimum volume of discounts will apply a brake upon expansion by the borrower where it will be effective, and assist in bringing about both stability and uniformity, and no such influence can be exercised either by arbitrary power or by the imposition of a tax upon earnings

which go to the Government and in which the respective borrowers will have but a trifling, if any, interest.

(8) MANAGEMENT AND SECTIONAL OR PARTISAN DIFFERENCES.

I approach this subject, Mr. President, with a great deal of hesitancy, because I hope that whatever board may be selected will absolutely ignore all partisan or sectional considerations. It is one of the vices of our politics, municipal, State, and National, that official position has not yet assumed a standing such that those who enjoy official positions ignore considerations of political advantage. When I read of many reforms which have been patterned after the manner in which they do things in Berlin, or in London, or somewhere else, I am forced to think how ineffective are many of the arguments and how often those who advance them ignore the great difference in the conditions here and abroad. The partisan spirit runs very high in this country, and it is very difficult for any official, however exalted the position, to entirely throw into the discard the idea that he must be a Democrat, a Republican, a Progressive, or something else, as well as a member of the Federal reserve board or of some other body. In this respect our machinery of government is defective. There is a great difference in our municipal affairs as compared with those of the governments in

Harmony of management directed toward a single purpose is sential to cope with the vast problems and the readjustment of our currency and monetary laws. May we expect that this is possible of accomplishment with 12 boards of directors, partisan to their districts, who may never meet together for exchange of views, and who will be subject to the exercise of arbitrary powers by a Government board? Another thing: It is not alone political, but there is the sectional feature of it. Anyone who has ever had any experience with appropriations for public buildings or for rivers and harbors, anyone who has been through a campaign and heard the arguments made for B, C, or D, that they get an appropriation for a public building or for dredging out a harbor, will recognize how firmly our people hold to the theory that an official, especially a legislator, is the agent of a particular locality. What is the nature of this bill? Why, its very framework invites sectional considerations; it starts out with the proclamation, "We will not have a great central national system, but we will have 8 or 12 regional systems." We put a section or a part of the country above the whole country; we make regulations that in a Federal reserve board a man shall be chosen, I presume, according to competency, but with the proviso that not more than one shall be chosen from any one district.

The very proclamation of the bill is an encouragement tomaintain that regard for sections. Is not this plan contrary to all human experience in the management of Government or private affairs? How may this system develop in this country of keen political partisanship, where each party grasps every advantage within its reach to secure the dominant position, or maintain it when once secured? Can we expect with confidence that a board of control, upon which sit officers of the Government whose appointments are partisan and political, which is subject in many important respects to the direction or influence of the officers of the Government, to be free from political influence and from discrimination, particularly having regard to the political complexion of the different sections of the country?

The first and essential protection against partisanship must be a long enough term of office to remove appointees from the influences of patronage. Those managing district offices must be responsible to a board of this character, free from political or sectional influences, and not responsible to a local constituency or clientele which may be influenced by political or sectional prejudices, rivalries, or competitions.

With one President having the power to appoint a majority of a board of control during one term of office, and with one or more members of the board members of his official family or subject to their direction, it is never impossible that the powers exercised by that board may be used for political or partisan purposes.

With the mention that I have already given it, I pass by the question of the responsibility of the first incumbent who makes these selections. But I trust that the choice will be made with the utmost care and deliberation. When once appointed, it seems to me that no President should have the power in one term of office to change the personnel of this board. Would such a board resist the pressure for rediscounts from a section of the country which had been guilty of overspeculation if another section had resources available? Can it be expected that the distribution of the funds of the Government throughout 12 regional banks can be effected without discord? Such a system as is proposed instantly inter-

jects sectionalism and partisanship. A board of management responsible directly to Congress, appointed for long terms, themselves appointing their local managers, would necessarily be free from such influences, the moneys of the Government would be assembled in one institution, no questions of sectionalism or partisanship could arise as to their distribution, and the credit operations of the institution would more surely be directed along economic lines.

Mr. BORAH. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. BURTON. Certainly. Mr. BORAH. The Senator from Ohio is discussing the probable effect of politics upon this system. It recalls the fact that when the second Bank of the United States was organized we had as President at that time a man who was perhaps as nearly nonpartisan as any man who held the Presidency during its first days; that was Mr. Madison. He was so nearly nonpartisan, at least he was so little aggressive, that he has been criticized by historians as having somewhat duplicitous views upon some subjects. I do not share in that criticism, but that criticism has been made. Yet at the time the second Bank of the United States was organized Mr. Madison had the appointment of 5 directors out of the 25, and the entire 5 he appointed were partisans.

In addition to that, Mr. Dallas, his Secretary of the Treasury, and Mr. Madison took an active part and an effective part in the election of the first president of the second Bank of the United States. It is entirely in accordance with the history of the time to say that the first president of the second bank was a fairly successful politician, but a most egregious failure as a bank president. It was under his presidency, the first presidency, that the bank was debauched, that embezzlement took place, that Baltimore and Philadelphia became the centers of corruption. He himself accepted \$1,800 as a portion of the

profits which were made in a stock deal in the bank.

Mr. President, this only illustrates that it is almost impossible, it does not make any difference who the man is, how high his ideals may be, or the character of statesman he may bebecause in some respects certainly Mr. Madison was as pure a man in private life as ever lived—these things inevitably tend in that direction; you can not, seemingly, prevent it under our

Mr. BURTON. I fully agree, Mr. President, with what the Senator from Idaho [Mr. Borahl] has said. We all deplore such a condition and we devoutly wish it were not so. That is one very strong reason why the modern movements for municipal ownership, and for managing by political agencies undertakings which have been left to private enterprise, call out such stren-

which have been telt to private enterprise, can out such stem-uous opposition in this country—the lower standard of effi-ciency that is furnished by a politically constituted body. Mr. NORRIS. Mr. President, I should like to ask the Sena-tor if it is his belief that it is going to be an impossibility to have the Federal reserve board absolutely disregard partisanship? Does the Senator think that it is going to take any hand in politics? Does he not believe that, even under our system, it is possible for a board to be appointed that shall be absolutely

nonpartisan?

Mr. BURTON. What does the Senator mean by "taking part in politics"?

Mr. NORRIS. Well, I mean to use their offices for the pur-

poses of controlling elections for the defeat of candidates or of parties. Does not the Senator think that, for instance, the Interstate Commerce Commission, although composed of men who belong to different political parties, have in their official capacity been absolutely nonpartisan and never have been influenced by partisan considerations?

Mr. BURTON. Oh, perhaps so. The probability is that this commission is one notable exception, but it should be borne in mind that the duties of the Interstate Commerce Commission in the exercise of discretion do not compare with those vested

in the Federal reserve board.

Mr. NORRIS. I will admit that, perhaps— Mr. BURTON. For instance, the Interstate Commerce Commission when a question arises will refer it to inspectors; they conduct investigations covering a long period; they hold hearings; the country becomes familiar with the facts; while in the case of the reserve board questions must be decided immediately and the questions which are proposed for them to decide are of such a nature that the possibility of abuse is admittedly

Mr. NORRIS. It is undoubtedly true that they have entirely different questions to decide, but the questions they will be called upon to decide are not more closely associated or connected with partisan politics than are the questions the Inter-

state Commerce Commission is called upon to decide. common knowledge that the railroads have controlled political parties and conventions, nominations and elections, and have

Mr. BURTON. That may be true out in Nebraska, but I never knew it to be true in Ohio.

Mr. NORRIS. Then your railroads in Ohio are operated by superior men or your citizenship is superior.

Mr. BURTON. I think it is largely because the electorate

would not allow it.

Mr. NORRIS. That may be; but, as a matter of fact, I think the Senator must have the knowledge that is more or less common, that railroads have in the past not only controlled elections and parties, but appointments that have been made. I do not understand why a board can not be devised and provided for by law that will control banking and currency in a nonpartisan way if we can get one that will control the rail-

nonpartisan way it we can get one that whit control the ranroads in a nonpartisan way.

Mr. BRANDEGEE. Mr. President—

The VICE PRESIDENT. Does the Senator from Ohio yield
to the Senator from Connecticut?

Mr. BURTON. Certainly.

Mr. BRANDEGEE. I desire to suggest to the Senator from

Nebraska that we have one Interstate Commerce Commission regulating railroads in the country, and not 12 regional Interstate Commerce Commissions, one in each section of the country.

Mr. NORRIS. I am not in favor of the 12 regional banks,

I will say to the Senator; but we were not talking about banks; we were talking about the Federal reserve board. The question was not as to whether we should have 12 or 8 or 4 reserve banks or 1 reserve bank, but whether the Federal reserve board could, under our system of Government and under the conditions prevailing, be absolutely nonpartisan.

Mr. BRANDEGEE. But the Senator from Ohio was discussing the whole structure of the bill providing for a Federal reserve board and regional banks, and was preferring a central bank, as I understood, instead of a lot of regional banks.

Mr. BORAH. Mr. President—
The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. BURTON. I yield to the Senator from Idaho.
Mr. BORAH. Whether or not we shall be able in the future to construct a board having to do with the finances of the country which shall be nonpartisan, all our experiences of the past have shown that we have been unable to place the finances of the country in touch in the most remote way with politics without having them enter into politics in its entirety. Take the first bank which was organized during the Revolutionary War; it drifted in the short space of four years into politics. The second Bank of the United States was destroyed because it was made a political issue.

Mr. Calhoun said that it was not because the bank itself entered into politics, but because it refused to enter into politics upon the strong side, that it was destroyed. That may be true or may not be true, but it was not permitted to be indifferent; it was not permitted to stand aside without either one side or the other seeking to exercise its influence upon the bank or seeking the influence of the institution for their purposes; and those banks were as nearly protected from partisan interference, I presume, as any bank could be which was not completely and absolutely under control of the Government and in which all

private interests, so far as control is concerned, are eliminated.

Mr. NORRIS. Mr. President, will the Senator from Ohio

Mr. NORRIS. Mr. President, will the Senator from Onio kindly yield further?

Mr. BURTON. Certainly.

Mr. NORRIS. In the first place, I think, in order to get a board that will be nonpartisan or a system that will be taken out of politics, we must have one controlled by the Government. If we can not devise a system that is going to be outside of politics and that will not become the football of politics, we ought to make no attempt to devise any system. I can conceive of nothing that would be more injurious to the welfare of business, banking, and the prosperity of the country in general than to have a banking system that would be under the control of parti-san influences or politics. I do not claim to be informed as to all the details of the Government banks we have had, but one of the objections to them, as I have always understood—and it was a serious and valid objection—was that they got into politics. It has seemed to me that it is possible for us to constitute a board that shall be out of the domain of partisan politics. Even though our forefathers failed, we ought to do the best we can to secure that end, and if we decide we can not do it, we ought to make no change, because certainly if we put the system into politics in the end it will come home to plague us. I think to a great extent both the bills which have been brought

in have very materially improved the House bill in that direction; but it seems to me it could be improved further. The suggestion made by the Senator from Ohio along that line seems to me to be correct, and that is that no President outside of the first one, of course, who must appoint all of them, ought to be allowed in the regular course of business to appoint during one term of office a majority of this board.

Mr. BURTON. As I recall, according to the House bill, the tenure of the members is longer than under the Owen amend-

ment, is it not?

The House bill makes-

Mr. BURTON. The Owen amendment makes the term six years, does it not?

Mr. SHAFROTH. Six years.

Mr. NORRIS. The House bill makes it a partisan, political thing all the way through, because it provides that three members of the Cabinet shall be members of the board. bills presented to the Senate take out two members of the Cabinet and leave in only the Secretary of the Treasury, but under the Owen bill the members of the board are appointed for a term of six years. So that, taking into consideration the fact that the Secretary of the Treasury is to be a member, every President would be able during his term of office to appoint a majority of the board.

Mr. SHAFROTH. Toward the close of his term.

Mr. NORRIS. Yes; and I will admit that that has removed, in my judgment, much of the objection. I think it has improved it very greatly. It will not be so bad if the President can only make the change toward the close of his term as if he could make it at the beginning. I concede that. It seems to me the bill would be improved wonderfully if the committee had doubled the term of the members of the board, for then they would have put it as clearly beyond partisanship as the Interstate Commerce Commission is now.

Mr. STERLING. Mr. President-

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from South Dakota?

Mr. BURTON. Yes.

Mr. STERLING. As somewhat related to the point now under discussion, I should like to invite the attention of the Senator from Ohio to the provisions of the bill in regard to the discretion lodged in the Federal reserve board as to forfeiting the charter of any national bank. The provisions to which I refer are found on page 6 of the Owen bill.

Mr. BURTON. Mr. President, I intended to make this argu-

ment applicable to one phase of this legislation, namely, as the title of my remarks is "Regional banks against a central institution." At a later time I desire to take up the matter be

suggests.

Mr. STERLING. Very well.
Mr. BURTON. The broad distinction which is given them in regard to the removal of any director or officer. I would pre-fer, however, not to take up that question now. Not alone is the question of political rivalry involved, but sectionalism as which is perhaps the more dangerous of the two. The very introduction of the idea of local ownership and management of regional banks implies sectional rivalry. The introduction of a board of control to regulate the relations between locally owned and managed regional banks admits the weak-ness of the regional plan and throws doubt upon its effective

(4) UNIFORM NOTE ISSUES.

Here again the weakness of the regional-bank system appears upon the face of the bill. A credit instrument to circulate freely among the people must be free from doubt as to its goodness and as to the ability of the obligor to redeem it in gold. Two regional institutions may not necessarily be of equal credit strength. Twelve institutions will certainly vary considerably in their strength and resources. Our national-bank notes have a uniform value by reason of the Government bond security. Notes secured by paper will vary in quality according to the quality of the security and the percentage of gold reserve.

In order that this vulnerable regional-bank scheme may be launched and the impediment of variable credit be removed, the United States Government, for a consideration, is adding its obligation to the notes. This aspect of the Owen bill requires separate discussion. The practical features of the plan as to regional banks may, however, be distinguished from the possibilities under a central-bank plan in a number of important re-The relation between volume of discounts and volume of note issues can not be controlled by a tax upon the notes, which tax is paid out of the earnings of the bank, when those earnings go to the Government or even when they are applied to the earnings of the member banks.

That is, any system whereby you pay a uniform dividend, and which you tax notes and tax them in case their reserves fall below the requirement, is ineffective. It is robbing Peter to pay Paul. It is taking the money away from the bank for a time and giving it to the Government, but the bank receives its dividends nevertheless.

Inasmuch as the volume of the issue of notes by a central bank or regional banks will depend upon the operation of the discount account, it becomes imperative that the board of control shall exercise such a measure of control of the discount rate as will enable it to check undue note expansion in any section. How may that be effected without again exercising arbitrary powers which are an unwarranted interference with economic laws of supply and demand? A graduated rate of discount will begin to apply a check in each locality as the tendency develops. If that becomes ineffective, the normal or base rate—that is, the advertised bank rate—can then be raised, the effect of which will be to direct the interchange of credit between the sections of the country without necessarily affecting the volume of discounts of a central bank. Such a process, which is comparable to that which occurs in Germany, would hardly be possible under the regional bank plan. There are, in fact, possibilities of note inflation in sections of the country where unusual demands for currency arise, which under the proposed plan would annually require to be met by the exercise of objectionable arbitrary

Mr. President, I do not believe in a note-issuing system; certainly not one where the Government is responsible, and where each one of eight banks can issue its money. To my mind, the question of currency is national in scope. If the right is given at all, it should be given to one great central agency which has a large outlook, a sense of responsibility, and, to come to a practical question, capital sufficient to make certain compliance

with its regulations.

(5) THE GOLD MOVEMENT.

Currency legislation is being undertaken in this country at a time when, for economic reasons, the world has witnessed an competition for gold. The German bank has added \$100,000,000 to its holdings the last year, about \$25,000,000 of which has been accumulated by the issuance of notes of smaller denominations than were formerly used.

This has application to the size of the Federal reserve notes. Of course, if you issue smaller ones, they will occupy a certain

place in the circulation that is not now filled.

Mr. SHAFROTH. And relieve the strain on gold to that extent.

Mr. BURTON. I question whether it will do that when you have so many now outstanding. I think the condition would be very different. The main point would be that these small Federal reserve notes would displace small notes now in circulation. The fact of the matter is that, save in certain portions of the country, such as California, we do not have any gold circulation worth mentioning. It is very different from conditions in Europe. The majority of our people dislike the silver dollar. They prefer the silver certificate. In Europe, on the contrary, there is a large circulation of small gold pieces and of silver pieces having a value of \$1 or thereabouts, such as the 5-franc pieces.

If you inject into our system an additional amount of paper money in small denominations, it seems to me it will make it more difficult to carry without embarrassment the silver certificates, which of course represent the silver dollar, and the green-

backs which we now have.

Mr. SHAFROTH. But do not the small denominations of paper money make it almost impossible for any large amount

of redemptions in gold to be made?

Mr. BURTON. They do if you do not have too many of

Mr. SHAFROTH. Banks attempting to accumulate money

Mr. SHARROTH. Banks attempting to accumulate money to present to the Treasury for redemption in gold would not think of trying to get \$1 or \$2 or even \$5 notes for that purpose.

Mr. BURTON. That, however, is due to another cause—the inconvenience of handling. There is a certain amount of circulation of small bills that this country will carry. I suppose the quantity of such circulation required is increasing, though I somewhat doubt that, because persons who formerly did not maintain bank accounts now do so, and pay their bills by means of checks. Nevertheless, concede that there is an increasing demand for more one and two dollar bills and five-dollar bills, you have enough of the silver certificates and greenbacks for that small change at the present time; and when you put in ones and twos and fives in the form of these Federal reserve notes I fear it will cause difficulty.

Mr. SHAFROTH. The Senator understands it is not com-

Mr. BURTON. I know that; but it is better to reform it

altogether—better to leave it out.
Mr. WEEKS. Mr. President, I do not intend to make the point of no quorum, but I can not refrain from congratulating the Senator from Ohio, who is making one of the ablest speeches of this generation on this subject, upon the attention which is being given to his arguments, and the possibility they have of affecting the opinions of those who are supposed to entertain different views from his.

Mr. BURTON. Mr. President, I suppose some of my views are somewhat academic. I can not blame anybody for going out while so long an address is being made.

Mr. SHAFROTH. I will state that the Senator's speech is very interesting to me.

Mr. BURTON. The Senator from Colorado is very kind.

Mr. ROBINSON. I concur in that.

Mr. BURTON. It is very kind of the Senator from Massa-chusetts and others to say that. I now resume the line of argu-

ment I was pursuing.

The French bank has expanded its note issues and limited the amount of its gold payments in order to conserve its gold holdings. The burden of readjustment of the gold supply has largely fallen upon England, where a free gold market is maintained, and our gold supply in this country has only been protected to the degree that it has during the past two years by the prevalence of unusually high rates of interest. The market for gold in this country is absolutely uncontrolled save by economic law. May not the proposed legislation have such an influence upon store of gold as to weaken our position rather than strengthen it, and possibly cause large exportations?

I wish to again touch on that subject in a minute, because I do not know that I made myself altogether clear in regard to

the gold situation in the remarks I made before noon.

One effect of the demands of enterprise, the constant establishment of new concerns, and the very considerable profits that can be derived from business ventures in the United States, has been a predominantly high rate of interest. That has been a factor tending to keep our gold supply at home, because the demand for investment here has been so considerable. Of course in another respect it may seem to work the other way; but, measurably, the high rates charged by our banks have had somewhat the same effect that the control of discount rates has had in Berlin and Paris and London.

Mr. BORAH. Mr. President-

The VICE PRESIDENT. Does the Senator from Ohio yield to the Senator from Idaho?

Mr. BURTON. I do. Mr. BORAH. I should like to ask the Senator from Ohio. presuming that he is as familiar with that feature of the subject as he is with all other features of the currency question, how the Reichsbank of Germany went about to build up its gold reserves after the depletion which took place in 1906 and 1907. They have now built up their gold reserve to a remarkable degree; and I should like to know how, in the judgment of the Senator, they most effectively accomplished that result. They made their notes legal tender after a most thorough and searching inquiry and one of the reasons for doing so was to more adequately protect their gold reserve. Never has their gold reserve been more thoroughly built up.

Mr. BURTON. I do not know that I can answer the question of the Senator from Idaho with the thoroughness of information which I ought to possess. Of course, by a charge of commissions on gold they check imports in a measure. They have brought in about \$25,000,000 of gold coin by issuing paper money—50 and 20 mark notes—smaller than those before issued; and then, in addition, they have resorted to raising rates of discount. I do not know but what they have adopted some other means with which at this moment I am not familiar.

Mr. BORAH. I had hoped the Senator would refer to another

feature of the matter.

Mr. BURTON. Does the Senator refer to the war chest at

Spandau?

Mr. BORAH. The fact is that the managers of the Bank of Germany, the Reichsbank, proceeded to make their bank notes legal tender for the purpose of building up their gold reserve. They stated that that was one of the objects of making the notes legal tender. I should like to know what the Senator thinks as to the effect upon their gold reserve of making those notes legal tender.

Mr. BURTON. I do not think it has any very great effect on the gold reserve. Making them legal tender tides over a condition of stress. But suppose we were to make legal tender |

our notes that are not now legal tender-the national-bank What effect would it have? So far as it had any, it would tend to drive gold out of the country rather than to

bring it in.

Mr. BORAH. Mr. President, that was the precise argument that was made against making legal tender the bank notes of Germany. The insistent argument was that it would have a tendency to lower the financial standing of Germany among the other nations of the earth and would deplete her gold reserve. The president of the Reichsbank said, however, that in his judgment that would not prove to be true, and as a banker and a financier he insisted upon making the notes of the Reichsbank legal tender.

Whether that was what did it or not, as a matter of fact, after the notes were made legal tender, the thing happened which the president of the bank said would happen-the build-

ing up of their gold reserve.

Mr. BURTON. I still think those who argued against it were right and that it was a case of post hoc ergo propter hoc. I do not see how else it can happen. Suppose you have a demand for a certain amount of currency in legal tender, of which a part is geld. Gold has a certain function to perform; and then you give to paper money the quality of legal tender. How under the sun can it happen otherwise than that a part of the gold, under the normal effect of that alone, will go out of the country?

Let me illustrate a little more clearly. Suppose you require a circulation of \$500,000,000 of legal tender and you have \$500,-000,000 of gold, and some day, by act of the legislature or imperial flat, you should say, "We will give to \$100,000,000 of paper the quality of legal tender." You have the same demand to comply with as before, your \$500,000,000. What can be the logical result except that it drives out \$100,000,000 of gold, and

you have only \$400,000,000?

Mr. BORAH. Permit me to put the matter the other way, which is more in accordance with the exact facts. Suppose a country needed \$500,000,000 with which to do the business of the community or the country, and they had only \$300,000,000 of gold and they was charled the country. of gold, and that you should make the representative of goldto wit, the paper which was redeemable in gold-legal tender. There never would be any occasion then for a man who had the paper money, which was legal tender, and performed all the functions of its principal, to go after the gold, so long as there was not, taking the paper and the gold together, an excess of the amount needed to do the business of the country.

Mr. BURTON. That would depend entirely upon another factor-the condition of the exchanges, due to a favorable balance of trade, loans from abroad, or some such cause. It is probable that at the time that \$200,000,000 of paper was made legal tender there was an urgent demand for gold, and the gold was brought in under influences other than making the paper

legal tender.

In this connection I wish to say that you can not compare their position with ours, anyway. We have too much of these motley forms of money already. I have given the figures. We motley forms of money already. I have given the figures. We have \$730,000,000 of national-bank notes, \$560,000,000 of silver dollars, which are half flat money, \$346,000,000 of greenbacks, which are all flat money, with a reserve of \$150,000 000. The greenbacks are legal tender, and the silver is legal tender, all that enormous mass of money-the national-bank notes not being legal tender.

Mr. BORAH. There is not a dollar of the money that is to be issued under this bill that is not flat money. It is all flat money. Ten years ago, when many people were advocating the free coinage of silver, if we had talked about issuing money upon the assets of a bank we would have been regarded as a step further toward lunacy than we were then. This is all flat money. The financial pharisee who has heretofore been denouncing others as believing in flat money will scarcely have the temerity to linger on the subject.

Mr. BURTON. I hope you did advocate it then, because you were no doubt foretelling what was sure to be accepted by the

people as the best policy.

Mr. BORAH. Exactly. We have now reached the point where, instead of taking the silver out of the mine and putting it into circulation, we are simply saying: "You may issue all the money you want to, so long as you can find sufficient amount of indebtedness upon which to issue it."

Mr. BURTON. It is not money in the sense in which the Senator is using the term right now. It is a promissory note. It is a credit instrument. If a bank issues a paper note for \$10, it is not, in its essence, any different from the transaction which would occur if I gave to the Senator from Idaho my promissory note.

Mr. BORAH. Exactly; but here is the Government of the United States issuing its own note, its own obligation, promising to redeem it in gold, and yet the Government refuses to endow it with all the functions of money. It performs all the duties and all the functions of money. Theoretically it is currency; in practice and actual use it is money.

Mr. BURTON. That is, it does as a matter of convenience. Mr. BORAH. And it does not stop in any of the functions of

money until it gets to the debt-paying power. Whenever you arrive at that point, however, you take away its legal-tender quality, and stop the function of money.

I do not look upon this as the paper money about which we have had the difficulty in this country, irredeemable paper money, paper money based upon general credit, with no gold set aside to redeem it and no provision for redeeming it, and so forth—the old flat money in its original acceptance; but here the Government issues this money itself. It agrees to redeem it. It provides for its redemption in gold, and yet it refuses to give to that money all the functions and all the virtues and all the

faculties of money.

Mr. BURTON. Simply for the vital reason that it is not money. It is a credit instrument that can be redeemed in money.

Mr. BORAH. Then, if it is not money, we are placed in the position of loaning the credit of the United States to private corporations to build up their individual credits.

Mr. BURTON. I shall have no difference of opinion with the Senator from Idaho in that regard; and I think it is a most unwarranted lending of its credit to these institutions.

Mr. BORAH. If we had a Government-controlled and Government-owned bank, such as the Senator advocates, the Senator would be in favor, would he not, of that bank being the sole

Mr. BURTON. I would, because it has these Liquid assets.
Mr. BURTON. I would be in favor of its issuing notes and the Government leaving it alone. I would be in favor of its issuing notes, but under very careful provision as to specie reserve and security in the way of commercial paper or other assets which can be very readily realized upon.

Mr. BORAH. I recognize the necessity of a bank in order to measure the demand for currency at a particular time, and so forth; but after all, if the Senator's plan should be adopted, the Government would be in fact itself, through this bank which it owns and controls, issuing the currency.

Mr. BURTON. No; except that it would have created an

institution which it endowed with that faculty.

Mr. BORAH. Truly so; but it is a Government institution just the same as one of the departments here is a Government institution.

Mr. BURTON. Not in the same close connection. The departments here expend money which comes from appropriations by Congress. The revenue collectors gather the money of the people in pursuance of law for the collection of taxes.

Mr. BORAH. Oh, yes. Mr. BURTON. I hope there may be further discussion on this subject at a later time. I certainly wish to express now my entire inability to subscribe to the provisions of this bill with regard to a Government guaranty of these notes. I do not think the Government ought to go into that business. It may not be very threatening or dangerous, but it is wrong in principle.

As I have said, the market for gold in this country is absolutely uncontrolled, save by economic law. May not the proposed legislation have such an influence upon our store of gold as to weaken our position rather than strengthen it, and pos-

sibly to cause large exportations?

This is such an important matter that it must not blindly lead us into a false position. There can be no doubt but that 8 or 12 regional banks can not act as effectively to control our gold supply as a central bank. It would not seem to be a question for argument, it is so apparent. This being true, the next considera-tion is whether a system of regional banks would better our pres-ent position or weaken it. There are many reasons to believe that it might weaken it materially. Any change in the law which makes it necessary for our banking system as a whole to maintain reserves in gold of any smaller percentage than that which now applies to the whole system will necessarily result in lower interest rates, expansion, higher rates of exchange, and gold exports.

I may note in this connection that the price of labor is usually the last to rise, so that, other prices having already gone up, labor does not get benefit of the increase.

It has been variously estimated that foreign investments in our securities amount to from four to six billions of dol-The enforced repurchase of these securities would impose a strain upon our credit system of unparalleled importance. We have just enacted a law reducing the tariff upon imports by nearly 40 per cent. A sharp decline in our balance of trade, brought about by a great enlargement of our imports, would likewise require the export of gold. A considerable reduction in the activity of business throughout the country may release credits and reduce rates to such an extent that the rate of interest will no longer afford protection to our gold reserves.

It is important that the institution or institutions to be created shall be able to exercise an effective influence upon the international movement of gold and to conduct international operations, either through its own agencies or through the agency of its members and correspondents, which will be substantially equal to that exercised by the great central banks of Europe.

Here is an important point that I do not think has been noted:

By the terms of the Owen bill the 8 or 12 regional banks may each establish agencies in any and all foreign countries, and without uniformity of purpose or action. How are you going to get anywhere with 8 or 12 separate regional banks establishing agencies abroad? Suppose we had an increase of trade at Buenos Aires or in South Africa. Suppose our merchants were not able to handle that trade without good banking fa-cilities. What chance is there under this bill, with at least 8 different institutions, to do anything that is effective? only way to accomplish salutary results would be to have 1 central organization to look out for our interests, 1 central bank, instead of 8 or 12, none of which would be sufficient.

Mr. NEWLANDS. Mr. President—

The VICE PRESIDENT. Does the Senator from Ohio yield to the Seniator from Nevada?

Mr. BURTON. Certainly.

Mr. NEWLANDS. May I ask whether the Senator regards it as essential that a central bank should have the power of establishing branches in foreign countries? Does he not think that all the work of international exchange could be fully covered by the old banking organizations of the country; and should not the functions of such a central bank be confined simply to mobilizing the reserves with a view to preventing a local panic or stringency, and also regulating the international

movement of gold so far as this country is concerned?

Mr. BURTON. I think it might be of value to a bank organized in this country to have branches in outside countries. If the central bank does not take care of the foreign exchanges, what agency will do it? Another bank, a private bank, is likely to manage the purchase of bills of exchange solely for profit. The whole idea of these bills is to establish a bank, the profits of which are limited, the functions of which are limited, one that is not expected to pay large dividends, but which is to exist for a public purpose.

Now, international exchanges have assumed such importance in the United States that it is a public purpose, and it seems to me it would be better to have it controlled by branches of a central bank than by others.

Mr. BACON. Will the Senator permit me to ask him a

question?

Mr. BURTON. Certainly. Mr. BACON. The great interest which the Senator speaks of is now taken care of by the great banking houses of New York, generally speaking, in this matter of exchange. asking for information and I want to get the Senator's view. In what way would the new system derange that or prevent it from continuing to take care of it?

Mr. BURTON. The Senator refers to the present houses in

New York?

Mr. BACON. Yes. Mr. BURTON. By this bill you seek to bring your banking under national control. The foreign exchanges are of vital importance and a very essential part of the system, and you must bring them under governmental control. You have varied from the old system in your domestic arrangements. You can not omit varying from the old system in your foreign arrangements as well. The two are closely associated.

Mr. BACON. The Senator may be correct, but I want to get his reasons for his statement. I want to know in what way the new system, when inaugurated, will interfere with the present banking houses

Mr. BURTON. They will go ahead, of course, conducting their business.

Mr. BACON. What will interfere with their taking care of it in the future as they have done in the past? I do not ask the Senator simply for his opinion, because he has already expressed that, but I want him to tell us how it will interfere with

the present banking houses continuing to take care of foreign

exchanges as they are now doing.

Mr. BURTON. Undoubtedly the private institutions will go on issuing letters of credit, buying foreign bills, and having to do with international exchanges; but we have left that matter in the past, as regards our gold supply, which is of the most vital importance, very largely to chance. A fortunate concurrence of circumstances has usually prevented injury to us, though on two occasion—in 1893-94 and in 1907—there was very serious trouble. The foreign-exchange banks do business for their own profit and in accordance with their own requirements exactly as regional banks would be obliged to, but a central bank could purchase foreign exchange from member banks when advisable to do so and build up a balance that could be used to import gold when necessary. In any system which con-templates a Federal board with national control we should take over that foreign business as well as the domestic business, in so far as it is necessary in order to protect our reserves. Otherwise our system would be incomplete.

Mr. BACON. If the Senator will pardon me, he has evidently made a very careful study of this question and I should like to know, for my information, in what way the machinery now to be organized and set in motion would prevent the system which is now in operation from being continued by the banks in New

York.

Mr. BURTON. Undoubtedly, as I have already stated, that would keep on; but there is a provision in every bill that is proposed here for the acquisition of foreign bills of exchange. That provision existed in the plan of the National Monetary Commission.

Mr. BACON. The Senator does not think, then, that this system if inaugurated will interfere with the banks of New York and other banking institutions of the country-of course there are others in neighboring large cities-in continuing effectually to take care of foreign exchanges in the future as they have done in the past; and if the Senator does not think so, I should like to have him point out in what way the present sys-

tem will prevent it.

Mr. BURTON. I have looked at it from rather a different standpoint than that suggested by the Senator from Georgia. I do not think that we have been taking care of it in the most

salutary way under the present system.

Mr. BACON. I did not suggest that it had been perfect, but I simply wished to know in what way it will be interfered with.

Mr. BURTON. These houses of course would still take a

very large part of the foreign transactions, and properly so, but that would not interfere with the protection that a central bank would afford working in conjunction with them.

Mr. WEEKS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ohio yield to the Senator from Massachusetts?

Mr. BURTON. Yes, sir. Mr. WEEKS. I should like to add to what the Senator from Ohio has said on that matter by suggesting to the Senator from Georgia that under our present system neither national nor State banks have foreign branches. The national banks can not have branches anywhere, and it is only by the banking houses in New York which in two or three instances have foreign branches, and in some instances have houses abroad that are very closely connected with them, that this foreign-exchange business is carried on. Their only means of controlling the gold supply and exchange is through finance bills or other bills drawn against products which we have sent abroad.

It is proposed in this new system that not only may national banks have branches abroad, under certain conditions, but also the reserve banks may establish branches abroad, and the investments of the reserve banks are so regulated that they will hold large quantities of paper or other securities which will be available to sell abroad. It will have a fixed and stable market, and in that way enable us in some degree at least, and I think

in a very large degree, to control our gold market.

For instance, if money were cheap in this country it would be a proper policy for the reserve banks of the United States to buy large quantities of prime foreign bills; that is, shortpaper, paper which has a market in every European capital. Having those bills on hand, if conditions changed here so that we needed either to prevent our gold supply going out or to bring in gold from abroad, all we would have to do would be to sell those bills abroad. It would have the effect which we desire in either instance.

Furthermore, the Hitchcock plan provides that we shall refund fifty million of 2 per cent bonds in 3 per cent one-year notes, which would be available for the same purpose. So the reserve banks will have at least two classes of securities which are not held by banking houses now engaged in the foreign !

trade and which would at least supplement the foreign business which those banking houses are now doing.

As a matter of fact, the national banks with a few exceptions are not engaged in foreign-exchange business. There may be 15 or 20 all told in the United States which do any considerable amount of foreign-exchange business. The larger part of it is conducted by private banking houses. Now, I want to refer

Mr. BACON. If the Senator will pardon me before he leaves that point, I understand from what he suggests that this proposed system will increase our facilities for taking care of foreign exchange?

Mr. WEEKS. Undoubtedly.

Mr. BACON. And it is a question as to whether the Owen bill will best effect this or what is known as the Hitchcock bill. Of course, there is a difference of opinion on that.

Mr. WEEKS. I will say to the Senator that either one of

them would supplement present conditions.

Mr. BACON. I can understand that, and of course it would be to our advantage, if such is the case, but I wish to ask the Senator the question I asked the Senator from Ohio, whether there is anything in the requirement of this proposed system which would in any wise impair the ability and the opportunity the present banking organizations in taking care of foreign. exchange?

Mr. WEEKS. I think not, except that there will be some competition developed under the provisions which we are making in this bill.

Mr. BACON. In other words, it might make it less profitable

to New York banks than it now is?

Mr. WEEKS. Possibly.

Mr. BACON. The Senator conceives that it will not in any manner be injurious to anyone, but, according to his suggestion, it might be less profitable to the New York banks. speaking of the New York and kindred banks in other cities. While it may lessen their profits, considered as to the interest of the whole country it will in effect increase the ability and facility for taking care of foreign exchange.

Mr. WEEKS. It undoubtedly will.

I will say further to the Senator from Georgia that very frequently in the past we have not had suitable facilities for taking care of foreign exchange, so that when we have been in distance here we have had great difficulty in controlling our

distress here we have had great difficulty in controlling our gold supply. It has been a spasmodic operation. Finance bills after a while do not sell well abroad or anywhere else. Possibly we have products which we have shipped abroad against which we can draw, and those being our only resources, it has been very difficult for us to control the gold supply, either to bring it in or to prevent its going out. We will by this legislation add to our facilities for so doing.

The senior Senator from Idaho [Mr. Boran] referred a little time ago to the fact that some deluded men who had supported free silver years ago had seen the light, and then took up the subfree silver years ago had seen the light, and then took up the subject of the discussion of legal tenders. I hope those deluded people who believe in legal tenders will also see the light before this bill is passed. He did so in asking a question of the Senator from Ohio, which related to the building up of the German gold supply. Germany is a debtor nation like the United States. It is rapidly developing, and for that reason interest rates are higher in Germany than they are in other European countries. That being the case it has been necessary for Germany at times. That being the case, it has been necessary for Germany at times to prevent the gold supply of its own country from going out and to bring in additional supplies to furnish a basis for credit it required in its foreign as well as domestic trade.

The German bank rate, with one or two exceptions, has been higher than the English bank rate for the last 25 years. In several instances it has been higher than the rate commanded by two or three months' paper in New York and in other cities of the United States. In every instance it has been higher than the French bank rate. That has been due entirely, I think, to the relatively greater development of business in Germany than other European countries. They have found it necessary to bring in gold by artificial processes frequently in order to furnish a basis for their circulation and credit which they require. That has compelled them at most times to pay very high rates for money. In the last year at one time to prevent the shipment of gold from Germany they paid as high as 8 or 9 per cent for short-time money in New York. It happened that we had a credit in Germany, on which we could have drawn if necessary to get the gold.

Instead of doing that, the New York banks loaned the money to the German banks at rates ranging from 8 to 9 per cent. That held the gold there, and as soon as the balance of trade was in favor of Germany, instead of lowering their rate sufficiently to enable the shipment of gold from Germany to the

United States, they maintained a higher rate, which brought gold into their country, not only from the United States, but

from other European countries.

Mr. BURTON. Mr. President, I was speaking of the authority under the Owen bill to establish agencies of regional banks in foreign countries. By its terms the 8 or 12 regional banks may each establish agencies in any and all foreign countries and without uniformity of purpose or action. consolidation of their foreign credit operations it is difficult to conceive how the influence required to be exercised could possibly be brought about, and in the case of regional banks of varying financial strength, having different demands from member banks, any method that would result in their consolidation seems beyond comprehension. Those who created the Owen bill evidently recognized this fact, for they have not made the slightest attempt to bring together the foreign operations of the regional banks, but have left them to take care of themselves, so to speak, apparently hoping that by some mysterious means a way might be found out of the difficulty. Is it not better to face this problem before it is too late? Can this country afford to do otherwise? It is not only perfectly clear theoretically that a central bank would serve to protect our gold supply, but actual practice has proved beyond question that it would do so. As I have already stated, it may be that the bank of the region where most of our foreign operations are conducted will be able to exercise a predominating influence in that class of business, but should this be true it would always be handicapped by the operations of the other regional banks, which would often be working against it. May it not also develop that its ability to defer exports of gold will be impaired by demands made upon it by the other 11 institutions which it does not control, or, on the other hand, that in the import of gold under conditions re-cuiring its purchase abroad, the cost of the operation may all be borne by the only institution which is able to effect such purchases?

If that is not the case, the cost of such operations must once more be arbitrarily enforced by the exercise of mandatory powers which are contrary to economic law and which will give rise to distrust and criticism. Are we to create a system where any 1 of 12 reservoirs of gold is free to conduct international exchange operations without cooperation or unity of purpose? If so, let us abandon the idea that this necessary object of monetary legislation is accomplished under the provisions of the Owen bill. One institution, with a branch in one or more or in each of the leading countries of Europe, as necessity develops, conducting its dealings on uniform principles and with a single purpose, carrying its accounts with foreign banks under one control, is necessary for the protection of our country's store of gold. It can not be denied by argument based on theory or practice, and if the Owen bill is passed there is every reason to believe that instead of strengthening our position in the foreign financial markets it will weaken it to the point of The failure or mere rumor of insolvency of any regional bank would blast our credit throughout Europe almost beyond recovery and might result in calling forth exports of gold the like of which we have never known. Credit is the greatest asset of nations, just as it is of individuals. If its credit is good, a country may rise up from the depths of destruction by earthquake or conflagration to greater heights than ever before, but if its credit is lost, neither magnificent cities nor vast resources can prevent suffering and degradation to its

(6) THE CREDIT OF THE GOVERNMENT.

The issue of paper money, bearing the obligation of the Government, must be examined in its historical and economic aspects and, further, with regard to the protection of the credit of the Government itself. Discussing only the latter features of this subject, what are the possibilities under the Owen-Glass bill of difficulty or disaster, as contrasted with the accepted plan common to all the great European nations, of a bank-note issue under Government regulation, but without the Government obligation? Should this country become involved in a foreign war, a great economic disturbance, or, what is more possible, should our credit situation be subjected to the disturbing influences of a great conflict between foreign nations, how may the demand obligations of the Government created by the Owen bill affect the credit of our Government?

Mr. President, I have already called attention to the fact that we have a favorable balance of trade of, say, \$700,000,000. In the examination of certain figures, made with some degree of care about 12 years ago, I came to the conclusion that the actual monetary balance in our favor on exports of merchandise was somewhat greater than that shown by the statistics from the customhouses. On the other hand, there is an adverse balance on a variety of claims, interest on our fluences largely corresponding to those which now arise in this

securities held by foreigners, expenses of tourists abroad, passenger fares of our citizens who sail for the most part on foreign ships, the paying of freight and insurance, and all these combined make a balance very nearly equal to the balance of merchandise in our favor. Indeed, a nation can show a very large adverse balance on imports of merchandise, and yet, notwithstanding this, by reason of commissions or from other causes continue to be prosperous. For instance, in 1899, Mr. Giffen, the English statistician, estimated the annual amount received by Great Britain from interest and profits on investments abroad as £90,000,000, or \$450,000,000; from commissions on trade as £18,000,000, which would be \$90,000,000; and from shipping engaged in international trade, over £70,000,000 annually; in all, approximately, £178,000,000, or about \$890,000,000.

It is quite surprising that in 1898 the excess of imports of merchandise in Great Britain over exports was almost exactly this same amount, or £176,530,000. It is perfectly evident that in some way we are sending money abroad to make up for this merchandise balance in our favor or there would be large imports of gold; but suppose there should be a foreign war or for some other reason this great supply of our securities held in European countries-in France, England, Germany, Holland, and in other places-was simply returned to us for liquidation. The immediate result would be a great drain on our gold sup-Those securities are estimated at from \$4,000,000,000 to \$6,000,000,000 and are in amount altogether out of proportion to the balance of trade. Suppose an unexpected share of that great mass of securities and obligations of ours held abroad should come back for redemption. I mention this to show that in our financial laws we should provide for this possible contingency, which is not by any means a mere conjecture, but might happen at any time in case of foreign war or of a domestic conflict.

The bill provides that the notes shall be redeemable in gold on demand at the Treasury Department of the United States or in gold or lawful money at any Federal reserve bank. bill permits the Federal reserve bank to authorize member banks to use Federal reserve notes or notes of the national banks as reserves. Under these conditions any great economic disturbance in this country, or any world-wide disturbance of credit which might react upon this country's credit establishment, involves a danger to the credit of the Government, so long as the Government's obligation is attached to the notes, to the extent, in fact, that a suspension of the reserve requirements of the regional banks as permitted by the bill might involve a suspension of specie payments by the United States Government. A great European war, necessitating huge expenditures, would raise rates of interest in foreign countries that would react in turn upon our banking system, requiring the exercise of every possible measure, first, to retain our store of gold; second, to the extent that it became impaired to enable the regional banks to pay their notes in lawful money; third, to enable the Government to redeem its lawful paper money in Will a system of regional banks, which is the instrument for issuing untold millions of notes which are an obligation of the Government, be able to protect the Government in such an emergency? And is it not the duty of Congress to see that any legislation now enacted shall afford every means which can be devised to that end? A drain upon the gold of the country in such emergency would be due to the necessary repurchase of foreign investments, to the interruption of our foreign commerce and the disturbance of the balance of international trade, to the floating of foreign loans in this market, to the withdrawal of foreign bank credits now extended to this country, and to the imposition upon our own credit establishment of the burden of financing trade which is now largely carried by England. Gold in this emergency would be withdrawn through the presentation of Federal reserve notes at the regional banks so long as they were able to furnish gold in payment. When unable to furnish gold presumably they would

exercise their right to pay in lawful money.

The demand for gold would thereby be transferred to the United States by the presentation of the lawful money. This process might necessitate the suspension of the reserve requirements as regards the regional banks throughout the country. The ability of the Government to pay gold would be limited to \$150,000,000, now held in its trust-fund reserve, and its ability to obtain gold from the regional banks. By what process might the Government redeem all its notes in gold if the regional banks had suspended their reserve requirements and the Government were forced to rely upon its own ability to purchase gold by the use of its own obligations? The markets of Europe would be closed. Our gold supply at home would be subject to incountry in time of panic. We will have possibly 20,000 State institutions, which, influenced by the strain and shock to the credits of the country, due to conditions described and to the suspension of the reserve requirements of the regional banks, will at once endeavor to strengthen their gold reserves, and to do so by presenting Federal reserve notes to the regional banks and demanding gold for them. Should payment be made in lawful money, the demand would be transferred to the Government.

A good deal of discussion has arisen, Mr. President, in regard to payment in gold or in lawful money. Certainly, any proposition that looks toward making it optional to pay at the Treasury, or, if a central bank were established, at the central bank, in other than lawful money should not be considered for a moment. Probably a provision by which payment can be made in lawful money in any of the branches or regional banks will not cause serious difficulty. I am frank to admit a decided preference for redemption in gold anywhere and everywhere; but I do not believe the option to pay in lawful money in places other than the central place of redemption can cause serious alarm or injury.

As contrasted with this condition, if the notes are the obligation of a central bank, the absolute suspension of reserve requirements could be made without involving the credit of the United States for the redemption of the notes, and the last resert of banking practice could be safely employed before suspension of payment in gold would be forced upon the Government. The United States is already obligated, directly or indirectly, for the redemption on demand in gold of a sum of money greater than the entire funded debt of the Government. Why add to the peril? Why offer gratuitously the credit of the United States when it is not required? Why create a note issue with a redemption fund much less than the amount which experience shows to be required in Europe, and then attempt to cure its defects by the indorsement of the Government?

### (7) REFUNDING OPERATIONS.

The refunding of the Government bonds now collateral to national-bank notes can better be conducted through the agency of one institution controlling the handling of all of the bonds than by 12 institutions which may find themselves in competition with each other in dealing with this difficult problem. Market considerations between the different sections of the country, the ability of one bank to carry its share of the burden without loss as compared with a bank in another section, the necessity which one bank may be under of using short-time Government obligations for the purchase of gold, when those bonds are scattered in the hands of 12 institutions, all suggest a condition of discord rather than of cohesion and an ineffective plan rather than a comprehensive one. A really dangerous situation might easily develop with 12 regional banks attempting to refund hundreds of millions of dollars of operations, amounting to many times the capital of all and many more times the capital of each. None of the regional banks are required to consider the size of their capital in any refunding operation authorized under the law; at least, I so understand the phraseology of the bill. Instead it seems to be an immaturely considered proposition, exactly as is true in the case of the foreign operations, with everybody hoping that it may work out all right. It is conceivable that regional banks with a capital of \$3,000,000 might be attempting to refund bonds amounting to \$100,000,000

Under the terms of this bill that would be possible. The proposition might look feasible to the board of directors under some conditions, if the reserves were unusually high and the demands of member banks seemed to run light for a period, and they might feel a sort of pride in showing that they could do more than their share. Circulating notes that would be put out against such bonds as they might purchase from the national banks in order to retire the national-bank circulation would represent an outstanding liability, against which they are apparently obliged to keep no reserve in the bill, and that might result in a presentation for redemption within a very brief time of an amount many times the capital of the bank. Again, it would seem to be useless and unnecessary to call the attention of anyone to the great difference in safety to the country and in ability to handle such refunding operations as would be necessary in order to retire national-bank circulation through a system of regional banks under the terms of the proposed act, or under any imaginable terms that could be drawn up, and a central bank that would be large enough to handle all such operations with safety and without friction.

(8) CLEARING FUNCTIONS AND DOMESTIC EXCHANGE,

I desire, Mr. President, briefly to touch on clearing functions and domestic exchange. Many of the same reasons which make for the real mobilization of reserves in a central bank as against

entire lack of such mobilization in regional banks apply to clearing functions and domestic exchange. Under the Owen bill Federal reserve banks are authorized to remit other Federal reserve banks' checks of certain described classes that they may receive on demand from member banks. The methods under which the handling of these checks are authorized under the proposed law would carry with them a delay the same or worse than that which exists under our present system. Instead of accomplishing the immediate presentation and collection of items, a roundabout collection would continue to be encouraged. The possibilities of abuse are very great.

Let me point out what could be done. A regional bank in Chicago having authorized items deposited with it that were drawn upon banks members of the New Orleans regional district would unquestionably forward them to New York for collection-that is, if New York exchange were at a premium and New Orleans exchange at a discount. The Chicago regional bank would not feel called upon to stand the loss of exchange involved. Even if it charged its customer such exchange, it might, in order to avoid the loss, forward the items to the New York regional bank. The New York bank might very easily have more of a demand for St. Louis exchange than for New Orleans exchange, which would result in such items then going forward to St. What is there to prevent the St. Louis regional bank from then forwarding the items to Chicago, should it require Chicago exchange; and what is there to prevent this circling of items during the whole period that New Orleans exchange might be at a discount? In the case of a central bank there would not be the slightest temptation to handle the items in any such manner, for it would be to the interest of the central bank to have the checks cashed immediately.

The division of interest that would be represented in the regional banks would not exist in a central bank, for as soon as the Chicago bank obtained credit in New York its loss of interest would cease, and as soon as the New York bank obtained credit in St. Louis its loss of interest would cease, and so on, whereas in the case of a central bank its loss of interest would continue until the items were collected, as every one of its branches would be in the same relation to it as itself.

Again, in the handling of the country's business a central bank would be economical and would reduce the shipping of currency back and forth between districts to a negligible minimum, whereas with a regional system, which must of necessity be based upon districts homogeneous as to their line of business, and which as districts have seasonal trade between each other, shipments of currency almost in as large an amount as those at present would probably occur, while the central bank would count money received in Chicago and paid out in New York as reserve, and could consequently reduce its actual cash in hand in the New York branch to the smallest amount that would handle its natural business before currency might have to be shipped. Yet similar transactions between the Chicago regional bank and the New York regional bank might necessitate shipments of currency back and forth, because money deposited in the Chicago regional bank would not count as reserve for the New York regional bank when called upon to pay it out. There is no comparison between the two systems as to economy and facility, and the regional-bank system will unquestionably put upon the people as a whole a tax that, while unseen, will be many times the cost of clearing items and making the domestic exchanges which would be incurred if these transactions were handled through the branches of a central bank.

Mr. President, I have spoken at this great length, perhaps with considerable repetition, with a view to setting forth the advantages of a central institution over regional banks. Whatever may be the prospect of legislation, my convictions are so strong that I can not forego the opportunity to set forth my views with the utmost earnestness.

From every standpoint the regional banks will prove disadvantageous to this country. It is not that with good management a certain benefit may not be received, but they are far inferior to methods which we can readily adopt. This measure is an attempt to secure the advantages of cooperation and centralization. I very much fear that if this plan is adopted we shall be farther away than we are now from those very desirable results.

This system will cause a serious wrench in a banking system which has been built up with great care, the result of a process of evolution in American business, and which, barring two or three defects, is as nearly perfect as any in the world. I emphatically deny that our banking system is defective in its general provisions; and the development of the country denies it. The great growth of the West itself disproves the idea that we have not had a good banking system. The development of all

classes of industry-agricultural, industrial, and others-shows that in our financial operations we have not lagged behind the rest of the world, because we would have to seek a very remote corner of the globe to find a place in comparison with which

we have grown less rapidly.

From 1907 until now I think there has been but little indication of any serious defect in the banking and currency system of the United States. In the year 1908 I had some part in framing the Aldrich-Vreeland bill. Reference has been made to the fact that it never has been resorted to. Why, it never was intended for anything except an emergency measure, and the emergency for which it was intended to provide has not arisen. If we had been in the condition in which many people said we were likely to find ourselves by reason of failure to pass this banking bill promptly, there would have been recourse to the provisions of the Aldrich-Vreeland Act long ago.

wish to say that I trust this bill will be carefully considered. What the country requires now is not the hasty passage of a banking law, but a good banking law, one carefully matured and considered, not one rushed through under whip and spur under 11-hour sessions, not one which is the dictate of a caucus, but one which we have had opportunity to discuss on the floor of the Senate in order to explain its terms and to

decide what is best for the country, and the whole country.

One thing seems to me rather surprising. The bill came in here some time during June last. I have forgotten the exact date. It was declared to have the support of the administration. How little resemblance there is between that bill and the one we have before us now. A very moderate estimate is that 60 per cent of the original measure has been stricken out and only 40 per cent left.

At what point in this evolution did you on the other side, my Democratic friends, reach perfection in this measure? There has been hardly a week when some vital change has not been made. Must we foreclose opportunity for discussion now? Must we hasten to a vote?

Ah, Mr. President, I repeat, not hasty legislation but sane, carefully prepared legislation on finance is what is required for the business of the United States.

I do not take the view held by many that the consideration of these subjects concerns merely sordid interests nor do I regard them as connected merely with our material growth, important as that may be. Our banking system is just as essential, and it is just as important that it should be discussed as that we should discuss human rights.

In the complex civilization of our modern life every great occupation has its beneficial purpose. The bank so utilizes the capital of a country or a community that commerce and industry may grow in volume without check. It makes the hopes of to-day the realities of to-morrow and bridges the chasm between the unpromising beginnings of enterprise and their final fruition. It is by banking that a man who is bereft of resources and poor in the prizes of life is enabled to reach, through credit, the richest rewards of fortune. The banks provide the means by which the thrifty may save their resources and make provision for old age.

Those engaged in the business of banking are but the agents of the people. In no line should a higher standard of care and integrity be required. These men stand for the thrift, the saving, and the care of all American citizens. We should consider this subject, not as one that we can regard superficially and carelessly, but as being associated with the welfare of the American people as closely as any question, with however much of idealism and however much of glamor it may be attended.

Mr. President, in the further progress of this debate I shall desire to be heard on some other points of this bill. very distant time I should like to propound to the Senator from Oklahoma a long series of questions. Some of them relate to the clearness of the provisions of the bill, some to its consistency, some to the legality of its sections, and some to their desirability. But inasmuch as the Senate has listened to me patiently for a very long time, I do not believe I ought to ask for further attention at this time.

Mr. WARREN. Mr. President, will the Senator yield for a question before he finishes his remarks?

Mr. BURTON. Certainly. Mr. WARREN. Early in the Senator's most able address he enumerated the various political divisions and countries that had central banks. He did not name the countries that are not in line, but it seemed as if he had taken in almost all.

Mr. BURTON. There are not very many left which do not

have a central bank.

Mr. WARREN. I wanted to ask the Senator, first, if the proportion is as large as it seems to be-almost universal-and, second, have these banks been universally successful? Have a

large majority been highly successful, so much so that in the study of the question the failures are too few to weigh at all against the successes?

Mr. BURTON. I think so. There has not been a single failure among them. I do not know that I ought to say exactly that. There are several banks in the south of Europe-I refer to the Bank of Spain and the Bank of Portugal and, at times, the Bank of Italy—which have, in a way, been under some embarrassment. I do not think that is true of any of them at this time. That was due in every case, however, to exorbitant demands of the Government upon the bank.

Mr. WARREN. Then we may consider, first, that the coun-

tries generally have made use of a central bank?

Mr. BURTON. Certainly. Mr. WARREN. And that they have been almost universally successful?

Mr. BURTON. Universally successful. There has been no failure among them, so far as I know-not even in Servia or Turkey or any of those countries.

Mr. WARREN. That surely ought to be the best possible

recommendation.

Mr. BURTON. I think the Bank of Italy to which I refer is not the institution which exists there to-day. I believe it was a prior one that was under some pressure from the Government, largely in the matter of note issue, though I am not absolutely certain which one it was.

Mr. OWEN. I call for the regular order.

The VICE PRESIDENT. 'The Chair does not understand the Senator from Oklahoma.

Mr. OWEN. The regular order is the reading of the House bill, I believe.

The VICE PRESIDENT. The regular order is the amendment offered by the Senator from Oklahoma.

Mr. HITCHCOCK. Mr. President, I understand the ruling of the Chair to be that I may now begin to offer amendments to the House bill with a view to perfecting it; that after those amendments have been disposed of the question will come upon the motion of the Senator from Oklahoma to adopt his amendment, which is in effect a substitute for the House bill; that when that is before the Senate it will be in order to offer any amendments to any part of the amendment of the Senator from Oklahoma; and that in offering those amendments the fact that they, or some of them, have been previously offered to the House bill cuts no figure.

I understand that is the ruling of the Chair, to which the

Senator from Oklahoma assents.

The VICE PRESIDENT. That, in substance, will be the ruling of the Chair. It has not been so announced.

Mr. OWEN. I was only acquiescing, of course, in what I understand to be the parliamentary rule. I do not wish to forecast any ruling the Chair may make.

Mr. HITCHCOCK. Oh, no; I understand that. I thought some doubt had arisen yesterday, and I learned that the purport of the discussion was as I have stated.

Mr. BRISTOW. Mr. President, if the Senator from Nebraska will yield, I should like to make an inquiry.

I understand that the Senator from Nebraska expects to offer section 2 of the Hitchcock bill as a substitute for section 2 of the House bill. In case the Senate should adopt the amendment-that is, should incorporate section 2 of the Hitchcock bill and make it section 2 of the House bill-I wish to inquire whether it would then be in order to offer the same amendment to the substitute and have a vote on that amendment as also an amendment to the substitute, it having been adopted by the House as an amendment to the original bill?

The VICE PRESIDENT. The Chair will try to make plain the views of the Chair upon the question, believing that there is absolutely no doubt about what Rule XVIII of the Senate

means.

The rule reads:

If the question in debate contains several propositions, any Senator may have the same divided, except a motion to strike out and insert, which shall not be divided; but the rejection of a motion to strike out and insert one proposition shall not prevent a motion to strike out and insert a different proposition; nor shall it prevent a motion simply to strike out; nor shall the rejection of a motion to strike out prevent a motion to strike out and insert. But pending a motion to strike out and insert. and insert-

That is this question, because the pending amendment of the Senator from Oklahoma is really a motion to strike out all after the enacting clause and insert substantially a new bill-

the part to be stricken out and the part to be inserted shall each be regarded for the purpose of amendment as a question; and motions to amend the part to be stricken out shall have precedence.

The Chair intended upon yesterday to rule that the original bill has precedence, and that amendments may be offered to the

original bill, adopted or rejected; that after all amendments have been offered to the original bill, and have been either adopted or rejected, the question then will come up on the amendment of the Senator from Oklahoma. As it must be passed upon in its entirety, it will be considered for the purposes of the amendment as a question, and the same identical amendments that were offered to the original bill may be offered to the proposed amendment of the Senator from Oklahoma.

The Chair does not, however, rule that the Senator from Nebraska can now present an amendment to the original bill, and if it be voted down or inserted, either way, that he can immediately follow it by an amendment proposed to the sodenominated Owen amendment; but he may do it later on, in Committee of the Whole. In other words, first perfect as the Senate may choose to perfect the original bill; then perfect as

the Senate may choose to perfect the Owen amendment.

Mr. BRISTOW. There is just one point there to which I wish to refer, because the Senator from Iowa [Mr. Cummins] is not in the Chamber at present, being detained on some work that he has in connection with this bill. The Senator from Iowa desires to offer an amendment to section 2 of the Owen substitute in the event that the Hitchcock section 2 is not in-corporated in the bill. If it is incorporated in the original bill, he desires also to offer an amendment to section 2 of the Owen substitute, believing, so I am advised, that the Owen substitute has a majority of the votes in the Senate and is more likely to be the law than the amended House bill.

We can not hear the Senator on this side.

W. Then it is because there is confusion on the Mr. OWEN.

Mr. BRISTOW. other side, for I think I am speaking loud enough to be heard.

I say the Senator from Iowa desires to amend the Owen

substitute. Now, do I understand that he is precluded from offering any amendments to the Owen substitute until all amendments have been offered to the House bill?

The VICE PRESIDENT. He is not precluded from offering

an amendment to it, but precluded from getting a vote on the question until the original House bill is perfected.

Mr. BRANDEGEE. I wanted to ask what the situation is as to what we call the proposed Owen amendment. In other words, has the Senator from Oklahoma offered his amendment now or has he simply had it printed and given notice that at the proper time he will offer it?

The VICE PRESIDENT. It has been offered and read, and it

is pending until something else is offered.

Mr. BRANDEGEE. Then it is at present the only pending amendment to the bill?

The VICE PRESIDENT. It is the only pending amendment. Mr. BRANDEGEE. I have given the matter no consideration, but if it is the only pending amendment I do not clearly see how other amendments shall be acted upon before action is taken upon the pending amendment.

The VICE PRESIDENT. It is in accordance with Rule XVIII, which provides that motions to amend the part to be stricken

which provides that out shall have precedence.

Out shall have precedence. "Motions to amend the part to be stricken out?"

The VICE PRESIDENT. Proposed to be stricken out.

Mr. BRANDEGEE. Inasmuch as the proposed amendment of the Senator from Oklahoma is to strike out the entire bill after the enacting clause, amendments proposing to perfect the origi-

nal House bill would be first in order.

The VICE PRESIDENT. They have precedence, in accordance with this rule.

Mr. BRANDEGEE. If that be so and the Senator from Iowa should offer an amendment to the proposed Owen amendment, he could not have action upon it until after the bill had been perfected and the Owen amendment would come before the Senate to be voted upon as a substitute?

The VICE PRESIDENT. The Chair has ruled that the right of way at the present time is for amendments proposed to the original bill. After they are disposed of amendments may be proposed to the so-called Owen amendment, and when they have been disposed of the vote is to be finally taken upon the Owen amendment, which is not a divisible question.

Mr. BRISTOW. Mr. President, I desire to say in this connection that what I want is to have a number of sections of the Hitchcock bill adopted by the Senate in lieu of the amendments proposed by the Owen bill.

The VICE PRESIDENT. There will be ample opportunity for that. The Chair desires to say that the difficulty will not be in proposing amendments, but in getting them adopted.

Mr. BRISTOW. The Chair probably is right in that.

The VICE PRESIDENT. The Chair so supposes from what he has observed in the Senate.

Mr. BRISTOW. The Chair probably is right as to that. I think it would be more difficult to amend the Owen substitute than the House bill. While the House bill was a great favorite some three months ago, it has lost its friends, and I think it has none now. Believing that, I am not so much interested in the amendments that are proposed to the House bill. The controversy, as I understand it, is between the amendments which the two sections of the committee have recommended to the House bill, and my desire is to have the Senate express its preference upon these two propositions side by side, in a yea-and-nay vote, because they contain the fundamental difference.

Mr. President-

Mr. BRISTOW. I yield to the Senator from Oklahoma.

Mr. OWEN. If the Senator will permit me, he will have the opportunity, under the ruling of the Chair, first to offer section by section the proposed amendments to the House bill. After that has been done he would have the right to offer those same sections as amendments to the proposed substitute offered by the chairman. When each has been finally perfected. the House measure having been perfected first, the measure presented by the chairman having been perfected second, then the final vote would be on the amendment offered as a substitute by the chairman as perfected by the Senate.

That would be the parliamentary order. So the Senator will have two opportunities—first, in amending the House bill;

second, in amending the substitute proposed by the chairman.

Mr. BRISTOW. I appreciate the situation outlined by the chairman and by the Vice President. I am somewhat disappointed in this respect, however, that we will vote upon section 2 as submitted by the Senator from Nebraska [Mr. Hitchcock] as an amendment to the House bill; that we shall have to go through the entire House bill until we have acted on all the amendments which the Senator from Nebraska desires to offer to it and dispose of them, and then we shall have to go back and start in again with section 2 of the Owen substitute and offer the amendments to that substitute down the whole line. What I wanted was to offer the amendments to each section as we went along, so that when we got-

Mr. OWEN. Mr. President-The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Oklahoma?

Mr. BRISTOW. I do.

Mr. OWEN. I suggest that the difficulty can be easily obviated by having the test made in the Senate only once instead of twice by offering the proposed amendments to the substitute offered by the chairman. That would give one test, and it would be sufficient, I take it. But the other plan, provided in Rule XVIII of the Senate, gives two opportunities to present the same matter. The Senator and those who agree with him have therefore their choice, either the offering of these matters twice or offering them once, just as they please.

Mr. HITCHCOCK. Mr. President—
The VICE PRESIDENT. Does the Senator from Kansas yield to the Senator from Nebraska?

Mr. BRISTOW. I do, gladly.

Mr. HITCHCOCK. I rose for the purpose of presenting an amendment, if there is to be no further discussion. I of course yield to the Senator from Kansas, if he desires.

Mr. BRISTOW. I am free to say that I wanted the Senator from Iowa [Mr. Cummins], who is absent at work on certain features of the bill, to have an opportunity to present his views in regard to the parliamentary situation, if he desired to do so. I sent for him as soon as the question came up.

Mr. HITCHCOCK. I think that situation can easily be met, because the Senator from Oklahoma and I have just agreed that a quorum ought at this stage to be present. I therefore, before asking that my amendment be read, suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst Bacon Hollis Hughes Smith, Mich. Owen
Page
Perkins
Pittman
Ransdell
Robinson Smoot Swanson Thompson Thornton Tillman Vardaman Walsh Brady Brandegee Bristow Johnson Jones Kenyon Bryan Burton Kern Lane Lippitt McLean Martin, Va. Martine, N. J. Chilton Clark, Wyo. Crawford Fletcher Saulsbury Shafroth Sheppard Sherman Warren Williams Gallinger Shively Myers Newlands Simmons Smith, Md. Hitchcock

Mr. MARTINE of New Jersey. I was requested to state that the Senator from Tennessee [Mr. Lea] is absent from the Chamber on official business.

The VICE PRESIDENT. Fifty-three Senators have answered to the roll call. There is a quorum present.

Mr. HITCHCOCK. I now offer section 2 as it appears in the

print of the bill, entitled "The Hitchcock amendments," ask that it be read as an amendment proposed to the House bill.

The VICE PRESIDENT. The amendment will be read.
The Secretary. It is proposed to strike out all of section 2, as printed in the House bill, and to insert in lieu the following

The Secretary. It is proposed to strike out all of section 2, as printed in the House bill, and to insert in lieu the following words:

Sec. 2. That the Federal reserve board, hereinafter provided for, shall, as soon as practicable after their appointment and confirmation, designate from among the reserve and central reserve cities now established a number of such cities to be termed Federal reserve cities, and shall divide the continental United States into districts, each district to embrace one of such Federal reserve cities: Provided, That the districts shall be formed with due regard to the convenience and customary course of financial and commercial business in each district, and need not necessarily coincide with State or county boundaries. The districts thus established shall be known as Federal reserve districts, and each of them shall be designated by the name of the Federal reserve city docated therein. The Federal reserve board shall, as soon as practicable after the said districts have been established, proceed to organize, conformable to the provisions of this act, in each Federal reserve cities, conformable to the provisions of this act, in each Federal reserve city designated as aforesaid, a Federal reserve bank, which shall be known by the name of the city in which it is established, as, for example. "Federal Reserve Bank of Chicago." Four Federal reserve cities, and apputenant to them four Federal reserve districts, and on more, shall in the first instance be designated and established as such by the Federal reserve cities, the provided, That after Federal reserve banks have been organized and in operation for a period of two years in said four Federal reserve cities, the provided of the provided and in operation for a period of two years in said four Federal reserve cities, with the requisite Federal reserve districts appurtenant thereto, and for that purpose may after and change the limits and areas of existing Federal reserve board may, in its discretion, from time to time, designate not to power to do business.

The VICE PRESIDENT. The question is on the amendment proposed by the Senator from Nebraska [Mr. HITCHCOCK].

Mr. GRONNA. Mr. President, I suggested a day or two ago that there should be an amendment made to this paragraph with reference to the amount of stock to be held by any person or corporation. I believe that the word "held" is insufficient, and that we should add to it the words "acquired or owned."

Mr. GALLINGER. At what point does the Senator suggest the amendment?

Mr. GRONNA. On page 6, line 7. I suggest that after the word "held" we add "or owned for the purpose of receiving

Mr. HITCHCOCK. Mr. President, I should be glad to accept any carefully prepared amendment that the Senator from North Dakota [Mr. Gronna] might present on the subject. I suggest, however, that he present his proposed amendment in writing and prepare it carefully. The purpose of the provision, of course, is to compel a wide distribution of the stock among the people and to prevent any considerable part of it from being acquired by any person or corporation. There is no danger of the acquisition of this stock in the hands of a few people for the purpose of control, because the stock has no voting power; but I am strongly in favor of providing for its wide distribution, because of its excellent character as a safe and proper investment for people of small means. I should be very glad to accept before a final vote is taken upon this paragraph any

proper amendment that would strengthen that purpose.

Mr. President, in offering this amendment and in offering the other amendments which I shall propose to the House bill, and later to the amended bill as presented by the Senator from Oklahoma [Mr. Owen], I have chiefly these objects in view;

First. To provide for the public ownership of the stock as distinguished from having the stock monopolized by the banking interests.

Second. To provide for the Government control of each reserve bank as distinguished from the plan in the House bill and in the draft of the Senator from Oklahoma, not permitting the banking interests of reserve districts to control the reserve

Third. To guarantee by specific and unequivocal language the equal treatment of every bank which, either through compulsion or by voluntary act, becomes a member of the system.

Fourth. To secure for the benefit of the thousands of banks throughout the South and West, in agricultural regions, permission to obtain the discount of some of their six months' paper, a thing impossible under the House bill and impossible under the bill presented by the Senator from Oklahoma.

Fifth. To provide for the gradual transfer of the reserves to the new reserve banks, instead of having it suddenly transferred as is provided in the House bill, a thing which possibly more than any other has alarmed the banking interests of the country and has tended to produce the constriction of credits which has already resulted.

Sixth. To provide from the surplus profits of these reserve banks, after paying dividends accumulated thereby, a fund for the insurance and payment of depositors in such member banks as may unfortunately fail.

Seventh. To increase the reserves against currency provided for in the House bill and also in the bill of the Senator from Oklahoma, so that they will be safe beyond any question and conform to the experience we have had with greenbacks and to the practice of European central banks as well.

Eighth. To provide for the unquestioned redemption of this currency immediately on presentation in gold or in gold certificates, so as to leave no doubt or possibility that this currency may be redeemed in other currency or in other promises to pay.

Ninth. To provide a safe and efficient method by which the

gold supply can be regulated by the action of the reserve banks. Those are the amendments which I propose to offer, and to which I invite the attention of the Senate, one at a time.

Mr. President, I want to say here and now that I shall do nothing to delay the passage of this bill, beyond securing fair attention to and consideration of its provisions here. I think there is some urgency that the bill be passed. I think, now that the question has been proposed and the banking interests of the country have been seriously disturbed, we ought to pass it as soon as possible, and I shall be here in this Chamber as many hours as other Senators are for that purpose; but I do deplore the disposition to disregard debate, to ignore discussion, and to assume on both sides of the Chamber that the bill has already been considered and passed.

This is a deliberative body, and we as Senators here have responsibilities. This is the most important piece of legislation that has come before the Congress of the United States in 50 years. No one questions that. The Senator from Oklahoma [Mr. Owen] has so declared it, and I indorse the statement. Shall we take legislation of this sort and have a pretense of discussion? Shall men who have studied this question for years be compelled in the Senate of the United States to talk about its vital provisions to empty chairs?

Mr. President, I do not yet believe, I can not believe, that it is the purpose of the responsible leaders of the Democratic Party to consider and vote upon and decide this question in the dark. It is contrary to all the purposes of the Democratic Party; it is contrary to the teachings of the President of the United States, who is the leader of his party. He has proclaimed time and time again that discussion in public was above all things the most important in legislation. Let me read from his very popular book called The New Freedom a few extracts which apply to the present situation with peculiar force, Mr. President. In an excellent chapter entitled "Let there be light," he says:

The concern of patriotic men is to put our Government again on its right basis by substituting the popular will for the rule of guardians, the processes of common counsel for those of private arrangement. In order to do this a first necessity is to open the doors and let in the light on all the affairs which the people have a right to know about.

Are the doors open in a caucus? Does anyone know how men vote in a caucus or what arguments are used in a caucus or the extent to which men are to be bound against their convictions in a caucus? To attempt to decide the vital questions in this bill behind closed doors, in the secrecy of a party caucus, and possibly by one vote to bind the Democratic Senators against their convictions, is in violation of the teachings of this great man now President of the United States. He says further, on page 113:

What are the right methods of politics? Why, the right methods are those of public discussion.

Mr. President, are we here to have public discussion? Shall we submit to the sneers of those on the Republican side who say we are bound hand and foot and gagged also? I think it is the duty of every Democrat to be here during this full discussion and to take an active part in the great questions which are here presented. The President, in his book, proceeds:

The methods of leadership open-

Mr. GALLINGER. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from New Hampshire?

Mr. HITCHCOCK. I do. Mr. GALLINGER. Mr. President, I have on one occasion, and possibly on two occasions, said that I considered the discussion of this bill futile so far as action on the bill was concerned, as I understood it had been agreed upon in a Democratic caucus, and that there will be practically a solid Democratic vote in favor of a certain draft of the bill. Now, I will ask the Senator, who is quoting from the President of the United States, if it is not a historic fact that the President of the United

States approved of a caucus on the tariff bill?

Mr. HITCHCOCK. Mr. President, that is an entirely different question, because for years it has been made a political question; but the President of the United States, through his particular friends and representatives on the floor of the Senate, some time, I think, in the month of September, declared that he did not desire to have the currency bill made a political measure. As I recall, the Senator from Colorado [Mr. Thomas] and other Democratic Senators stood here and spoke for the President in that way; I think that that was in good faith, and I believe the President of the United States, when as author

he made these statements, spoke in good faith.

Mr. GALLINGER. Mr. President, I do not question that, and yet I do not see that the differentiation that the Senator makes as between the tariff bill and the currency bill absolves the President from a change of mind. After he wrote that, he undoubtedly, as I understand, did approve of a Democratic caucus on the tariff bill. I do not know whether all the statements which have been made, coming from various sources, that the President has approved of the caucus on the currency bill, are true or not, but in view of what happened on the tariff bill, I have thought I was justified in concluding that the President

approved of a caucus on the currency bill.

Mr. HITCHCOCK. Well, Mr. President, I doubt it. I shall not believe until I hear the votes cast that Senators on this side, who have assured me they never would be bound by a caucus on a bill of this sort that was not political-I shall never believe that they will be bound, and I shall not believe that my Democratic associates here, who personally to me and to others have declared their convictions on certain features of this bill, are going to stultify themselves and come in here when the time arrives to vote and vote against things that they believe in and in favor of things that they do not believe in. I shall not believe that until I hear it and until I see it.

What are the right methods of politics? Why, the right methods are those of public discussion; the methods of leadership open and aboveboard, not closeted with "boards of guardians" or anybody else, but brought out under the sky, where honest eyes can look upon them and honest eyes can judge of them.

And again:

If there is nothing to conceal, then why conceal it? If it is a public game, why play it in private? If it is a public game, then why not come out into the open and play it in public?

You have got to cure diseased politics as we nowadays cure tuberculosis, by making all the people who suffer from it live out of doors; not only spend their days out of doors and walk around, but sleep out of doors; always remain in the open, where they will be accessible to fresh, nourishing, and revivifying influences.

I, for one, have the conviction that government ought to be all outside and no inside.

If that means anything at all, it means that this great bill will be discussed in public, debated in public, and men will vote according to their convictions after the discussion, and not decide before the discussion is held. They will not go into secret corners and connive with each other to bargain and trade and surrender their convictions, but they will come in here upon the floor of the Senate and, after listening to the debate, give their votes on the merits of the question, in accordance with their convictions.

He goes on:

I, for my part, believe that there ought to be no place where anything can be done that everybody does not know about.

Has this bill already been passed in secret, where nobody

except a certain privileged few were admitted?

I do not believe it. I do not believe Senators of the United States, elected here to represent their States, will put themselves in such a position.

I do not care to weary the Senate nor to take up time unnecessarily, but there are one or two other extracts that I shall read: Legislation, as we newadays conduct it, is not conducted in the open.

That was one of the accusations against the method of legislation which this new administration is to cure.

It is not threshed out in open debate upon the floors of our as-

There is an indictment. Shall we plead guilty to it, and repeat it?

It is, on the contrary, framed, digested, and concluded in committee rooms. It is in committee rooms that legislation not desired by the interests dies. It is in committee rooms that legislation desired by the interests is framed and brought forth. There is not enough debate of it in open house.

If it is bad to do it in committee rooms where both parties and all parties are represented, it would be aggravating the evil to do it in a party caucus, either Republican or Democratic,

where only one side was represented.

Mr. President, I have said this much on this subject and read these extracts because not only do I resent the attitude of some of my Democratic friends here, but I resent the attitude of the Republicans on the other side of the aisle, who are twitting us with the fact that we, as United States Senators, have no option, no freedom to vote as we please and to follow our convictions.

Woodrow Wilson, the writer, goes on:

Take any question you like out to the country—let it be threshed out in public debates—and you will have made these methods impossible. I am not intimating that corruption creeps in; I do not know what

He is not denouncing these private methods of legislation merely because they are corrupt.

I am not intimating that corruption creeps in; I do not know what creeps in. The point is that we not only do not know, but it is intimated, if we get inquisitive, that it is none of our business. My reply is that it is our business and it is the business of every man in the State; we have a right to know all the particulars of that bill's history. There is not any legitimate privacy about matters of government. Government must, if it is to be pure and correct in its processes, be absolutely public in everything that affects it. I can not imagine a public man with a conscience having a secret that he would keep from the people about their own affairs.

And finally, in a sentence, Woodrow Wilson says, on page 132: There is no air so wholesome as the air of utter publicity.

So, Mr. President, at the very outset, in beginning to offer my amendments, I decline to assume that they are beaten in advance. I decline to assume that men on this side of the Chamber are not only shackled, but gagged; and I offer the amendments believing that some heed will be paid to their merits, and that if that occurs, some of them will be adopted.

The amendment I have offered as section 2 embraces a number of changes of the House section. It also embraces practically the same changes as the section proposed by the Senator from Oklahoma [Mr. OWEN]. In the first place, it provides that the Federal reserve board, and not the organization committee. shall do the work of laying out this great new system over this big country.

That is not a very important change, perhaps, compared with some others, and yet it has its importance. It is particularly important if you are going to try to cut up this country into 12 districts, because the puzzle will be one of the most difficult that any man ever attempted. I imagine that any body of men that has considered at all the question of the number of banks has found the most serious difficulty in so dividing up the country as not utterly to disjoint the banking and business processes that are now going on,

Mr. BORAH. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. HITCHCOCK. I do. Mr. BORAH. The Senator has been reading from a book. What is the date of that deliverance?

Mr. HITCHCOCK. I am not able to inform the Senator as to that. It appears to have been published in 1913. I supposed it was last year, but the edition I have was published in 1913.

Another change which this section involves is reducing the number of districts from 12 to 4. This also is not so important a change as some others which the section provides. I am firmly of the opinion that if the bill as it finally passes provides for 12 reserve banks, a number of them never will be organized. I think that is so. If I am wrong and they are organized, I am firmly of the opinion that they will be such weaklings and such failures and such disappointments in the part of the country they are expected to serve that President Wilson will very soon recommend to Congress a reduction in the number.

As we have proposed this section we recognize the fact that we may be mistaken. We recognize the fact that more than four reserve banks may, on experience, be found desirable.

So we have provided that after two years' experience the reserve board may increase the number of reserve banks, and may increase it to a number, I think, equal to 8 or 10. I have forgotten the limit. We give to the reserve board appointed by the President absolute power, if they find that four reserve banks are inadequate or not desirable, to increase the number after two years' experience. We believe this is a wise provision, but we are confident that experience will show not only that four reserve banks are adequate in this country, but that a larger number would be practically a misfortune.

Mr. President, I want now to speak for a moment of the local interest which has come into this matter. I notice that the two Senators from Georgia were particularly solicitous that Atlanta might be made a reserve city; and I have learned that other Senators have favored the idea of a larger number of regional banks upon the theory that a local interest was to be gained by

it, and that a local benefit was to be secured.

Mr. SMITH of Georgia. Mr. President— The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Georgia?

Mr. HITCHCOCK, I do.

Mr. SMITH of Georgia. I desire to say to the Senator that so far as the Senators from Georgia are concerned, the Senator from Nebraska is in a measure mistaken.

The position taken by the Senators from Georgia was that there were a number of southeastern States that had distinctive commercial relations toward the east; and they believed that if the number of banks was to be eight, or in that neighborhood, there should be a regional bank in the southeastern section. If the number was to be less, then they believed that their rela-tions moved them toward the east, and not toward the west.

I disclaim for my colleague and myself any vote with reference to the number of banks that had in view simply location

at any particular place.

Mr. HITCHCOCK. I did not mention the subject by way of criticism, because I am frank to say that when I originally began the consideration of this subject it was my heart's desire that a regional bank might be established at Omaha. I believed Omaha great enough and important enough as a banking center to have such a regional bank. My studies have led me, how-ever, unavoidably and irresistibly, to the conclusion that the welfare of the system demands a small number of banks, and that cities like Omaha or Atlanta or Louisville or Cleveland or Cincinnati or any other cities of that class, and many others larger still, will be much better off if they are associated together in a larger district, and get the benefits of a varied climate and varied industries and great mobilization of reserves. Such sentiment as has existed in favor of a large number of regional banks, however, does spring from local interest.

I have here correspondence which indicates this to be a fact.

I took the trouble, just as we were about to report the bill, or a short time before, to address letters of inquiry to banks in such cities as might be made reserve cities if the number were increased above four. I wrote my letter rather hurriedly, and it was not very well framed; but the idea was to ask the banks in those cities whether they preferred to be associated with a great reserve bank, covering a large area of territory, or whether they would prefer to be associated with a small reserve bank, in case their city should be chosen as the seat of that Almost without exception, every letter which expresses the desire that the city named be made a reserve bank expresses also the opinion that the good of the country and the success of the system will be best subserved either by a central bank or by three or four great reserve banks.

I am going to ask for the reading of some of these letters, in order that they may go in the Record. I shall take first four short letters received from banks in my own city, Omaha. I ask for the reading of those four short letters.

The VICE PRESIDENT. Is there any objection? Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

THE OMAHA NATIONAL BANK, Omaha, Nebr., November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

My Dear Siz: Answering your letter of November 14, with reference to the number of regional banks, beg to say it is the unanimous opinion of the officers of this bank that it would be better for the whole country if the number of regional banks were placed at four rather than more. This would make them stronger institutions and cover a wider territory, and therefore they would be better able to serve the commercial interests of the country.

Except as a matter of convenience for the transaction of business, we do not know that the location of a Federal reserve bank in Omaha would be of especial benefit.

Very truly, yours,

W. H. Bucholz,
Vice President.

W. H. BUCHOLZ, Vice President.

THE MERCHANTS' NATIONAL BANK, Omaha, Nebr., November 18, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Hon. G. M. HITCHCOCK,

United States Senate, Washington, D. C.

My Dear Senator: I am in receipt of your letter of the 14th instant. It seems to me that all the trained bankers of the country will be united on the question of regional reserve cities. It will be admitted by anyone conversant with the question that the fewer reserve cities we have the more effectively reserves will be mobilized. Four in the United States is certainly a sufficient number. The more reserve cities you have the more the reserves will be scattered and become ineffective. As a banker in Omaha I certainly would be in favor of being attached to a reserve bank in one of the central reserve cities, rather than to have Omaha the headquarters of a smaller reserve bank covering the territory naturally tributary to this city. If the bill should go through as the President wishes and 12 regional banks will be established, some of them will be so small and inadequate as to become ridiculous. This bank is now doing business with the National City Bank, of New York, having a capital and surplus of \$55,000,000, and with the Continental & Commercial National Bank, of Chicago, having over \$30,000,000. Of what practical use can a reserve bank with, say, \$5,000,000 capital be to us? It would be so small that it would have no influence at all.

We again beg to thank you for the position you have taken on the banking and currency question.

Yours, very truly,

L. Deake, President.

THE UNITED STATES NATIONAL BANK OF OMAHA, Omaha, Nebr., November 19, 1913.

THE UNITED STATES NATIONAL BANK OF OMAHA,
Omaha, Nebr., Navember 19, 1913.

Hon. G. M. Hitchcock,
United States Senate, Washington, D. C.
Dear Mr. Hitchcock: We are in receipt of your letter of the 14th instant asking us to express an opinion upon which proposition is more desirable, i. e., four regional banks, located in New York, Chicago, St. Louis, and San Francisco, or eight regional banks, and whether or not Omaha would desire to become the seat of a regional reserve bank. We are unqualifiedly in favor of four regional reserve banks, for the reason that the very theory of the bill should be to effectually mobilize reserves, and the fewer the centers the better the service for the commerce of the country. Only in event of a compromise would we recommend more than four regional banks and that would be five, in order to give the South two and have the other one located at New Orleans. This is a concession based upon policy rather than principle.

In event of four banks being chosen, or five, we would much prefer to be included with Chicago rather than with St. Louis, and trust that you may be instrumental in bringing that about.

We believe that in your position upon the bill in the Committee on Banking and Currency you have rendered great service to the country, and we believe that hereafter the Democratic Party itself will be forced to confess that you have rendered a great public service to them—you certainly have to the Nation.

Congratulating you upon your efforts, and with best wishes for your continued success, we are,
Very truly, yours,

Millton T. Barlow.
Victor B. Caldwell.

MILTON T. BARLOW. VICTOR B. CALDWELL.

FIRST NATIONAL BANK OF OMAHA, Omaha, Nebr., November 21, 1913.

Hon. G. M. Hitchcock, Committee on Banking and Currency, United States Senate, Washington, D. C.

Washington, D. C.

Dear Sir: Replying to your favor of November 14, we are not in favor of the bill for the establishment of Federal reserve banks, but if such banks are to be established, we believe the interests of the country would be best served by the establishment of only one such bank. If, however, more banks than one must be established, we believe it to be to the best interest of the country in general to have not more than four reserve banks established.

We do not see any advantage in the establishment of

We do not see any advantage in the establishment of a smaller reserve bank to cover the territory naturally tributary to our city.

Very respectfully, yours,

C. T. KOUNTZE, President.

Mr. HITCHCOCK. I now send up some letters from the bankers of Denver. In view of the fact that the Senator from Colorado [Mr. Shafroth] has advocated Denver as the city for a regional reserve bank——

Mr. SHAFROTH. Mr. President, that is a mistake. I have not advocated Denver. I have advocated eight banks; but I know very well that the board which determines this matter can locate those banks wherever they please, and there is no influence which the Senator from Colorado could exercise that would change their views with relation to the matter. I do not think I have ever mentioned Denver in connection with these banks.

Mr. HITCHCOCK. I will ask to have the letters read, in view of the Senator's statement.

The VICE PRESIDENT. Without objection, the letters will be read.

The Secretary read as follows:

THE UNITED STATES NATIONAL BANK OF DENVER,
OFFICE OF THE PERSIDENT,
November 19, 1913.

Senator G. M. HITCHCOCK, United States Senate, Washington, D. C.

My Dear Senator HITCHCOCK: Answering your inquiry under date of the 14th instant, beg to say that the officers and directors of this bank are strongly of the opinion that the fewer regional banks that are established the stronger will be the system. While we naturally would feel pride in having Denver headquarters for a regional bank, we can not afford to let that pride overcome our best judgment. So far as the banks throughout this section are concerned, I believe they are a unit in preferring to have Denver attached to a reserve bank in one of the central reserve cities—particularly if we can be attached to Chicago, with a branch in Denver—than to have Denver the headquarters for a smaller reserve bank.

We fear the present danger in distribution of reserves will not be overcome with a considerable number of reserve banks and that the idea of mobilization will be defeated, especially with a larger number than four banks. The fight for reserves and cash in case of stringency and panies would be transferred from the unit banks to the larger institutions. While fewer in number, their efforts would be more gigantic in proportion; and we believe that every additional bank added to the proposed system beyond the minimum number necessary to prevent too great a centralization would be but a step in weakening that system. Four banks would undoubtedly give us a stronger system than eight, and I sincerely trust when the bill is finally presented to the Senate by your committee it will provide for not exceeding four banks. This number, I think, will be the ideal number and cover the territory most admirably, and at the same time be a guaranty against a possible centralization of too much power in any one section of the country.

I have made some study in this direction of European systems and have not been entirely in sympathy with those who advocate one central bank, believing that our country is so large and its interests so diversified that the regional bank idea would give best service to the country at large. For instance, New York fully understands the needs of the far East, Chicago the needs of the West and Northwest, St. Louis the requirements of the South, and San Francisco the necessities of the entire Pacific coast.

I thank you for the opportunity of expressing myself.

In this connection, I beg to say I expect to be in Washington the first week in December, meeting as a member of the American commission with that commission in preparing its final report on our European investigation. Following that meeting, upon my return home, I am scheduled to address the Nebraska Farmers' Congress, in their annual convention in Omaha on December 10, having chosen as my subject, "Can European credit systems be made applicabl

THE FIRST NATIONAL BANK OF DENVER, November 19, 1913.

Hon. G. M. Hitchcock,

United States Senate, Washington, D. C.

Sia: We beg to acknowledge receipt of your letter of the 14th, which has had our careful attention, and in reply would say that our conviction, based upon long experience in the banking business and intensive study of the problems which now confront this country, as well as a perusal of much of the matter which has gone before the Monetary Commission and your own committee, is that the fundamental principle of currency revision should contemplate the creation of one large central bank of discount and issue with branches in the commercial centers of the country, under such intelligent and experienced direction as will enable it to become a help rather than a hindrance to our growing Nation. This we understand the administration to be on record against in its platform, written at Baltimore for political purposes, and are told that under no circumstances is the central plan to be considered at this session.

in its platform, written at Baltimore for political purposes, and are told that under no circumstances is the central plan to be considered at this session.

In view, therefore, of the fact that a central-bank bill is impossible of passage at this time, and in order to bring the new system as near that plan as is possible—it being recognized that the successful practice in other civilized countries is in that direction—we believe there should be as few regional reserve banks as will be accepted by the majority in Congress; and under the belief that no less than four will be countenanced, we approve banks in New York, Chicago, St. Louis, and San Francisco, with branches at the proper locations in the respective territories, which would necessarily establish one in Denver. If, however, the action of Congress creates a greater number of regional reserve banks than 4, say, S to 12, we are in favor of the location of one in this city, for the reason that we are strategically located to serve a large and growing country, and on account of our accessibility in it, should be favored.

The sense of this letter is, therefore, our belief in—First. A central bank.

Second. Four or less regional reserve banks, with a branch located in Denver.

Third. A regional reserve bank in Denver, providing a sufficient number of banks are established to give our claims consideration. These plans are noted in the order of our preference, and our support would gladly be given in the same order.

Respectfully,

C. S. HAUGHWOUT, Cashier.

COLORADO NATIONAL BANK, Denver, Colo., November 19, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

DEAR SIR: Replying to the inquiry contained in your letter of the 14th instant, we beg to say that we favor legislation providing for as few reserve banks as possible, and we believe that a system comprising four reserve banks would be more desirable than one comprising eight reserve banks.

Very truly, yours,

G. B. Berger, President.

THE DENVER NATIONAL BANK, Denver, Colo., November 20, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

DEAN SIR: Replying to your communication of the 14th instant regarding the number of regional banks that should be established, we beg to say that so far as this bank is concerned we would favor four banks, located as noted, rather than eight. We would, however, prefer the establishment of one only, say in Washington, which, with the establishment of necessary branches in various cities, would, we believe,

answer every purpose.

In answer to your question as to the desirability of this city being attached to a reserve bank in one of the central reserve cities or become the headquarters of a smaller reserve bank we beg to say that if the establishment of a reserve bank in this city would result in competition with our already established banks we would prefer to be attached to a reserve bank in one of the central reserve cities.

At your pleasure we would like to receive a little information on the subject of the reserve or branch bank located in this city coming into competition with the other banking institutions in this city or territory tributary thereto.

Respectfully, yours,

E. S. IRISH, Caphier.

FEDERAL NATIONAL BANK, Denver, November 20, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Senator. Replying to the inquiries contained in your letter of the 14th instant beg to say that if it is possible to have one reserve bank, with the necessary branches throughout the country, we would favor it. However, it is our belief that the four regional banks to be located in New York, Chicago, St. Louis, and San Francisco, with branches in the banking centers of the country, would be better than eight or any larger number.

Should it transpire that eight or more regional reserve banks are finally decided upon we hope Denver will be made the home of one of them.

Yours, very truly, W. T. RAVENSCROFT, President.
Mr. HITCHCOCK. Without reading, I should like to have inserted in the RECORD some short letters from banks in some other States which possibly might become cities of regional reserve banks.

Mr. BRISTOW. Will the Senator state from what cities the letters come

Mr. HITCHCOCK. I am about to give a synopsis of this whole correspondence. I am not printing nor having read let-ters which express a preference for eight or more regional banks. I will, however, give a synopsis of the results of my correspondence.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

THE AMERICAN EXCHANGE NATIONAL BANK, Dallas, Tex., November 22, 1913.

Mr. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Sir: Referring to your letter of the 14th, it is our opinion that a fewer number of regional banks would be for the best interests of the country. At the same time, if eight are organized, we naturally feel that the city of Dallas should be headquarters for one of them, embracing, as it does, a very large financial district.

Very truly, yours,

NATHAN ADAMS, Cashier.

THE UNION NATIONAL BANK, Houston, Tex., November 18, 1913.

Senator G. M. HITCHCOCK, Washington, D. C.

Washington, D. C.

Dear Sir: In reply to your circular letter of November 14. We strongly favor and urge the smaller number of reserve banks as a matter of protection to the member banks and the system. It is the one point in the proposed bill over which we feel the most concern, the most fear—the establishment of too large a number of reserve banks, thereby weakening the chain. The compulsory rediscounting by one regional bank for another will not cure this weakness fully. We want to be a member of a strong group, a group not dependent upon agriculture alone, and that perhaps one crop—cotton in this section—where all the banks of a smaller district would be seeking rediscount accommodation at the same time of the year. We want to be in a large district with diversified interests—both in agriculture and manufactures.

By all means let us have the smaller number of reserve banks—not over four. There is no place for a reserve bank in Houston or in New Orleans—the logical point in a system of 12 regional banks would be at the one city or the other—but branches should be established in these cities.

cities.

We repeat, we fear the weaker system of the larger number of banks very greatly. We would welcome the new system, based on four regional banks with branches where necessary.

Respectfully,

T. C. Dunn, Vice President.

THE HOUSTON NATIONAL EXCHANGE BANK, Houston, Tex., November 24, 1913.

Mr. G. M. Hitchcock,

United States Senate, Washington, D. C.

Dear Sie: Referring to your favor of the 14th instant, beg to say that I am heartily in favor of as few regional reserve banks as possible, preferably three, located in New York, Chicago, and San Francisco.

I believe the more regional banks established the less assistance they can render to the surrounding territory; for instance, a bank located in the South. Each State would require funds at approximately the same time, and such a demand would necessarily cause the interest rate to be large; whereas a bank located in the East would not feel the demands upon it from the South because of the fact it would have funds from banks in that locality who do not need the assistance of reserve banks at a season of the year when those in the South do.

With my best wishes, I am,

Yours, very truly,

Henry S. Fox, Jr., Vice President.

THE FIRST NATIONAL BANK OF HOUSTON, Houston, Tex., November 19, 1913.

Hon. G. M. HITCHCOCK, Washington, D. C.

Sir: Replying to your letter of inquiry of the 14th instant, beg to say that in our opinion a central bank located at Washington, in which the Government would have control, would be the most ideal situation with respect to the actual needs of our financial system. Our present system is good enough as far as it goes, but by reason of the fact that it lacks the further facilities so requisite to care for the legitimate needs of commerce, which a central bank would supply, it becomes the weakest and most dangerous of that of any other nation.

With such an institution in which a large per cent of the idle reserves of the individual banks of the country would be mobilized, which fund serving as a basis for credit expansion through the discounting of commercial obligations, and any part of said credits thus created subject to conversion into circulating notes if desired or required, would more nearly meet the requirements of the day, and there would be less expense in the operation of such an institution than there would be less expense in the operation of such an institution than there would be in several regional reserve banks scattered throughout the country, and which would render no more efficient service if, indeed, they would be capable of even approximating the service that would be rendered through the central institution.

It seems, however, that it is a political impossibility to expect the creation of such an institution at this time or at any time in the near future, therefore it occurs that the regional reserve banks must be accepted and tried out. If this conclusion be true, then the fewer the number of such regional reserve banks the more efficient will be system be. We can see no reason why a city like Houston should not be well cared for, being included in the territory of New York, Chicago, or St. Louis, and from the standpoint of the necessary relief these needs could be as easily met under these conditions as readily as if we had a regional reserve bank located at this point.

Should the number be so generous as that Texas would fall heir to one, then, as a matter of fact, our selfish interest would prefer that such an institution be located in Houston.

Yery respectfully,

J. T. Scorr,

Vice President.

CITY NATIONAL BANK, Galveston, Tex., November 18, 1913.

Hon. G. M. HITCHCOCK, United States Senator, Washington, D. C.

United States Senator, Washington, D. C.

Dear Senator: I have before me your letter of the 14th.
For the past seven years I have been secretary of the Texas Bankers'
Association and have, through this medium, become well acquainted
with the bankers in this State.

In the early part of September we had a special call meeting of the
association for the purpose of discussing the proposed currency measure The consensus of opinion of this meeting was that the number of
regional banks should be reduced to about four. The majority of the
bankers to whom I have talked seem to be of the same opinion. I do
not believe, however, that the bankers, as a rule—and when I refer to
bankers I mean the country bankers—feel that this is of as much
interest as the proposition to break up relations that have existed
between them and their city correspondents, and they are of the opinion
that the division of the reserve should be so made as to permit them to
maintain with their regular established correspondents a sufficient portion of the reserve to enable them to maintain a line of credit as heretofore.

For your information I might say that I am not a city banker myself,
for I have only hear out of the "sticks" a very few years and prac-

tofore.

For your information I might say that I am not a city banker myself, for I have only been out of the "sticks" a very few years and practically all my experience has been in country banks.

I believe that the rank and file of the country banks would much prefer to make their rediscount arrangements through the city correspondent rather than attempt to make it through the regional banks. They have spent years building up their acquaintanceship and credit, and to totally destroy this would, in the belief of many, be a serious mistake.

take.

I am sure that a regional bank in Galveston would not be of any special assistance, and there should be a concentration of the capital and reserves in as few places as possible, according to our belief, in order to give the system real strength and value. I venture to guess that the same feeling would exist among the national banks in the reserve cities in this State, although I do not make this as a positive assertion.

sertion.

In my talks concerning this bill I have, as far as possible, tried to get the idea of the country rather than the city banker. While this is a small matter, perhaps there would be some certain local pride with the bankers over the State should they be called upon to take stock in some rival city near by. This would not have any special weight, but I am sure you will find that this feeling would exist, though perhaps only in a small degree.

In answering the last sentence of your letter I might say that you can put us down as favoring four instead of eight reserve banks.

Respectfully,

Respectfully,

J. W. Hoopes, Vice President and Cashier.

WHITNEY-CENTRAL NATIONAL BANK OF NEW ORLEANS, November 17, 1913.

Hon. Gilbert M. Hitchcock, United States Senate Committee on Banking and Currency, Washington, D. C.

United States Senate Committee on Banking and Currency, Washington, D. C.

Dear Mr. Hitchcock: Your valued letter of the 14th instant has been duly received, and I note therein that your committee is divided as to the advisability of having four or eight regional banks. My position has always been that the samelier the number of regional banks the better it would be. At the same time, I am of the opinion that the distribution of whatever number may finally be agreed upon should be intelligently made, with due regard to both geographical and commercial conditions.

If four regional banks are to be decided upon, they should be located one in New York City, one in Chicago, one in San Francisco, and one in New Orleans. St. Louis is only 300 miles from Chicago, and should properly be embraced in that district. New Orleans is 24 hours from St. Louis, and 27 hours from Chicago, and 40 hours from New York; it commands the trade of Mississippi, Louislana, eastern Texas, western Tennessee, southern Alabama, western Florida, and southern Arkansas; besides, owing to its proximity to Mexico, Central America, and South America, its trade will be enormously increased upon the opening of the Panama Canal, and it should be regarded as of prime importance to locate one of the regional banks in the city of New Orleans.

Furthermore, as the purpose is to decentralize capital and to retain as much as possible of the resources of each section in its particular vicinity, this can best be accomplished by placing in the far South one of the main regional banks. It will be of prime importance in giving to the central control information concerning conditions throughout this section, in which a bank located here would be more competent than one located in St. Louis, a city serving a trade entirely different and handling different commodities than that which exists in the cotton-producing sections of the country.

Under these circumstances, New Orleans feels that it should not be called upon to affiliate with St. Louis, but that St. Louis

affiliate with Chicago, and that the number of four regional banks favored by you should be retained.

I have no objection to this correspondence being made public, as I feel that the position which I have taken in the premises is unassitable to the correspondence of the correspondence

able.

I wish to take this opportunity of congratulating you upon the firm and sound stand which you have taken on currency legislation, and the bankers are depending upon you to counteract the unsound measures proposed by a number of the members of your committee, and any assistance which I can render, I assure you I shall be glad to do at any time, With kind regards, I am,

Yours, very truly,

Sol Wexler, Vice President.

THE COMMERCIAL NATIONAL BANK OF NEW ORLEANS, November 21, 1913.

The Commercial National Bank of New Orleans, November 21, 1913.

The Hon. G. M. Hitchcock.

United States Senate, Washington, D. C.

Dear Sir: Referring to your letter of November 14, we do not think it would be well to have too many regional banks, but at the same time we think New Orleans and its surrounding territory is of sufficient importance to have the headquarters of a reserve bank in this city.

You ask me the question if we favor a system of four reserve banks or eight reserve banks, and in reply to this it seems to me that four would be sufficient if placed to serve the entire country from a geographical standpoint; that is to say, one in the East, one in the West, one in the South, and one in the North-center. With this in view it would seem that the logical points would be New York, San Francisco, New Orleans, and Chicago.

St. Louis, from its commercial and financial importance, would appear to be entitled to one, but they are only a night's run from Chicago.

While not altogether favoring the central bank idea, if it is established I should think that one bank, with branches situated in different sections of the country, would be preferable.

The wrifer still clings to the idea that asset currency issued by the national banks, under proper restrictions would be the most desirable currency for the country.

Yours, respectfully,

J. H. Fulton,

President.

J. H. FULTON, President.

AMERICAN NATIONAL BANK, St. Paul, Minn., November 20, 1913.

Hon. G. M. HITCHCOCK, Washington, D. C.

Sir: Referring to your communication of the 14th instant, we wish to state that in our opinion four regional banks would be more desirable than a larger number. Under that number we would be satisfied to be attached to the district of Chicago.

However, if a larger number is designated and if one of the Twin Cities is to be designated, we would, of course, prefer to have St. Paul become the headquarters for this territory.

Yours, very truly,

H. B. Humason.

H. B. HUMASON, Cashier,

THE FIRST NATIONAL BANK OF ST. PAUL, St. Paul, Minn., November 18, 1913.

Hon. G. M. HITCHCOCK.

Hon. G. M. Hitchcock,

United States Senate, Washington, D. C.

Sir. Acknowledging receipt of your communication under date of the 14th instant, mentioning that the Banking and Currency Committee of the Senate is now split over the number of regional banks that should be established in the pending legislation, one half of the committee favoring four regional banks, to be located in New York, Chicago, St. Louis, and San Francisco, the other half of the committee favoring eight regional banks.

You ask whether a city like St. Paul would desire to become the seat of a regional bank, with the surrounding territory embracing several States and possibly 700 or 800 member banks, or whether it would prefer to be attached to a large area of country, with head-quarters in New York, Chicago, or St. Louis, and with branches in the banking centers of the country, including such cities as ours.

I beg to state we are strongly of the opinion that the number of regional banks should not exceed three or four. We carnestly favor the designation of New York, Chicago, and St. Louis, possibly San Francisco, as the seat of such regional reserve banks.

It seems to us that in the proposed measure now pending the mobilization of reserves to meet trade requirements would be safely and economically accomplished through 3 cr, at the most, 4 regional reserve banks; that the establishment of the larger number, 8 or 12, would be unwise and would prove impracticable. In the event, however, of a larger number of regional banks being established, we respectfully submit that the city of St. Paul, with its prestige, its volume of business, and its commercial status with respect to the territory adjacent and tributary, should be selected as the seat of one of the reserve banks.

I desire to congratulate you, sfr, upon the firm and unequivocal stand you have taken in the deliberations of your committee during the pendency of the measure before them. Your attitude has done of the very objectionable features of the banking and currency measure so st

THE MERCHANTS NATIONAL BANK, St. Paul, November 18, 1913.

Hon. G. M. Hitchcock,

Care of United States Senate, Washington, D. C.

Dear Sir: Replying to your circular letter of November 14, addressed to the National German-American Bank, can advise you that this institution, of which I was cashier, was consolidated some little time ago with the Merchanis National Bank, of which I am now vice president.

I can assure you that we all greatly appreciate the kindly interest you are showing in getting the opinions of bankers on the question of whether there should be four or eight regional reserve banks. It is evident that the cash reserve of these regional banks will be divided into as many ownerships as there are banks, and none will be able to strengthen its own reserves except by reducing the reserve of other regional banks to the same extent,

Since branches are provided for in the present bill and can be made to do the same service as a regional bank, we are earnestly in favor of keeping the reserve banks down to the smallest number, as the funds of the various branches would always be counted as the property of the particular regional reserve bank of which the branch is a part, and thus the ownership of the reserves would be in fewer divisions.

I have followed with interest the discussions on the currency proposition ever since the commission was first appointed, about five years ago, and have yet to find a single valid reason why there should be a multiplication of reserve banks. In order to hold down the regional banks to the smallest number, we would very gladly forego the privilege of having one of these institutions in our midst, if having it would mean that there must be eight. If, however, there is no possibility of reducing the number below eight, we would thank you to use your best efforts to have St. Paul, the capital of the State of Minnesota, designated as one of the points where a regional bank should be established.

Again thanking you for your kindly interest, I am,
Yours, very truly,

H. Von Der Weyers,

H. VON DER WEYER. Vice President.

THE MERCHANTS' NATIONAL BANK, St. Paul, November 17, 1913.

Hon. Gilbert M. Hitchcock, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

Sir: In acknowledging receipt of your favor of the 14th, I prefer to give you confidentially my views regarding regional banks rather than address a communication to the committee.

I think there is no question but what four regional banks, located in New York, Chicago, St. Louis, and San Francisco, can handle the business of the country much more satisfactorily than a larger number.

Naturally if a bank is to be located in this section of the country, we should like to have it in St. Paul; and if branches are to be located in smaller banking centers, we certainly want one here.

I want to take this opportunity of assuring you that the bankers as well as the business men of the Northwest appreciate more than we can ever tell you the most excellent work that you have done in connection with the currency bill.

If there is any information you want regarding local conditions in this section, do not hesitate in calling on me.

Yours, very truly,

D. S. Culver, President.

THE CAPITAL NATIONAL BANK OF ST. PAUL, St. Paul, Minn., November 17, 1913.

THE CAPITAL NATIONAL BANK OF ST. PAUL, St. Paul, Minn., November 17, 1913.

Hon. Gilbert M. Hitchcock, United States Senate, Washington, D. C.

Dear Senator: Replying to your communication of the 14th instant, I beg to say that we are very much in favor of the establishment of four regional reserve banks in place of eight, believing that the purposes for which the proposed legislation is to be enacted can be much better carried out by the smaller number of reserve banks.

The writer had the pleasure of meeting you at the time Mr. E. D. Hulbert, of Chicago, appeared before the committee, and I have taken great interest in the various recommendations made by the different bankers.

While I am aware of the fact that section 15 was approved at the conference of bankers held in Chicago, I am confident that it was not understood at the time that this section gave the Federal reserve banks the right to purchase commercial paper, etc., in competition with member banks, and for that reason it seems to me that a most important change in the bill, at least from a viewpoint of a banker, would be to restrict all domestic transactions of the Federal reserve banks to transactions with the member banks, excepting the purchase of foreign bills of exchange. In other words, it does not seem to be a fair proposition to give the Federal reserve banks. Your kindness will be greatly appreciated in enlightening me on the question, as to whether any such restriction has been made or is contemplated.

Greatly appreciating the efforts you are making in framing a workable banking and currency bill, I am,

Yours, very truly,

John R. Mitchell, President.

JOHN R. MITCHELL, President.

THE SECURITY NATIONAL BANK, Minneapolis, Minn., November 17, 1913.

Hon. GILBERT M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Sir: Replying to your inquiry of November 14, we beg to say that should Congress finally pass a bill establishing from eight to a dozen regional banks, we would want to see one of them located in Minneapolis. We are strongly opposed, however, to the establishment of so large a number of banks, believing firmly that the results desired can be best achieved through one central bank, or if not one, as few as

Dossible.

We are therefore in favor of the establishment of four such institutions as against any larger number, and in the event of such an arrangement would want to see Minneapolis included in the territory served by the Chicago bank, with a branch in this city.

Yours, very truly,

I.S. BONNEON, Wish Provided.

J. S. POMEROY, Vice President.

THE NORTHWESTERN NATIONAL BANK, Minneapolis, November 17, 1913.

Hon. GILBERT M. HITCHCOCK,

Minneapolis, November II, 1913.

Hon. GILBERT M. HITCHCOCK: Answering yours of the 14th, will say that this bank individually prefers a central bank, and if it is impossible to secure that, then the number nearest one would suit us. Therefore we favor four banks in preference to eight.

I have never heard any banker in Minneapolis or St. Paul express a desire to have S or 12 regional banks simply so that we could have one in one or the other of these cities. We believe the idea of such a large number is economically unsound and unnecessary.

I want to congratulate you personally on the work you have done in the interest of sound banking, for the prosperity of all the people of the country is absolutely dependent upon our banking business being on a sound basis.

With very kind personal regards, believe me,

Very truly, yours,

JOSEPH CHAPMAN, Vice President.

THE SCANDINAVIAN AMERICAN NATIONAL BANK,
Minneapolis, November 18, 1913.

Minneapolis, November 18, 1913.

Mr. G. M. Hitchcock,
United States Senate, Washington, D. C.

Dear Sir: Your letter of the 14th, inquiring as to whether we would prefer, in the new banking bill now before Congress, to have four regional reserve banks rather than eight is at hand.

In reply you are advised that so far as this institution is concerned we would prefer a smaller number, providing branches were established in other financial centers, which would allow the use of the facilities which the reserve bank proposes to give, with the least possible delay and annoyance.

In our independ, one central bank located in Chicago with branches

which the reserve bank proposes to give, with the read and annoyance.

In our judgment, one central bank located in Chicago with branches in various parts of the country, where the business demand warranted, would be better than four. I say in Chicago for the reason that that city is not only a large financial center but the geographical center as well. Minneapolis is the manufacturing, financial, and distributing point for the Northwestern States, and the business interests of the Northwest would best be served by having a branch located in this city in case the bill provides for either one, two, or three regional banks. In case eight were determined on, Minneapolis by all means should have one of the eight.

Respectfully,

Theodore Wold, President.

FIRST NATIONAL BANK, Minneapolis, Minn., November 18, 1913.

Minneapolis, Minn., November 18, 1913.

Hon. G. M. Hitchcock,

United States Senate, Washington. D. C.

Dear Sir: Replying to your favor of the 14th, I would say that we feel as though it would be much better to have as few regional reserve banks as possible, and for this reason would prefer to have four rather than any more. We would be glad if the number could be less than four, believing that the reserves of the country could be controlled to better advantage in this way. In case four are named, we will naturally be attached to the one located in Chicago, on account of our location here.

Very truly, yours,

F. M. Prince. President.

F. M. PRINCE, President.

FIRST NATIONAL BANK OF KANSAS CITY, Mo., November 17, 1913.

Mr. G. M. Hitchcock,

United States Senate, Committee on Banking and Currency,

Washington, D. C.

Dear Sir: We have yours of the 14th instant, and have right along been in favor of a small number of regional banks, feeling that an increase in the number weakens the proposition and diminishes its effectiveness. We would rather see four regional banks, with perhaps a branch of one in Kansas City, than a larger number, with a regional bank here.

This, we believe answers your faculty.

nk here.
This, we believe, answers your inquiry.
Yours, truly,
C. G. HUTCHESON, Cashier.

NEW ENGLAND NATIONAL BANK, Kansas City, Mo., November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

Dear Sir: I have your letter of the 14th instant in regard to the number of regional banks we would favor.

First, we would prefer simply a central bank; not being able to get that, we would wish as few regional banks as possible, and would favor four banks, located in New York, Chicago, San Francisco, and either St. Louis or New Orleans.

If a regional bank were placed in Kansas City, it would not have the strength of a bank established in one of the larger centers. A branch established here would take care of our wants as well as to have a regional bank established in this city. We would therefore be strongly in favor of four reserve banks instead of eight.

Yours, truly,

J. F. Downing, President,

J. F. Downing, President,

THE SECURITY NATIONAL BANK OF KANSAS CITY, Kansas City, Mo., November 17, 1913.

The Security National Bank of Kansas City,
Kansas City, Mo., November II, 1913.

Hon. G. M. Hitchcock,
United States Senate, Washington, D. C.

Dear Sir: Your letter under date of the 14th instant reached us this morning, and in reply beg to say that we are decidedly in favor of four rather than more regional reserve banks. Naturally, we would like one of the four located at Kansas City, but appreciate that the commercial interests of the country would probably be better served by locating them at the four largest commercial centers, including one on the Pacific coast. The law should avoid an expensive, unwieldy organization, and with four regional banks located as suggested, with credit committees located at other large commercial centers throughout the country to pass upon and approve the securities, the commercial interests of the country could and would be as well served by four as would be the case by a greater number. Let the bill be framed along lines looking to the serving of the entire commercial fabric of the country, which will make it practicable for those who have solvent and acceptable securities in times of emergency to realize thereon without favor to one class over another, or without placing a burden on one for the benefit of another. When such a bill is framed and passed the business interests of the country will promptly approve and adopt it, but it would be a grievous mistake to frame and pass a bill the putting into operation of which would of itself create a stringency, which situation, in our opinion, would follow the bill as passed by the House.

Pardon us for having gone beyond the scope of your inquiry in making this reply.

C. S. Jobes,

President.

THE INTER-STATE NATIONAL BANK, Kansas City, Mo., November 18, 1913.

Hon. G. M. HITCHCOCK, Washington, D. C.

Six: Replying to your letter of November 14, in relation to the number of regional banks that should be established in the pending legislation, will say that our judgment is that four regional reserve banks will better serve the entire country than a larger number. In the location of these banks the needs of the whole country should be considered, rather than localities.

We believe that the four banks should be located in New York, Chlcago, New Orleans, and San Francisco.

Our reason for suggesting New Orleans instead of St. Louis is that Chicago and St. Louis practically serve the same section, with Chicago, however, serving the larger territory in the West and Northwest. There is no question but what the South would feel entitled to one regional bank, and, of course, New Orleans would be the point for such a bank if that should be decided on as advisable.

Should there be a larger number of regional banks than four, we, of course, believe Kansas City should have one of such banks, as Kansas City serves the West and Southwest, Chicago serving the Northwest; and with a bank at New Orleans and one at San Francisco, the western section of the country would be well taken care of in this respect.

Leaving out any personal preference, we are sincerely of the opinion that four regional banks, rather than a larger number, are desirable.

Yours, very truly,

Lee Clark,

LEE CLARK, Chairman of the Board.

SOUTHWEST NATIONAL BANK OF COMMERCE, Kansas City, Mo., November 29, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

My Dear Senator: Your favor of the 14th received relative to the number of regional banks which you think would be most advantageous under the new currency bill. I wrote a letter to a member of the committee some weeks ago and gave my views on this question, advocating four, and at most five, banks—the four mentioned by you, with the fifth, if necessary, in Washington, for the convenience of the Government, in addition to which they would be able to have a more practical experience at headquarters if such a bank could be established in Washington.

There is no question, Senator, but that with fewer banks they would be stronger and the burden would be distributed over a wider territory, thus equalizing the business that might flow into either one of these banks. In other words, if we have a bank in Kansas City with a small territory the pressure comes on the reserve bank just the same as it comes on the reserve city banks to-day, and this bank would not be in any better position to take care of the business of the company than we are at the present time. I don't see any advantage to Kansas City becoming one of these regional banks, for, as we now understand it, there will be no particular advantage to be gained other than that of quick service.

While you are not esking Senator for our opinion set I had the

there will be no particular advantage to be gained other than that of quick service.

While you are not asking, Senator, for our opinion, yet I had the pleasure of attending some of the hearings of the committee and want to compliment you for the work that you were doing at that time. Don't allow any bill to pass that will do an injustice to the present national bank holding large amounts of Government bonds.

I want to call your attention to the statement of this bank, herewith inclosed. I am also of the opinion that the joining of this association should be voluntary rather than enforced. No one objects to all the supervision necessary, but we do believe that we have some rights when we are compelled to invest our money, and we further believe that the charter rights that we now have with the Government should be respected.

that the charter rights that the proper con-be respected.

Assuring you that we are all anxiously awaiting the proper con-summation of the work you have in hand and awaiting a further opportunity to be of some service to you, I remain, Yours, very truly,

J. W. Perry, President.

J. W. PERRY, President.

THE SECOND NATIONAL BANK, Baltimore, November 17, 1913.

\$19, 176, 889, 25

Loons and discounts

Hon. Gilbert M. Hitchcock,

Committee on Banking and Currency,

United States Senate, Washington, D. C.

Dear Senator: In reply to your inquiry of the 14th instant, we beg to state that the management of this bank is firmly of the opinion that, through the contemplated currency legislation, but a single reserve bank should be created; hence, if this can not be accomplished, our preference naturally is for as few of such as possible; four, therefore, rather than cight.

preference naturally is for as few of such as possible; four, therefore, rather than eight.

Burying civic pride, which certainly would prompt us to urge Baltimore as one of the cities to be selected for the location of a regional reserve bank, and disregarding the distinction which would come to our city in the event of its selection as such because of our conviction that a single or a very small number of regional reserve banks would best serve the interests of our entire country, it is our opinion that it would be more desirable for our city to be attached to a reserve bank in one of the central reserve cities than to become the headquarters for a smaller reserve bank.

Respectfully,

Chas. C. Homer, President.

FARMERS AND MERCHANTS NATIONAL BANK, Baltimore, November 18, 1913.

Hon. G. M. HITCHCOCK, United States Senate Chamber, Washington, D. C.

DEAR SIR: Replying to your inquiry of November 14, we beg to say that as the writer took part in the Chicago conference of August 21 and 22, and our vice president, Mr. Osburn, participated in the action

of the American Bankers' Association in October at Boston, there can be no doubt as to the attitude of this bank upon the currency bill.

Personally I favor one reserve bank; failing that, as few as possible. I do not think that, in any event, with Baltimore only four hours' ride from New York and 45 minutes from Washington, this city would be the seat of a regional reserve bank if there were as many as 12.

Sincerely, yours,

Chas T. Chave President.

CHAS. T. CRANE, President.

CITIZENS NATIONAL BANK, Baltimore, Md., November 17, 1913.

CITIZENS NATIONAL BANK, Baltimore, Md., November 17, 1913.

United States Senate, Washington, D. C.

Dear Senator: Acknowledging receipt of your esteemed favor of the 14th instant, we beg to say that inasmuch as we favor a central bank it is only natural for us to prefer four reserve banks to eight. As a matter of pride, we would be only too glad to have Baltimore become the seat of a regional reserve bank; but, to be consistent, we could hardly expect this if you decide upon four. Even if you decide upon eight, which we trust you will not do, we could then hardly expect to have a regional reserve bank, as, in all probability we would either come within the New York or Washington division.

In closing we want to commend you for the manner in which you are trying to get at the facts concerning the pending banking and currency bill. We do hope the other members of your committee will not vote for something that will not meet the business needs of this country.

Very truly, yours,

A. D. Graham, Vice President.

A. D. GRAHAM, Vice President.

Hon. G. M. Hitchcock,

United States Senate, Washington, D. C.

Dear Sir: We think that four regional banks would cover all requirements, and be better adapted to add strength to the new currency measure. Of course, State and city pride would like to see Baltimore one of the number, but my opinion is that the limit should be four.

J. M. LITTIG, President.

THE OLD TOWN NATIONAL BANK OF BALTIMORE,
Baltimore, Md., November 17, 1913.

G. M. HITCHCOCK, ESq.,

Care of Committee on Banking and Currency,

United States Senate, Washington, D. C.

Dear Sir: We are in receipt of your favor of the 14th instant, making inquiry whether or not the city of Baltimore would prefer to be attached to a regional reserve bank in one of the central reserve cities or become the headquarters for a smaller reserve bank covering territory naturally contributary to it.

In my opinion, I feel that it would be better to have eight regional reserve banks in the United States, provided one of these reserve banks is established in Baltimore. I would not, however, favor the establishment of eight such banks if the seat of one was not in this city.

If the currency bill should provide for four regional banks, I feel that the cities mentioned in your letter would be satisfactory, viz, New York, Chicago, St. Louis, and San Francisco.

Jacob W. Hook, President.

JACOB W. HOOK, President.

THE NATIONAL BANK OF COMMERCE, OFFICE OF THE PRESIDENT, Baltimore, Md., November 17, 1913.

Hon. GILBERT M. HITCHCOCK, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

Dear Sir: I beg to acknowledge receipt of yours of the 14th instant, and in reply to the inquiry therein made I hesitate to express a decided opinion one way or the other, especially in view of the fact that your committee, after all these months of careful consideration, appears to be itself quite divided on the subject, thus evidencing that there are, as in so many other cases, two sides to this question.

Viewing the matter from a local standpoint solely, the banking interests of this community very naturally desire that one of the proposed reserve banks should be located here, which, of course, would involve having probably eight, certainly six, reserve banks; but, taking a broader view, I am inclined to think that four, possibly five, reserve banks, in which event the city of New Orleans ought to be included in the cities named by you, would be the wiser decision, on the general principle that the fewer the banks the stronger financially they will be, thus being better able to render the expected service when the emergencies for which these reserve banks are designed arise.

Should, however, the bill as finally passed call for a larger number than six reserve banks, the geographical position of this city, especially in its relations to the rapidly developing South, would fully justify its being named as one of the reserve bank cities.

With much respect, I am,

Very truly, yours,

Eugene Levering,

President.

EUGENE LEVERING, President.

FIRST NATIONAL BANK, Baltimore, Md., November 17, 1913.

Hon. GILBERT M. HITCHCOCK, Washington, D. C.

Sir: We beg to acknowledge receipt of your favor of November 14. As one of the greatest objections to our present banking system is the scattering of reserves, in order to cure this in any new system the ideal would be a complete mobilization in one central bank. This being objectionable to the present administration, we think the fewer the number of regional reserve banks the better will the system operate. With this in mind, we prefer four to eight. If, however, the committee should decide upon eight, we very much desire to have a regional reserve bank located in Baltimore. Our reasons for this, for which we may be forgiven, are almost entirely selfish. Baltimore has been called the Metropolis of the South, and a regional bank here could admirably serve the territory composed of the States of Maryland, Virginia, North Carolina, South Carolina, Georgia, Florida, and Alabama. In other words, we prefer four, but would like Baltimore to have a regional bank if the number is to be over five.

Very truly, yours,

H. B. Wilcox, President.

THE NATIONAL EXCHANGE BANK OF BALTIMORE, Baltimore, Md., November 15, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Sire: Replying to your letter of the 14th instant, I would say that personally I am strongly in favor of a single reserve bank, with such branches as may be found necessary. But if we are to have regional reserve banks I would advocate, speaking academically and unselfishly, as small a number as possible. Recognizing, however, that to have such a bank actually located in the city of Baltimore would be a great advantage to the city, I am tempted to answer your question by voting in favor of eight banks, provided one of them was located here; but that consideration is based upon the advantage to the city and not based upon a belief that eight reserve banks are, in general, better than four.

Very respectfully, yours.

Waldo Newcomer, President.

Very respectfully, yours,

WALDO NEWCOMER, President.

THE AMERICAN NATIONAL BANK, Richmond, Va., November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Hon. G. M. Hitchcock.

United States Senate, Washington, D. C.

Dear Sir: Replying to your favor of the 14th instant, we have to say that in our opinion four regional reserve banks with branches will serve the country better than a larger number. Some of our reasons for this are that the concentration of reserves and management will be less expensive and less cumbersome, and a reserve agency covering a varied territory will be more able to meet the demands of its members than one covering a smaller territory, where the demands would likely come at the same period and season.

We have talked with many bankers on this subject, and the opinion of those who have considered the subject most carefully agree that one central institution would better serve the business of the country than a number. It seems to us, however, that on account of the wide territory to be covered that the four institutions would be a most excellent compromise.

The practical experience of a great many small banks, which are now carrying their reserves in the largest banks of New York, is that they get better and more satisfactory service in every particular than is given by the small banks in New York. The reasons for this are easily understood, as the organization of the large banks are more complete, and they can better afford to cover the entire territory than the banks with smaller business. We in the South are very anxious that some immediate action be taken in this matter, and sincerely trust that your committee will come to an early agreement which will prove for the best interest of all the people.

Yours, very truly,

OLIVER J. SANDS,

President.

OLIVER J. SANDS, President.

MERCHANTS' NATIONAL BANK OF RICHMOND, Richmond, Va., November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

DEAR SENATOR HITCHCOCK: In response to your letter of November 14, we beg to advise we are very much in favor of limiting the number of reserve banks to the four cities mentioned in your letter.

Very truly, yours,

Thus B McAnana Cashier

THOS. B. MCADAMS, Cashier.

NATIONAL, STATE & CITY BANK, Richmond, Va., November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Sir: In answer to your inquiry of November 14, we think one central bank more effective than any other number; four more likely to work satisfactorily than eight.

Respectfully,

WM. H. Palmer, WM. H. PALMER, President.

THE FIRST NATIONAL BANK OF RICHMOND, VA., Richmond, Va., November 17, 1913.

Richmond, Va., November 17, 1913.

Hon. G. M. Hitchcock,
United States Senate, Washington, D. C.

Dear Sir: In reply to yours of the 14th, I beg to say that this bank feels that one central bank with branches would be the best, and that if a greater number must be established that four would be preferable to eight.

As to making Richmond a regional-bank location, we think that is immaterial. We prefer the larger territory, that we might have a larger reserve to draw on, than to have a small territory, all of which would have demand for money at the same time.

Yours, very truly,

JNO. B. Purcell, President.

JNO. B. PURCELL, President.

THE FOURTH NATIONAL BANK, Cincinnati, Ohio, November 18, 1913.

Hon. G. M. HITCHCOCK, Washington, D. C.

Washington, D. C.

Dear Sir: I am in receipt of your favor of the 15th instant. We would prefer that there should be as few regional banks as possible, and would favor four rather than eight. I understand your question as simply applying as to whether the city of Cincinnati would desire to become the seat of a regional reserve bank. If there are to be more than four of such banks, we certainly would wish one of the additional to be established here, and believe this city to be logically and geographically entitled to such consideration. We have a strong currency association covering considerable territory in this and neighboring States, we are about the center of population of the United States, and within a given radius surrounding us probably have more reserve cities than any other locality.

Very respectfully,

Charles E. Wilson, President.

THE SECOND NATIONAL BANK OF CINCINNATI,
OFFICE OF THE PRESIDENT,
November 20, 1913.

Senator G. M. HITCHCOCK, Washington, D. C.

DEAR SIR: In reply to your letter of the 15th instant as to whether in our opinion there should be more than four regional banks, I have to say that in my judgment it would be a great deal better to have as

few regional banks as possible, and I think four—located at New York, Chicago, St. Louis, and San Francisco—would be much better than to have eight.

However, if there are to be more than four such banks, we think that one should be established in Cincinnati on account of our geographical location, and the fact that we have a subtreasury and a very strong currency association covering considerable territory in this and adjoining States. We are near the center of population of the United States, and within a given radius, have more reserve centers than any other city.

Yours, very respectfully,

C. F. SMOOTH, President.

THE CENTRAL NATIONAL BANK, Cleveland, Ohio, November 22, 1913.

Hon. G. M. Hitchcock,

United States Senate, Washington, D. C.

My Dear Sir: Replying to yours of the 15th instant, we are strongly in favor of a revision of the currency, as experience has demonstrated the inadequacy of the present system to take care of the large and rapidly growing business of the country. We believe that the best interests of the country, however, would be subserved with three regional banks rather than a greater number, as the result would be stronger institutions. With the mobilization of reserve accounts which would naturally come to them, the agricultural, industrial, and commercial interests of the Nation could and would be cared for to a greater degree than is now possible, or than could be possible, with 12 regional banks, as the bill now pending in Congress originally contemplated.

With our large and rapidly growing city we certainly would ap-

With our large and rapidly growing city we certainly would appreciate the location of a regional bank in Cleveland, but would subordinate our ambition in that respect in the furtherance of a banking measure that would be subservient to the best interests of the entire

Country.
Your attitude toward this great question is approved by not only the banking fraternity of the country but by all men who have kept in touch with the general trend of financial legislation.

Very truly, yours,

THE CENTRAL NATIONAL BANK,

THE CENTRAL NATIONAL BANK, By J. J. SULLIVAN, President.

FIRST NATIONAL BANK, Cleveland, November 17, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Sir: In answer to your inquiry of the 15th, would give our opinion as being in favor of four rather than of eight reserve banks in the plan now being considered by your Senate committee.

Should the measure be passed providing for the larger number of regional banks, Cleveland will urge its claims for consideration as a proper location for one such bank. Should the smaller number be decided upon, we think Cleveland and the banks of eastern Ohio would prefer being attached to the bank having its headquarterg in the city of New York.

Very truly, yours,

Thos. H. Wilson Vice President.

THOS. H. WILSON Vice President.

THE UNION NATIONAL BANK, Cleveland, Ohio, November 17, 1913.

Hon. G. M. HITCHCOCK, Washington, D. C.

DEAR SIR: We beg to acknowledge receipt of your valued favor of

DEAR SIR: We beg to acknowledge receipt of your the 14th.

We would much prefer a system of only four regional banks, believing a greater benefit will accrue to the subscribing banks by having the reserves concentrated in four places rather than in a greater number. We feel that one regional reserve bank, with a number of branches in the principal centers, would be the best solution of the proposition. If we can not have one, then not more than four. While no doubt it would be an advantage to this city to be selected as the seat of one of the regional reserve banks, yet our geographical location, in my judgment, would prevent our selection, even if there were eight or more regional banks.

E. R. FANCHER,

Respectfully, yours,

THE BANK OF COMMERCE (NATIONAL ASSOCIATION), Cloveland, Ohio, November 17, 1913.

Cleveland, Ohio, November 17, 1913.

Hon. Gilbert M. Hitchcock,
United States Senate, Washington, D. C.

Dear Sir: In reply to your letter of November 15, it is my opinion that the business interests of Cleveland and surrounding territory would be better served by our being attached to a large area of country, with headquarters in New York, Chicago, or St. Louis, and branches in the banking centers of the country, including such cities as Cleveland. In short, I would prefer a system of four reserve banks, and will be glad to see Cleveland included in the four.

Very respectfully, yours,
G. A. Garretson, President.

NATIONAL CITY BANK, Cleveland, Ohio, November 17, 1913.

Hon. G. M. Hitchcock,

Care of Banking and Currency Committee,

United States Senate, Washington, D. C.

Dear Sir: We are in receipt of your letter of the 14th instant in reference to the pending financial legislation and more particularly guarding the number of regional reserve banks.

In our opinion the regional reserve banks should be reduced to the smallest number. We would favor four banks; this would not prevent these banks from having branches in other of the larger cities.

In this connection I wish to express our appreciation of the work you personally are doing to have the proposed bill amended so that it will be more acceptable and more practical.

Very truly, yours,

C. A. Paine, President.

THE NATIONAL COMMERCIAL BANK, Cleveland, Ohio, November 17, 1913.

Hon. G. M. HITCHCOCK,

United States Senate, Washington, D. C.

DEAR SIR: Your letter of the 14th instant at hand, and in reply beg to say, that so far as this bank is concerned, we are heartly in

favor of four regional banks instead of eight, with the principal or central bank located in Washington, and the others in New York, Chicago, and St. Louis. Chicago, and St. Louis. Very truly, yours,

C. L. MURFEY, Vice President.

THE CLEVELAND NATIONAL BANK, Cleveland, Ohio, November 17, 1913.

Cleveland, Ohio, November 17, 1913.

Hon. G. M. Hitchcock,
Senator, Washington, D. C.

Dear Sir: The management of this bank desires to strongly recommend the limiting of regional reserve banks to four.
There is a strong, and we feel conclusive argument in connection with the question of creating not to exceed four regional reserve banks.
The ideal solution of that question would be one central association located in Washington, with branches where in practice they were found necessary.

Very truly, yours,

F. W. Wardwell, President.

F. W. WARDWELL, President.

WESTERN NATIONAL BANK OF PITTSBURGH, November 25, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

United States Senate, Washington, D. C.

My Dear Sir: I have your favor of November 15, questioning me as to certain things in the banking and currency bill.

Answering your first question I would say that I very much more favor one central bank than four regional banks, therefore very much more than eight reserve banks.

In regard to having a reserve bank in a city like Pittsburgh, I would say, in my own opinion, it would not be very much of an advantage to us to have a bank of this character here if we could get emergency currency without undue delay. If we would have to go to New York, for instance, or Philadelphia, to make our deposit of commercial paper, where it would be unknown, I should think it would make considerable delay, because it would take the regional bank in that city several days to look up the standing of the notes we would deposit as collateral for our emergency currency.

Also I should think the fact of having a reserve bank in Pittsburgh would cut down the amount of money deposited here by banks in the

days to look up the standing of the notes we would deposit as collateral for our emergency currency.

Also I should think the fact of having a reserve bank in Pittsburgh would cut down the amount of money deposited here by banks in the surrounding territory.

I don't know that this question has been answered by banks in this vicinity, as we have not had a consultation regarding it. As a usual thing the clearing house committee works as a unit in these things and agrees on a policy, but we have not had a meeting of that committee for some time to consult about the currency bill.

Very truly, yours,

CHARLES MCKNIGHT,

CHARLES McKnight, President.

DIAMOND NATIONAL BANK, Pittsburgh, Pa., November 17, 1913.

Hon. Gilbert N. Hitchcock,

United States Senate, Washington, D. C.

Dear Sir: Answering the inquiry in your letter of the 15th, beg to say that the writer is in favor of four regional reserve banks, but in case your committee should recommend and Congress would pass a bill for a larger number of regional reserve cities, Pittsburgh should be one of these cities. However, the writer's primary preference is for a central reserve bank.

Very truly, yours,

WILLIAM PRICE, President.

COLUMBIA NATIONAL BANK, Pittsburgh, Pa., November 29, 1913.

Hon. G. M. HITCHCOCK.
United States Senate, Washington, D. C.

Dear States senate, Washington, D. C.

Dear Sir: Replying to your esteemed favor of the 15th instant, our preference would be for four regional banks.

If there are eight or more regional banks established we would certainly like to see one established in Pittsburgh, as with the enormous amount of currency handled through our pay rolls it would be of material advantage to have a regional bank in this city.

Very respectfully, yours,

W. C. LOWRIE. Vice President.

W. C. LOWRIE, Vice President.

THE LINCOLN NATIONAL BANK, Pittsburgh, Pa., November 19, 1913.

Hon. GILBERT M. HITCHCOCK, United States Senate, Washington, D. C.

Dear Size Senate, Washington, D. C.

Dear Size: We are in receipt of your letter of November 15 in the matter of Committee on Banking and Currency of the Senate endeavoring to ascertain our opinion as regards pending legislation.

If the plan of having regional banks—and we are not prepared to say that we favor such a plan—is adopted, we think that four such banks would be preferable to eight, three of the banks to be located as now in the central reserve cities, with possibly one in California.

Respectfully, yours.

Respectfully, yours, C. B. McLean, President.

THE PEOPLES NATIONAL BANK OF PITTSBURGH, Pittsburgh, Pa., November 18, 1913.

Pittsburgh, Pa., November 18, 1913.

Hon. G. M. Hitchcock,
Washington, D. C.

Dear Sir: In reply to your favor of the 15th instant, as we are in favor of a central bank we naturally would favor four reserve banks as much better than a larger number. This being the case, we would favor a branch bank for Pittsburgh.

However, if the bill as finally passed provides for eight reserve banks, then we certainly would like to have one in Pittsburgh.

Yours, very truly,

ROBT. WARDROP, President.

ROBT. WARDROP, President.

MELLON NATIONAL BANK OF PITTSBURGH, November 18, 1913.

Hon. G. M. Hitchcock.

Committee on Banking and Currency,
United States Scaate, Washington, D. C.

Dean Sir: I have your letter of the 15th instant, in which you inquire our opinion on the subject of regional banks, and beg to say in reply that our first choice would be for one central institution, that falling, then as few others as may be. We feel that if the scheme is

adopted and we join it that it would be much better for us to be attached to one large bank with great extended influence than to an institution which necessarily would have to be much smaller if located Pittsburgh.

Respectfully, yours,

W. S. MITCHELL, Cashier.

THE KEYSTONE NATIONAL BANK OF PITTSBURG, Pittsburgh, Pa., November 19, 1913.

Hon. G. M. HITCHCOCK, United States Senate, Washington, D. C.

Hon. G. M. HITCHCOCK.

United States Senate, Washington, D. C.

Dear Sir: I beg to acknowledge receipt of your circular letter of November 15, which seems to the writer to contain three distinct questions, the last one of which is perhaps the most important. The writer is of the opinion that one central reserve bank would be the best for all concerned, but believes this impossible to obtain at this time, and he would referred for favor four regional reserve banks instead of eight. From a selfish viewpoint, he would naturally like to see Pittsburgh chosen as one of these regional centers, but for the good of the bill and from a broader viewpoint, he would not deem it advisable to make from a broader viewpoint, he would not deem it advisable to make from a broader viewpoint, he would not deem it advisable to make from a broader viewpoint, he would provide the contract of the own more, it is his belief that Pittsburgh would possibly be entitled to one more, it is his belief that Pittsburgh would possibly be entitled to one more, it is his belief that Pittsburgh would naturally prefer to be a regional center rather than to be attached to some other such center as New York, Chleago, or St. Louis. The writer has often wondered whether the sponsors of this bill know how much the banking business of the country obtained quite a considerable amount for the provide of the provide the country obtained quite a considerable amount of the provide of the provide of the country obtained quite a considerable amount of the provide of the individual concerns. For instance, the banks now extend a line of credit to the merchant or manufacturer, and he in turn sells on an open account for 30 or 60 days' time. To make this bill assuccess this pays and would naturally have to be changed, as the banks of not receive enough commercial paper to make such a bill a success. Turne we would have to say to him, "You must not sell on an open account on time, but sell your goods on 60 days' time, taking a note in payment, and bridge sid note to

A. S. BEYMER, Vice President and Cashier.

Mr. BRADY. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Idaho?

Mr. HITCHCOCK. I do.

Mr. BRADY. The amendment proposed by the Senator from Nebraska favors offering the stock of the Federal reserve banks to the public. All the letters that have been read seem to be from bankers. I should like to know from the Senator whether he has had communication with business men, farmers, and men of that class, as well as bankers, relative to their opinions

as to how many banks we should have in the system?

Mr. HITCHCOCK. I will say to the Senator that it is possible and it seems to me probable that I have had more correspondence on this subject than any other Senator. In fact, I have had so much that I have absolutely been unable to read

it all.

I can say, furthermore, that I have had a sort of referendum of this matter out in my State. I went home about two weeks ago and I found, in the first place, the people eager to learn about this legislation. I found, in the second place, that almost without exception they were enthusiastic for the amendment which I have here proposed.

I had the pleasure in Omaha about a week ago of addressing what was said to be a record crowd in the Commercial Club. Ordinarily the club seats at its noon-day luncheon some 300 of the leading business men of Omaha, including bankers. Unexpectedly I was asked to speak at the noon-day luncheon, I think a week ago, Monday. The room was packed; there were very many more present than could participate in the luncheon. After the luncheon I spoke for over an hour, and I am free to say I never had an audience so enthusiastic; I never had an audience so attentive on the subjects which I drove home, which were the public ownership of stock, the governmental control of each bank, the establishment of an insurance fund for depositors; the guaranty that each bank should have an equal privilege and an equal right to discount; the provision that six months' paper, which is essentially Western and Southern paper, should be accepted by the regional banks in a limited amount. There were some other features which I covered, but those are the features which have taken hold on the public opinion of this country, and, if Senators do not know that now, they will know it later in one form or another.

Mr. BRADY. Mr. President—

The VICE PRESIDENT. Does the Senator from Nebraska yield further to the Senator from Idaho?

Mr. HITCHCOCK. I do.

Mr. BRADY. I have some friends and some business associates who live in Omaha. I have received communications from them since the Senator from Nebraska returned home, and they unanimously say that the reception tendered to the Senator on his return was one of the most cordial and most enthusiastic that had ever been held in the city of Omaha. believe the words the Senator has just spoken simply convey the facts as they exist relative to his reception.

I also returned to my home in Idaho and discussed this measure with my friends, and I found them almost unanimously in favor of the public subscription of the stock, as suggested by the Senator from Nebraska. I found many bankers in favor of four or six regional reserve banks, but the business men and farmers with whom I talked seemed to feel that eight regional reserve banks would be better for the public than four regional reserve banks. For that reason I was anxious to hear from the Senator what the business men, outside of the bankers, in his State thought relative to the number of regional reserve banks.

I found another very interesting condition in Idaho. believe that if the Owen amendment is adopted and the banks are compelled to pay for stock, the banks undoubtedly should have control of the regional reserve banks by being allowed to elect a majority of the directors; but, on the other hand, if the Hitchcock amendment should be adopted and there should be a public subscription for the stock, they seemed unanimous in that case that the Government should have the control of the majority of the board of directors of the reserve banks and

not the bankers.

am just simply expressing the feeling as I found it in Idaho, and I am glad to have this information from the Senator relative

to the sentiment in his State.

Mr. HITCHCOCK. Mr. President, I thank the Senator for his statement, and I am free to say that I was almost embarrassed by the wealth of my welcome. I think the business interests of this country have been a good deal wrought up by the threat of evil contained in this bill as it came from the other House. I know that in practically every community in this country there has been a great contraction of credits. The banks have been alarmed over the prospect, and the feeling has been growing that this legislation contained a possible disaster to the business world of the United States.

There is something in what the Senator from Idaho [Mr. Brady] says, that at first the disposition is to favor the larger number of regional banks, on the theory that that plan produces greater dissipation of money and avoids the dangers of a concentration, but I have never falled, when I explained to a lay-man unfamiliar with the study of this subject, to win his sup-

port to the idea of the four regional banks.

Here are some of the reasons for them: With 4 regional banks you equalize the rate of interest, while with 8 or 10 regional banks you will have low interest rates in New York, Boston, and Chicago—they being the great centers—and you will inevitably have high interest rates in all the smaller regional You localize them. Explain that to a business man banks. You localize them. Explain that to a business man and he sees the importance of equalizing those rates of interest by reducing the number of regional banks.

Again, all through my section of the country the demand for an insurance of bank depositors is great. Explain to a man who believes in the establishment of an insurance fund for the benefit of depositors of failed banks that that insurance fund

will be a real thing if you have four regional banks, a real fund with real money in it that will pay the depositors, and then explain to him that if you have 8 or 10 or 12 regional banks you will have 5 or 6 of them that may not even pay dividends-yes; you will have some that will not even pay ex-

Mr. POMERENE. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. I do. Mr. POMERENE. The Senator from Nebraska has just stated that he told these people that they would have a real insurance fund if there were four banks, and that if there were eight or more banks there might be several of those banks which would not pay expenses. Was the Senator able to explain to these people the grounds for his assurance that in the one system there would be a sufficient insurance fund, while in the other there would not be?

I myself believe in bank insurance, but I am afraid that under both of these bills the amount of this insurance fund is going to be purely problematical. I favor it because it is a beginning of what I believe will be a completed system, which will give genuine protection to the depositors; but with the information I have had—and I have been giving pretty careful attention to this subject for a number of weeks-I would not be able to guarantee to any man that, under either system, there would be a substantial insurance fund, and I have never heard anyone express himself upon this subject who thus far has been able to give me that satisfactory information. If the Senator from Nebraska is able to give it, I think it would be a very great benefit to the Senate.

Mr. HITCHCOCK. Mr. President, of course we have no precedent, no experience. We look at the central banks of Europe, and we realize that the Bank of England pays, I think, 10 per cent dividends, although it charges a very low rate of discount; the Bank of France pays somewhere about the same, as I recall it, on a larger amount of capital stock; the Reichsbank, of Germany, also pays a handsome dividend and accumulates a handsome surplus; but no one supposes that if those countries were cut up into a number of regional banks instead of having one bank there would be any dividends or any profits. If an insurance fund is possible at all for the depositors in failed banks, it is only possible by keeping the number of reserve banks so low as to make them profitable. A small business man asked me that very question, and I said to him: "Well, we have three department stores here in Omaha, all making money. You could easily find that the surplus profits of those department stores could be depended on for any purpose you wanted; but what would be the case if you cut them up into 12? They might all lose money, and certainly there would be very little fund that might be depended on in that case."

The whole hope of bank insurance rests upon having the number of regional banks so small that the overhead charges will not eat up all the profits. So other arguments might be used. and I have used other arguments with business men, and, without exception, they have realized that the small number of regional banks was necessary to the stability and strength of the system. It is necessary, if we judge by the experience of Europe, and it is necessary because we know that the great evil in the United States to-day is a diffusion and dispersion of our reserves, yet we are likely to fall into the same evil by cut-

ting them up into a number of weak banks.

Mr. President, I had not intended to take so much time on this subject of the number of regional banks; but I have a few figures to which I should like to refer in order to show Senators how weak and sickly many of the reserve banks will be if you go past four or possibly five. We confront a great problem as soon as we pass four. We will all concur that, if we have only three or four regional banks, they must be located in New York, Chicago, St. Louis, and San Francisco, or possibly New Orleans instead of St. Louis. We will all concur in that. Those are the natural locations; but once you pass that what are you going to do? Are you going to include Boston and the Boston territory, which has national banks with a capital and surplus of \$160,000,000? If so, you give Boston a little reserve bank, according to the plan of the Senator from Oklahoma, with about four and a half million dollars paid in capital. Are you going to include Philadelphia, with its \$195,000,000 in bank capital and surplus in that city and immediate territory? If so, you give to that region a little reserve bank with five and a half million dollars paid in capital. Are you going to include Pittsburgh, with its \$157,000,000 of capital and surplus there and in the immediate neighborhood? If so, you would have a little reserve bank of \$4,000,000 paid in capital. Are you going to include the district in Ohio, represented by the Senator from that State [Mr. PCMERENE]? If so, with \$130,000,000 in capital and surplus in the banks of Ohio in the immediate neighborhood, tributary to either Cleveland or Cincinnati, you would have a little reserve bank with \$4,000,000 paid in cash capital, according to the bill of the Senator from Oklahoma. Are you going to include Baltimore, with \$80,000,000 capital and surplus in her banks and those of the surrounding territory? If so, you would have a little sickly reserve bank of two and a half million dollars paid in capital.

Are you going to include Atlanta and New Orleans-and I put them in the same territory—the banks in that territory having something like ninety-five or a hundred million dollars in capital and surplus? If so, you would have a little, sickly reserve bank of \$3,000,000 paid-in capital. I dare say that there are individual banks in Atlanta almost as great as that reserve

bank would be.

You are going to include Chicago, of course. Are you going to include Minneapolis, with, say, \$70,000,000 of capital and surplus in the banks of that city and surrounding territory? If so, you will have a little reserve bank of \$2,000,000 paid-in capital. I might go on with Fort Worth, with \$80,000,000 capital and surplus in the banks in its immediate territory, which would insure a little reserve bank of two and a quarter million dollars of paid-in capital. I might include Denver, Kansas City, and Omaha in one district, in order to lump them, with, say, \$100,000,000 of capital and surplus in the banks and calling for a little reserve bank of but two and a half million dollars paidin capital. I think that practically completes the list. From these cities you will be compelled to select them, and you will have a hard problem. If you permit Boston to remain with New York, you simply aggrandize and magnify New York; if you permit Philadelphia to remain with New York, again you magnify New York; if you permit Pittsburgh to remain with New York, that also magnifies New York and leaves even less for the reserve districts remaining.

Mr. SMITH of Georgia. Mr. President— The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Georgia?

Mr. HITCHCOCK. I do.

Mr. SMITH of Georgia. If you should have only four banks, you would attach the entire southeastern section to New York and you would still aggrandize New York and make the New York reserve bank a good deal larger than the other three re-

serve banks, would you not?

Mr. HITCHCOCK. By comparison it would not be so large. If you should have four reserve banks, the bank in New York would have a capital of about \$50,000,000, which is only as large as the capital and surplus of the largest bank in New York City to-day. Think of that! There is a national bank in New York with a capital and surplus of \$50,000,000; but if you cut up the territory in the way proposed by the Owen bill, you will establish a reserve bank in New York with about thirteen and a half million dollars paid-in cash capital.

Mr. SMITH of Georgia. But would not the New York reserve

bank have not only a capital of \$50,000,000 but an immense surplus consisting of the reserves which would be placed in it?

Mr. HITCHCOCK. Of course it will have the reserves; but I say that New York is practically an irreducible minimum. You can not reduce New York to any certain amount; and if you divide the rest of the country up into 11 parts instead of 3, they will all be more insignificant as compared with New York. Mr. President-Mr. OWEN.

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. HITCHCOCK. I do.

Will the Senator object to my interrupting him? Mr. OWEN.

Mr. HITCHCOCK. Not at all.

I wish to call the attention of the Senator to the only reliable estimate perhaps that was made before the Committee on Banking and Currency of the Senate, and that was made by Mr. Cannon, of New York, the president of one of the great banks there. Mr. Cannon made an estimate of the earnings of the proposed reserve banks, and he estimated, not counting that interest would be paid to the Government, that the bank of New York, with nineteen and a half million dollars of capital-that is something less than one-fifth of the capital of the whole system—would earn five and a half million dollars per annum. The figures will be found on page 2152 of the report of the committee, giving the estimates and the basis Upon the same reasoning, the earnings of of the estimates. this system would be \$25,000,000 a year.

Mr. LANE. Mr. President, I should like to ask the Senator, if he will allow me, who would be paying this profit to them?

Where would they get it?

Mr. OWEN. They would be earning it on a basis of 4 per cent interest, according to the estimate of Mr. Cannon. If that interest were lowered, as it might be very readily lowered, the earnings would still be very large.

Mr. LANE. A profit of \$5,000,000 on an investment of \$19,000,000?

Mr. OWEN. \$19,000,000 capital.

Mr. LANE. And \$5,000,000 profit on that? Mr. OWEN. Not on the capital alone, but on the capital, surplus, and Government deposits, which would amount to about six times the capital.

Mr. POMERENE. And the reserves.

Mr. OWEN. That includes the reserves and Government deposits.

Mr. HITCHCOCK. It is true that Mr. Cannon made such a guess, and it is nothing but a guess; it is true that other bankers came before the committee with other estimates which indicated that there might be no profit at all. We had some testimony to the effect that as the bill came from the House it would require a building larger than any in the city of Chicago to accommodate the employees of the reserve bank there if it were to act as a clearing house for all the thousands of banks belonging to that region. Those are nothing but the merest guesses without any foundation, and one man's guess is opposed to another man's guess. It is very evident, however, that if you split this country up into 12 parts or 10 parts or 8 parts you are going to have a lot of weaklings for reserve banks where you ought to have strength; you are going to have doubt where you ought to have confidence; you are going to fly in the face of the experience of all the countries in the world, and you are going to ask bankers to rely upon reserve banks that have actually less capital than some of the individual banks belonging to the system.

Mr. POMERENE. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK.

I do. The Senator from Nebraska has just Mr. POMERENE. characterized the estimate of Mr. Cannon as a guess, and has made the statement that one man's guess is just as good as another. I should like the Senator to state whether the assurance he gave to his people about the efficiency of this insur-

ance fund was a mere guess or was it an estimate?

Mr. HITCHCOCK. Well, Mr. President, I have not guaranteed to my people that an insurance fund would be accumulated, but I felt absolutely safe in telling them that an insurance fund with 4 reserve banks was far more probable than an insurance fund to be paid out of the profits of 8 or 10 or 12

banks doing the business of 4.

Mr. SMITH of Georgia. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Georgia?

Mr. HITCHCOCK. I do. Mr. SMITH of Georgia. I wish to ask the Senator if it is not true that the estimated capitalization to which he refers is based solely upon national banks becoming members of the reserve banks?

Mr. HITCHCOCK. It is.
Mr. SMITH of Georgia. Then, if the Senator will permit me,
I desire to add further that I am sure he is incorrect in his statement that a reserve bank covering the territory including the Southeast and my own State and going west far enough to include New Orleans and the territory tributary to New Orleans would only have a capitalization of \$6,000,000.

I have had the calculation made, and a bank located in the southeastern section, not going as far west as Mississippi, would have a capitalization of six millions, considering the national

banks alone.

Mr. NEWLANDS. Mr. President—
The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Nevada?

Mr. HITCHCOCK. I do.

Mr. NEWLANDS. If the Senator will permit me, I should like to state that in my judgment the Senator, as well as the other members of the two sections of the Banking and Currency Committee, has lost sight of the fact that the real capital of these reserve banks is made up of the reserves deposited with them by the member banks. The cash reserves of all the mem-ber banks of the country, both National and State, constitute a part of their capital, and they turn over that part of their capital to the reserve banks. If the cash reserves of all the banks of the country aggregate a billion and a half dollars, it means that under this system \$500,000,000, or one-third of that amount, will be deposited by the member banks with the reserve banks. That constitutes an enormous capitalization.

One reason why I have always opposed the requirement of any capital whatever outside of the reserves of the member banks is that it has always seemed to me insignificant and unimportant as compared with the portion of the capital of the reserve banks that constitute the reserves of the member banks, and I have thought it rather weakened the reserve banks to add this paltry additional call upon the member banks. Besides that, I felt that it would change these organizations from organizations intended for protection and security into organizations for profit, to which I am opposed. I may have to submit to the view of the majority on that subject, but I am opposed to organizing these reserve banks at all for purposes of profit.

Mr. REED. Mr. President-

The VICE PRESIDENT. Does the Senator from Nebraska yield to the Senator from Missouri?

Mr. HITCHCOCK. I have been requested by the Senator from Indiana [Mr. KERN] to give way for an executive session. Would the Senator prefer to interrupt me now?

Mr. BACON. I was about to suggest, with the consent of the Senator from Nebraska, if he will now yield the floor temporarily, that there are some important matters that ought to be attended to in executive session.

Mr. HITCHCOCK. I will yield to the Senator from Missouri

immediately after the recess

Mr. REED. What I had to say had special reference to a remark made by the Senator from Nevada [Mr. NEWLANDS]; but it is not of sufficient importance to interfere with the executive session.

#### EXECUTIVE SESSION.

Mr. BACON. Mr. President, I move that the Senate proceed to the consideration of executive business.

The motion was agreed to, and the Senate proceeded to the consideration of executive business. After 10 minutes spent in executive session the doors were reopened.

#### RECESS.

Mr. O'GORMAN. I move that the Senate take a recess until 8 o'clock this evening.

The motion was agreed to; and (at 5 o'clock and 55 minutes p. m.) the Senate took a recess until 8 o'clock p. m.

### EVENING SESSION

The Senate reassembled at 8 o'clock p. m.

# BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. STONE, I desire to give notice that at the earliest opportunity on to-morrow I shall address the Senate on the

pending currency bill.

Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER (Mr. CHILTON in the chair). The Senator from Utah suggests the absence of a quorum. The Secretary will call the roll.

The Secretary called the roll, and the following Senators an-

swered to their names:

names:
Hitchcock
Hollis
Hughes
James
Johnson
Kenyon
Kern
La Follette
Lane
Leas
Lewis
McLean
Martin, Va.
Myers
HNG OFF Simmons Smith, Ga. Smith, Md. Smith, S. C. Smoot Sterling Ashurst Bacon Borah Nelson Norris O'Gorman Overman Owen Page Pomerene Bradley Brady Brandegee Bristow Stone Thompson Thornton Tillman Variabanan Bryan Burton Chilton Reed Robinson Root Shafroth Colt Dillingham Sheppard Sherman Shively Walsh Fletcher Gronna Weeks

The PRESIDING OFFICER. Fifty-five Senators have answered to their names. There is a quorum present. The question is on the amendment offered by the Senator from Nebraska [Mr. HITCHCOCK], on which he is entitled to the floor.

Mr. HITCHCOCK. Mr. President-

Mr. LEWIS. Will the Senator from Nebraska pardon an interruption for a moment?

Mr. HITCHCOCK. Certainly.

Mr. LEWIS. As I am about to leave the Chamber, I should like to inform the President that before we took a recess there was an understanding that the Senator from Missouri [Mr. vide a rate of interest for Arkansas, for instance, because if it

REED] should conclude an explanation which he had begun, but he yielded in order that we might go into executive session. I should like to ask the Senator from Nebraska if he understood it?

Mr. HITCHCOCK. The Senator from Missouri is here and I

would be glad to yield to him.

Mr. LEWIS. I beg pardon; I did not know that the Senator from Missouri was here. I was a party to making the motion for an executive session this afternoon, and that is why I desired to carry out the contract.

Mr. REED. Mr. President, the remark which I was about to make would have been pertinent at that time, but it is utterly unimportant at this time. I desire that the Senator from

Nebraska shall go on.
Mr. LEWIS. I have discharged my duty.

Mr. HITCHCOCK. Mr. President, I was about to conclude, when the Senate took a recess, some views of the reasons which had led the section of the committee of which I am a member to report in favor of four regional reserve banks instead of a larger number. In brief, I stated that the reasons for the smaller number were that the experience of other countries had taught the need for mobilizing the reserves in a central bank, and that we felt we had stretched to the utmost the possibilities of making proper reserves when we had provided for four reserve banks. We felt some justification for this on account of the great size and area of the country, and on account of the very large number of individual banks as compared with the banking interests of Europe.

We feel that the small number of reserve banks will equalize the rates of interest throughout the country. We feel that with a reserve bank in New York, one in Chicago, one in St. Louis, and possibly one in San Francisco there will really be only four rates of interest in the United States. There is every reason to believe that there will be very little difference between what New York, St. Louis, and Chicago will charge to individual banks in discounting their paper, which means that a bank in one of the Southern States and a bank in one of the Western States will be able to discount its paper at as low a margin of discount as a bank in the city of New York or a bank in

Chicago.

To my mind, that means that the banks in remote States, like Nebraska, my own State, like Arkansas or Kansas or Oklahoma, where capital is comparatively scarce, will, under a system of four reserve banks, be able to discount its paper at as good a rate as though that bank were located on Wall Street in the city of New York, and all the banks in those States being able to do so, the competition between them will lead them to reduce the rate of interest which they will charge the borrowing public, and the result will be not only an equalization of the interest rates throughout the United States but a tendency to lower them toward the level of the interest rates of the old countries.

There is only one rate of interest in France. Away out in the Provinces the discount rate is the same as it is in the city of Paris. There is only one rate of discount in Germany. is only one rate of discount in Great Britain. There is no reason why in this country we should not approximate the same result by including in a single district a great area of country. So the small number of reserve banks argues for a low and a regular and an even rate of interest to the borrowing public.

On the other hand, if you have 8 or 10 or 12 reserve banks

you make each bank subject to the conditions of the territory in which it operates, and being subject to those influences, it will be compelled to charge its member banks a higher rate of discount because of the scarcity of the funds in the territory where it exists. You will have the same condition which exists nowhigh rates of interest in the sparsely settled parts of the counin the South and West, and low rates of interest in the districts of the older and more settled East.

I think that is not desirable. I think that we should have a system by which this can be equalized, by which the surplus funds of the rich East can be utilized in the sparsely settled districts of the poorer West. That is one reason for a smaller number of regional banks in addition to the great benefit that

will come from mobilizing the reserves of the country.

Mr. ROBINSON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Arkansas?

Mr. HITCHCOCK. I do.
Mr. ROBINSON. Will not that be controlled not by the number of regional banks but rather by the rate of discount fixed uniform in the law?

Mr. HITCHCOCK. I think not, Mr. President. There are some things that law can not do. Law can not possibly pro-

puts Arkansas into a territory along with other States in the neighborhood of Arkansas, inevitably the rate of interest in that territory must be governed by the conditions there.

Will the Senator yield for another ques-Mr. ROBINSON. tion?

Mr. HITCHCOCK. In a moment. But if it puts Arkansas in a wide area with varied resources and connected with a great reservoir of idle funds, the reserve money of the banks, Arkansas will get the same effect that the densely populated portion

of that district will receive. It will get an equalized rate. Mr. ROBINSON. I desire to ask the Senator from Nebraska if his amendment authorizes the reserve board to fix a rate of

discount uniform throughout the United States?

Mr. HITCHCOCK. No; it does not and it could not. The provision I have proposed goes only to the extent that one rate of interest shall be charged to all for the same service. this amendment a bank in the city of Chicago across the street from the reserve bank will get no better rate of interest than the bank out in Nebraska which has only \$25,000 capital and exists in a city with but 3,000 population.

Mr. ROBINSON. If I understand the Senator's answer correctly, he misunderstands my question. My question was this: Under the Senator's amendment can one rate of interest be charged to one member bank and a different rate of interest be charged to another member bank in a different part of the country, recognizing in that way the varying demands for loans?

Mr. HITCHCOCK. All of the bills provide that the board of directors of the reserve banks shall fix the rate of interest. I will state it differently. Each of the bills-the original House bill, the bill of the Senator from Oklahoma, and the bill which I reported-provides that the rate of interest in the first instance shall be fixed by the board of directors of the reserve banks. We have taken the precaution in our bill to provide that that rate of interest shall be the same for every bank in the district, so that if there are only four districts the remote regions get as low a rate of interest as the great city in which the reserve bank is located.

Mr. ROBINSON. So you do recognize the right to charge one rate of interest in one district and a higher rate of interest

Mr. HITCHCOCK. Yes; all of the bills do that; but with only four districts, as the Senator will see, there can be but very little variation, because Chicago-already a great competitor of New York, already having enormous banking capital and surplus—is able now to give to her business men practically as low a rate of interest as New York can give. The result will be that in one of the remote States situated in the Chicago district, or in one of the remote towns situated in the Chicago district, they will get as low a rate of interest as does any bank in the city of Chicago.

Mr. ROBINSON. If I understand the Senator's argument correctly, it is that one of the purposes of his amendment is to make, or to attempt to make, uniform the rate of interest to be charged member banks borrowing money?

Mr. HITCHCOCK. That is correct.
Mr. ROBINSON. If that be true—if it be desirable to establish a uniform rate of interest and to disregard the varying demands for loans in the various parts of the country-why not fix it by law and provide that the same rate shall be charged to banks borrowing from the reserve banks without regard to locality?

Mr. HITCHCOCK. Such a provision might possibly be made in the bill which I have reported, because I believe, in effect,

that will be the result.

Mr. ROBINSON. But that is not the provision of the Senator's bill. The Senator has just stated, in answer to my former question, that he has provided four districts and that the rate of discount may vary in every one of those four dis-

Mr. HITCHCOCK. Yes.
Mr. ROBINSON. But by reason of the fact that there is a smaller number of districts than are provided for in the Owen bill, the variation will not probably be so great as it would be under the operation of the Owen bill. What I want to know is, if you desire to recognize as a fundamental principle the right of every member bank to secure loans at a uniform rate of interest, why do you not prescribe that in the proposed law?

Mr. HITCHCOCK. Personally I should have no objection to such a provision, and there are some other members of the committee who would favor it, and as applied to the bill which I have had the honor to report it would really make no difference; but there are some arguments against it. The regional bank alone has the right, in the first place, to make the rate. All the bills have provided that after the reserve bank has

made a rate it is subject to review by the Federal reserve board. It may be reviewed, it may be raised, or it may be lowered. So the Federal reserve board ultimately has the power to regulate the matter. In the bill which I reported we have provided that every bank, as a matter of right, shall be entitled to discounts to the amount of its capital stock. We did that because we did not want to leave in the hands of any board of directors the power to utterly refuse a bank a reasonable amount of discounts. So, to guard against discrimination, we also provided that no bank should give discounts in excess of twice its capital That was to provide against favoritism, because we know from the experience of the past that men having great discretionary power may sometimes become guilty of favoritism. Therefore we provided that no individual bank should have discounts in excess of twice the amount of its capital stock without the express consent of the Federal reserve board.

Within those two limits is the only discretion of the board of directors. We have also provided in our bill that the bank which only has discounts to the extent of its capital stock shall have the lowest rate of interest which prevails in the district, and when a bank goes past half that amount of discounts it becomes obligatory upon the reserve bank to place an additional charge for interest-a higher charge for interest-for the purpose of checking excessive discounts. No such provision exists in either of the other bills. I think it is in the interest of equality; I think it is in the interest of safety. favoritism on one hand and discrimination on the other.

Mr. ROBINSON. If the Senator will permit me further, the Senator is aware of the fact that in certain parts of the country, especially in the West and South, the demands for loans at some seasons of the year are greatly in excess of what exists in the East. If this legislation is calculated to produce a uniform rate of interest throughout the country, the inevitable result, in my judgment, will be the attraction of money to those sections where the demand is greatest; and I am inclined to think that some consideration, at least, ought to be given in legislation of this character to local demands and local conditions; yet I recognize the fact that if the law provides that any member bank in any part of the country may secure a loan at the same rate of interest as any other member bank in a different part of the country the inevitable result would be to equalize interest rates throughout the United States. That result would unquestionably tend to develop those sections of the country where there is a demand for an increased amount of money for the purposes of their development.

Mr. HITCHCOCK. That is very true, Mr. President, and I think it is one of the important purposes which should be kept in view in this legislation. This is one country; this is a public utility; and being a public utility we should, as far as possible, aim to have it placed at the disposal of the whole country upon equal terms. We in the West undoubtedly send our mail to greater distances than do people in other parts of the country, but a postage stamp as a public utility costs no more to us than it does to a man sending a letter across the city here in

Mr. BRISTOW. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. HITCHCOCK. I do.

Mr. BRISTOW. I could not hear all that was said by the Senator from Nebraska and the Senator from Arkansas, and I may be repeating something that the Senator from Nebraska has already stated; but I will say that, under the amendment offered by the Senator from Nebraska, a little bank in a remote region in Arkansas is entitled to its discount up to the amount of its capital stock at the same rate that the largest bank in St. Louis would get from this regional bank that we seek to create. It will be entitled to it under the proposed If that is not a provision in the interest of the people of the United States, I do not know how you can frame one.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. I do.

Mr. POMERENE. I was going to address myself rather to what the Senator from Kansas has said than to the Senator from Nebraska. Does the Senator from Kansas think that under any and all circumstances each of these banks would get exactly the same amount of accommodation from the regional banks, considering the amount of their capital and surplus?

Mr. BRISTOW. They will get what they ask for up to the amount of their capital, if they want it. If they do not want it, they will not take it. If they need it, they can get an amount up to their capital and surplus at the same rate.

Mr. POMERENE. Is that in no respect to be dependent upon the financial condition of the bank or the moral standing of the

directors of the bank?

Mr. BRISTOW. Mr. President, if the Senator from Nebraska will pardon me further, our bill prescribes that certain prime commercial paper, a part of it running for six months, such as the cattleman's paper and the farmer's paper of the West, and 90-day paper, the merchant's paper of the west, and 90-day paper, the merchant's paper of the village or the city; that is, first-class paper, shall be entitled to rediscount. The bill fixes the status of that paper, and, whether that paper is owned by a bank of \$25,000 capital or a bank of a million dollars capital makes no difference in the value of that paper. That paper is A 1 paper, and whether it is presented by a farmer or a merchant who lives in a remote district in Kansas or Arkansas, or whether it is presented by a merchant who lives in the city of St. Louis or Kansas City, it is good and will be paid when it is due; and when that paper is taken to a regional reserve bank for discount it is entitled to the same consideration, whether the note is for \$500 or for \$5,000.

Mr. POMERENE and Mr. ROBINSON addressed the Chair. The PRESIDING OFFICER. The Chair is unable to tell

who is entitled to the floor.

Mr. BRISTOW. If the Senator from Nebraska-Mr. ROBINSON. The Senator from Nebraska The Senator from Nebraska has the floor. Mr. HITCHCOCK. I have yielded to the Senator from

Mr. ROBINSON. Will the Senator from Kansas yield to me for a question?

Mr. BRISTOW. Certainly.

Mr. ROBINSON. Did I understand the Senator correctly to say that under the Hitchcock amendment one small bank in any part of the United States would be entitled to the same rate of discount that any large bank in another part of the United States would be entitled to?

Mr. BRISTOW. Within the regional district.
Mr. ROBINSON. Oh, within the regional district.
Mr. BRISTOW. I think it ought to be within the United

States. That is the reason I am primarily in favor of a central bank, but our bill provides for equality of treatment within the respective regional districts. I think we ought to have some kind of a provision by which the rate could be fixed the same throughout the United States.

Mr. ROBINSON. Varying rates may be charged within the four districts or eight districts?

Mr. BRISTOW. In the four districts; we do not recognize eight districts. We think it would be a great misfortune to create more than four.

Mr. ROBINSON. But the amendment contemplates the

future possibility of eight districts?

Mr. BRISTOW. It makes it possible, but it never would be undertaken, because two years will demonstrate the utter uselessness of more than four reserve banks.

Mr. ROBINSON. Why do you put a provision in the bill which you yourself regard as utterly useless? If you are satisfied that there is no possibility of any demand ever arising for eight districts, why do you provide that eight may be created?

Mr. BRISTOW. I am expressing my own views. I did not

want provision made for anything else but four, but other

Senators thought it was well-

Mr. ROBINSON. I am discussing the amendment as it is

before the Senate.

Mr. BRISTOW. But others thought it was well to permit this to be done, if experience should demonstrate that our judgment was wrong as to four.

Mr. HITCHCOCK. Mr. President, there is a very—Mr. POMERENE. Mr. President—

HITCHCOCK. If the Senator from Ohio will permit me, there is a very natural and proper answer to the question asked by the Senator from Arkansas. The reason why it was provided in the bill reported by myself that the system should start with four reserve banks was because we felt that four banks were the utmost number that it was safe to create and still secure a mobilization of the reserves and a strong system. At the same time, there were members upon the committee who thought that a larger number should be established; and so, when we came to a vote in the full committee of 12, in a perfectly nonpartisan spirit we voted, 8 to 4, as I recall, in favor of four banks, but conceded to the minority of the committee the proposition that the Federal reserve board should have the power after four years to increase, without any legislation, the number of reserve banks to eight, providing experience should teach that the increase was wise. It was a compromise made in the full committee before the committee split, and our section of the committee retained it, as we retained provision, as far as I am concerned and as far as my vote is

other provisions that had been decided upon before the split occurred.

Mr. ROBINSON, Mr. President-

Mr. POMERENE. As between four banks and a central

The PRESIDING OFFICER. The Chair can not keep track of the proceedings when more than one Senator is talking at

the same time.

Mr. ROBINSON. If the Senator from Nebraska will vield to me, I desire to suggest, both to the Senator from Nebraska and to the Senator from Kansas, that in reporting an amendment recognizing the necessity of providing for four regional reserve banks they have recognized the principle contained in the so-called Owen bill, which recognizes the necessity for regional reserve banks. There is no difference in principle between the establishment of four and eight. If a difference in principle exists, it must exist between the central-bank plan and the regionalbank plan and not in the number of regional banks.

Mr. HITCHCOCK. The Senator is entirely correct.
Mr. ROBINSON. What I want to know is this: Having recognized the principle of the regional reserve banks, and having in that sense admitted that the principle of the central bank is wrong, how is it that you arrive at the conclusion that the number "4" is sacred and the number "8" or "12" is absurd or objectionable from the standpoint of public policy or the interests of the country?

Mr. HITCHCOCK. In answer to that question, I will say to the Senator that the section of the committee of which I am a member, and in fact the whole committee, does not regard any part of this legislation as sacred. There was a disposition when this bill came from the House of Representatives to regard it as a sacred document of which we were not supposed to dot an "i" or cross a "t," but after we had been in session a number of weeks and had heard a few hundred witnesses, our opinions gradually changed, and both wings of the committee united in the conclusion that the bill must be materially amended. The section of the committee headed by the Senator from Oklahoma [Mr. Owen] decided that it must be amended 60 per cent, and they retained 40 per cent of the We agreed with him so far as he went, but we concluded that it should be amended 64 per cent, and we retained 36 per cent of the House bill. I merely cite this to show that the day of sacred documents has passed.

Mr. ROBINSON. Mr. President—

The PRESIDING OFFICER. Does the Senator from Ne-

braska yield further to the Senator from Arkansas?

Mr. HITCHCOCK. I do.
Mr. ROBINSON. The Senator from Nebraska attaches more importance to the word "sacred" than I did in making the statement. I will state the question in another way. If you recognize the necessity for regional banks at all and discard the central bank plan, how is it that you arrive at the con-clusion that there should be four regional reserve banks, and no more?

Mr. HITCHCOCK. Very logically, as I believe, I can show the Senator. At the present time there are three central re-serve cities in the United States which have grown up as the result of custom in the banking and commercial world. In those three cities are concentrated the great reserves of the United States, the great reserves of the national banks, and many of the reserves of the State banks. Those three cities naturally would be selected as three of the places in which to locate the reserve banks of the country. Banking business and commercial business would be dislocated to the least possible extent by locating in those three cities, in our opinion, the reserve banks of the country; but under this system it is necessary to take into account in part geographical conditions, because these reserve banks are to perform a function somewhat different from reserve agents in the past, and on account of the great distance to the Pacific coast, although according to the volume of business it was hardly entitled to it and hardly needed it, we felt it would be wise to locate upon the Pacific coast another regional bank, and in that way we logically arrived at the conclusion that four regional banks should be established.

Mr. ROBINSON. But you did not stop there. If I may proceed for just a moment, you provided for the creation at the discretion of the Federal reserve board of eight additional Federal reserve cities, recognizing the possibility, at least, if not the probability, of the necessity of 12 regional banks as the measure is put into operation and develops.

concerned, was put in there for the purpose of equipping the President of the United States and the Federal board which he was to appoint with the power of increasing the number of banks in case, after two years' experience, he thought it desirable. On my part, I am absolutely confident that neither the President of the United States nor the board which he is to appoint would, after two years' experience or one year's experience, do anything of the kind; but I was perfectly willing to give them the power to do so.

Mr. ROBINSON. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska further yield to the Senator from Arkansas?

Mr. HITCHCOCK. I do. Mr. ROBINSON. If I understand the gist of that statement, it is that, while the Senator doubts the wisdom or the necessity for it, he has consented to a provision which will give to the appropriate authorities the power to do two years from now

what they insist upon doing now.

I maintain my first proposition, that in principle there is absolutely no difference between the Owen bill and the Hitchcock bill, except that the Owen bill provides now for 8 regional reserve banks with a possible increase to 12, whereas the Hitchcock amendment provides for 4 regional reserve banks with a possible increase to 12. So there does not appear to me to be a very strong distinction in principle between the two bills as regards the regional reserve banks. Both bills recognize the principle of the regional reserve bank and discard the principle

of a central bank; and you can not get away from it.

Mr. HITCHCOCK. The Senator is entirely correct. There is no dispute there at all. There is no difference in principle. It is simply a difference in mathematics, based upon experience. We have had experience now for many years with having our reserves cut up in the 50 different reserve cities of the country. That is where they are located now. Some of them are central reserve cities and some of them reserve cities, but there are 50 different cities holding the reserves of the banks of the country. It has been thought that the result of that was to scatter the reserves entirely too much, and that the time would come when we would follow the example of Europe and mobilize and centralize our reserves.

There were a number on the committee who felt that we should follow the example of Europe absolutely and have one central reserve bank; but out of deference to the strong sentiment of others who disagreed with them, particularly the sentiment of those who were in a position of power to enforce their beliefs, the concession was made in principle, and we have merely sought to keep the number as small as possible, for the sake of protecting the country and making the system as strong as possible. The Senator is right; there is no difference in

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. I do.

Mr. POMERENE. As I recall the bill to which the Senator's name is attached, as reported from the committee, it provides for four regional banks, with the privilege after two years of organizing 12 additional banks, and also provides for the organization of branch banks without limit.

I wish to call the Senator's attention to a further matter. The Senator seems to be very strong in his conviction that there ought not to be more than four banks, but on April 8, 1913, the Senator introduced in the Senate a bill providing for not less than 20 nor more than 25 regional reserve associations.

If the Senator was of the opinion eight months ago that there should be 20 or 25 of these associations, and now is of the opinion that there should be only one bank, and has agreed to a report that there should be four banks, with the privilege of organizing 12 more, and with innumerable branch banks, it seems to me the section of the committee of which the Senator from Oklahoma is the chairman is about right when it says that there shall be not less than 8 nor more than 12.

I should like to understand what the reason is for this change of view with respect to the number of banks. Certainly it can not be regarded as going to the vitals of the question; otherwise the Senator would not be willing to change from the one

system to the other.

Mr. HITCHCOCK. Mr. President, I am rather surprised that the Senator from Ohio brings up against me the bill which I introduced last April, because I made a frank confession in the committee that after the protracted study we had given the matter and after the many witnesses we had heard I was ashamed of the crude and useless proposition I had made in that bill. It was not a bill which possessed the dangers of the bill as it came from the House of Representatives. It was a bill in which I

endeavored at the time to put my ideas into form, because was strongly in favor of banking and currency reform; but it did not take many months of careful study of this question for me to see that to provide 12 or 20 or 25 reserve banks was to provide a mere paper wall against a flood, and that they would be as useless and helpless to save the banking system of the United States in time of trial as any foolish device which the people might produce.

Mr. BRISTOW. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Kansas?

Mr. HITCHCOCK. I do.

Mr. BRISTOW. May I inquire if there have been any greater changes in the opinion of the Senator from Nebraska, judging from the bill he introduced, than there have been in the opinion of the Senator from Oklahoma, judging from the bill which he introduced and the bill for which he is now standing?

Mr. HITCHCOCK. Mr. President, I am interested in the merits of this question. I really am not interested in analyzing the changes which have gone on in the minds of men as they have studied this question. I do not think it is discreditable I think it is desirable—that men go with an open mind into the study of a great question. I have no criticism to make upon the Senator from Oklahoma for such changes as he made in the bill of which he was the joint author-at least so reputed.

I think it is to the credit of a man, when he finds that his first staggering effort has been unwise, to make a change. have had no hesitation in calling the attention of the committee to the fact that I had introduced such a bill. upon the floor of the Senate that it was my heart's desire that reserve bank might be established in my home town, which is a considerable banking center, with sixty or seventy-five million dollars of deposits, but I could not candidly urge the establishment of such a reserve bank. Anyone who studies this question candidly will inevitably come to the conclusion that the safety of a banking system consists in so centralizing your reserves as to create great reservoirs for the protection of the banks of the system.

Mr. THOMPSON. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the junior Senator from Kansas?

Mr. HITCHCOCK. I do. Mr. THOMPSON. The fact is, then, as I understand from what has been stated by the Senator from Nebraska and also by other Senators of his branch of the committee, that all of the Senators who now advocate four regional banks instead of a larger number really believe in the central-bank idea. Am I right?

Mr. HITCHCOCK. As an acamedic proposition, I think they do. As an academic proposition, I think the Senator from Oklahoma does.

Mr. OWEN. He does not.

Mr. THOMPSON. And the other members of the committee

believe in the regional bank system?

Mr. HITCHCOCK. They certainly all believe in the essentials of the central bank. The central bank does not consist of a vault. The central bank does not consist of a mass of money. The central bank does not consist of a single sign. The central bank consists of central control, and that is provided in this bill. The control is central; and when you get your control centralized, you have a central bank.

Mr. STONE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Missouri?

Mr. HITCHCOCK. I do.

Mr. STONE. If it be true that the central control provided for in the bill is in fact a central bank, what is the objection to the proposition submitted by the Democrats of the committee for eight regional banks or any other particular number of banks? If the Federal reserve board is in substance and effect a central bank, as the Senator says, and if a central bank is the supreme idea of the Senator; if that is his ideal after reforming his notions; if after two or three months of diligent study of the subject he has changed his former opinions, as presented in the bill he offered, and he now comes to the idea of a central bank, and thinks that the Federal reserve board is in effect a central bank, what is the objection to having 8 or 10 regional banks?.

I take it that it is now the idea of the Senator from Nebraska to have a central bank—that is to say, a real central bank, one bank-stationed here in Washington, with vaults where all the reserves are to be congregated, and that should exercise plenary control-with one supreme board to exercise absolute control over the whole business of banking. That seems now to be the idea of the Senator, under his revised

plans. That being so, would he not have the regional banks, or, to the same effect, branch banks, scattered throughout the country under the control of this great central bank? A central bank with numerous branches seems to be the Senator's present ideal of a banking system. Now, as I understand him, he says, in substance and effect, that his bill as he reports it, and likewise the Owen bill as reported, would accomplish the very end he desires.

I am puzzled to know just what it is that troubles the men-

tality of the distinguished Senator from Nebraska.

Mr. HITCHCOCK. Possibly if the Senator would spend more time in the Senate Chamber he would be able to get Mr. STONE. I spend far more time in the Senate Chamber

than the Senator from Nebraska—twice as much time.
Mr. HITCHCOCK. The Senator from Nebraska has not stated that this board of control, although it contains the essence of a central bank, will produce the ends of a central bank. I have stated that all bills provided for central control, and that, in its essence, central control was a central bank. The bill reported by the Senator from Oklahoma, however, and I pre-sume supported by the Senator from Missouri, contains such defects as to hamper and cripple the operation of the system.

What does it do? It proposes to divide up the country into 8, 10, or 12 distinct systems. It proposes to give to the banking interests of each division the control over the banks in each

Does the Senator grasp that idea? Mr. STONE. Oh, that is not difficult to grasp.

Mr. HITCHCOCK. I think not, but it is a very important These 8, 10, or 12 regional banks, public utilithing to grasp. ties, devised by Congress to serve a public purpose, are to be placed under the control of the banking interests instead of the Government. Not only that, but it is proposed to divide up the great reserves of the country into 8, 10, or 12 different managements, different controls.

When stringencies come, as come they will, there will be the same scramble between these 8, 10, or 12 regional banks that now exists between the 50 reserve cities of the country. So I say that the system, as reported in the bill advocated by Senator OWEN, hobbles and cripples the central control provided for.

I trust the Senator from Missouri can get that idea straight. Mr. STONE. I get the idea, and suppose I get it straight.

Mr. HITCHCOCK. I think I gave it straight.
Mr. STONE. I do not care further to interrupt the Senator, however. I am interested in having him proceed. Nevertheless,

it seems to me his argument is ill founded.

His objection now is that although we have, in effect, a central bank, represented in the Federal reserve board, we should not have 4, 6, 10 regional banks under a local or regional management; that is, under boards appointed under the provisions of this bill to direct the affairs of those regional establishments. He seems to think that that arrangement would provoke some conflict between the central bank, as he calls it, represented in this central board, and the regional board. But the only difference I can see between the provision as it appears in the bill and the one the Senator outlines would be that the Senator would create a great central bank here at Washington with one board, with all the reserves of the whole Nation concentrated here, and then have branch banks scattered out over the country, how many the Lord only knows, instead of having a central Federal reserve board with 8 or 10 regional banks under supervision and control.

Mr. HITCHCOCK. That is not my proposal, I will say to

the Senator.

Well, then, I do not know just what the Sena-Mr. STONE. tor's proposal is.

Mr. WILLIAMS. Does not the Senator provide for branches for regional banks?

Mr. HITCHCOCK. Both bills provide for that. All these bills provide for that.

Mr. WILLIAMS. Do you limit them in the slightest degree? Mr. HITCHCOCK. Not at all. They can be formed with branches. When the term "branch" is used it should not be considered as a branch bank. I will illustrate it to the Senator: Suppose a regional bank is established in Chicago. The banking business will be done there at Chicago, but the territory of Chicago, in the bill which I had the honor to report, will embrace a number of States through the Northwest and the West and in the Mississippi Valley. For the convenience of the great banking center in that region it is proposed to permit the regional bank, under authority of the Federal board, to establish branches-not branch banks, but branches-a branch to consist simply of an office, with two or three men it it, for the purpose of discounting the paper of the bank. If one is established at Kansas City, as would undoubtedly be the case, then

the banks, naturally, in Kansas City that would desire to discount paper could bring their paper there and discount it, and the members of the branch representing the Chicago reserve bank would take that paper and give to the Kansas City bank, or the bank in the territory of Kansas City, a draft on the Chicago bank for the amount of money that the paper dis-counted amounted to. Then the Kansas City bank, or the other bank, would send that draft to Chicago and get either credit or currency for it, as is proposed. It involves no bank, but simply the branch or office of the big reserve bank at Kansas City. All the bills provide for that, and it is necessary on account of the great area of the country. It involves neither mystery nor anything dubious in its nature.

But the point I desire to make in reply to the question of the Senator from Missouri is that under the bill which I have reported the Federal reserve board appointed by the President retains absolute control of each one of the reserve banks. It names a majority of the directors in each. It holds the reins of control of these reserve banks in its own hands. But under the bill reported by Senator Owen that control is lost. intrusted to the banking interests, the very banking interests that we have heard denounced as being the money devils of the country. It turns over to the banking interests of New York the control of the reserve bank in New York City. It turns over to the banking interests of Chicago the control of the reserve bank in Chicago.

In our opinion, that is not right. We believe in Government control, real and actual, all the time, and we do not believe that the banking interests in any community should be intrusted with that power. We are not necessarily suspicious of them, perhaps not as suspicious as some of the other gentlemen who have been making great speeches against the money devils, but we believe that this is a public utility and that the control of it should be left in the hands of the agents of the Government of

the United States.

It is easy to see that if you place the control of a board of directors in the hands of the banking interests the powerful banks are the ones that are going to dominate it. Through banks are the ones that are going to dominate it. their country correspondents and their great acquaintance they will be the ones who will elect the directors. They have an

interest at stake; they have axes to grind.

In your bill you practically give them unlimited power. have some fine words in it about an equal treatment of all banks, but you know what have been the charges in the past about the discriminations that have been made by the banking interests of New York when they were not in a reserve bank. They were not in a legalized trust; they were not in a legalized organization. They simply had interlocking directors, and they have been able to blacklist paper and blackball borrowers until men have been driven into bankruptcy because of the discrimination of those New York interests.

Yet you propose in your bill to turn over to their control the reserve bank of New York. You propose to turn over to the control of the banking interest the reserve bank of that district. That may be right. I do not think so, and I do not think the people of the United States after all this excitement over the Pujo investigation are going to be satisfied to have Congress put in the hands and under the control of the banking interests the

control of this great public utility.

Why do they want the control? The Senator from Colorado [Mr. Shafroth] said that they will not come into the system until they get control. That may be true of some large banks that have axes to grind, but out in my part of the country the banks have no such prejudice, I assure the Senator from Colorado, and I know what I am talking about. I have had more correspondence with the people of Nebraska—I have come in closer touch with them, I will venture to say—than any other Senator on this floor with the people of his own State. I have had to defend myself, and I have succeeded in doing it; and I know whereof I speak when I say that the people of Nebraska do not want to have the reserve banks controlled by the banking interests, and I know whereof I speak when I say that the people of Nebraska want to have the reserve banks owned by the people and not by the banking interests.

Mr. SHAFROTH. I want to say to the Senator—
The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Colorado?

Mr. HITCHCOCK. I do. Mr. SHAFROTH. I want to say to the Senator from Nebraska that it is nothing but human nature which prompts men to say that when our reserves and our capital are in a bank we want the control of it. I want to say that no matter how many men the Senator consulted, unless there was a fair discussion before the people and they determined to come into a system where \$400,000,000 of their money was to be controlled by appointments which might in the end drift into a political

management, that can not be urged with force.

Of course, the Senator has the best motives in the wide world, and I have no criticism to make of him as to his changing his mind. It is natural that we should do that if we get a new light on a subject. But we can not avoid the conclusion that if the Senator's bill is passed it will mean no bill. That is what it will mean. You might just as well tear this bill up now if you are going to insert in the bill a provision that when men put \$400,000,000 into banks, their own money, they can not control the board of directors who handle that money. That is simply something that will kill the bill. It may be that a single bank has some good points in it, and it may be if you want a competing bank that is all right, but our bill is framed want a competing bank that is all right, but our bill is framed upon the theory that this is a bank of banks for the purpose of preventing runs on banks, for the purpose of preventing failures in times of excitement. The banks, as a matter of fact, want and must have this place of discount in order to get the money.

You will find that there is no man who will trust his money when he has not a voice in the control of the organization that is to handle it. You may say that individuals will say, "All right, I agree to that," but when they come to the point where they are called on to put up the money, the result will be that you will find a failure of the system; and then you will have a law on the statute books that does not operate at all, with many changes as to the circulating medium and many

changes in other respects.

We have attempted to draw this bill upon the theory that it is a bank of banks. We are not providing an investment for the people. The people have hundreds of opportunities to invest. We are not providing in this bill for something that will create a rate of interest for somebody. We are providing for one specific thing, and that is for the mobilization of the reserves in

order to prevent runs upon banks.

One great people's bank might be considered a good institution in a certain line, but when you consider that we have 25,000 people's banks now, what is the use of turning this into another people's bank? Every national bank in the United States is a people's bank. Why? Because any five persons can get together and organize a bank and go into the banking system. If any community in the United States feels that the banks of that community are oppressive, all they have to do is to set up an opposition bank, and they have a perfect right to do it; and that becomes a people's bank. We have not any necessity for more people's banks, but we have a necessity for a bank of banks, for the purpose of giving discounts to banks so that they can prevent runs upon these institutions and thereby be of advantage to the

To say, as a matter of fact, that these banks should be people's banks it seems to me is contrary to the very principles of our bill. It is diametrically opposed to it. It is absolutely a butchery of the bill as it came from the House. want to mix a bank of banks with a people's bank or a bank in which opposition or competition arises as against the other

banks.

If this provision were passed as the Senator says it should be, it would absolutely result in a destruction of the entire bill. We would have no system whatever, because it is necessary for the banks to come into it. You can not force them in. I is said that you can go out of the system. That is true, and if it is to their detriment they can go out and organize under a State law. Consequently they can not be forced into the system; they would say, "No; we will not accept your terms; we will not put our \$400,000,000 into the hands of a board of directors where we have not a majority of the directors. It means that the system would not be subscribed for. It means, as a matter of fact, that it would be a failure. It would mean that the banks would not discount at these banks. It would mean a complete collapse and failure of the entire system, and

that would mean that we would have no system at all.

Mr. HITCHCOCK. I have heard the Senator from Colorado go over that ground a great many times, but he has never mentioned the name of a bank that said it would not come in unless

the banks had control of the board of directors.

Mr. SHAFROTH. Would the Senator put his money into the

hands of anybody he could not control?

Mr. HITCHCOCK. I have done so many times.

Mr. SHAFROTH. No; the Senator would not if it was a

permanent investment.

Mr. HITCHCOCK. I go to a bank and make my deposit, and I have no control over it. I go to an insurance company and buy my insurance and have no control over it. I go to the Post Office Department and make a deposit in the postal savings bank and I have no control over it. The Government runs it.

Mr. SHAFROTH rose.

Mr. HITCHCOCK. If the Senator will permit me, before I conclude, the branch of the committee to which he belongs has itself been compelled to come to the same doctrines, because their bill provides that when the banks fail to subscribe a sufficient capital to maintain a reserve bank, then it shall be offered to the public, and if the public do not subscribe it shall be taken by the Government. So the Senator has been forced to come to the ownership of the stock by the people as a matter of necessity.

Mr. SHAFROTH. No: if the Senator will observe the language that is used, it says that it may be offered to the public. It, however, proposes that the banks shall subscribe for this capital stock, and if they do not subscribe they must go out of the system. There are many people who object to that, it is true, but nevertheless you can not have two sets of national banks, one belonging to the system and another national bank not belonging to it. The Senator has made citations, but that is a public service. Of course, from the Post Office you get a public service, and there are certain things the officers of the Government have to comply with. The men who invest their money in a corporation always believe that the people who have the money there should have the control of that corporation.

Mr. HITCHCOCK. Mr. President, we are not proposing in our bill that the banks shall invest their money. This brings me to the most important part of the amendment which I have offered. It provides that the banks shall underwrite the sale of this stock and shall take it on sale, but that for 60 days the stock shall be offered to the public in small allotments, and that such part of the stock as the public does not take shall be taken by the banks themselves; but that when taken by the banks themselves it is a live asset which they can sell at will and realize on when it becomes necessary to raise money for their depositors or desirable to raise it for their borrowers

Now, Mr. President, there is not a precedent in the world—Mr. WILLIAMS. Right there I should like to ask the Sen-

ator a question.

The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Mississippi?

Mr. HITCHCOCK. I do.

Mr. WILLIAMS. Does not his bill provide that these reserves shall be contributed by the member banks?

Mr. HITCHCOCK. It does.
Mr. WILLIAMS. That is what I thought. How many millions of those reserves which are now the money and property of the member banks will be placed under his bill as reserves in the regional bank?

Mr. HITCHCOCK. That is all a guess, of course. We will say, roughly speaking, \$450,000,000.

Mr. WILLIAMS. That is the point I was arriving at. The regional banks will have \$450,000,000 independently of the question as to who shall subscribe for the stock?

Mr. HITCHCOCK. Those same banks now have those reserves kept in banks over which they have no control. I opine that they will feel just as safe to have their reserves in great reserve banks, having nine directors, five selected by the Government and four selected by themselves. As it is now no bank has any power to select a director in a bank in which it keeps its reserves

Mr. WILLIAMS. No; it has power to select—
Mr. HITCHCOCK. And it has power—
Mr. WILLIAMS. It also has power to select the banks.

Mr. SHAFROTH. Fifty-two banks of the central reserve

The PRESIDING OFFICER. The Chair will have to call the attention of Senators to the rule. The Chair can not keep order unless they address the Chair and get permission to interrupt the Senator who is entitled to the floor. The Senator from Nebraska will proceed.

Mr. HITCHCOCK. I have stated that in my correspondence and in my conversation with bankers in my State I have not found one who objected to having the Government of the United States select a majority of the board of directors in the reserve

Mr. SHAFROTH. Mr. President, the Senator heard what protest was made

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Colorado?

Mr. HITCHCOCK. I do.

Mr. SHAFROTH. The Senator heard what protest was made

by the bankers through their conventions and through the resolutions which were passed at various-

Mr. WILLIAMS. National bank associations, I think. Mr. SHAFROTH. Resolutions which were passed by the various bank associations, one at Chicago particularly, that de-

manded representation upon the Federal reserve board. That board does not deal with the money as does the Federal reserve bank, but they proclaimed that it was tyranny to force them and, but they proclaimed that it was tyrainly to force them into a system where they did not have representation upon the Federal reserve board, though the Federal reserve board exercises only a governmental power, whereas the directors of the Federal reserve banks deal directly with the money, with the making of loans, and in every other transaction as a banker

Mr. HITCHCOCK. Yes; I heard of that protest, but, with other members of the committee, I disregarded it. I did not regard it as of any moment, and experience has shown that the bankers had no idea that their protests would amount to anything or would be considered.

Mr. SHAFROTH. Do you not think—
The PRESIDING OFFICER. Does the Senator from Nebraska vield to the Senator from Colorado?

Mr. HITCHCOCK. I do.
Mr. SHAFROTH. Does the Senator not think that if a banker would protest against not having representation upon the Federal reserve board, which does not deal with money, he would not with ten times the power protest against lack of representation on the board of directors which had his money under their control—\$400,000,000 of it—and he not be able to

Mr. HITCHCOCK. I will say in reply to the Senator that have received literally thousands of letters since this agitation began, and I have not received a single protest from a banker against having Uncle Sam control the board of directors.

If the Senator knows of any, I hope he will name one.

Mr. SHAFROTH. That question was never considered until after the committee got together after the hearing of the evi-

Mr. HITCHCOCK. Well, Mr. President, it has been several weeks since that report was made, and I have been out in touch with my people; I have had in my audiences practically every banker in the city of Omaha and many bankers from outside the city of Omaha, and I think if there had been a very violent protest some of them would have whispered it to me in some

Mr. SHAFROTH. That might be true, but, as a matter of fact, all of the bills, or at least the bill that we had before us, provided for six of the directors being appointed by the banks and three of the directors being appointed by the Government. That was assumed to be settled by those who appeared before the committee; and it does seem to me that, in view of that, the banks have not had a fair opportunity to debate both sides of the question to determine which plan they favored. Viewing it from the standpoint of self-interest, it seems to me that they would naturally say that if they furnished the reserves they

should have a majority of the board of directors.

Mr. HITCHCOCK. Mr. President, I think that we are spending too much time on the point. I want to go now to the other point involved in the amendment, which is that the stock in these banks shall be subscribed for and owned by the people

and not by the banking interests of the country.

In the first place, that is the condition in every country in the world, so far as I know. In Great Britain there are 10,000 stockholders in the Bank of England; in France there are, as I recall it, between 20,000 and 30,000 stockholders in the Bank of France; in Germany I think the number is still larger; and I see no reason why in the reserve banks of the United States we should not have a hundred thousand stockholders-people who would be glad to have a 5 per cent investment, provided it is under Government control; people who would be glad to have a 5 per cent investment for small savings and small amounts of money; a 5 per cent investment free from city, State, or National taxation. I want to say, Mr. President, that, to my mind, the providing of that great investment for that large number of people will be an element of strength to the banking system of the United States.

First, it will bring \$106,000,000 of funds, now either idle or employed at a low rate of interest, into the great banking world. An addition of \$106,000,000 to the banking capital of the United States will of itself be a great element of strength to the

In the next place, you will have an ownership of these banks without a voting power, dependent upon the Government to elect the directors, without an ax to grind, having no selfish interest in the policy of the bank; you will have an ownership shifting from time to time, just as investments shift among the people. On the other hand, if you require the banks to subscribe the capital to this system, you practically compel them to take \$106,000,000 out of the communities where it is employed, not

only profitably but efficiently, for the benefit of the communities, and compel them to part with 6 per cent of their capital and surplus and send it off to a remote regional bank, where it can

surplus and send it off to a remote regional bank, where it can only earn a small rate of interest as compared to what it is doing when actively loaned to the people.

Mr. President, we know already that the banking capital of the United States is inadequate. That is a part of our trouble. It is inadequate compared with the banking capital of the Old World, and it is inadequate for a very natural reason. Each individual bank is trying to do as large an amount of business as possible on as small an amount of capital as possible. That policy, pursued through a long number of years in order to get dividends has resulted in the densits growing faster in prodividends, has resulted in the deposits growing faster in proportion than the capital has grown.

The capital is the margin of safety for depositors; and I think it is an evil that this disparity has gone on increasing between capital and deposits, because the margin of safety to the people has not been kept up. With an already inadequate capital it is now proposed in this bill to take some of what already exists away from the communities. It may be that the big banks in the big cities can do this easily enough, because they can turn their portfolio of securities into money very rapidly by rediscounts and get even; but I want to tell you that away off on the prairies of Nebraska, down on the prairies of Kansas, I will say to the Senator from Kansas [Mr. Thompson], out in Minnesota, in all the Western States, and, I think, in some of the Southern States, when you go into a little town where there are a couple of banks with \$25,000 capital each, it is a different proposition. The farmers, merchants, and other people of substance in the town have gotten together a little capital; they have subscribed two hundred, or three hundred, or four hundred, or a thousand dollars each, and they have gotten together \$25,000 capital. It is a big thing for them. propose to take away \$2,500 out of that community. That is one of the most serious objections to this bill. I found it so in talking to the people in my portion of the country, and I found it so in the communications which I have received.

Mr. OWEN. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. HITCHCOCK, I do. Mr. OWEN. Would the Senator object to stating in that connection whether an individual bank such as he speaks of which contributes \$2,500, can not, if it so desires, immediately obtain every dollar of that money again as a loan from the bank at probably 3 or 4 per cent?

Mr. HITCHCOCK. Well, Mr. President, if you divide the country up into 8 or 10 or 12 regional bank districts, I say no; they will have to pay a higher rate out there. I will say they will have to pay a higher rate out there. I will say furthermore, that I have not found any of them that wanted to

make the exchange.

I hold in my hand here an analysis of some 150 letters-I do not remember how many I have received-from the national banks of Nebraska to whom I wrote. I addressed a letter to them and I said, "Before you answer this letter I should like to have you call your board of directors together and give me the sentiment of the people of your community." That was after the House bill passed and came to the Senate. One hundred and twenty banks stated that they were opposed to the bill as it came from the House. They were mostly small country banks in Nebraska. We have very few banks of any considerable size there. Sixty-nine of them said they would probably give up their national charters and join the State system. Fifty-five of them stated that they objected to the compulsory investment of capital, and some of them stated it in very strong language as one of the chief objections they had to the bill. Thirty-three of them complained that they had not any paper which came within the definitions of the bill, or had not enough paper of that kind to make it worth while for them to join the For that reason we have reported in our bill in favor of allowing reserve banks to discount a limited amount of sixmonths' paper, which is the paper that the country banks in these remote regions largely deal in.

Mr. OWEN. Would interrupt him further? Would it be agreeable to the Senator if I should

Mr. HITCHCOCK. Certainly.

Mr. OWEN. I wish to ask the Senator if he ascertained the sentiment of the people of Nebraska from addressing these letters to the bankers?

I was seeking to find out by these letters Mr. HITCHCOCK. whether or not the national banks of Nebraska were going to come in or stay out of the system. I regarded it as one of the great dangers of the House bill that it would result in wrecking the national banking system, because more than 3,000 of the 7,500 banks are small banks; and, if my letters from Nebraska are any gauge, it is absolutely true that the vast number of small national banks throughout the country would have denationalized, and some of them are going to do it now.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. I do. Mr. POMERENE. I will ask the Senator if the answers to his letters were based upon the Glass bill as it came from the House, or upon the Senator's bill, or upon the bill which bears the name of the chairman of the committee?

Mr. HITCHCOCK. They were based upon that "sacred document" as it came from the House, of which, as I have said, we

were forbidden to dot an "i" or to cross a "t."

Mr. OWEN. By whom.

Mr. HITCHCOCK. And which we were commanded to pass without a hearing and without much investigation.

Mr. POMERENE. Mr. President, I have been around these hallowed precincts for some time, and I have not heard that anybody has forbidden anybody else to change his views or to criticize any bill that came from the House, or any bill that Anyone has a right to change his view. originated here. The Senator himself has changed his view a number of times. I say that not to his discredit, but simply for the purpose of showing that he has been a free moral agent all these weeks.

Mr. HITCHCOCK. Mr. President—
Mr. OWEN. The Senator from Nebraska did not tell us by whom he had been ordered not to dot an "i" nor cross a "t," and I would be glad if the Senator would disclose that valuable information, unless it is confidential with the Senator.

Mr. HITCHCOCK. I think I will leave that for the country

I will take my chances on it.

Mr. OWEN. If the Senator is content to leave that as an

insinuation, it is for the Senator to do so.

Mr. HITCHCOCK. I will take that liberty. In order that the Senate may understand the character of letter which I addressed to these bankers, I shall take the liberty of reading it. It was dated September 23, 1913, five days after the bill came to our committee. The letter which I have in my hand is addressed to the First National Bank, Utica, Nebr., and is a sample of the letters which I sent out. It is as follows:

GENTLEMEN: I am addressing this letter to the bank rather than select an officer, in the hope that before answering it the officer who receives the letter may submit the questions to his associates on the

directorate.

Under separate cover I am sending you a copy of the banking and currency bill as it passed the House of Representatives. It is now before the Banking and Currency Committee, of which I am a member, and we are being urged to make an early report upon it to the Senate.

I do not think it is necessary to say how we were being urged. I do not think it is necessary to say how we were being urged.

I would like to know what you think of this bill. Do you think it will help the national banks in Nebraska to serve their customers? If the bill passes as it stands would your bank go into the new system, or would you give up your national charter and become a State institution? If you favor the bill, please state in what particulars, and if you oppose it, please state your chief objections briefly.

A very prompt reply is strongly desired and will be greatly appreciated. The name of your bank and the names of your officers will not be mentioned by me in the committee hearings or elsewhere if you desire to write confidentially.

I received a very general response to that letter; not from all the banks, but from a very large number. I have read an analysis of their answers, and those answers convinced me at that time that the bill as it came from the House was a great menace, and that one of its serious defects was the compulsion put upon the national banks to join the proposed system or go out of the

national banking system.

That led me to consider very closely the idea of having the stock sold to the people. I have said that every central bank in the countries of the Old World, where the banking systems have attained the highest degree of perfection, where runs are unknown and panics are practically unknown, where they have succeeded in improving upon their system generation after generation until they have it nearly perfect-in every one of those countries the people own their central bank; they own their reserve bank, and the stock is scattered, as I have said, between 10,000 owners in England, between 20,000 and 30,000 owners in France, and the same number in Germany. So I say if precedent, experience, and example count for anything, certainly public ownership of the stock is a proper plan to adopt.

Mr. POMERENE. Mr. President

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. I do. Mr. POMERENE. Mr. President, the Senator from Nebraska has just referred to the banks of the Old World, in which the people hold a substantial amount of the stock-

Mr. HITCHCOCK. All of it.

Mr. POMERENE. All of it. It is also true that those are, in very truth, people's banks, in which they discount their paper, make their deposits, and deal with them as we deal with our individual banks in this country, while in the bills which are now before the Senate none of the individual stockholders, in case there should be individual stockholders, would have any right to make any deposits in any of the reserve banks or to enjoy any of the privileges which usually exist between depositors and banks. Is not that correct?

Mr. HITCHCOCK. Yes, that is correct; I do not think it is of any importance, however. The stock of those banks is owned by the people of those countries and not by the banks. The banks are not interested in the board of directors nor permitted to sit upon the board of directors if they buy the Bear that in mind, Senators. The great central banks of the Old World, while they hold the reserves of the other banks, are not controlled by the banks; in fact, their independence is zealously guarded. Yet it is proposed in this country to create a banking trust and forever vest in the banks the possession and control and ownership of these reserve banks.

Mr. OWEN. Mr. President

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Oklahoma?

Mr. HITCHCOCK. I do. Mr. OWEN. Does the Senator wish the Senate to understand that the banks of Europe are required to put their reserves in these so-called public-utility banks?

Mr. HITCHCOCK. I have not said so. I said they do it.

Mr. OWEN. To what extent? Mr. HITCHCOCK. They do it completely. Mr. OWEN. The Senator is mistaken.

Mr. HITCHCOCK. Why, Mr. President, the banks of Europe, in either Germany or France or England, keep practically nothing but till money in their vaults. They deposit their whole reserves in the reserve banks, and they have not a thing to say about the management of the reserve banks.

Mr. WILLIAMS and Mr. BRISTOW addressed the Chair.
The PRESIDING OFFICER. Does the Senator from Ne-

braska yield, and to whom?

Mr. HITCHCOCK. I yield to the Senator from Mississippi. Mr. WILLIAMS. Does not the Senator see the difference between that condition and a condition of things where the law compels the banks to keep up the reserves of the regional banks? There is nothing in the law of France that compels anybody except a branch bank of the Bank of France to put its reserves in the Bank of France. There is nothing in the laws of England that compels the joint-stock company banks to put their reserves in the Bank of England. There is nothing in the laws of Germany that compels any banks outside of the branch banks of the Reichsbank to put their reserves in the vaults of the

or unsafe they can withdraw them. A state of legal compulsion to maintain the reserves of the regional banks themselves, by depositing a part of the reserves of the member banks, must strike the Senator as a totally different thing from the voluntary deposit of one bank in another,

Whenever they feel that the management is bad

Mr. HITCHCOCK. In that respect, however, there is no difference between the bills. All bills require that these reserves shall be kept in these banks. Our reserve system is entirely different from that of Europe. There is no reserve required by law in Europe. A bank in the city of Berlin can keep 2 per cent reserve, or 3 per cent, or 4 or 5 or 20 per cent, just as it pleases. The law puts no compulsion upon it. It simply affords it an opportunity to keep its reserves in a great bank, under Government control, but it does not give it any voice in the control of that bank.

Mr. WILLIAMS. Neither has any other voluntary depositor

any control of the bank.

Mr. HITCHCOCK. But in the bill which I have reported the banks are permitted to elect four out of the nine directors, so that they will have a voice in the policy of the bank; they will have an insight into the management of the bank; but the banks will place their reserves there, not because they control the bank, but because they believe it is under Government control and is a safe place to put their money.

Mr. WILLIAMS. One word further.
The PRESIDING OFFICER. Does the Senator from Nebraska further yield to the Senator from Mississippi? Mr. HITCHCOCK. I do.

Mr. WILLIAMS. If the position which the Senator has been advocating for the last quarter of an hour is correct, then why should be commit the illogicality of putting four representatives of the banks upon the board? If it be a horrible thing to let the bankers have the control of the board, why is it not in time, though not in degree, equally horrible to let them be represented

on the board at all? It is purely a public utility, purely for a public purpose, and the member banks are to have no voice about the management of the regional banks. Why not do as they do in the banks of Europe and make the entire board official or public?

Mr. HITCHCOCK. Mr. President, I have great difficulty in pleasing the Senator from Mississippi. First, he criticizes me for having provided that the banks shall not have control of the board of directors, and now he criticizes me because they are permitted to have a minority in the board of directors. will tell the Senator, possibly, why it is. It is because I am the great compromiser. I was even willing to compromise my-self by sitting with a lot of Republicans in order to stand by my convictions, [Laughter.]

Mr. WILLIAMS. Mr. President, if the Senator will pardon me, I do not criticize the Senator for giving the banks four members; but I criticize his argument, and the logicalness and soundness of it, when, after arguing for a quarter of an hour or more that the banks ought not to have any voice, and that the public ought to control the whole thing, he finally confesses in the course of his argument that he is giving them four members, thereby to that extent confessing that the contention contrary to his own was at least partially sound.

Mr. HITCHCOCK. If the Senator was only criticizing my argument, I shall not answer him, because I will admit that it is a very easy matte: to criticize my argument. I am interested. not in my argument, but in the substance of this bill.

Mr. WILLIAMS. I was criticizing the Senator's argument

in the light of his position, which is his bill.

Mr. HITCHCOCK. I served with the Senator from Mississippi in the House of Representatives, and I presume he often found occasion to criticize my arguments then. I have no expectation of living up to the standard of argument maintained by the Senator from Mississippi. [Laughter.]
Mr. SHAFROTH. Mr. President—
The PRESIDING OFFICER. Does the Senator from Ne-

braska yield to the Senator from Colorado?

Mr. HITCHCOCK. I do. Mr. SHAFROTH. A few moments ago the Senator from Nebraska said that we were creating a bankers' trust, and very severely criticized that idea. I want to remind the Senator that in the bill which he introduced in April he did not permit any-body except a bank to become a stockholder in the reserve banks which he was creating.

I do not mean that for a criticism of the Senator's change of views, because I think it is very proper for him to change them; but I have a right to quote him as an authority and quote from his views at that time as against his views at the present time.

The Senator from Nebraska is a man who has made a study of the banking question for many years. He has visited the banks of Europe. He has found how they operate. He came back here and introduced a bill which did not let a single person on the outside of the banks come in as a stockholder in the banks; yet he says we are creating a bankers' trust because we have done the same thing that he did in the introduction of

Not only that, but the Senator says it is outrageous not to let the Government have a majority of the board of directors. When you turn to this same bill of his, however, you find that he provided that every one of the nine directors of these reserve banks was to be elected by the banks.

The bill that is presented here, both from the House and in the form of the Owen amendment, provides what? It provides that three of them shall be appointed by the Government, and it provides that six shall be appointed by the banks. Three of them, however, shall not be bankers. Three of them shall represent industry and agriculture and manufacture, and they are removable by the Federal reserve board if they do anything that is wrong.

Because we advocated that, and took our lesson from the bill which he introduced, the Senator charges that we are creating a bankers' trust. We have provided for the election of only six out of the nine, with the right on the part of the Government to remove three, and the right to appoint three in the first instance. Only three out of the nine are to be bankers; but in his bill everyone of the nine directors was to be appointed

I have not any doubt that a person can change his view; but he ought not to charge us with creating a bankers' trust, when on the 8th day of April of this year he introduced a bill, after a thorough study of the European banks, and placed those provisions in a bill which would come infinitely nearer creating

a bankers' trust than our bill.

Mr. HITCHCOCK. Mr. President, I thought possibly the statute of limitations had run against that bill. [Laughter.]

Certainly there is no Senator here who can say that I ever asked him to vote for it. It did not take long after I had had it printed for me to see that it was no good. While I will not allow anyone else to change my mind for me-be that understood—I always reserve the right to change my own mind.

Mr. SHAFROTH. Yes; but does not the Senator think he ought to be a little more liberal than to accuse us of creating a bankers' trust, when just seven or eight months ago he was

creating a still worse one, if we are creating one?

I do not object to the Senator changing his views. the very highest motive prompted him in doing so. the slightest doubt that he changed his views honestly and without any ulterior motive whatever, because I know his high character; but it seems to me that when he introduced a bill of this kind, the authority for which we can quote from the Senator himself, it hardly becomes him to say that we have introduced a bill to create a bankers' trust.

Mr. HITCHCOCK. Mr. President, the Senator from Colorado has made such a large portion of my speech that I hardly know where I am in my own speech at the present time; but as the Senator from Oklahoma desires to take the floor I shall

hurry to the close of what I have to say.

I want to call the attention of the Senate to the fact that in France the great reserve bank has a capital of \$36,400,000; the Reichsbank, in Germany, has a capital and surplus of \$58,000,000; the Bank of England has a capital of \$70,000,000, all owned by the people. It is seriously proposed in this country, with nearly three times the population of France, 50 per cent more population than Germany, and more than twice the population of England, to create 12 sickly little reserve banks, with an aggregate paid-in capital of only \$50,000,000 all combined.

Most of these little reserve banks would be smaller than the largest private institutions within their districts. They would be much smaller than the reserve banks in the big cities with which the country banks are already dealing; and to consider seriously that this amount of capital, split up into 8, 10, or 12 reserve banks, would meet the great requirements of the banking system for reserves and for discounts is, to my mind, nothing less than ridiculous.

I believe if France has found it necessary, as she has, by experience to have \$36,000,000 capital massed in one institution, and the Reichsbank \$58,000,000 capital massed in one institution, and the Bank of England \$70,000,000 capital massed in one institution, it will hardly do for this country to undertake to do a banking business along the same lines by entering upon our business with an authorized capital and paying in only \$50,000,000 and counting the liability of the banks as the rest of the capital.

It is the practice for shaky business institutions in this country to start with an authorized capital of \$200,000 and pay in \$60,000 or \$70,000. They print the word "authorized" in small letters and the "\$200,000" in large letters, and imagine that they have some substance; but the only capital is the capital that is paid in in cash.

Mr. POMERENE. Mr. President— Mr. HITCHCOCK. So, in this case, the only capital of these banks worth considering at all is the capital that will be paid in gold, in hard gold, to be used by the banks; and the authorized capital or the subscribed capital, being merely a liability of the subscribers, is not a safe capital with which to begin to

do the great reserve banking business of the United States.

Mr. POMERENE. Mr. President—

The PRESIDING OFFICER. Does the Senator from Nebraska yield to the Senator from Ohio?

Mr. HITCHCOCK. In just a moment. So I say, Mr. President, that our provision which requires the \$106,000,000 capital to be paid in in gold is the only safe way to begin business. I say it is a great deal better to have that money drawn from the pockets of the people and brought into the banking world fresh, to add to it and to strengthen it, than it is to take it from the banks, where it is now actively employed, and place it in the reserve banks. I say, furthermore, that it will be safer for the people of the United States, safer for the depositors in the banks of the United States, safer for the borrowers who must apply to the banks of the United States, and safer for the banks that must apply to the reserve banks for discounts, not to have the ownership of these reserve banks monopolized by the banking interests.

The Senator from Colorado objects to my statement that this is likely to create a banking trust. To compel the banks in the first instance to take this stock, and prohibit them from selling it, is to mass them together in practically a single organization, for all time, with a common interest. They will become a political power in every election. They will be knocking at the doors of Congress, and will be united in their demands. If they are not a trust for the purpose of doing banking business, they will be a trust for the purpose of controlling the politics of the United States.

The Senator says there are 25,000 banks in the United States. There are, and they have hundreds of thousands of stockholders, and each one of those banks is a center of power and influence. Unite all of them in a legalized banking trust and you do not know what monster you may be creating by law.

You would not allow them to do it without law. The whole theory of our legislation has been that such combinations are a I would rather have that stock ownership divided among the people. I would rather trust the control of those regional banks to the Government of the United States than to trust it to the banking interests, although I personally have a very good opinion of the banking interests of the United States.

Mr. POMERENE. If I may be permitted to interrupt the Senator-

Mr. HITCHCOCK. Certainly.
Mr. POMERENE. The Senator from Nebraska says there is Mr. POMERENE. no analogy between the corporation that has a small amount of paid-in capital stock with an authorized capital stock of a very much larger amount and the capital of the regional banks which would be authorized with \$106,000,000, with \$53,000,000 paid in and the other \$53,000,000 not to be paid in when the member bank or subscribing bank may will it, but to be paid in upon the call of the Federal reserve board at any time the condition of the bank may require it. When it is called in, as it would be if the Federal reserve board was composed of the right kind of men, the banks we propose would have the same capital as the banks which are provided for in the bill for which the Senator stands sponsor.

Mr. HITCHCOCK. Mr. President, if it became necessary in some great emergency, in the opinion of the Federal reserve board, to require the individual banks to pay in \$50,000,000 in gold, the very conditions which made that necessary would make it almost impossible for the banks to do so. It is a great deal better to allow the people to pay it in now voluntarily than to trust to the future power of the Federal reserve board to compel

banks to pay it in to meet an emergency.

I have been surprised, Mr. President, at the unwillingness of my friend, the Senator from Oklahoma [Mr. Owen], to accept this amendment. It is in line with his whole political doctrine. I half believe that he believes in it to-day.

Mr. OWEN. I will tell the Senator when I have a chance. Mr. HITCHCOCK. I will give the Senator a chance very gladly. I will give it to him now. I wish he would tell us why he does believe in it.

Mr. OWEN obtained the floor.

Mr. THOMPSON. Mr. President-

Mr. OWEN. I yield to the Senator from Kansas.

Mr. THOMPSON. Before the Senator from Oklahoma makes his address, I desire to make a short reply to some reference the Senator from Nebraska [Mr. HITCHCOCK] has made to Kansas and to myself.

He urged very strenuously that it' would be extremely advantageous to the people of Kansas to adopt the banking system he proposes in his bill, and he also stated that it is the desire of the people of Kansas to have such a bill passed. I believe that he claims to have learned of this sentiment on his recent visit West.

Mr. President, I wish to say that I also made a recent visit to my own State of Kansas, and I failed to find a single banker or business man who was favorable to the Hitchcock proposition.

Furthermore, as some evidence as to how the bankers in my State stand on this proposition, the executive committee of the Kansas State Bankers' Association, which is composed of some-thing like 930 bankers, met recently and adopted the following resolution:

Resolved, That it is the judgment of the executive committee of the Kansas State Bankers' Association that the interest of the American people will be best served by provision in the currency bill for not less than 12 Federal reserve banks for the especial reason that a stringency would not affect the whole country as now, but would be confined to its particular record.

A member of this association, in submitting this resolution, has written me a letter explaining the views of the bankers on this important question, which I think it would be of some importance at this particular time in the consideration of this question to read, and I desire to read it.

In reference to the inclosed resolution, passed at an executive meeting of the Kansas State Bankers' Association in Kansas City last week, permit me to suggest that you do not allow anyone to befog the real issue in this currency bill. The real issue in this bill is the 12 regional banks.

The opponents of the bill, in my opinion, would surrender to every feature in it if the Government would give in and compromise on one reserve bank with branches. In our opinion, we need the bill just as

At the present time all our reserves are in one place in the East, and each time that place gets into difficulty the entire country is paralyzed. We have had enough of that, I believe.

The new currency bill is like the new ocean liner; it has 12 airtight compartments, any one of which may be punctured and the ship still float in good shape.

I hope you will stick to the new plan of 12 regional banks. All the banks outside of the general reserve cities should be for it, and I believe many of them are, if you could get next to them confidentially, providing they understand the bill.

I have also submitted the substitute proposed by the Saneton

I have also submitted the substitute proposed by the Senator from Oklahoma [Mr. OWEN] to the State banking department of my State, and I have a short letter from Mr. P. E. Laughlin, the assistant commissioner, which I also desire to read:

Have to thank you for remembering me with copy of the new currency bill as agreed upon by the party caucus, and assure you that personally I am highly pleased with the measure.

I hope it will be passed promptly, as I believe it will prove entirely satisfactory to the interests of the entire country.

I have also submitted the bill to various national bankers of my State, and I have yet to learn of a single banker who disapproves of the measure.

I have several letters here, but I will refer to only one this evening, as it expresses the sentiment of all. It is as follows:

I beg to acknowledge receipt of copy of the currency bill as agreed on by the Democratic caucus and thank you very much for same.

I have read the bill through somewhat hastily, but am very favorably impressed with it in its present form, and think it is perhaps as near right as it is possible for us to expect. It is very much improved over the House bill, and I believe it will be a workable bill and one that all bankers will approve, in that they will accept the terms of same.

same.

I feel that it is quite important that a bill would be enacted that would meet with the approval of the national banks, and one that would be so attractive that other banks would come into the system, for it is not only that all banks already in the system should stay by it, but that the inducement would be so strong that new banks could come in and State banks already organized could have the benefit of same, thus making it a strong national proposition.

This, I think, the Senator from Nebraska will find is the sentiment of the people of Kansas on this proposition, and of the bankers in particular.

Mr. OWEN. Mr. President, this great question, which we have been studying in the United States for many years, has had every detail of it subjected to microscopic examination. It has surprised me to see the insistence of the Senator from Nebraska [Mr. HITCHCOCK] upon amendments which would greatly impair the efficiency of the plan proposed by the House of Representatives and which is now presented, with certain amendments, by the Democrats upon the Committee on Banking and Currency.

We have in the United States 25,000 independent, individual banks, each bank having its stockholders, composed of the citizens of the city or town or village where the bank is located, the stock owned by the people, the banks managed by the people, just as much as a grocery store would be managed by a little grocery company that might gather together \$25,000 of capital and conduct a grocery business for its immediate vicinity. These banks have each and every one of them their own reserve required by law, but in time of trouble they have no place to go; they must rely upon themselves, because they have no adequate security except in their own vaults. When a panic sweeps across the country and they call for their reserves deposited as open accounts in the reserve cities or the central reserve cities they are told that there is a panic on and they can not then get their reserves; much less can they get other needed accommodation or available currency with which to meet the demands upon them. Thus the panic conditions are emphasized and made much worse by almost unavoidable competition of banks seeking and hoarding cash as reserves in their own vaults.

In devising this new system of mutual cooperative assistance, if we had 12 Federal reserve banks, we would be concentrating on an average of 2,000 of these banks in each one of the 12 banks, because there are 25.000 of these independent banks. In effect, what we are doing here is providing a plan of mutual cooperation between these banks. We have had the wise and efficient example of self-assistance set to us in the clearing-house associations of the city banks, where they stand back to back in times of a run or of a panic.

When a run is made upon some single bank within the confines of a city like Chicago, for example, all the banks in the clearing house lock arms and stand guard together and furnish the necessary cash or credits to meet the demands made upon any one of their members. They do this voluntarily. They do it out of an instinct of self-preservation. They do it because it is obvious common sense that they join themselves together in self-defense. And now we are arranging a plan by which

an average of 2,000 of the banks may lock arms as members of a Federal reserve bank.

Mr. WILLIAMS. And legally.

Mr. OWEN. And do it by law under the safeguard and the patronage of the United States, under a plan by which their reserves are concentrated in one of these regional reserve banks, under the protection of the Government, whereby they can get obligations of the United States in the form of Federal reserve notes—good currency—against their commercial bills. So there can not arise again in this country at any time a serious stringency or a panic which can not be instantly abated by all the money which is necessary to restore confidence and to put an end to the monetary panic.

Now, in these net less than 8 nor more than 12, regional banks proposed in our measure, it is proposed that these banks which are going to be established under a charter of the United States shall hold a certain part of the legal reserves of the member banks. Altogether the member banks will put into these Federal reserve banks four hundred and odd million dollars of reserves, if all the national banks come in, and over

\$600,000,000 of reserves if all the State banks come in.

We propose that these banks-whose stock is owned by thousands of citizens-shall be the stockholders in these Federal reserve banks established for the mutual protection of the member banks themselves. It is a bankers' bank indeed. It is

established for that purpose.

The Senator from Nebraska [Mr. Hitchcock], instead of contenting himself with maintaining the proposal of the House of Representatives to establish a bankers' bank for the purpose of enabling these banks to protect each other, is undertaking to tear it to pieces by proposing to establish reserve banks upon a totally different policy. He demands a people's bank, the stock owned by the public, and that the banks, asked to contribute from \$400,000,000 to \$600,000,000 of reserves, shall not be in control of these establishments which are intended to protect them, which are built up for the purpose of giving them stability, but that the banks that may be compelled to put in six hundred millions of reserves shall have only a minority representation on the board of directors.

Mr. WILLIAMS. In their own mutual insurance associations?

Mr. OWEN. Yes; a minority representation in their own mutual insurance associations. In Europe there is a totally different state of affairs. We see in Europe great public utility banks, the stock owned by the public, receiving private deposits and extending private discounts; but in Europe they have just a few big, strong, powerful banks like the Credit Lyonnais in Trance, with branches everywhere throughout the country; and the Government of France was compelled in self-defense to establish a bank directly competitive with these big banks that otherwise would have been able to throttle competition and establish a dangerous private monopoly in banking. The Bank of France was not established as a means of protecting an individual competitive banking system such as we have in this country. They have no such bank system in France as we have in America. They do not have individual banks at every crossroads as we have. The Credit Lyonnais, a gigantic establishment, has its branches everywhere, and the Government had to establish a competing bank, which has the stock held by the public, which allows individuals to deposit in the Bank of France, which allows individuals to come to the Bank of France and get discounts and borrow money as low as 5 francs. An individual can borrow \$1 from the Bank of France. It is in direct competition with the big banks of France, and it was necessary in order to provide the French people a reasonable rate of interest by that competitive plan.

The American idea has been quite different. The American plan has been one of competition between 25,000 individual banks which are not permitted to have branches, the Corn Exchange Bank of New York being one of the very few exceptions

which is conducting branches.

Under the American system we have relied upon competitive banking in the United States, and now this bill proposing these 8 to 12 regional reserve banks is intended to enable the individual bank to fulfill its function by providing it with a place where it can always—not sometimes, but always, under every condition and in all circumstances—discount its commercial bills of a qualified class and get currency, where it can always get relief, and, therefore, where its individual freedom is for the first time established in the United States.

We are establishing the individual freedom of the individual bank; we are enabling the individual bank to perform its function without fear or a quivering cowardice that dares not go against the secret word that passes out from New York all

along the line that "there are going to be tight times." We have heard that deadly whisper too many times in this country; that secret, sinister, base, cowardly cry of fire! fire! fire!

The banks of this country when they hear that cry know that a stringency is on; they know that a panic can be created by making the banks of the country feel that deadly fear. They started out to do it just a few months ago, and the Secretary of the Treasury had to announce to the country that there were \$500,000,000 in printed money available to meet the demands. They started it again and he announced that the funds of the Federal Treasury would be freely put out in this country upon proper collateral in order to put an end to that fear which was

being stirred up by a few selfish men.

We propose by this plan to establish freedom in this country; we propose by this plan to establish a freedom of competitive banking in this country, in order that these banks may fulfill their proper functions by competition. We do not propose to have our plans miscarry and torn to pieces by the bad advice of the Senator from Nebraska. The Senator from Nebraska has been a student of this matter; he has studied the question for years, and it does not avail for him to demand leadership in this matter when just a few months ago he proposed all kinds of plans which he now decries. Why should he be followed as the only prophet who can see the truth?

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Nebraska?

Mr. OWEN. I yield to the Senator from Nebraska.

Mr. HITCHCOCK. I should like to ask the Senator from Oklahoma whether or not he has changed his mind during that time on any important feature of this bill?

Mr. OWEN. The Senator from Oklahoma has not changed his mind as to Senate bill 384, which I am now going to read. Mr. HITCHCOCK. I should like to ask the Senator whether he has changed his mind on the subject of the public ownership of the stock?

Mr. OWEN. He has not.

Mr. HITCHCOCK. Will the Senator permit me to read some remarks that the Senator from Oklahoma made on that subject? Mr. OWEN. With pleasure.

Mr. HITCHCOCK. I read as follows:

SUGGESTION.

It is suggested that if the general public were allowed to subscribe to these Federal reserve banks for a limited sum, the capital could easily be obtained for these Federal reserve banks by popular subscription.

The stockholders of the Bank of England, of the Imperial Bank of Germany, and of the Bank of France are private persons, and it is an advantage for the banks of the country to be permitted to take this stock rather than to have it subscribed by private persons.

If the subscription by the banks is made merely permissive, then the stock books should be opened to the public, and I believe this would be a wise adjustment of the objection and would popularize the Federal reserve system.

If private persons are allowed to hold stock in the Federal reserve banks, there would be no reason why a bank withdrawing should not be allowed to sell its stock to anyone who wishes to buy.

It is provided by this section that the capital stock shall not be hypothecated, the reason for which is obvious. If, however, private persons were permitted to acquire stock in these Federal reserve banks, there would be no good reason why such person should not hypothecate or sell such stock.

In case private persons are allowed to take stock in these banks, it would be proper to allow the stock to be sold by the bank at its option. Some of the banks having complained that it is unfair to them to require them to take stock in the Federal reserve banks, the bill might be judiciously modified so as to make the subscription for stock by the banks permissive, but not compulsory, permitting the general public to subscribe for this stock on a 4 per cent guaranteed basis without a double liability, and permitting the Government directors of the Federal reserve banks to act as voting trustees for the stock held by the public.

Permitting the public to subscribe to the stock of the Federal reserve banks and not making the subscription to the stock compulsory on the banks would tend to popularize the banks and obviate the opposition of those banks who think their subscription to the stock should be optional with them.

Mr. President, I think that is splendid doctrine, and the Senator from Oklahoma thought so on the 26th day of June of this year.

Mr. OWEN. I will answer the Senator. I remember the notes very well. The banks at that time were declaring with great vehemence that they would not come in; that they did not feeling willing to enter a system where the United States Government was going to control the Federal reserve board. The alternative was then suggested that, if they were not going to come in, there was a way to get the necessary capital to protect the banking interests of this country and to protect the

stability of the commerce of this country by putting this stock

out to public subscription.

Mr. President, even in the bill which we have finally presented we have provided that if the banks do not accept the conditions imposed by the bill, in that contingency the stock will be offered to the public, because this country is not going to permit its commerce, its industries, its productive energies to be paralyzed by any future financial panic. There is no inconsistency in it. We have in this proposed system not only a plan to protect the banks themselves, but we are in this system also proposing to put a large amount of the United States funds into these banks—probably not less than \$200,000,000 of money.

It is only a reasonable and just thing that when we do that,

we ought to have the security of a list of stockholders who shall put in a substantial amount of money on their own part, and we ought to have a double liability. In the proposal which we have submitted we require the banks to subscribe for \$106,000,000 and to pay in one-half of that, but we also require them to be subject to a double liability on \$106,000,000, or a liability of \$212,-000,000, against the national banks alone, which is about the amount that the Government of the United States will expect to put into the Treasury of the Federal reserve banks as public

Mr. President, the Senator from Nebraska on April 8 insisted in his bill that there should be not less than 20 nor more than 25 Federal reserve banks, and yet in the committee he was disposed to demand one central bank, although the Democratic National Party declared against a central bank. There were others who preferred a central bank. Some thought that, as an economic theory, it was better. I am not finding any fault with that; I am only pointing out that the Senator from Nebraska has not, after his study of years on this matter, been altogether committed against the regional reserve plan.

In April last he agreed to a proposal for 20 or 25 regional reserve banks-not less than 20 nor more than 25-while in the proposal he submits now he says four banks, and then authorizes in two years "not more than eight additional banks," Mr. HITCHCOCK. Oh, no.

Mr. OWEN. Oh, yes; the bill speaks for itself, if the Senator

will read it.

Mr. HITCHCOCK. Oh, no; the Senator is entirely mistaken. I do not propose eight additional banks in two years. cession to the sentiment for eight, we inserted a clause permitting the Federal reserve board, appointed by the President, if they found it desirable after two years' experience, to add them. We did not add them, and we think the board will never add them.

Mr. OWEN. The Senator put in a provision:

That after Federal reserve banks have been organized and in operation for a period of two years in said four Federal reserve cities, the Federal reserve board may, in its discretion, from time to time, designate not to exceed in all eight additional Federal reserve cities, with the requisite Federal reserve districts appurtenant thereto, and for that purpose may alter and change the limits and areas of existing Federal reserve districts.

Showing that he had no feeling of certainty that 12 banks would not be required.

It is comparatively easy after you have established 12 banks to combine those banks and make a lesser number, but after you have once established a smaller number it is extremely difficult to cut them to pieces; it is almost impossible. The Senator himself will not say to the Senate that he believes it possible to cut those four banks up after they have once been established. He does not believe it within the bounds of reason.

Mr. HITCHCOCK. On the contrary, I took the trouble—
The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Nebraska?

Mr. OWEN.

Yes; I yield to the Senator. COCK. I took the trouble to draw a provision, Mr. HITCHCOCK. which the Senator will find in the bill, in which a plan is provided by which the Federal reserve board can and may add to the number of reserve banks if it finds it desirable to do so. was so confident, and I am so confident, that experience will vindicate the position that they are not desirable that I am perfeetly willing to trust the board with the power to add them if it finds it necessary or desirable to do so.

Mr. OWEN. But the Senator did not stop there. vided that the notes which were to be issued as bank currency should be redeemed in lawful money only and not in gold. Now the Senator can not permit them to be redeemed in lawful

money, but only in gold.

Mr. HITCHCOCK. Mr. President-

Mr. OWEN. I yield to the Senator. Mr. HITCHCOCK. If the Senator desires to discuss that old bill of mine, which was merely a tentative proposal which I introduced for the purpose of having it printed, he should bear in

mind the fact that those were nothing but bank notes; they were not United States promises to pay

Mr. OWEN. Oh, yes; I understand that.
Mr. HITCHCOCK. And I think it is rather a useless contribution to this debate to discuss a measure which the author himself abandoned about as soon as he devised it.

Mr. OWEN. Oh, I think the Senator was quite right in

abandoning it

Mr. HITCHCOCK. The Senator will recall the fact that I myself called the attention of the committee to the bill which I had introduced, and said that it was an indication of the value of study and the taking of testimony in the matter

Mr. OWEN. The Senator is quite right. I commend him to

further study.

Section 15 of Senate bill 384 provides:

SEC. 15. That each reserve association shall be governed by a board of nine directors, six of whom shall be elected by allowing each bank belonging to the reserve association one vote, and three of whom shall be elected by allowing to each bank one vote for each share of stock held by it. The board of directors shall elect a president, vice president, and cashier, who shall have the usual powers of such officers, but no person who is an officer or director in any bank shall be eligible for president, vice president, or cashier of a reserve association.

In other words, these banks were to be governed absolutely by the banks without the Government having a single director and without the Government having any supervisory whatever over the banks. The fatal defect of this bill intro-duced by the Senator from Nebraska was that it put into private hands the control of the credit system of the United States. That was the very fatal objection found in the central-bank plan proposed by the so-called Aldrich bill, written, I believe, not by Mr. Aldrich, but by a distinguished Senator who adorns this Chamber. The one great thing in common between the proposal of the Senator from Nebraska and the Aldrich bill is that in both cases the control of the credit system

was put in private hands.

The Senator has studied this matter; he has changed his old plan. I do not complain of any man changing his plan as he studies a question; I think that is right; but I call attention to the fact that the advice which is now being given to us so zealously, so insistently, and so persistently by the Senator from Nebraska will result in increasing the 18,000 State banks by probably 7,000 national banks in addition, because he proposes now to take from the national banks over \$400,000,000 of their reserves, and say to them, "We are going to manage your reserves by a governmental bureaucracy, which will name the president of each reserve bank, which will name the cashier of each reserve bank, which will name the teller of each reserve bank, which will name every employee of the reserve bank, which will write its by-laws, which will administer its affairs, and the \$400,000,000 which will be taken from you by law and put into these banks you will be permitted to see administered by four directors, if you choose to elect them, and you may go up there and look on." Will they come in?

Mr. HITCHCOCK. Mr. President—

The PRESIDING OFFICER. Does the Senator from Oklahoma yield to the Senator from Nebraska.

Mr. OWEN. I yield to the Senator from Nebraska.

Mr. HITCHCOCK. I understand the Senator from Oklahoma is a large stockholder and a director in a national bank. I ask him, would his bank stay out of the system if he and his associates were not permitted to select a majority of the directors

in the reserve bank?

Mr. OWEN. I will say to the Senator that I should think that the directors of any national bank would look with great aversion upon a system which took from them their reserves and did not permit them to safeguard those reserves. Under the plan which we propose the banks, although allowed to administer the affairs of the Federal reserve bank by choosing six directors, three of whom must be chosen to represent the public interest, but still acceptable to the banks, still trusted by the banks—those six directors with three Government directors sitting across the table from them, with one of the Government directors being chairman of the board, with the entire board subject to removal by the Federal reserve board for any mis-conduct whatever, are under the safeguard and the protecting care of our great Government; but the banks that put in over \$400,000,000, representing the savings and the money belonging to the stockholders, representing hundreds of thousands of our citizens—the banks, while they conduct the administrative part under the safeguard of the Government, we need not fear that they will administer the affairs of the bank unfaithfully. But we are not willing after having denied the banks any representation whatever upon the Federal reserve board, upon which they have strenuously insisted, upon which they have declared that unless they did have representation they would not enter

the system. The evidence was brought to us by the authorized representatives of the American Banking Association that unless they had representation upon the controlling board they would not come in.

We have tried to give the banks a reasonable right to safe guard their own funds and to administer their own funds under the supervising care of the United States, administered with full power in the Federal reserve board, and with three representatives at the table of every board of directors of each of the Federal reserve banks.

The Senator from Nebraska not only insists upon changing the entire policy proposed in this bill as to the stockholders, but also proposes to reduce the number to four, and he advises us with great zeal that we were instructed not to change a letter of the bill coming over from the House, not to cross a "t" nor to dot an "i," and yet in the same breath he tells you that we

have changed that bill until only 40 per cent of it remains.

What kind of consistency is this? When I challenge him to name the man, "No; he will not." The obvious meaning is that the President of the United States has exercised tyrannical power over the Senate of the United States, and has sent forth an edict that not a letter shall be changed in the House bill, not the crossing of a "t" nor the dotting of an "i." I say to the Senator from Nebraska that I regard it as poor party loyalty to misrepresent the President of the United States.

asked the Senator in the committee room whether or not the President ever had approached him in any indelicate way with regard to this matter, because in the committee room I had frequently to meet this insinuation; and the Senator replied that he had not been approached indelicately by the President

in any way.

Mr. President, it is a strange thing that the Senator from Nebraska is the only Democrat in this body who knows what the Democratic sentiment is in the Senate and in the House and in Nebraska. It was a great reception the Senator got in Omaha. That great chamber of the chamber of commerce, holding 300 citizens, was filled to overflowing. How many Republicans were there, how many bankers were there who did not have any politics one way or the other, is not recorded. But the Senator not only reproaches the President of the United States for a fault which he has not committed, but he goes further and he reproaches his party associates with having held a secret caucus and throttled debate.

I will say that as far as the caucus was concerned, I have preferred an open caucus. I have preferred a stenographer in the caucus; and who ever heard of a real secret caucus? There is no more secrecy in a caucus than there is in executive sessions in the Senate, and that is a standing joke. There is no secrecy.

And let us look at the action of the Democratic Party in caucus, if you please, on this bill. Here this bill, containing principles of government which have been discussed now for five years, came to us after the subject matter had been particularly inquired into by both branches of the Banking and Currency Committee of the House of Representatives, in the Pujo report, and in the Glass hearings, and thousands and thousands of pages of printed matter published upon this question. The matter, debated at length in the Democratic caucus of the House, debated on the floor of the House, finally comes over to us. Month after month we hear witnesses, beginning on the 2d of September, over two months, taking thousands of pages of evidence—3,200 pages—and after it is all over, then debating with our brethren on the Republican side in the committee. The committee will bear witness that we considered the matter as a committee in good temper, without partisanship; but finally we came to a parting of the ways. It became perfectly obvious that the Republican members preferred a central bank. The Democratic members were opposed to a central bank. And after we had discussed it for two weeks in the committee, then we separated quietly, peacefully, by common consent, I take it. The Democratic members perfected the measure according to their conception of what was best. The Republican members, with the Senator from Nebraska, did the same thing. And when that work was concluded the Democratic conference met and considered the report made by the Democratic mem-bers, but they did more. They considered also the report made by the Senator from Nebraska and the five Republican members of the committee, and they adopted a number of things which

There was no partisan hostility. It is a difference of the point of view, and the Democratic Members of this body met together in conference, as they ought to do, because they are charged with the responsibility of government before the country. They can not turn over that responsibility if they would; much less would they turn it over properly to the Senator from Nebraska and the Republicans of this body.

Why should the Senator from Nebraska turn the control of the Senate in this important matter over to the Republicans? They are not responsible to the people under the present circum-

ances. We have party responsibility.

Mr. President, this matter has been debated on this particular section for a number of hours. At this late hour I do not wish to detain the Senate longer. The Senator from Nebraska, with the cross-questioning which consumed much of his time, has given about four hours to discussing this proposed amend-I do not know whether anyone else desires to discuss this matter further, but I think the time has come to dispose of this contention, and I move to lay upon the table the amendment of the Senator from Nebraska.

Mr. GRONNA. Mr. President, may I ask the Senator from Oklahoma a question? Mr. OWEN. Certain

Mr. OWEN. Certainly. Mr. GRONNA. The Senator referred to the fact that under the provisions of his bill the banks would be required to place about \$400,000,000 in the reserve banks, which, of course, is frue.

Mr. GRONNA. Is it not also true, however, that the people would have six dollars in these reserve banks to every dollar placed there by the bankers? Is it not true that the national banks have a capital of about a billion dollars?

Mr. OWEN. Yes; that is true.

Mr. GRONNA. And that the people have deposits in those banks of nearly \$7,000,000,000?

Mr. OWEN. Yes; that is true; and in order to protect the deposits of the people in those banks it is of the highest importance to the people to enable the banks to act together and protect their reserves and to protect each other by having these reserves kept in large reservoirs, where the Government may furnish them also with elastic currency. It protects the depositors and will give the depositors a protection which they never have had in the past, and which will put an end to failure of national banks or member banks except where there is absolute theft of the

I move to lay upon the table the amendment of the Senator from Nebraska

The PRESIDING OFFICER. The question is on the motion of the Senator from Oklahoma to lay on the table the amendment proposed by the Senator from Nebraska.

Mr. BRANDEGEE. On that I demand the year and nays. Mr. WEEKS. Mr. President, I make the point of no quorum. Mr. NEWLANDS. I ask the Senator from Oklahoma not to press the motion at this time. It was my intention to speak this evening, and I yielded what I thought was the preference to

Mr. WEEKS. There are three Senators on this side prepared to speak this evening. If we are going to have that kind of a motion at 10 minutes of 11, I make the point of no quorum.

Mr. OWEN. It is not necessary to make the point of no quorum for that purpose, because I am perfectly willing to withdraw the motion.

Mr. OVERMAN. Mr. President, I rise to a question of order. The suggestion of the absence of a quorum having been made, we can not do anything else but to have the roll called.

Mr. BRANDEGEE. I ask for the regular order.
The PRESIDING OFFICER. The Secretary will call the roll. The Secretary called the roll, and the following Senators an-

swered to their names:

Ashnrst Overman Owen Smith, S. C. Smoot Sterling Bacon Brady Brandegee James Johnson Page Pittman Stone Johnson Kern Lane Lea Lewis Lippitt Martine, N. J. Myers Newlands Bristow Bryan Burton Swanson Thompson Thornton Vardaman Pomerene Ransdell Robinson Root Chilton Shafroth Walsh Crawford Cummins Sheppard Shields Shively Williams Gore Norris O'Gorman nna Simmons Smith, Ga. Hitchcock

Mr. JAMES. My colleague [Mr. BRADLEY] is unavoidably detained from presence here. He has a general pair with the junior Senator from Indiana [Mr. KERN].

The PRESIDING OFFICER. Fifty-three Senators have answered to their names. A quorum of the Senate is present. Senator from Oklahoma has withdrawn his motion to lay the amendment on the table.

Mr. KERN. Mr. President, it being now 2 minutes of 11 o'clock, I move that the Senate adjourn until to-morrow morning at 10 o'clock.

The motion was agreed to; and (at 10 o'clock and 58 minutes p. m.) the Senate adjourned until to-morrow, Friday, December 12, 1913, at 10 o'clock a. m.

#### NOMINATIONS.

Executive nominations received by the Senate December 11, 1913. PROMOTION IN THE REVENUE-CUTTER SERVICE.

Third Lieut, Roy Ackerman Bothwell to be second lieutenant in the Revenue-Cutter Service of the United States, to rank as such from July 19, 1913, in place of Second Lieut. Muller Stuntz Hay, promoted.

#### APPRAISER OF MERCHANDISE.

Thomas Butterworth, of Ohio, to be appraiser of merchandise at Cincinnati, in the district of Ohio, in place of George H. Kolker, superseded,

#### COLLECTORS OF INTERNAL REVENUE.

Frank B. Niles, of Ohio, to be collector of internal revenue for the tenth district of Ohio, in place of William V. McMaken, superseded.

Harry H. Weiss, of Ohio, to be collector of internal revenue for the eighteenth district of Ohio, in place of Alfred N. Rodway, superseded.

#### UNITED STATES ATTORNEYS.

Robert N. Bell, of Alabama, to be United States attorney, northern district of Alabama, vice Oliver D. Street, resigned.

Rogers H. Burnett, of Pennsylvania, to be United States attorney, middle district of Pennsylvania, vice Andrew B. Dunsmore, resigned.

James L. McClear, of Idaho, to be United States attorney, district of Idaho, vice Curg H. Lingenfelter, term expired.

Alexander D. Pitts, of Alabama, to be United States attorney. southern district of Alabama, vice James B. Sloan, appointed

Thomas D. Samford, of Alabama, to be United States attorney, middle district of Alabama, vice Warren S. Reese, resigned.

#### UNITED STATES MARSHAL.

Albert Bollschweiler, of New Jersey, to be United States marshal, district of New Jersey, vice Thomas J. Alcott, resigned.

### RECEIVERS OF PUBLIC MONEYS.

Fred A. King, of Grand Rapids, Minn., to be receiver of public moneys at Cass Lake, Minn., vice Elisha B. Wood, term expired.

Otto R. Meyer, of Dickinson, N. Dak., to be receiver of public moneys at Dickinson, N. Dak., vice William A. McClure, term expired.

### REGISTERS OF LAND OFFICE.

Peter M. Ringdal, of Crookston, Minn., to be register of the land office at Crookston, Minn., vice Arthur P. Toupin, whose term will expire December 15, 1913.

A. G. Swindlehurst, of Wadena, Minn., to be register of the land office at Cass Lake, Minn., vice Lester Bartlett, term

William J. Wood, of Sundance, Wyo., to be register of the land office at Sundance, Wyo., vice Joseph Lytle, removed.

### SUPERVISING STEAMBOAT INSPECTOR.

Eugene E. O'Donnell, of Massachusetts, to be supervising inspector, fifth district, Steamboat-Inspection Service, vice John D. Sloane, resigned.

# PROMOTIONS IN THE ARMY.

# QUARTERMASTER CORPS.

Maj. Herbert M. Lord, Quartermaster Corps, to be lieutenant colonel from March 4, 1913, vice Lieut. Col. Beecher B. Ray, whose recess appointment expired by constitutional limitation March 3, 1913.

## CAVALRY ARM.

Maj. John C. Waterman, Cavalry, unassigned, to be lieutenant colonel from December 2, 1913, vice Lieut. Col. Thomas J. Lewis, Cavalry, unassigned, retired from active service December 1,

### CORPS OF ENGINEERS.

Maj. Charles Keller, Corps of Engineers, to be lieutenant colonel from December 6, 1913, vice Lieut. Col. David Du B. Gaillard, who died December 5, 1913.

## INFANTRY ARM.

Maj. André W. Brewster, Infantry, unassigned, to be lieutenant colonel from December 2, 1913, vice Lieut. Col. George W. McIver, Thirteenth Infantry, detailed as adjutant general on that date.

Capt. John Howard, Nineteenth Infantry, to be major from December 5, 1913, vice Maj. Samuel Seay, Tenth Infantry, who died December 4, 1913.

First Lieut. William H. Patterson, Twelfth Infantry, to be captain from December 5, 1913, vice Capt. John Howard, Nine-

teenth Infantry, promoted.

First Lieut. Leonard J. Mygatt, Infantry, unassigned, to be captain from December 6, 1913, vice Capt. Frederick W. Fuger, unassigned, retired from active service December 5, 1913.

First Lieut. Elliott M. Norton, Twentieth Infantry, to be captain from December 6, 1913, vice Capt. Samuel W. Widdifield, Tenth Infantry, resigned December 5, 1913.

Second Lieut. Bruce B. Buttler, Thirtieth Infantry, to be first lieutenant from December 5, 1913, vice First Lieut. William H. Patterson, Twelfth Infantry, promoted.

Second Lieut. Evan E. Lewis, Twenty-fifth Infantry, to be first lieutenant from December 6, 1913, vice First Lieut. Leonard J.

Mygatt, unassigned, promoted.

Second Lieut. Paul A. Larned, Fifth Infantry, to be first lieutenant from December 6, 1913, vice First Lieut. Elliott M. Norton. Twentieth Infantry, promoted.

### APPOINTMENT IN THE ARMY.

Rev. John E. Rochford, of New York, to be chaplain, with the rank of first lieutenant, with rank from December 3, 1913, vice Chaplain Andrew C. Murphy, Fifth Field Artillery, resigned September 20, 1913.

# PROMOTIONS AND APPOINTMENTS IN THE NAVY.

Lieut. (Junior Grade) John A. Monroe to be a lieutenant in

the Navy from the 1st day of July, 1913.

Lieut. (Junior Grade) William F. Newton to be a lieutenant in the Navy from the 1st day of July, 1913.

Lieut. (Junior Grade) Garrett K. Davis to be a lieutenant in

the Navy from the 1st day of July, 1913.

Asst. Civil Engineer Kirby Smith to be a civil engineer in the Navy from the 8th day of August, 1913.

Asst. Civil Engineer David G. Copeland, with rank of ensign, to be an assistant civil engineer in the Navy, with rank of lieutenant (junior grade), from the 8th day of August, 1913.

Ruskin M. Lhamon, a citizen of Missouri, to be an assistant surgeon in the Medical Reserve Corps of the Navy from the 4th day of December, 1913.

Norman M. McClelland, a citizen of Texas, to be an assistant surgeon in the Medical Reserve Corps of the Navy from the 25th day of November, 1913.

### CONFIRMATION.

Executive nomination confirmed by the Senate December 11, 1913. UNITED STATES MARSHAL.

Albert Bollschweiler to be United States marshal for the district of New Jersey.

## HOUSE OF REPRESENTATIVES.

# THURSDAY, December 11, 1913.

The House met at 12 o'clock noon.

The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

God of life and light, justice and mercy, truth and righteousness, love and liberty, we need the touch of Thy spirit, the counsels of Thy wisdom, the uplift of Thy power and guidance in every new condition and problem which confronts us for thought and action. We thank Thee for the gracious privilege of thinking and living our own thoughts. May we not forget that every question has at least two sides and the door is open for differences of opinion. Help us, therefore, to cheerfully accord to others the same right to think and act that we claim for ourselves; thus may we live in harmony and brotherly love as children of one God and Father of all men.

The Journal of the proceedings of yesterday was read and approved.

# EXTENSION OF REMARKS.

Mr. CURRY. Mr. Speaker, I ask unanimous consent to extend my remarks in the Record by having published an address delivered by Representative Joseph R. Knowland, of California. before the recent convention of the National Rivers and Harbors Congress on the subject of "Pacific coast terminals."

The SPEAKER. The gentleman from California [Mr. CURRY]

asks unanimous consent to print in the Record an address recently delivered by Representative Joseph R. Knowland, of California. Is there objection? [After a pause.] The Chair hears none.

COST, ETC., OF PUBLIC BUILDINGS.

The SPEAKER. The Clerk will call the roll of committees.

The Clerk proceeded with the call.

Mr. CLARK of Florida (when the Committee on Public Buildings and Grounds was called). Mr. Speaker, I ask unanimous consent that the bill S. 2689, "An act amending an act entitled 'An act to increase the limit of cost of certain public buildings; to authorize the enlargement, extension, remodeling, or improvement of certain public buildings; to authorize the erection and completion of certain public buildings; to authorize the purchase of sites for public buildings; and for other purposes, passed without prejudice. The gentleman from Ohio [Mr. Ash-BROOK] has charge of a bill that was reported a day or two ago. I do not see him here just now, and he would like very much to call it up.

The SPEAKER. The gentleman from Florida [Mr. CLARK] asks unanimous consent that the Committee on Public Buildings

and Grounds be passed without prejudice.

Mr. MANN and Mr. UNDERWOOD rose.
Mr. UNDERWOOD. Mr. Speaker, I see that the gentleman from Illinois [Mr. Mann] has the same idea in mind that I

Mr. MANN. Mr. Speaker, we had a substantial understanding here in the last Congress that we would not pass committees Therefore I object. on call.

Mr. CLARK of Florida. Mr. Speaker, I then call up the bili

S. 2689.

The SPEAKER. The gentleman from Florida [Mr. CLARK], chairman of the Committee on Public Buildings and Grounds-

Mr. MANN. Mr. Speaker, that bill is on the Union Calendar and can not be called up to-day.

The SPEAKER. If it is on the Union Calendar, of course it can not be called up to-day. The Chair was not informed as to which calendar it was on. Is it on the Union Calendar?

Mr. CLARK of Florida. I see that it is, Mr. Speaker.

The SPEAKER. This bill is on the Union Calendar.

#### VOCATIONAL EDUCATION.

Mr. HUGHES of Georgia. Mr. Speaker—
The SPEAKER. The Chair will say to the gentleman from Georgia [Mr. Hughes] that at the end of 60 minutes, or when the call is exhausted, he has a right to move to go into Committee of the Whole House on the state of the Union.

Mr. HUGHES of Georgia. Mr. Speaker, I ask unanimous consent to call up this resolution, as it is unfinished business. I sincelely hope there will be no objection to that.

The SPEAKER. The gentleman from Georgia [Mr. Hughes] asks unanimous consent to proceed with Senate joint resolution No. 5, which was discussed for two days during the extra session.

Is there objection? [After a pause.] The Chair hears none.

Mr. HUGHES of Georgia. Now, Mr. Speaker, I ask unanimous consent to consider this resolution in the House as in the Committee of the Whole House on the state of the Union.

Mr. FOSTER. Mr. Speaker, I object.

The SPEAKER. The gentleman from Georgia [Mr. Hughes] asks unanimous consent to consider this resolution in the House as in the Committee of the Whole House on the state of the Union, and to that request the gentleman from Illinois [Mr. FOSTER] objects.

Mr. HUGHES of Georgia. Therefore, Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the state of the Union for the purpose of further

considering this resolution.

The SPEAKER. The gentleman from Georgia [Mr. Hughes] moves that the House resolve itself into the Committee of the Whole House on the state of the Union for the further consideration of the resolution (S. J. Res. 5), of which the Clerk will report the title.

The Clerk rend as follows:

Joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education.

The SPEAKER. The question is on the motion of the gentleman from Georgia [Mr. HUGHES].

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the state of the Union for the further consideration of Senate joint resolution 5, with Mr. Moon in

The CHAIRMAN. The House is in Committee of the Whole House on the state of the Union for the consideration of the resolution which the Clerk will report.

The Clerk read the title of the resolution, as follows:

Joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education.

Mr. HUGHES of Georgia. Mr. Chairman, as this resolution has been previously discussed at some length. I would like very much if there could be some agreement reached as to the time for general debate, at the expiration of which the resolution could be considered under the five-minute rule.

Mr. FOSTER. Mr. Chairman, this is a very important matter, and I do not think the general debate should be limited

Mr. HUGHES of Georgia. Then I will withdraw my sugges-

tion, Mr. Chairman.

Mr. Chairman, this resolution is the result of an agreement between Senator Hoke Smith and Senator Page of Vermont. A bil! known as the Page vocational education bill was introduced in the Senate. That passed, but owing to the magnitude and importance of that great national question, those two Senators came together and agreed that it would be better to introduce and pass this resolution. This resolution is to authorize the President to appoint a commission of nine, whose duty it shall be to report a plan on vocational education.

Now, Mr. Chairman, that plan is not binding, of course, when it is submitted to this House in the event that commission is appointed; no more so than would be a plan submitted by an architect who expects to build a house. There have been several bills of this nature introduced, both in the Senate and in the

House, none of which has been acted upon.

Now, Mr. Chairman, there seems to be a difference of opinion, or rather a confusion, as to the Lever bill and as to the Page bill on vocational education. I wish to present my views so that they can not be misunderstood. The vocational bill, as I comprehend and understand it, is a measure by means of which the youths of this country can be instructed and educated and perfected in any calling in life which they may select. I believe the passage of that bill would reach every home in this broad land. I believe it would reach every town, every city, and every county.

Mr. Chairman, it has been said that "the boy is father of the man," and that is true. Hence it is our duty to equip the youths of this country in order that when they grow to manhood they will be useful and capable in the occupations which

they have selected.

Now, Mr. Chairman, the Lever bill, which passed this House, is really a demonstration bill. I wish to say as a farmer and as a Member of this House that I am in favor of that bill to the utmost. It is an extension, really, of what is known as the Knapp bill for demonstration work, which has done so much work and so much good in the great State of Georgia, which I in part represent. We have within the vaults of our various agricultural colleges scientific information that is now locked up and has long been locked up, and this Lever bill is a key to unlock those vaults and disseminate that information. In other words, it takes that theoretical, scientific information and carries it directly to the man behind the plow.

Mr. TRIBBLE. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield to his colleague from Georgia

Mr. HUGHES of Georgia. I do. Mr. TRIBBLE. The gentleman stated that the Lever bill passed the House at the last session. It has been reported again favorably to the House at the present session. Now, the gentleman states that this was a compromise measure between Senator Page and Senator Smith, Senator Page advocating a vocational education bill and Senator SMITH advocating a demonstration bill, which is the same as the Lever bill.

Now, that being true, would not the passage of this resolution and the appointment thereunder of a commission result in deferring the passage of the Lever bill? The commission, according to the resolution, is to report on the 1st of December next. That means December of next year, and not the present month of December. It means December a year from now.

Mr. HUGHES of Georgia. The bill is amended in that

Mr. TRIBBLE. Yes. That means that the commission would report a year from now to the House, and on that account would not the passage of this resolution mean the deferring of the

Lever bill for a year?

Mr. HUGHES of Georgia. Not at all.

Mr. TRIBBLE. Why, then, did Senator SMITH and Senator Page make the statement that this investigation should be had, covering the period of a year, as a compromise between those two bills? I may have misunderstood the gentleman.

Mr. HUGHES of Georgia. I did not intend to convey that idea. I meant to say that both Senator SMITH and Senator Page were in favor of a vocational-education bill, but there was some disagreement between them as to some of the details of that bill. Senator SMITH not only favored with all of his force and power vocational education, but he is a strong advocate of the Lever bill.

Mr. TRIBBLE. Will the gentleman yield further?

Mr. HUGHES of Georgia. Let me say this to the gentleman: There have been some amendments to this bill which have passed unanimously, and which will be recommended to be in-corporated into the resolution before it passes, and the intent is that this commission shall make their report as soon as possible. In the event that this resolution passes, I apprehend that men will be placed on that commission who know the importance of the great questions involved and who will use all their efforts to present their report at the very earliest possible moment. At the same time that will not affect in the least the passage of the Lever bill. I want to say that the gentleman from South Carolina [Mr. Lever] himself is in favor of this resolution, and if he is on the floor of the House I am quite sure that he will be glad to make some remarks concerning it.

Mr. TRIBBLE. One other question. As a matter of fact, the Page bill provides for demonstration work, just as the Lever bill does; and, as a matter of fact, I think you will find upon investigation that this was a conflict between those two Senators as to which one of these bills, the Lever bill-known as the Smith bill in the Senate-or the Page bill should pass that body. Now, these two Senators, one advocating the Lever bill demonstration work and the other-Senator Page-advocating the vocational bill which carries demonstration work have agreed, as I understand, that this measure shall be passed and that this investigation shall be had, which would postpone this matter a year. I am not opposing this resolution unless it retards progress on the Lever bill.

Mr. HUGHES of Georgia. I am glad to hear the gentleman

Mr. TRIBBLE. But I want to understand distinctly before I cast my vote for it that it will not delay the passage of the Lever bill or the demonstration work therein provided.

Mr. HUGHES of Georgia. That is my contention exactly, and I shall urge the position which the gentleman takes,

Mr. MONDELL and Mr. EDWARDS rose.

The CHAIRMAN. To whom does the gentleman yield?
Mr. HUGHES of Georgia. I yield to the gentleman from
Montana, who, I believe, was first on his feet.

Mr. MONDELL. My attention has been called to the fact

that the resolution provides for the appointment of a commission of nine men. Would the gentleman have any objection to an amendment substituting the word "persons"?

Mr. HUGHES of Georgia. The committee have already agreed to an amendment making it "nine."

Mr. MONDELL. That has been proposed, has it?

Mr. HUGHES of Georgia. Yes,

Mr. TOWNER. As I understand it, the amendment does not substitute the word "persons," but strikes out the word "men." Mr. HUGHES of Georgia. It provides for a commission of

Mr. TOWNER. So that it will read "a commission of nine." Mr. MONDELL. That is entirely satisfactory, so that the President may appoint a woman if he sees proper to do so.

Mr. TOWNER. I want to call the attention of the chairman of the committee further to the fact that it is the intention, as I understand, to strike out also the words "December 1 next," so that it will read:

Report a plan as soon as practicable for national aid to vocational education.

While there has been no action of the committee to that effect, as I understand from our conversation, that was the agree-

Mr. HUGHES of Georgia. That is the agreement, yes. Mr. TOWNER. So the gentleman will understand that this provision to report December 1 will not be urged by the committee. It will be the recommendation of the committee that the resolution shall read that this commission shall report as seen as practicable.

Mr. HUGHES of Georgia. Yes.

Mr. EDWARDS. Mr. Chairman, will the gentleman yield?

Mr. HUGHES of Georgia. I yield to my colleague.

Mr. EDWARDS. I heartily agree with my colleague [Mr. TRIBBLE] in favoring this resolution if it does not hinder the passage of the Smith or Lever bill. We regard both propositions as being important for the farmers of the country, and this resolution which you have up now is good not only for the farm-

ers but for everybody, as I understand.

I would like to ask a question concerning the words "December 1 next." As I understand, this language was put in last

September and referred to December 1, 1913.

Mr. HUGHES of Georgia. It would have been December 1, 1913, if the resolution had passed in time.

Mr. EDWARDS. Then, would there be any objection to putting into this resolution the proposition that the commission report by, say, the 1st of April, 1914, or as soon thereafter as practicable?

Mr. HUGHES of Georgia. The committee had that under consideration, and they were unanimously of the opinion that it would be well to use the words "report as soon as practicable." I assure you there is no disposition whatever to defeat the Lever bill, and I would oppose this bill if I thought it meant that.

Mr. TRIBBLE. I know the gentleman would. Mr. HUGHES of Georgia. There is no man in the House

more anxious to have the Lever bill passed than I am.

Mr. TRIBBLE. I will say to the gentleman, if he will permit me, that there is not a man on the floor of this Fouse who advocates the passage of the Lever bill with more force, strength, energy, and vigor than my colleague, Mr. Hughes of Georgia. That is the reason I call his attention to this fact.

Mr. BUCHANAN of Illinois rose.

The CHAIRMAN. Does the gentleman from Georgia yield to the gentleman from Illinois?

Mr. HUGHES of Georgia. I do.

Mr. BUCHANAN of Illinois. What is the need for the commission to investigate this matter if the Lever bill passes? Does not that provide for vocational education?

Mr. HUGHES of Georgia. No; the Lever bill is a demonstration bill. In other words, there is an accumulation of scientific information in the vaults of the sanctum sanctorum of agricultural colleges, and the farmer gets no advantage of it.

Mr. BUCHANAN of Illinois. Does the gentleman think that we have not sufficient information at this time to pass a vocational-education bill?

Mr. HUGHES of Ceorgia. No; and it has been delayed for

five or six years.

Mr. BUCHANAN of Illinois. Sometimes, as the gentleman knows, many worthy matters are delayed in making investigations for information, and that the investigations are really

for the purpose of delay?

Mr. HUGHES of Georgia. Mr. Chairman, I would oppose this measure if I thought there was any suggestion that it was

for the purpose of delay

Mr. BUCHANAN of Illinois. Such commissions as we had in

the tariff matter, in my opinion, were for the purpose of delay.

Mr. HUGHES of Georgia. We think that this will hasten
the passage of the Lever bill. We hope it will hasten the passage of this great measure, and I believe it will, judging from the letters that the committee is receiving daily on the subject. I believe that it will upbuild the country; I believe that it will have a tendency to keep the farmers' boys on the farm; I believe it will have a tendency to make them forget to be bad in these towns and cities, because they will become interested and will become instructed in their great chosen profession.

Mr. TALCOTT of New York. Will the gentleman yield?

Mr. HUGHES of Georgia. Certainly.

Mr. TALCOTT of New York. Would there be any objection to mentioning specifically in this resolution the bills that have

been before the House and the Senate?

Mr. HUGHES of Georgia. I scarcely think that would be necessary, because it will be plain that they are to present a plan for vocational education to the House for its adoption or rejection.

Mr. TALCOTT of New York. Reference is made in this only to the Lever bill and the Smith bill.

Mr. HUGHES of Georgia. The Lever bill is not included in this.

Mr. TALCOTT of New York. It is to be considered by the commission?

Mr. HUGHES of Georgia. Not at all. Now, Mr. Chairman, I have nothing further to say at this time, but I would be glad to answer any question.

Mr. GOULDEN. Will the gentleman yield?

Mr. HUGHES of Georgia. Certainly.

Mr. GOULDEN. Is there any objection to placing a definite

time when this commission shall report?

Mr. HUGHES of Georgia. The committee had that under discussion for a good while and we were convinced that the President would appoint men who knew the necessity of making a speedy report, and that the commission would make it as early as it was possible for them to do. Still, if we could agree on some time which would be ample for them to make the report I see no objection to it.

Mr. GOULDEN. I want to say to the gentleman from Georgia that he knows as well as I do that sometimes commissions are drawn out rather long, and I think it is well to fix a definite period in which they shall report.

Mr. HUGHES of Georgia. If the gentleman will excuse me. I think the time of this commission will be short, because there is

no salary attached to it.

Mr. GOULDEN. That is true; but I have had some experience with commissions, and they have dragged along for two There is a salary for the secretary and there vears sometimes. are other little things that creep in. I hope the committee will fix a definite time—either April, May, June, or July.

Mr. HUGHES of Georgia. Well, we want the best that can

be had, and the whole object is to get a plan as perfect as it is

possible to be.

Mr. FOWLER. Will the gentleman yield?

Mr. HUGHES of Georgia. I will yield to the gentleman from Illinois.

Mr. FOWLER. The gentleman from New York raised an interesting question, and I want a little further information. The gentleman from Georgia answered that it would hasten the report because there is no salary attached to the commission.

Mr. HUGHES of Georgia. I did not give that as the reason

altogether, but that is incidental.

Mr. FOWLER. Does not the gentleman think that if a definite time is set for the report, and also a fair compensation to the commissioners, that we will get a better class of work and probably a higher grade of men?

Mr. HUGHES of Georgia. I can not say that I would object to that feature of the bill. The committee had that under consideration, and they thought that the words "to report as

soon as practicable" would answer all conditions.

Mr. FOWLER. Did your committee discuss the question of compensation, a fair and reasonable compensation to the com-

Mr. HUGHES of Georgia. There is no compensation what-

ever. We did discuss that question.

Mr. FOWLER. And the committee was unanimous in eliminating it

Mr. HUGHES of Georgia. Certainly; the resolution contains

no salary

Mr. FOWLER. Do you not think that a better grade of work could be had by paying the men a fair compensation for

Mr. HUGHES of Georgia. I believe this is such a great national question that you can get the best men in the land to give their time and best services without any compensation.

Mr. FOWLER. Indeed, it is a great national question.

Mr. HUGHES of Georgia. It appeals to the patriotism of the

people of the country.

Mr. FOWLER. And it ought to appeal to our highest patriotism. I agree with the gentleman that every man owes to the country some duty without pay, but in such an undertaking as this, with but little information at hand heretofore compiled upon the subject, we will require the very highest skill in investigating the question in order that we may go into it from a scientific standpoint and bring before the people the very best information that can be had. Does the gentleman think that can be done without paying the commissioners a fair compensation?

Mr. HUGHES of Georgia. I do: and I do not believe that the committee would agree to the proposition of compensation.

Mr. FOWLER. The gentleman does not think that the committee would agree to limit the time, coupled with a fair compensation for the commissioners.

Mr. HUGHES of Georgia. They might agree to limit the time, but I do not believe the committee would agree to a com-

Mr. SMITH of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. HUGHES of Georgia. I do.

Mr. SMITH of Minnesota. Will the chairman of the committee state why the committee can not make this investigation itself by having hearings and perfect its own bill?

Mr. HUGHES of Georgia. Mr. Chairman, it is possible that might be done, but I do not believe, with all respect to that committee, which is one of the best in the House, that it will be able to submit a plan that perhaps would be as perfect as that which would be submitted by a commission, whose only duty would be to use their very best brain and energy to present a bill on this subject.

Mr. POWERS. Mr. Chairman, will the gentleman yield? Mr. HUGHES of Georgia. Certainly.

Mr. POWERS. Mr. Chairmen, I want to state that since there has been some objection made to this resolution on the ground that there is no definite date fixed when this commission shall report, I suggest to the gentleman that we might change the resolution by making them report April 1, 1914, or as soon thereafter as practicable.

Mr. HUGHES of Georgia. I suggest to the gentleman that he do not suggest any such amendment until we have a little further discussion, in order that we may find out the sentiment.

Mr. WILLIS. Mr. Chairman, will the gentleman yield?

Mr. HUGHES of Georgia. Certainly.

Mr. WILLIS. The gentleman will recall that when his bill was under consideration before I spoke against it vigorously upon the ground that I felt it would delay the passage of this legislation. I understood the gentleman from Georgia to say that the gentleman from South Carolina [Mr. Levers] was in favor of this measure and expected to speak in favor of it. Am I correctly informed?

Mr. HUGHES of Georgia. Yes; he is in favor of the resolution, and if it is possible will make a talk upon this subject.

Mr. WILLIS. He does not feel the passage of the resolution would delay the passage of the bill in which he is interested? Mr. HUGHES of Georgia. No; and I would not favor it

myself if I thought so.

Mr. WILLIS. The gentleman is confident that this will not

delay the legislation?

Mr. HUGHES of Georgia. I am confident of that, and I am anxious that the Lever bill be passed through this House at the very earliest possible moment, because it has been revised and has been made more effective and better. It has been introduced in the Senate by Senator Hoke Smith and has been introduced in the House again by Mr. Lever.

Mr. WILLIS. The gentleman will recall that my opposition rested entirely upon the proposition that I felt that this would delay the legislation upon agricultural and vocational education.

Mr. HUGHES of Georgia. Yes.

Mr. WILLIS. If the gentleman gives us his assurance that from his examination it would not delay this necessary and desirable legislation for the encouragement of agricultural and

vocational training, I am not disposed to be critical about it.

Mr. HUGHES of Georgia. I certainly feel it can not and will
not delay it. If I thought it would, I would not be in favor

of it.

Mr. Chairman, will the gentleman yield? Mr. OUIN.

Mr. HUGHES of Georgia. Certainly.
Mr. QUIN. I am in favor of this resolution, but I want this report to be submitted at a certain definite time. I favor both the Page and the Lever bills.
Mr. HUGHES of Georgia. Yes.

Mr. QUIN. Can not the gentleman put it at an early period. so that we may get this enacted into law before next June?

Mr. HUGHES of Georgia. The committee had that under

consideration, and we feel that the President of the United States will appoint men whose only object is to push with intelligence this great question in presenting this plan, and we believe that the commission as appointed will report if they can within 30 days or 60 or 90 days. We feel that the commission will report it at the very earliest possible moment,

Mr. NORTON. Mr. Chairman, will the gentleman yield for a

question?

Mr. HUGHES of Georgia. Certainly.

Mr. NORTON. Is it not a fact that a great many of the leading educators, presidents of State universities, and a great many faculty members of the leading universities and institutions of higher learning of the country desire that an investigation be made such as is contemplated to be made by this commission, before any legislation along the line of the Lever bill is enacted by Congress?

Mr. HUGHES of Georgia. I do not think so.

Mr. NORTON. The gentleman thinks that it is not their desire that this investigation be made by a commission before the Lever bill is passed?

Mr. HUGHES of Georgia. Not at all. We want the Lever

bill passed next week if we can.

Mr. NORTON. Well, who favors this resolution, then, among the educators of the country?

Mr. HUGHES of Georgia. Well, sir, the educators favor it,

the carpenters favor it, the brick masons favor it, the farmers favor it, and I think nearly every person connected with the business of agriculture in this country seems to favor it.

Mr. NORTON. I will state to the gentleman why I asked this question. I have had several letters from leading educators, presidents of universities and agricultural colleges throughout the country, and they inform me that they are in favor of the enactment of this resolution before any vocational education legislation is passed by this Congress. I do not believe the gentleman quite understood my question, when he says the leading educators of the country are opposed to this resolution.

Mr. HUGHES of Georgia. Are opposed to it?

Mr. NORTON. The leading educators of the country.

Mr. HUGHES of Georgia. They are not opposed to it.

Mr. NORTON. They favor it, do they not? Mr. HUGHES of Georgia. Yes; they favor it.

Mr. NORTON. So I have been led to believe. Mr. HUGHES of Georgia. And so do the farmers of the coun-

try and the mechanics of the country—they favor it, too.

Mr. BUCHANAN of Illinois. Mr. Chairman, I would like to ask the gentleman if he understands labor and farmers' unions favor legislation for vocational education or are in favor of this resolution for a vocational commission to secure information? I do not understand the labor unions or the farmers' unions or like organizations have made any expression in favor of a commission to be created for investigating this question, but that they are in favor of the legislation-

Mr. HUGHES of Georgia. That may be. Mr. BUCHANAN of Illinois. They are in favor of legislation on the subject of vocational legislation.

Mr. HUGHES of Georgia. Mr. Chairman, I reserve the bal-

ance of my time.

Mr. MURRAY of Oklahoma. Mr. Chairman-

Mr. TOWNER. Mr. Chairman, I desire to be recognized. The CHAIRMAN. Is the gentleman from Iowa a member

of the committee?

Mr. TOWNER. Yes, sir.

The CHAIRMAN. Is the gentleman from Oklahoma a mem-

Mr. MURRAY, of Oklahoma. No, sir.
The CHAIRMAN. The Chair recognizes the member of the

Mr. TOWNER. Mr. Chairman, I think there will be time Perhaps something ought to be stated enough perhaps for all. further with regard to the origin of this joint resolution. Members will understand that the joint resolution did not originate in the House nor in the Committee on Education. The joint resolution originated in the Senate and was the result of conferences between the Members of the Senate who had vocational educational bills pending and was reported unanimously by the committee and passed unanimously by the Senate. comes to us therefore as a Senate bill and is now pending here as a Senate bill. It will have to be amended. We have agreed on some amendments in the committee and further amendments will perhaps be considered by the House. I suggest to the chairman of the committee and other members of the committee that, in my judgment, it will make very little difference whether we state the time, as is suggested by some Members and as some Members think best, or not. I think that it would be best, perhaps, to mention some particular time. If a time definite is stated, for instance, as suggested, April 1 or as soon thereafter as posssible, it would not compel a report by the commission by April 1 if, in the judgment of the commission, circumstances should not warrant such action. Mr. Chairman, I think a fair consideration of the importance of this measure would lead everyone to agree as to the importance of this resolution. The question of vocational education is by far the greatest question now pending with regard to education not only in this country but all over the world. In England at present Parliament has under consideration a great scheme of education which amounts to an entire revolution of the plan of education in Great Britain. Its chief feature and the impelling cause of this is because they desire to engraft upon their system this vocational system of education which we have now under consideration.

It is, of course, a very serious question as to how far the General Government should go in vocational education and as to what part it should take in it. Largely and almost exclusively our general system of education is a State question, and not a national one. But the question of a vocational attachment, if I may so term it, to our educational system is so largely a question of evolution and development, that whether or not the General Government shall take a large or a very limited part in vocational education should be determined only by conference and perhaps by experiment. I think we all would not desire to embark the National Government into a great scheme of national vocational education at this time. But I think the action now contemplated is certainly advisable in view of the large elements in this case, in view of the men and women who are interested in it. As was suggested here, the labor unions are exceedingly interested in vocational education, and I have no doubt but that all these various interests would agree that if the President shall appoint, as he undoubtedly will, a commission of the best educators and experts that have already considered this question, if they shall have hearings upon the matter, if they shall consider carefully the question that I have suggested with regard to the relations of the National Government to it, with regard to its development as a part of the general system of education in the United | be obtained by it could be gotten without expense?

States, there can be recommendations made that will be of great benefit to Congress in consideration of future legislation.

This resolution provides that the commission shall report That by no means commits Congress to it after it is reported. However, all of the light, all of the learning and knowledge that can be presented, ought to be made available and ought to be considered by this House before legislation is taken. There can be no question whatever but Congress will be compelled to consider this question in definite form. There are bills now pending before us for consideration, and there will be others. Continually this pressure will be augmented. because it is a world-wide movement as well as a Nation-wide movement.

Mr. HARDWICK. Will the gentleman from Iowa yield for

a question?

Mr. TOWNER. Yes; I will be glad to do so.

Mr. HARDWICK. Where does the gentleman find any warrant in either the delegated or implied powers of the Federal Government for the Federal Government to engage in any sort of an educational project?

Mr. TOWNER. Let me answer the gentleman by saying that the general Government has already engaged very largely

in educational projects.

Mr. HARDWICK. I am speaking of the power, not of the

practices there may have been in the past.

Mr. TOWNER. It seems to me that that question is an absolutely theoretical one. Already the National Government has embarked upon the question of aiding education.

Mr. HARDWICK. I am asking the gentleman about the theory. He is advocating this thing, and I want to know what he rests it upon.

Mr. TOWNER. I must confess that I do not care to discuss the theoretical aspect of the question, but let me say to the gentleman that that will be one of the questions that will have to be considered. I have been suggesting to the House that the part which the National Government shall be called to take in this system of vocational education will be one of the great questions that will necessarily have to be considered by this

I want to say in regard to the question as to whether this commission will or ought to be able to do its work without compensation, that I am very sure there are eminent men whose services can be secured for this great national service, without compensation other than their expenses, which are provided for in this bill.

I do not think of anything else that I care to suggest to the committee.
Mr. ASWELL. Will the gentleman yield?

Mr. TOWNER. I will be glad to do so. Mr. ASWELL. There is a National E There is a National Education Association in this country consisting of 60,000 members. you can get all the information on this question that can be

secured by this commission, can you not?

Mr. TOWNER. I think not. You see the particular and very important thing we have to consider has not yet been considered.

Mr. ASWELL. About two years ago we devoted portions of a whole session to vocational education.

Mr. TOWNER. Oh, certainly. For 10 years past the questions of vocational education have been considered.

Mr. ASWELL. It is a fact that everybody in this House and in this country believes in vocational education, but is it wise to spend \$15,000 to do a thing that can be gotten in one or two letters?

Mr. TOWNER. The gentleman is assuming conditions I do not think exist. This commission is appointed to ascertain how the General Government can help in this thing, how far it can go with it, and that has never been passed upon, never has been reported, and never considered by this House.

Mr. ASWELL. Is not the Lever bill the answer to that ques-

tion now as to how far it can go? Mr. TOWNER. The Lever bill?

Yes. Mr. ASWELL.

Mr. TOWNER. The Lever bill is not a vocational bill.

Pursuing that question that the gentleman Mr. ASWELL. just asked, if this House is going to adopt the Lever bill and this commission is appointed, will not the body at the other end of this Capitol wait until the commission has been appointed before it will take action on the Lever bill?

Mr. TOWNER. No; I am sure not. This resolution and the

Lever bill are not necessarily joined in interest.

Mr. ASWELL. Does the gentleman think we should expend \$15,000 for this little effort when the information that would

Mr. TOWNER. If I could answer the gentleman at all, I would say his question implies a state of facts that I can not The information which he says already exists agree to at all. is not now available.

Mr. ASWELL. I am prepared to say that we can get it free-

without any charge whatever.

Mr. TOWNER. I certainly take issue with the gentleman, because it is a fact that while there have been for years discussions in regard to vocational education, yet there has not been considered by any of the committees that he refers to, or discussed in any of the reports that he refers to, the question as to how far and in what way the General Government has the power to aid in vocational education.

Mr. ASWELL. Has the gentleman read the reports on voca-

tional education made two years ago?

Mr. TOWNER. No; but I think I am justified in making

my statement.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentle-

man yield?

The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Illinois? The gentleman from Georgia [Mr. Hughes] has yielded the floor to the gentleman from Iowa.

Mr. TOWNER. Yes.

Mr. BUCHANAN of Illinois. Does not the gentleman think we have Members of Congress at both ends of the Capitol who are competent to decide the question as to how far the Federal Government can go in a case of this kind, without creating a commission, which, to my mind, will be an unnecessary expense and will result in delaying the passage of the vocationaleducation legislation that we are interested in?

Mr. TOWNER. I do not think so. If I did, of course I would not favor the resolution. This is such a wide-reaching question, a question affecting so many interests, a question affecting the laboring men of the cities and the farmers in the country, a question affecting every branch of activity almost in this country, that it is impossible for any man to compass the general It is peculiarly a matter about which wise legislation is entirely dependent on knowledge of existing conditions. facts can be ascertained, recommendations based thereon made, and wise legislation secured.

Mr. COX. Mr. Chairman, will the gentleman yield?
The CHAIRMAN. Does the gentleman from Iowa yield to the gentleman from Indiana?

Mr. TOWNER. Certainly.
Mr. COX. Does the gentleman know of any law in the State of Iowa that requires the teaching of vocational branches of education in the public schools there?

We have not a law requiring it, but we have Mr. TOWNER. a system under which the various public schools are allowed to do it, and they are doing it very extensively.

Mr. COX. It is not made compulsory in the State of Iowa?

Mr. TOWNER. No.

Mr. COX. I want to say to the gentleman that the State of Indiana has passed a law making it compulsory on the part of the public schools to impart vocational education. Now, here query that occurs to my mind. I do not know whether all the details have been fully and completely worked out in Indiana under the Indiana statute, but I am sure that the men at the head of it are working them out very fast and very rapidly.

Now suppose that this bill becomes a law and a report is made by this commission to this House, in a measure backed by the President of the United States. That report in no wise fits the condition in my State or in any other State which already has a law requiring instruction in vocational education in the public schools, and in such States where the question has been worked out does not the gentleman believe that instead of bringing about a benefit it would do an injury in cases of that kind because of conflicting interests?

Mr. TOWNER. I certainly do not, and I do not think the results which the gentleman apprehends would follow under any conditions or circumstances. It is, of course, barely possible that after the entire investigation of this matter it may be deemed wise for the Nation to go no further with regard to

vocational education.

The passage of this resolution does not commit us, except to the investigation of this great question, the consideration of it. and the reporting of the facts with recommendations. This we do in response to a great nation-wide demand, which I do not think we ought to refuse, and in response to a movement that is world-wide in its character with regard to vocational education. It seems to me that is ample warrant for the action that is asked to be taken by this resolution.

I reserve the balance of my time.

Mr. MURRAY of Oklahoma and Mr. POWERS rose.

The CHAIRMAN. Is the gentleman from Oklahoma a member of the committee?

Mr. MURRAY of Oklahoma. I am not.

The CHAIRMAN. The Chair must first recognize members of the committee, and then will recognize other gentlemen. gentleman from Kentucky [Mr. Powers] is a member of the committee.

Mr. POWERS. When this matter was before the committee some time ago I occupied considerable time. That being true,

I shall not say very much to-day.

There seems to have been some misunderstanding as to just when this commission shall report, and there have been some questions asked as to why the Committee on Education of the House does not solve this problem itself and formulate a bill and bring it before the House for action instead of indorsing a resolution whereby nine members of the commission shall be

appointed to investigate this question.

I want to say for the information of the House that the other branch of Congress at the other end of the Capitol has passed this identical resolution. In other words, that body came to the conclusion that the problem was so big and so intricate and so important that before taking any decided step, or, in other words, before enacting any law on this important question, a commission should be appointed to make a thorough and complete investigation of the entire question. And I want to say, further, that two of the leading Senators intensely interested in this matter, one a Democrat and the other a Republican, came before our committee and enthusiastically indorsed this plan of action. And after our committee had considered it we came to the conclusion that the Senate was right and that this resolution ought to pass. These nine men, to be appointed if this resolution passes, are entitled to no salary for their services. Their work will be merely a work of love. This resolution is not intended to furnish jobs at fat Nothing of that character is contemplated. Upon the other hand, the resolution specifically provides that these men are to get nothing for their services.

As the resolution was originally drawn this commission was to have made its report on or before the first of this month, but the matter went over, and the committee amended its resolution so as to make the report of this commission as early as practicable after the passage of the resolution and after their appointment. Since some objection has been made to the fact that there is no definite time fixed for this commission to report-and I can see the force of that objection-I am going to offer an amendment to this resolution in line 6, to add the

words.

April 1, 1914, or as soon thereafter as practicable.

That is, in order to put an incentive behind this commission, if they need any, and to give them a limited time in which to report, I shall offer this amendment fixing April 1, 1914, or as soon thereafter as practicable, instead of leaving them to report at will, or as soon as they may complete their investigation. It is true if they are not ready to report at that date the clause "as soon thereafter as practicable" will give them more time.

Mr. WILLIS. Will the gentleman yield?

Mr. POWERS. Yes.
Mr. WILLIS. I do not understand the gentleman's amend-

ent. How does he propose to change this?

Mr. POWERS. I propose to change this so as to make this commission report on April 1, 1914, or as soon thereafter as practicable.

Mr. WILLIS. You propose to strike out December 1 next? Mr. POWERS. Yes; and to substitute the words "April 1, 114," so as to have a definite date.

Mr. WILLIS. But you propose to leave the language "or as soon thereafter as practicable," which may mean almost any-

Mr. POWERS. That gives them more latitude.

Mr. WILLIS. A good deal more.

Mr. POWERS. But they have a fixed date mentioned as a time suggested when they shall report.

I yield the remainder of my time, or so much thereof as he may desire, to the gentleman from Oregon [Mr. LAFFERTY].

Mr. MURRAY of Oklahoma. Do any other members of the committee desire to speak?

Mr. MANN. The gentleman from Kentucky has yielded part of his time.

Mr. MURRAY of Oklahoma. How much time?

Mr. POWERS. If the gentleman from Oklahoma wants some

time, I can possibly yield to him some of mine.

Mr. MURRAY of Oklahoma. No; I will get my own time.

Mr. POWERS. I yield to the gentleman from Oregon [Mr.

LAFFERTY] the remainder of my time.

Mr. LAFFERTY. Mr. Chairman, I wish to apologize to the House for the fact that my remarks will not be directly upon this resolution, but they will bear upon the subject of the education of our people. When the House is in Committee of the Whole on the state of the Union it is permissible for Members to discuss any subject that relates to the welfare of the country, and I desire to say a few words on the state of the Union.

My remarks shall be directed to legislation which I deem necessary to the happiness of the people of the United States. It will be my purpose to point out the kind of a fight that must be made to secure this legislation. In doing so I shall endeavor to show that the channels of news at the present time are all controlled by the money power, and that, therefore, if the people are to win there must hereafter be more direct communication between Members of Congress and Senators here in Washington and their constituents at home. A small portion of my remarks may appear to be local in their application, but I doubt not that every Member within the sound of my voice will agree, that conditions with reference to our present news service are much the same all over the United States.

I have heard it said that no man can be nominated and elected to Congress or to any other important public office under present conditions, unless he be supported by a daily newspaper. That statement is not true, in my opinion. If it were true it would be most unfortunate for the public welfare, If it for in that case our Government would be completely dominated by, and our public servants would be entirely subservient to, privately-owned newspaper corporations. Newspapers are special-privilege corporations. All special-privilege corpora-

tions stand together when in common danger.

In my district there are three dailies, all owned by millionaires. H. L. Pittock owns a majority of the stock in the Oregonian and the Telegram, which I treat as one paper; S. Jackson owns a majority of the stock in the Journal, and E. W. Scripps owns a majority of the stock in the Daily News.

It would be as reasonable to expect a camel to go through the eye of a needle as to expect any one of these three newspaper corporations to support me hereafter, or to give publicity to the work I am doing here in Congress to break up private

Among other trusts there is the Newspaper Trust. The Associated Press supplies the Oregonian and the Telegram with news from outside of Portland, without which news neither paper could profitably run for a week; and the United Press supplies the Journal and the Daily News, the Journal receiving the full report and the Daily News the "pony" or abbreviated report, and neither paper could run without such outside news. These press associations now have it in their power to control the policies of the papers they serve, for the reason that they may withdraw their service at any contract-expiring period and give the same to another. Besides, all daily papers are under obligations to the press associations for not furnishing the same service to others who would start competing papers.

Mr. SHERWOOD. Will the gentleman allow an interruption? Mr. LAFFERTY. Certainly.

Mr. SHERWOOD. I will state to the gentleman that I have been elected four times to this House in a district nominally 10,000 Republican, a district which has a population of about 300,000, and I have never had the support of a single daily

paper in any campaign.

Mr. LAFFERTY. I am most delighted to hear the distinguished Member from Ohio, Gen. Sherwood, who is a fearless patriot and was a brigadier general in the Union Army, make that statement. It only coincides with what I said a moment ago—that I do not believe it is necessary that Members of this House have the support of daily papers in order that they may

come back here if they faithfully serve their constituents.

Mr. SHERWOOD. I understood the gentleman to say that no man could be elected without the support of the papers

Mr. LAFFERTY. I said that statement has been made, but

that I do not believe it.

Last April I introduced a bill to make the Associated Press, the United Press, and all other press associations common carriers of news, and to place them under the jurisdiction of the Interstate Commerce Commission. The effect of that bill, if it becomes a law, will be that press associations will have to furnish their news reports to all comers at the same price and upon equal terms, and if that price be deemed exorbitant any newspaper may complain to the Interstate Commerce Commission to have a reasonable rate fixed for the service, just as an application may now be made to the commission to have fixed a reasonable freight rate. Therefore, if my bill becomes a law any man may start a newspaper and be assured that he can buy any press report on the market upon equal terms with any other newspaper. That would break up the newspaper monopoly and

would make local newspapers independent.

About the time I announced my intention of introducing that bill, Mr. Bond P. Geddes, a reporter here in Washington for the House press, a gentleman whom most of the Members know personally and whom I now see in the gallery, came to my office and complained that I had said in a statement which appeared in the Congressional Record that the Associated Press and the United Press were controlled by the money power. Mr. Geddes stated to me that the United Press was owned by E. W. Scripps, the same man who owns the Portland Daily News, and Mr. Geddes, after pointing out that the Daily News had supported me in the last campaign, asked me to print a retraction in the Congressional Record of my statement that the United Press was controlled by the money power. Mr. Geddes stated that in coming to see me he was acting under orders from the Washington, D. C., manager of the United Press, who at this present time is Mr. Perry Arnold, in the Munsey Building. I declined to print any retraction. From that day to this my name has not appeared in the Daily News, except for brief mention when I was recently in Portland. The paper refused, as did the other three papers of Portland, to mention my departure from Portland for Washington on November 26, 1913, to attend the present session of Congress. Personally, I did not care, but I notified the Daily News, the Journal, and the Oregonian of my departure, and it was as little as they could have done to notify their readers, many of whom are in official correspondence with me as their Representative here, of the fact that I had been in Portland for three weeks and of my return on the day mentioned for Washington. The Oregonian and the Telegram refused to either mention my arrival or departure.

Mr. McKENZIE. Will the gentleman yield? Mr. LAFFERTY. I will. Mr. McKENZIE. I would like to ask the

I would like to ask the gentleman if, in his judgment, his fight against the money power, as he calls it, is the reason that the newspapers in his district failed to mention the fact that he had departed for Washington?

Mr. LAFFERTY. I do.
Mr. KEATING. Will the gentleman yield?
Mr. LAFFERTY. I will.
Mr. KEATING. Does the gentleman hold that any newspaper which fails to mention the going and coming of a Congressman is subject to the money power?

Mr. LAFFERTY. I do not

Mr. LAFFERTY. I do not. Mr. KEATING. So these newspapers that the gentleman refers to might have failed to mention his name for other

Mr. LAFFERTY. Certainly; a great many of the best men in the country are engaged in the newspaper business. Most, if not all, the reporters here are gentlemen; but they are hired to do certain work, and they do it.

Mr. McKENZIE. Will the gentleman yield again?

Mr. LAFFERTY. I will.

Mr. McKENZIE. Can the gentleman cite a single instance in this country where any man who is endeavoring to help the people or uplift society or purify the politics of the country

has ever been wrecked by the press of the country?

Mr. LAFFERTY. I can cite the instance of several who have been Members of Congress who have introduced bills to break up monopoly and who have been retired. During the late fight for the direct primary in the State of New York, when impeachment charges were preferred against Gov. Sulzer by Charles Murphy and William Barnes, we found the press of this country in sympathy with the impeachment proceedings.

Mr. KEATING. Will the gentleman yield? Mr. LAFFERTY, Yes, Mr. KEATING. While we are talking about Charles Murphy and Mr. Sulzer and the charge made by the gentleman from Oregon that the press of New York favored Mr. Murphy in these proceedings, is it not a fact that the press of New York,

almost without exception, condemns Mr. Murphy?
Mr. LAFFERTY. No; it is not. I read the editorials in the Washington Star and the Philadelphia papers and all over the country that whatever decision the high court of impeachment might render must be accepted as having been rendered without prejudice, thus preparing the public mind for the disgracing of one of the best men that ever served on the floor of this House. Mr. Sulzer, it is said, accepted campaign contributions. I did not accept a single penny during my last campaign and I never shall accept a cent from any source in the future. Mr. Sulzer did great work in this House; he did splendid work as governor of New York; and the charges were not preferred against him for any high crime or misdemeanor that he had perpetrated, but because he would not serve Charles Murphy.

Mr. KEATING. I understand that the gentleman places himself on the same pedestal as Gov. Sulzer. That is not the question I asked the gentleman. He made the flat statement that the members of the New York press had supported Mr. Murphy and opposed Gov. Sulzer. I ask him to name the papers in New

Mr. LAFFERTY. The New York Times, the New York Sun, and the New York Herald. The Tribune was halfway favorable to Mr. Sulzer, giving him lukewarm support.

Mr. MOSS of West Virginia. Will the gentleman yield? Mr. LAFFERTY. Yes.

Mr. MOSS of West Virginia. Does the gentleman contend that because Mr. Murphy filed charges against Mr. Sulzer that therefore Mr. Sulzer was not guilty? Does not the gentleman believe that whether Murphy or some obscure citizen had filed charges against Mr. Sulzer he was guilty of appropriating money that was contributed to campaign purposes for his own personal use, and that he ought to have been found guilty?

Mr. LAFFERTY. I am not saything that everything Mr. Sulzer did prior to the electon I would have done. I do say his impeachment and removal from office was a travesty on justice, a fraud and a fake, and was not done for the purpose for which they pretended to do it, but because he would not obey

Charles Murphy.

Will the gentleman yield? Mr. PLATT.

Mr. LAFFERTY. Yes.

Mr. PLATT. Does not the gentleman think that Mr. Sulzer had a fair trial?

No; he did not get a fair trial before an Mr. LAFFERTY. No; he did not get a fair trial before an unprejudiced court. That court was as prejudiced as the court that tried Robert Emmett and sent him to the scaffold.

Mr. PLATT. I think if the gentleman had been present at any of those hearings he would believe that that was a fair

Mr. CANTOR. Mr. Chairman, will the gentleman yield? I would like to ask him a question.

Mr. LAFFERTY. I can not yield further. Mr. CANTOR. But I want to deny a statement that the gentleman has made in respect to the court of impeachment. That court was composed of judges of the court of appeals.

Mr. LAFFERTY. Yes; and did not the best judge of that court of appeals—Judge Cullen, the most respected member of that court—refuse to vote for the impeachment of Mr. Sulzer?
Mr. CANTOR. Let me answer that.

Mr. LAFFERTY. But I will not yield further.

Mr. CANTOR. He said the governor

Mr. LAFFERTY. But I will not yield further. Mr. CANTOR. Well, I will answer it just the same.

Mr. LAFFERTY. All right; if the gentleman is going to

answer anyway, let him go ahead.

Mr. CANTOR. I want to say this, that the justice he names declared that the governor was guilty of moral turpitude, and should have been removed, but on the final vote he did not vote.

Mr. LAFFERTY. No; he did not make such declaration. Mr. CANTOR. He made such a declaration. Mr. PAYNE. Oh, yes; he did.

Mr. CANTOR. I am making this statement in justice to the Court of Appeals of the State of New York, in order to deny the statement which the gentleman has made about the court of impeachment. [Applause.]

Mr. DONOVAN. Mr. Chairman—
The CHAIRMAN (Mr. FITZGERALD in the chair). For what

purpose does the gentleman rise?

Mr. LAFFERTY. Mr. Chairman, I decline to yield?

The CHAIRMAN. The gentleman declines to yield.

Mr. DONOVAN. I do not ask the gentleman to yield. Is it

proper to make a parliamentary inquiry?

The CHAIRMAN. The gentleman can not make a parliamen-

tary inquiry while somebody has the floor.
Mr. DONOVAN. Then, I rise to a point of order.

The CHAIRMAN. The gentleman will state the point of

Mr. DONOVAN. The question, I understand, before us is the matter of a school commission.

The CHAIRMAN. The gentleman is not in order. He has of stated a point of order, and he will take his seat. The gennot stated a point of order, and he will take his seat. tleman from Oregon has the floor.

Mr. DONOVAN. Mr. Chairman, I rise to a point of order that the gentleman is not speaking to the matter in question before us.

The CHAIRMAN. The point of order is overruled, and the gentleman from Oregon will continue.

Mr. LAFFERTY. Mr. Chairman, having stood by my bill to break up the Newspaper Trust, and my statement that both the Associated Press and the United Press are controlled by the money power, well knowing that such action on my part would alienate my last vestige of newspaper support, so far as the dailies are concerned, I desire to give other Members of the House and my constituents and the country at large, so far as I can, my reasons for so doing.

Since I became a Member of this honorable body three years ago I have had but a single purpose, and that purpose is to work and vote for the public welfare upon all occasions as against special interests. I appreciate as highly as does any gentleman here the great honor of sitting as a Member of this House. But I did not regard my election to the House as the end but as only a means whereby I could help accomplish an end, to wit, the enactment of laws for the public welfare. few of those who voted for me, or for any Representative within the sound of my voice, had any special interest in our elections, but they were interested in the trust we are to discharge.

want to make it plain that Members of this House can not fully discharge their duties to work for the common people and the general public welfare if they permit their course to be influenced by newspapers printed by private corporations for private gain. There has been entirely too much toadying to private gain. There has been entirely too much toadying to "the press." Mayors of cities postpone important engagements in order to admit to their offices some gentleman representing "the press." Governors do the same thing. Cabinet officers, and even the President himself, scan the papers to see what sort of a "story" was "carried" by the various press associa-tions concerning some of their activities. These press associations and their newspapers soon let it be known what shading of opinion they will "play up strong," as they call it, and what they will ignore. In that way "the press" wields a powerful influence to-day on the actions of many public servants.
"The press" has two ways of killing off a public servant

who proves recalcitrant and insists upon serving the public welfare in season and out of season. One is attack and ridicule and the other is silence. By one means or the other "the press" figures it can bring any public servant to his knees before it. I have defied "the press." I shall continue to do so. In no other way, in my opinion, can a public servant be abso-

lutely independent and serve his employers.

It was as natural that the special interests should have seized upon "the press" as a means of controlling public servants as it is for a thug to grab the first bludgeon within his reach with which to strike you down when he desires your pocketbook. In former years the special interests could control public servants by sending their agents into conventions to nominate men known to be "safe," and by putting up the money to elect such men, but with the coming of the direct primary laws, the direct election of Senators, and the corrupt-practices acts, requiring that it shall be made public by affidavit where campaign contributions come from, all of which laws started with William S. U'Ren, in the State of Oregon, the special interests are, in their extremity, left with but one powerful weapon still under their complete control, and that weapon is "the press

Having now said this much, by way of preliminary, I desire to state a few facts for the benefit of the public, which the people of this country would never get out of the newspapers, as run at present, if they should read every word in them

from childhood to the grave.

In the first place, we have in this country \$125,000,000,000 in wealth, and 50 men own 40 per cent of this wealth. In other words, 50 men own nearly half of the total property of the United States. When any citizen gets this information out of a corporation-owned newspaper I wish he would come and let me know. Moreover, 200,000 men own 70 per cent of the wealth of the United States, leaving only 30 per cent for the remaining 99,800,000 people. The figures here given are taken from the United States census reports. These identical totals were given as correct in a speech upon the floor of this House and appearing to the Compression of August 1991. and appearing in the Congressional Record of August 9, 1912, delivered by the gentleman from Maine, Mr. McGhlicubby, who is one of the ablest and most conservative Members from the most conservative section of our country.

If any citizen believes that it is a healthy condition to have 2 per cent of our population own 70 per cent of our wealth, and to have 50 men own nearly half the colossal wealth of the United States, or that such a condition would have come about under fair laws, I should like to see that citizen. He would be the kind of a citizen who would believe the statement of a

private newspaper corporation, operated for private gain, in preference to that of his own public servant.

The wealth of this country has been concentrated by three methods, to wit, public-service monopolies, left to charge all the traffic would bear; industrial monopolies, allowed to charge for their commodities any price they saw fit to fix; and through usurious interest collected from the public at large by the money

During all this process of wealth concentration Congress has remained inert as though paralyzed. The newspapers have kept the public entertained by general information and by alleged "bitter contests" in Congress over nonessential matters, for example, whether the tariff on woolen manufactures should be 35 per cent or 50 per cent when either rate would be practically prohibitive.

If anyone doubts that the railroad companies, the express companies, the telegraph and telephone companies, the electric light and gas companies, the street railway and other publicservice companies, all of which are natural monopolies, are charging the public exorbitant rates, I will give just a few facts for consideration which do not appear in the newspapers.

Some time ago I wanted to send a telegraph message of 97 words from Portland to Washington. The agent said it would be \$6.50. I said, "I want to send the message at Government The agent looked it up in the rate book and told me the message would cost \$1.10, making a difference of \$5.40 on one little 97-word telegram. The reason the companies do this is that they do not want Government competition. They know if they charged the Government what they charge the public, that the Government would build lines of its own from Washington to Portland and from New York to San Francisco to transact the Government business, and they know that such lines would pay for themselves in one year at the rates they charge the public. And it is safe to say that the telegraph companies are not losing a penny on Government business.

The telegraph rate is only typical of the charges of all other public monopolies. One corporation—the American Telephone & Telegraph Co.—now owns all the Bell telephones of the United States, and also the Western Union Telegraph Co. This fact does not appear in the newspapers. But if any newspaper will prove that my statement is untrue, I will resign from office.

It was recently stated by Senator Cummins, of Iowa, that the railroads of this country are capitalized for \$17,000,000,000, and that no expert competent to judge the matter has ever placed their actual valuation at more than half that amount. For 20 years the people have been deluded into believing that Congress had invested the Interstate Commerce Commission with full power to fix railroad, telegraph, and express rates, but that was not true, for not until one year ago did Congress give the commission power to make a physical valuation of the railroads, and not until it was given that power did the commission have any authority to fix a rate, except when it was alleged that a given rate was unreasonable as compared with some other rate of the same railroad. Now, it will be seen how limited the powers of the Interstate Commerce Commission have been all these years, and still are, for the physical valuation has not yet been completed. The people have not been advised of this sham through their daily newspapers. And, now, that we gave the commission the power a year ago to make the physical valuation as a basis for fixing reasonable rates, we find the Associated Press and the United Press busily engaged in molding "public sentiment" to the belief that rates which the railroads themselves have fixed and under which the concentration of wealth partially took place, are actually too low.

At this precise point in the preparation of this speech, December 8, 1913, noon, I received the Portland Daily News of December 3, 1913, containing the following editorial:

### OUR RISING MR. LAFFERTY.

Out at St. Johns the other night Congressman A. Walter Lafferty took occasion to go out of his way to take a wallop at the News, and remarked, according to published reports, "the Portland News has been muzzled so far as saying anything good about Mr. Lafferty, which the editor had admitted was a fact."

Probably A. Walter was correctly quoted. If he said it, he lied, The editor of the News very frankly informed Mr. Lafferty, on his recent return from Washington, that this paper would not fight his fight as it had done the two previous campaigns. The News believes that Lafferty would never have seen the Halls of Congress without its support; the News believes that at the time it supported him, he was the best candidate in sight; it does not believe he is going to be the best candidate the next campaign.

The only reason the News has had nothing to say about the good things Mr. Lafferty has done has been because he has not done anything.

things Mr. LAFFERTY has done has been because he has not done anything.

For two terms he has resolved, and resoluted, and chattered, and extended his remarks in the Congressional Record, and sent out seeds, but if he has been responsible for a single meritorious act, if he has done anything for his district, if he has gained any standing in Washington, if in two terms of two years each he has climbed an inch to a position where he can be of service to this district, the fact has escaped the eagle eye of the News.

LAFFERTY is a Progressive, but he doesn't get anywhere. As a conversational artist, he is a wonder; he can devise more good reforms that never happen than any candidate we have met up with, and several months ago the News, after digesting his record, decided for itself that it was through with A. WALTER, and it did not disguise the fact from him

several months ago the News, after digesting his record, decided for itself that it was through with A. Walter, and it did not disguise the fact from him.

But the News has not been muzzled, nor is it fighting Lafferty; he is not an undesirable, he is not a crook, he is just a neat conversational artist, a charming dinner companion, and of late imbued with an overweening sense of his own importance without any considerable ground for his belief.

The News elected Lafferty twice and doesn't especially regret it; but Lafferty has had his chance and has not made good; that's enough said as to A. Walter.

But if a word more is needed, the News will remark that had it a year ago known what it now knows about A. Walter it would not then have supported him for Congressman. Also the News does not believe that he could possibly be elected from this district next campaign, even though he had a record of efficiency, which he has not.

The receipt of the Portland News was the first notice I had of such an editorial. But it was not a surprise to me. It had not been my intention to give the details of the flop of the Portland News, so far as its editor, Dana Sleeth, is concerned. But now I shall do so.

I arrived home in Portland Sunday, November 8, 1913. The following morning I went to the office of the Portland News, was greeted most cordially by Mr. Sleeth, and, knowing that he had received his orders, I told him that I did not expect the News to support me hereafter, but that I hoped it would make no difference between ourselves as friends.

Sleeth replied, "Yes; I received a letter about seven months ago about the case." He then told me that Roy W. Howard, of New York, president of the Unite. Press, which is owned by E. W. Scripps, who also owns the Daily News, sent Bond P. Geddes in to see me last April at the time I introduced the bill to put all press associations under the Interstate Commerce Commission. He further said that Howard had sent the notes of the interview made by Geddes, in which I had declined to print a retraction of my statement that the United Press was controlled by the money power, to B. F. Canfield, of Spokane, Wash., who is the northwest manager for all the so-called Scripps papers, of which the Portland News is one. Sleeth said that Canfield had sent the papers to him. That was all Sleeth said, but it was a fact that my name had not appeared in the Portland News from the date he received those "orders" up to November 9, 1913. In my speech at St. Johns I did not say that Sleeth had been muzzled; I merely recited the facts; but I say now that he has been muzzled, and I leave it to any sensible citizen to decide the question.

At the present time I have far more respect for the Oregonian and Telegram than for the Portland News. The Oregonian Publishing Co. does not make any bones of the fact that it is a representative of the money power and vested interests. But how is it with the Portland News? That paper is worse than a suake in the grass, because it has more intelligence. It is owned by E. W. Scripps, a multimillionaire, who has made his millions by hiring reporters at starvation wages and by starting 67 so-called penny newspapers in the United States, by establishing the United Press Association, which he also owns, and by pretending to be a friend to the poor people, Scripps is not now and never was a friend of the poor people of this country. He is a cold-blooded money-making multimillionaire. So long as he can take up the case of some unfortunate, like the poor woman who has recently been convicted of murdering her husband over in Connecticut and sentenced to be hanged, and make money out of it by using it to work upon the emotions of the poor people of the country, he does so. He has a set of reporters and a set of so-called editors trained in his peculiar school. They are to play to the poor people. They prate much about unimportant matters of local concern. But when Mr. Scripps once finds that a public officer is really amounting to anything and really endangering monopolistic graft, of which he is one of the most bounteous beneficiaries, he throws off his cloak and shows the cloven hoof. For every "pitiful" story printed by the 67 Scripps papers, appealing to the heartstrings of the poor and the unfortunate, a stream of pennies from the laboring people of this country, transformed into a stream of gold by the advertisers in Mr. Scripps's papers, pours into his coffers. He is simply cashing the misfortunes of the downtrodden.

But the meanest and most despicable part of the editorial attack upon me in the recent issue of the Portland Daily News is the statement that had it known a year ago what it knows now it would not have supported me. By that statement the writer of the editorial convicts himself and sews himself up from hereafter springing his mysterious information without making himself ridiculous, for earlier in the same editorial the writer says, "LAFFERTY is not an undesirable; he is not a crook." If that be true, the alleged information withheld from

the public can not be of any consequence. The editor realized that he had given no justification whatever to the poor people of Portland, who are my friends and who are his bread and butter, for having turned against me.

The simplest tests of common sense will show that the man who wrote the editorial was not sincere and did not himself believe what he was writing. As an excuse for turning against me, he says that several months ago he "digested" my record and found that I was not accomplishing anything in Congress. Mind you, several months ago was just at the close of my first term. No sane man expects wonders from a Congressman his first term. Yet during that term I had secured the passage of 16 bills, including one whereby the Government land-grant suit has been greatly expedited and the sum of \$1,000,000 turned into the Federal Treasury by compromise with the so-called innocent purchasers of the land that was sold, before the suit was brought to enforce the grant as to the remaining 2,300,000

The fact is that the only "record" the writer of that editorial ever "digested" was the letter sent him by the president of the United Press directing him to fight me or quit his job. He still has his job.

Again, as a pretext to his readers for deserting me, the writer

of the editorial says of me:

If in two terms of two years each he has climbed an inch to a position where he can be of service to this district, the fact has escaped the eagle eye of the News.

Yet when the paper deserted me, "several months ago," after "digesting" my record, I had not been even sworn in as a Member during my second term, and even now I am serving my second week of the first regular session of my second term, and not until March 4, 1915, will I have served two terms of two years each. These facts show that the pretended change of mind of the editor, based upon any just cause, is a pretense, a fake, a fraud, and a sham. This editor has a much poorer opinion of the intelligence of his readers than I have to delude himself into the belief that he could shove down their throats such miserable rot.

The editor takes unto himself full credit for both my elections. That is not nerve, it is pure gall. In 1910 I was nominated without the support of the Daily News, and my nomination was equivalent to an election. In the final campaign that year the Daily News remained neutral between John Manning and myself. So I became a Congressman without the support of the Daily News. The News, in the fall of 1911, when edited by Mr. E. O. Sawyer, did come to my support at a time when I needed it most, and I shall ever remain grateful for that help. And during the campaign of 1912 one or two of the most brilliant editorials ever penned by any man came unsolicited from Mr. Dana Sleeth in my behalf; and they, too, will ever be gratefully remembered. But I may merely mention the fact that during the time the News was supporting me I was supporting it and I made it more subscribers than any other man who ever said a word for the paper in Portland. But all the time I said the paper was owned by Mr. Scripps, a multimillionaire, and that the News might be expected to change front and begin fighting me any day.

Many people who have heard me speak in Portland will remember that statement. I may say, further, that when I had the support of the Daily News its support cut both ways. While it made me some votes it lost me some. Many people felt that might be the same wishy-washy, fly-by-the-night, undependable kind, as the News has now proved itself to be. But I hope these people will now see that I will stay put. Moreover, I may merely suggest to the editor of the News that last year in eastern Multnomah County, where the News did not circulate, I ran farther ahead, both at the primary and at the general

election, than I did down in the city.

"LAFFERTY is a progressive, but he doesn't get anywhere," says Mr. Sleeth. At that I am one ahead of the Daily News. It rails against Mayor Albee and fills its columns with talk of the recall of Tom Word till the public is sick and tired that the development of the public is sick and tired that the development of the public is sick and tired that the development of the public is sick and tired that the public is sick and tired the publ of its repetitions; but it advocates no specific laws, as I do, which would guarantee to every man and woman who toils a comfortable living while they are young, a competence for their old age, and an opportunity to live in happiness, own a home, educate their children, and take an annual vacation as they pass through this life. Just laws, such as the specific measures I have introduced into Congress, will, in my opinion, guarantee this much in return for the industry of every individual, and I believe the people will have these laws within the next five But they will not get these laws if they listen to such hirelings of intrenched special privilege as is the editor of the Daily News, who, for his paltry share of the plunder and pelf

represented by his salary, is willing to drive the dagger of treachery and falsehood into the heart of any public servant who has the courage to stand by the people's interests at all

But to go ahead with my speech where I was interrupted by the diversion to the Portland News. I was saying that both the United Press, owned by Mr. Scripps, and the Associated Press are now busily engaged in creating public sentiment to the effect that railroad rates are too low, and that the Interstate Commerce Commission ought to make an order raising the rates. I have recently read news items to that effect from both press associations, and doubtless every gentleman within the

hearing of my voice has done likewise.

I suppose these press associations would also have the telegraph companies raise their rates. The same men own both the railroad stocks and the telegraph company stocks. And I will give it as my candid opinion that the Western Union Telegraph Co. is now making a profit of 500 per cent per annum based upon its actual cash investment in its plant. This ought to be conclusively shown by the fact that it charges the public \$6.50 for a message for which it charges the Government only \$1.10, and no sane man will think for a moment that it is losing any money on the Government business. By analogy, the rates of the telephone companies, also owned by the same men who own the Western Union Telegraph Co., ought to be immediately cut in half by the proper governmental and State commissions.

I heartfly favor Government ownership of both the telephones and the telegraphs, and have bills pending for that purpose.

For many years all parties have complained bitterly against trusts during campaigns, but after the election little is said. The only way to control a trust is to give some governmental board or commission the power to control it. The trusts can not be controlled by talk or by simpering and hypocritical editorials

in the Scripps 67 varieties of gold mines.

The Portland News says I have no record for efficiency. Let us see about that. I was first sworn in as a Member of Congress April 15, 1911. On April 29 of that year I introduced H. R. 8092, being the first bill ever introduced into either branch of Congress giving the Interstate Commerce Commission power to fix maximum prices of commodities when found to be controlled by an absolute monopoly. It is true that my bill has not passed. But we now have a dozen bills of similar import pending and with a good prospect of such a bill becoming a law, But we now have a dozen bills of similar import pendtogether with the creation of an interstate trade commission to enforce its provisions.

During my first term also, as is shown by the Congressional Record for April 30, 1911, I secured the first vote ever had in the House of Representatives for the creation of a parcel post when I offered the so-called Lewis-Goeke bill as an amendment to the Post Office appropriation bill. That, too, was voted down and the bill went to the Senate without any parcel post. But there Senator Bourne secured the incorporation of a parcel-post amendment, and when it came back to the House it was

agreed to.

Relating to Oregon, during my first two years in Congress I secured the passage of 16 bills and secured larger appropria-tions for the district than it had ever had before. Besides, I put some life into the Oregon & California Railroad land-grant suit, and I may say now that I shall keep after the case till it is won. I now have a bill pending, which I believe will pass, directing the circuit court of appeals at San Francisco, where the case is now pending, to immediately certify the case to the Supreme Court and directing the Supreme Court to advance the case on its docket when received and to dispose of the same at the earliest practicable date. And I have every promise of appropriations during this Congress equally as favorable as those of the last Congress.

It is true that my bill did not pass directing the Secretary of the Interior, in the future expenditure of the reclamation fund, to give a preference to those States which had contributed to the reclamation fund more than they had received, the object being to return to Oregon the \$7,000,000 excess she had contributed to the fund from the sale of her public lands in excess of the amount she had received in reclamation work; but I have kept hammering away on my bill, and reintroduced it this term, and the Secretary of the Interior has recently recognized the equity of Oregon's claim and has ordered the building of the West Umatilla extension, to cost \$4,000,000. Besides, I have several bills pending to liberalize the homestead laws, making 2 acres of clearing and cultivation sufficient in a timbered area and opening up millions of acres of nontimbered lands now included in the withdrawals in Oregon.

From my position last Congress on the Committee on Irrigation of Arid Lands I have, this Congress, been promoted to membership on the Committee on Interstate and Foreign Commerce, one of the most important committees in the House. It meets several times every week. The work of each member of that committee is as arduous, as intricate, and as important as the work performed by any Federal judge. Yet the Portland News, parroting after its contemporaries, says of me:

If he has done anything for his district, if he has gained any standing in Washington, if in two terms of two years each he has climbed an inch to a position where he can be of service to this district the fact has escaped the eagle eye of the News.

It, is true I have introduced many bills which have not passed. But by introducing these bills I have put my promises to the people of my district and to the people of the country into concrete and specific form. The people of this country now know exactly where I stand,

That I shall be reelected, I have not the slightest doubt. I have faith in the intelligence of the average American citizen to stand by a servant who is faithful, and I expect before I leave Congress to see many of my bills, if not all of them, enacted into law. Of course, many of them can not now be passed. It takes a majority of the Members of Congress to pass a bill. But so far as I am concerned, I want the public to know that I stand ready to vote for the reforms I have proposed, and so long as I remain a Member of the House these mensures will be brought to the attention of the House at every session

On April 17, 1913, I introduced a bill in this House (H. R. 2908) to establish a mandatory nation-wide presidential preference primary, the only bill for the purpose offered at this session, except the one introduced by the gentleman from Illinois, Mr. Hinebaugh, and the latter bill left the matter of accepting its terms to the several States. Probably only a few thought my bill, or one like it, would ever become a law. But last Tuesday (a week ago) we found the President of the United States standing in this Chamber advocating just such a law, and that part of his address was vigorously applauded. Following the President's message the reporters went to the Committee on Election of President, Vice President, and House of Representatives, to find what bills had been introduced in the House for that purpose, and they found that mine was the only one. Needless to say, they did not mention it.

only one. Needless to say, they did not mention it.

There is one other bill I have introduced to which I wish to call especial attention. It is a bill providing for rural credits, or agricultural asset currency. I claim that the passage of this bill would lift from the backs of the American people the heaviest burden they now bear. As exorbitant as are the charges of monopolies, both carrier and industrial, which would be controlled and reduced under my pending bill to create an interstate trade commission, the interest charges of the money power annually exacted from the people of the United States are more exorbitant.

The Statistical Abstract of the United States Government shows the following astounding facts, none of which any citizen will ever get from a millionaire-owned newspaper, or from any Congressman who is afraid of a millionaire-owned newspaper. The total stock of money in the United States is only \$3,500,000,000. Yet, the people of the United States have on deposit in the banks of the country \$17,000,000,000. That is the first nut to crack. How is it possible? The only answer is that the banks are loaning credit, and charging 8 per cent interest for it, and are not loaning real money.

Next, the farmers of the United States have borrowed on their farms \$5,000,000,000, while the total stock of money in the United States, as stated, is only \$3,500,000,000. Again, I ask you, how is it possible? The farmers of the United States are paying annually \$500,000,000 in interest, or enough to build and fortify the Panama Canal. This interest charge is \$5 per capita of our population, and, of course, is added by the farmer to the cost of his products and is ultimately paid by the consumer.

If the farmers were paying this enormous interest to men who owned the money and had loaned it to the farmers, I would not complain. But that is not true. The men who have loaned this gigantic amount of "credit" to the farmers do not own either the money or the credit. They are simply loaning to the farmers something they themselves do not have, but which under our present financial laws they claim to have.

The game is worked in this way: A bank secures deposits, for example, of \$10,000,000. It then really owes its depositors \$10,000,000. But instead of holding this money on deposit it loans out what it "owes," except a small percentage, and the men to whom it loans again deposit the same money and it is again reloaned, ad infinitum, until we now have the conditions in the United States which the figures I have just quoted show.

If all the depositors should call for their money at once, they could not get it. For, as stated, the people have "deposited"

\$17,000,000,000, while the entire stock of money in existence in this country is only \$3,500,000,000.

The total stock of gold money in the United States is only \$1,000,000,000, or one-seventeenth of the total money the people are supposed to have on "deposit." So that if all the depositors should call for their money to-morrow and demand payment in gold they could only get 6 cents on the dollar, granting that the banks had in their vaults every dollar of gold in existence in the United States. At the same time the total property wealth of the United States is \$125,000,000,000. Therefore it is clear that we must have asset currency secured by property.

Being confronted with this condition and wishing to continue its business of loaning the credit of the people rather than real money, the money power has called for legal authority to establish a central bank, which bank shall have power to indorse the notes of citizens held by it and deposit same with the Government and secure from the Government a new issue of Treasury notes therefor. That was the Aldrich plan of creating more money. The Glass-Owen bill, which soon will become a law, follows that identical plan, except that it divides up the banking profits into 12 regional reserve districts, thereby distributing the profits of the credit business into the several parts of the country. The Glass-Owen bill is a step in the right direction, but it is a very short step. It leaves in the hands of the money power the authority to collect millions from the public aunually in the way of exorbitant interest, to which it is not entitled. The Government is going to loan to the regional reserve banks-private corporations-our Treasury notes at onehalf of 1 per cent interest, taking as security the notes of various citizens-the banks' customers-when such notes shall be indorsed by the regional reserve banks. That is all right as far as it goes, but while passing this bill we should have provided that the banks should not charge the public more than 3 or 4 per cent for these notes when the banks reloan them to the public.

The Glass-Owen bill is nothing more nor less than a plan for loaning Government Treasury notes to the citizens of the United States upon their notes, through the bankers as brokers, the banks guaranteeing the citizens' notes, and the bankers getting a commission on the transaction equal to the difference between one-half of 1 per cent, which the Government is to charge the bankers, and the 6 per cent or 8 per cent which the bankers will charge the citizens.

The new currency law will relieve the business situation, and to that extent it is good. But it should give the public more of the benefits.

Now, as a trailer to the Glass-Owen bill there is to be an agricultural credit bill, a bill to help the farmers. I introduced such a bill on October 11, 1913, H. R. 8835, by far the most radical one ever introduced into the American Congress, which bill is now pending before the Committee on Banking and Currency, having under consideration the matter of rural credits. I have been invited to appear before that committee soon, but my constituents will never hear of my work through the newspapers. All the other so-called agricultural credit bills merely provide for organizing the farmers locally, so that they may borrow money from the present Money Trust-the money power. It does seem to me that the farmers can do that much without "aid" from Congress; but my bill provides, fol-lowing almost the exact language of the Glass-Owen bill, that the Secretary of the Treasury shall cause to be printed and deposited in the Treasury of the United States an issue of Treasury notes, and shall, under such regulations as he may prescribe, loan such Treasury notes to the farmers of the country, taking as security first mortgages upon their farms, not to exceed 60 per cent of the unimproved value thereof, at 2 per cent interest per annum, and my bill provides that the profits which the Government shall derive, and it will derive a profit even at that low rate of interest, shall go into a special fund for the building of public roads. Mark my words, this bill is identical with the Glass-Owen bill, except that the Glass-Owen bill provides for loaning Treasury notes to the banks for one-half of 1 per cent, upon commercial paper, personal promissory notes, accepted drafts, and so forth, as security, while my bill provides for loaning the same kind of Treasury notes to the farmers upon first mortgages and at interest four times as high, to wit, 2 per cent. No man who is afraid of the money power or the newspapers would have dared introduce the bill I have offered.

Inasmuch as this country has property amounting to \$125,-000,000,000 and its stock of money only amounts to \$3,500,-000,000, the plan of the Government to issue asset currency to the public, based upon good asset security, is all right; and in so far as this asset currency shall be issued upon personal

notes, it is proper that the Government should provide, as in the Glass-Owen bill, that its Treasury notes shall be loaned to the public for individual notes, through the banks, requiring the banks to secure the Government by their indorsement of the notes. But as to that portion of the asset currency to be issued which shall be required by the farmers who have good real estate security to offer there is every reason why the loans should be made direct and not through the banks. The farmers have borrowed \$8,000,000.000, and they pay an annual interest, as heretofore stated, of \$500,000,000. This interest represents as heretofore stated, of \$500,000,000. a sum of money which will go to the banks if the farmers borrow through the banks. It will go to the Government-to the people-if they borrow direct from the Government; and the sum, as stated, represents \$5 per year to each man, woman, and child in the United States. It is a sum which would rebuild all of the telephone and telegraph lines in the United States three times. This is only a portion of the unearned interest the money power is collecting annually from the American people, and it can be saved to the people by the passage of my agricultural asset currency bill.

[At this point Mr. Moon resumed the chair.] Mr. BUCHANAN of Illinois. Will the gentleman yield?

Mr. LAFFERTY. Yes.
Mr. BUCHANAN of Illinois. Does the gentleman know I have introduced a bill which provides for issuing notes to loan to the farmers and workmen on their homes? I understood the gentleman to state that no one else had introduced such a bill.

Mr. LAFFERTY. I am sorry. I do not think I misrepre-sented the gentleman when I said mine was the most radical.

Mr. BUCHANAN of Illinois. I introduced a farmers' loan bill in the Sixty-second Congress.

Mr. LAFFERTY. I am glad to know the gentleman preceded me, and I give full credit to him.

I am in favor of the gold standard; I am in favor of sound

money; but do you know—
Mr. MURRAY of Oklahoma. And the gentleman wants asset

Mr. LAFFERTY. I want it; you bet. We have only \$1,000,000,000 of gold in the United States. The people have on deposit in the banks \$17,000,000,000. If they go to-morrow to the banks and demand their money in gold, the banks, with every penny of gold in existence in the United States, could only pay 6 cents on the dollar. The proper basis for money is to make so many grains of fine gold the standard of value and then to maintain all our other currency at a parity with that amount of gold by securing it with property. We only have a total of three billions five hundred millions of actual money, whereas we have \$125,000,000,000 of assets. It is ridiculous to think about a hundred and sixty-eight billion dollars' worth of business annually, which was the amount of the clearing-house transactions last year, being done on \$3,500,000,000 of actual cash-a little over 1 per cent of the business being cash and the rest credit. The farmers now have borrowed \$8,000,000,000 at 8 per cent iuterest, and there are only \$3,500,000,000 in existence in the United States.

My God, Mr. Chairman, are there any gentlemen here who are so dense that they will not understand that the money power by the control of credit is lending something to the people that it does not own itself? It is physically impossible for it to own that much cash, and it does not own the credit. The Glass-Owen bill, even without my agricultural asset currency bill as a trailer, will provide the best system of currency that any country in the world has. I have visited the other civilized countries of the world, and I know that the other countries are even more under control of the money power than this country will be after the passage of the Glass-Owen bill. But to have complete relief we ought also to have agricultural asset cur-

We are on the dawn of a new era; we are on the dawn of an era when the sovereign voters of the United States are going to come into their own, when they are going to have the benefit of the richest country in the world, when they are going to be able, if they engage in honest employment, to enjoy themselves while they are living and to improve their intellectual and spiritual being at the same time. That is what our forefathers fought for at Valley Forge, that is what all patriots of this country have bared their breasts to the battle for, and for Members of this House to fail to appreciate these facts and without fear or favor discharge their duties is not coming up to the simple requirements of the oath of office we take when we stand up here and are sworn in. I have heard these newspapers ridicule gentlemen of this House who are able men. The most humble Member of this House represents a one four hundred and thirty-sixth of the greatest Nation that has ever grown up under the beneficence of Almighty God. And when a

Congressman does his duty and honestly performs his great responsibilities he is entitled to respect rather than calumny and abuse. When I was just out of school, a few years ago, I was prosecuting attorney in the great State of Missouri, in the district of that great Democrat, CHAMP CLARK, and he can tell you whether or not I am one of the old blue hen's chickens. [Laughter and applause.]

In conclusion, I wish to call attention to just a few of my bills, which I hereby pledge the country to work faithfully for so long as I have the opportunity and a drop of blood left in

my body.

They provide for-

Agricultural asset currency, just explained. Nation-wide presidential primaries. Direct election of Federal judges.

A true label law for all food products and drugs.

An interstate trade commission to control monopolies.

A change of the rules of the House. I now have bills pending for all of these purposes. Under the present rules of the House, which are antiquated, nearly seven months of every regular session of Congress are consumed in passing the supply bills, which, being necessary to run the Government, are privileged and prevent any general legislation from being considered. These rules make the House merely an from being considered. These rules make the House merely an auditing committee. These rules work right into the hands of the standpatters who do not wish any legislation passed. have prepared a complete new draft of the rules, providing for one supply bill under the budget system, for record votes in committees, so that Members may be put on record both in committees and in the House upon all bills introduced, thereby preventing the present pigeonholing process whereby many good bills are killed without the possibility of fixing responsibility. Although I am now and have always been a progressive Replican, my set of rules were indorsed by both the Progressives and progressive Republicans in this Congress, who delegated me to offer them the first day of the extra session as a substitute for the old rules, and upon putting the matter to a vote my set of rules received 26 votes. Next Congress these rules will receive more votes.

I heartily favor the initiative, referendum, and recall, so that the people may pass good laws or kill bad laws when the legislative representatives fail to do so, and so that any representative or public officer may be recalled if he does not fulfill his preelection pledges or becomes corrupt. In no other way can we have a government of the people. Carrying out this idea of government by the consent of the governed, I have introduced a resolution for a constitutional amendment providing for direct election of Federal judges for 12-year terms instead of having them appointed for life. If we had such an amendment judges would not permit cases to drag as, for example, the Ore-California Railroad land-grant case has dragged, nor would they be hasty to hold unconstitutional a law for the benefit of the public.

I have in my possession a telegram from Judge Henry E. Mc-Ginn, of Portland, who is one of the ablest men in Oregon or any other State, approving my resolution for the direct election of Federal judges, which telegram I value as highly as any communication I have received during my three years in office, and during that time, I will say, I have received from Portland over 10,000 letters, and every one of them was answered the day it was received. I had the good fortune to meet Judge McGinn during my first year in Portland, and I have known him intimately ever since. The telegram which he sent me is as follows:

POSTAL TELEGRAPH Co., Portland, Oreg., April 16, 1913.

Hon. A. W. Lapperty,
Washington, D. C.:

Your head and heart are both right. Congratulations on your amendment Federal Constitution providing for election of Federal judges.
They will beat you never.

Hever F. McGiny.

I have a bill pending, H. R. 9832, requiring that all canned vegetables or meats have a statement on the label giving all the contents, with the percentage of each, as well as the year the product was packed. Mine is the only bill of the kind ever intro-duced. The so-called pure-food and drugs act of June 30, 1906, is very incomplete and inefficient, as Dr. H. W. Wiley has There is no reason on earth, except private greed, why such absolute safety should not be guaranteed the health of the country as is provided in my bill. The bill also provides that all packages, bottles, or other containers of food, drugs, or medicines put on the market for the interstate trade shall bear a label giving the true contents thereof, with percentages of

each. The people will never get these things if they fail to stand up for their rights. No great reform was ever wrought without a terrible struggle, a fight to a finish, and many times bloodshed. The fight I have been engaged in the past three years has been grinding. I have withstood it, and am stronger physically and mentally to-day than ever before in my life. I am in the fight to the end. No man can stand the fight that is made on him when he undertakes the battle for the public welfare, into which I have entered, unless he has a good moral character. Otherwise he would not last a month. Therefore I want my old friends to have courage, and those who only know me by reputation to demand facts when the dirty onslaught begins upon me by a united press during the coming fights. Were I guilty of an offense that would even amount to a misdemeanor, the enemy would have had me out of office long before this.

Finally, just a word for those who toil. It is for them that I am fighting hardest. I favor labor unions, and have always favored them. I favor a universal eight-hour day. I have offered a bill, H. R. 8826, making it unlawful for any mill or factory engaged in shipping its products into the interstate trade to employ men, women, or children more than eight hours a day. If this and the other measures I favor become laws, every man who works will be independent, he will be able to take a vacation each year, he will be able to educate his children, he will be able to lay by a little for his old age, and in this life he will be able to call his soul his own. Nothing less than this is justice. I deeply sympathize with all struggling poor people of Portland, of whom I am one, left as we are without newspaper assistance, but, thanks be to God and W. S. U'Ren, we have a State publicity pamphlet through which all candidates may make known to the voters their pledges, independent of the newspapers, and if I have my way about it the same kind of a publicity pamphlet will be provided for Presidential candidates, through a nation-wide direct primary law. and at the coming primary, while I do not agree with all of Mr. U'Ren's single-tax ideas, I shall certainly come home to Portland and cast my vote for him for governor of the State of Oregon if his name shall appear on the ballot.

I also heartily favor the old-age pension and industrial insurance laws recently put through in England by Lloyd-George. The newspapers have not mentioned the old-age pension law because it is opposed by the income-tax-paying higher-ups. But until conditions shall be changed so that a man who labors will be paid enough to enable him to lay by a competence, any man who works away his life for the good of the Commonwealth or the Nation should not be turned into the poorhouse or made dependent upon others when he is old and helpless. I have introduced an old-age-pension bill in Congress and I wish it could be brought to a vote to-morrow. I also wish that Mr. George's industrial insurance law would be adopted in the United States, so that poor laboring men and women, by paying a few cents a week in the way of revenue stamps to be canceled and placed upon a card, could create an insurance fund held by the Government, out of which surviving relatives would receive a reasonable sum for burial expenses and for their future support in case of the death of the insured.

The Portland News says in its editorial that I can devise more good reforms that never happen that any candidate it has met up with. There are 436 Members of Congress. Whenever the people of the United States elect 219 Members—a majority—who favor these reforms they will be passed. It certainly would be a backward step and would be postponing the happy day when these reforms will be realized for the voters to retire from Congress at the very beginning of his efficiency a man who has had the belief, backed by the courage, to advocate these reforms, at the cost that I have in the past and do now advocate them with all my heart.

I do not expect newspaper support for some years to come, but through paid advertisements and through official letters I shall keep the public advised as well as I can. I shall spend every dollar of my salary in the future, as in the past, for public printing, clerical help, halls, and so forth, in order that I may win this fight. No person contributed one cent to my campaign last year. I shall decline to accept a cent from any source in the future. I am not required under any corruptpractice act to include in any campaign-expense account what I pay out for official printing between campaigns or during campaigns, for that matter, when such printing is such as goes with the office I occupy. Congress has wisely given to its Members the postal frank in order that they may officially advise their constituents of their work, and had it not been for that postal frank the special interests would have had me out of office long ago. These same special interests now wish to see the p frank of Congressmen abolished. But it will never be done These same special interests now wish to see the postal

In final conclusion I wish to say that in all future campaigns, as in the past, I shall meet my constituents face to face in every

part of my district, and I shall in some way advertise these meetings. My standing challenge to any and all of the editors assailing me, and to anyone else having any reason to give why I should not have the confidence and esteem of my constituents, is hereby renewed to cover the full period that I shall remain in public life. And I want it noted that no one of them has ever yet accepted the challenge. I want to meet as many of my employers as possible. But I want the thousands of toilers whom I may never have the pleasure of meeting personally to know that I shall remain loyal to them to the end. [Applause.]

Mr. MURRAY of Oklahoma. Mr. Chairman—
The CHAIRMAN. The Chair recognizes the gentleman from Oklahoma [Mr. MURRAY].

Mr. MURRAY of Oklahoma. Mr. Chairman, we have drifted a little bit from the subject.

The object sought is increased production, and the problem to be solved is the discovery of the wisest plan to attain that object, whereby expenses of living may be reduced and future generations may be clothed and fed. This knowledge, sometimes called "vocational education," but more commonly called agricultural and mechanical education, is not a new science. It is the oldest science known to civilized man. We are just now having a revival of that science, lost to the white race during the many centuries of superstition and ignorance known as the Dark Ages. If you will but read the first book of Moses. or the story of Jacob and Laban, you will observe the ethnologic distinction between Jacob and Laban. You will further discover that Laban knew little of stock raising, while Jacob, the scientific stock breeder, knew and actually succeeded, through sexual selection, in demonstrating a principle of Darwinism 2,000 years before Darwin was born, wherein he robbed old man Laban of his herds by producing "a spotted, ringed, streaked, and striped" breed from the old man's herds. Jacob said the Lord had prospered him, and Laban thought it was true. But he was really robbing the old man by a process of science in the name of the Lord. But the story will disclose to you that the old man and his boys ultimately woke up, when it was too late, to the fact that Jacob, through a shrewd contract, had gotten the old man's herds by the process of science, or through his knowledge of stock breeding and feeding.

The resolution before the House looks to the creation of a commission of nine to devise a plan for "vocational education." Of all subjects, the white race, and especially the English-speaking peoples, have the least knowledge of agriculture. When ancient history points to the renown of Egypt and its rich soil, it is found that such was due to the splendid farmers of Egypt. The fertile valley of the Nile yet remains where it fed the inhabitants of the ancient civilization of Egypt; but the Egyptian farmer is gone.

There is no story in history but which brings in bold relief the renown, the wonder, and the grandeur of the Egyptian farmer. Even the Bible, as well as Josephus, speaks of the rich, fertile valley of the Nile. Hence production was ample, and its civilization grew the wonder of ancient times. Out of this civilization was established the great Alexandrian library. Through it the Pyramids were constructed. But after their country was overrun and controlled by a foreign race who could not comprehend that system the great library was destroyed and the civilization of Egypt went down in night never to rise again. But when you understand that the Egyptian farmer made it a rule annually to turn up and break up the soil 10 or 11 inches deep just prior to the overflows, which resettled it, thus giving for a dry season an 11-inch water base and available fertility for plant life, then you will understand the reason for the renowned fertility of the Nile to be due to a complete knowledge of the laws and science of production. In the great Roman civilization the same principle applied. They, too, held to the rule of deep annual breaking of the soil and to scientific, intense cultivation; and notwithstanding the Roman governmental principle militated against individualism the farmers of Rome developed an individualism and independence, giving ample production and feeding, clothing, and making possible that great civilization. But other classes grew jealous of this independence and, just as we have done in the past few decades, stinted the farmer, and in order to break down his independence passed the "Agrarian laws" and placed the title to his estate in the Government of Rome, that they might jerk his farm and home from under him. This so discouraged the Roman farmer that he refused to put forth extra effort to build up the soil year by year until he lost that great art. Production began to fail. High cost of living followed, ushering in a decay of the Roman civilization. I want to say to the business and professional man, and especially to you men of the East-and I measure my words as I say it—that to stint the farmer is but to take the bread from your own mouths. In proportion to governmental care for the direct producer just in that proportion will all other classes prosper, and, conversely, that in proportion to your stinting him will you suffer the consequences. The farmer can stand low production better than you can. Obviously, your wisest plan would be to give him all of the opportunities; to encourage him to remain upon the farm, because it means greater production, less cost of living, and strengthens his ability to feed mankind. For, after all, the farmer must feed the world. I was astonished when I read the first annual report of the Secretary of Agriculture on the farmers' needs. This report is made up of methods of "coordination" for his department, which is but another term for centralized control, but is weak in recommendations for the farmer. I stand appalled at two statements in that report, one in which he says the farmer ought not to ask for rates of interest lower than other people, even after the Secretary advocates a rural credit system from 10 to 60 years, which discloses the superb ignorance of a knowledge of agriculture and its needs of this otherwise learned Secretary of

While it is true that in a "commercial system" of banking, interest rates should be uniform to all, but "commercial bankmeans, primarily, personal security on short-time loans; but the farmer can not pay on 60 years' time such rates as must be charged under a "commercial system" of banking. The Secretary further says that the farmer ought not to organize or cooperate with a view to fixing his prices. This statement is doubtless made upon the assumption that his prices will be too high to other classes, which will prove true under low production, but can never prove true under a scale of ample production, where the number of farmers are proportionate to other vocations—in short, when the farmer remains on the farm. But they will not all remain there if you do not encourage them not only in the knowledge of agriculture but in his credit and banking privileges, in your tariff laws, and in all the other policies and measures of government. The professional or business man is shortsighted indeed if he can not see these fundamental truths, and I warn you now that such narrow policy in Congress and through the Secretary of Agriculture will bring wreck and ruin first upon you and the laboring man living in your midst and serving you at the machine and in the shops. Though you despise the farmer, your own selfish interest ought to dictate the wiser policy of encouraging him and all who would desire to engage in the calling of agriculture. Europe has done this. All nations of Europe have felt these requirements needed, and have made such provision, not that they like the farmer better than we but that they know their own interest better than the American nonproducer.

The lessons to be learned from the experience of Rome and of Egypt are sufficient to prove the sound philosophy of Olin M. Roberts, of Texas, in his wise saying that "civilization begins and ends with the plow." Therefore the knowledge of the plow and its allied uses is the knowledge of first magnitude.

During the Dark Ages the white race lost the science of agriculture. Perhaps the German, the Dane, and the Swede have retained more of this knowledge than any other. The Chinese, by reason of their superior knowledge of agriculture, have been enabled to support one-fourth of the people of the world. For 40 centuries, without mining or manufactures, upon agriculture alone, they have lived in peace, fed, and sustained that dense and congested population. When you understand that the Chinese have in the country precincts 4,800 people to the rater mile, which would compress, at that rate, in one of our average Western States the entire population of this Republic, you will then realize that if we were to double our population without increasing the knowledge of agriculture, our power of production, misery and starvation would confront us-if not social revolution destroy us.

It will not be my purpose to discuss whether Malthusianism is true, but Prof. Malthus once taught that the time would come world when, with universal peace, the world could not feed itself, due to the fact that production increases by arithmetical ratio, while population increases by geometrical ratio. But whether that doctrine be true or not, we are confronted by the stubborn problem of production sufficient to feed our people; and if we were to double now the population of this Republic, revolution would inevitably follow. When I cite you the fact that this Republic and the States have spent for 25 years \$180,-000,000 annually for agriculture and increased production only 3 per cent plus, while population has nearly doubled, then you will realize what the next 25 years will bring to us.

The resolution before the House disclosed from its discussion even the lack of knowledge by these otherwise intelligent gentlemen who compose this House. The Lever bill is an entirely different bill from the proposition submitted in this resolution. adoption of this resolution is meant that this body, with its present information, is not ready to enact a bill now to provide for agricultural education, then I would favor it in order to obtain that information. If it means that after its enactment the committee that would be appointed would be entirely made

of university professors, I would oppose it.

In this statement I would not have you believe that I am opposed to universities. On the contrary, I believe in them. I repeat, again, I believe that it is of equal importance that a few men be educated beyond the great body of citizens as it is to diffuse knowledge among all the citizens, but this knowledge for the many should be confined to those things they can in after life use. Many things are produced by scientists and men of learning of common use among the people, but which few of our citizens would care to learn. Among these is the almanac, which in colonial times was made alone by Ben Franklin and sold to the people; but the knowledge of making almanacs, which few of us would care to learn, is understood by so many they now give them away.

There are two systems of education-the "classical" and the "industrial" schools-the university and the agricultural and mechanical college. Both schools are required if we are to subserve the best interests of American society, but they can not be conducted on the same plan nor united in their faculty or

management.

If for an entire generation all the States in America should appropriate a half million dollars annually for the support of their universities and in that generation produce but one Jefferson, it would be worth that aggregate expenditure. Likewise, it would be worth such expenditure if each State would appropriate for a like period the same amount for an agricultural and mechanical college and in one generation they created one Luther Burbank, who has produced 2,500 new plants-among them the Burbank potato for the dry regions of the West; the navel, or seedless, orange; the white blackberry; the seedless grape; the cross between the apricot and the plum, called the plumcot; the spineless cactus; and others too numerous to mention. His horticultural and agricultural achievements, the pure composite of science, in the interest of man and to feed the world, marks him the greatest benefactor for 20 centuries. For the reason that the classical school and industrial school can not be united under the same faculty or management do I strenuously object to appointing university professors on this commission to frame the plan. Equality of degree and kind of education should not be sought. We should have equality of education should not be sought. We should have equality of opportunity in every science, art, literature, and of all known philosophy of man, and that, too, at the expense of the public, leaving each individual to choose his own course as to whether he desires a higher education and the kind that suits his taste and ambition after he has first been taught the elements of things he can use in after life.

I have had a deal of experience with this question. I have been in two constitutional conventions. In the first one the committee turned down the proposition to teach agriculture in the common schools. I went upon the floor and convinced the convention that to teach agriculture in the common schools would prove wholesome. When the constitution of our State was under consideration, I appointed a committee that I thought would write a provision in that constitution, and to my astonishment they turned me down because they did not understand the subject. They said it was "nonsense." I went upon the floor and put into the Oklahoma constitution a clause existing in no other constitution, making it mandatory to teach the elements of agriculture, horticulture, stock feeding, and domestic arts and sciences in all public schools in that State. Following that the legislature vitalized that provision, and consequently every school in the State teaches agriculture. [Applause.]

The legislature then separated the board of regents, providing one for the university and another elective by the farmers as the regents of all agricultural and mechanical colleges, providing for a system of farmers' county institutes and six district or secondary schools of agriculture, with but a two-year course, the real farmers' school. Then the battle began. The same battle that has characterized every step since the organization of the first board of agriculture in Great Britain. contest which characterized this work in its birthplace in America—the State of Illinois. At about this time Justin Smith Morrill, of Vermont, took the lead in this House and passed the first Morrill Act in 1860, but which was vetoed by President Buchanan. His renewed efforts resulted in the Morrill law of July 2, 1862, by the approval of the wise old "Abe" Lincoln, resulting in the creation of an agricultural and mechanical college in every State in this Republic.

The profound learning of Morrill convinces the student of this

I am partly for this resolution and partly against it. If by the subject that he was 200 years ahead of his generation. The

same battle in Illinois, of which the inquiring mind may convince itself, if it will take up some encyclopedia of agriculture, under the subject of "agricultural education," has all along the line been the same. Our contest in Oklahoma is and has been the same as existed in the State of Illinois. The battalions against us have for its right wing the State university, who know nothing of the economics of agriculture, standing with jealousy and the fear of competition; the left wing consists of a few of those from every calling—some from among them being farmers themselves—who can not comprehend the wisdom and philosophy of the system. This is my reason for saying, as I said before, that I would oppose this resolution if university presidents should control the board, just as it was a mistake to put into the Cabinet as the Secretary of Agriculture a university president who knows nothing of the science of agriculture.

Since Oklahoma's experience the great State of Wisconsin has followed with 6 district or secondary schools of agriculture, Arkansas with 6, Mississippi with 30, and, prior to that, Georgia

and Alabama had wisely entered upon the plan.

Now, remember, gentlemen, the Lever bill is not a vocational educational bill. The Lever bill is essential when you enter upon a vocational system, for the reason that you must keep a campaign going on among the farmers themselves before you can train their sons and daughters. Dr. Harvey said he was never able to convince any man over 40 years old that the blood circulated. Hence, the Lever bill will reach many over 40 years old. The doctrine of an increased knowledge of agriculture is more than an educational question. It is a sociological problem that must come with the growth and development of mankind. You must put it into the school and teach the boys and girls who will compose the generation on to-morrow, but if you do not follow it with the Lever bill, to enable trained men to go forth and battle for the cause, keeping a propaganda before the adult farmer till you have trained their boys, some of them will try to destroy the system. [Applause.]

will try to destroy the system. [Applause.] This brings to mind an incident within my own experience when just such work as the Lever bill contemplates was first introduced in my county. A boys' corn club was organized in my community at Murray schoolhouse. A boy some 12 years old, son of a tenant farmer, a good man, but shiftless, who had been taught and really believed that farming consisted wholly of labor (of work and then more work), joined the club and received his quota of seed corn. The next morning he asked his father for an acre of ground upon which to plant it. After explaining that he "wanted to make a scientific farmer," his father took the corn away from him, fed it to the chickens, gave him a kick, and told him to "hunt the calves." But later, in consequence of this being the only club in the county, it won some \$300 in prizes at the State and county fairs, which they divided equally among the club members. This winning of money was the only thing that convinced this boy's parent, and the next year he was permitted to join. You know we oftentimes have to knock a man down to convince him, and some

times the second time.

This brings to mind another phase of this subject. It aids in a better knowledge of marketing. The crops most difficult to produce or that require the greatest knowledge are invariably marketed more wisely than that class of crops easy of production, for instance, anybody in the South, even a negro, can grow cotton, and it has always been unwisely marketed. It is not marketed at all. It is "dumped" off to the buyer, destroying the market. Notwithstanding it is the most stable crop. It can be thrown in the weather after being baled and does not deteriorate in value. You will observe that the products of the fruit farmer, although perishable, are generally wisely marketed, because it requires more judgment to produce it. No one ever heard of unwise marketing of alfalfa, because it requires more knowledge of the soil and of plant life and of all the elements that make for increased production. Hence scientific agriculture means to the farmer better marketing while it means to the balance of the world increased production and lower cost of living. Moreover, shiftless, ignorant method of agriculture in every country increases landlordism, always a detriment to any country, because a nation is strong or weak in proportion to the number of home owners in proportion to the population and the land. Under intelligent, scientific, intensive cultivation the owner of "broad acres" can not compete under his tenant system with the small farmer. Hence economic necessity forces sale, and consequently small home owning. From this standpoint alone vocational education is worth the money.

I have often observed that fact, and do you know that the worst enemies of agricultural education are some of the farmers themselves? Merchants, feeling that it is a necessity, some-

times think it is "nonsense," and that farmers do not work hard enough. God knows they work hard enough, but too many of them without thought. A farmer must take his "thinker" along with his plow to the field if he would achieve the greatest success.

If work, and only work, were all required to make a good farmer, then the man with the greatest physical strength and the greatest endurance of physical labor would and could be the best farmer, and the negro would be the best farmer of any race in the world. But you know it is not true. As a matter of truth it requires more science and a greater knowledge of elements of science to become a scientific farmer than to fill any

other calling in life.

If a man were a druggist, he would need understand chemistry and a few allied sciences; or a physician, these and but a few others. But if he would be a scientific farmer he must understand physical geography and physiography, and especially these as they disclose the formation of soils and the preservation of fertility, overlooked in the universities. He must understand natural history and zoology to understand animal life—stock breeding and feeding. He must understand botany to know plant life; entomology to enable him to combat insect pests; and besides these he must learn the elements of chemistry and biology and keep tab on the weather. I do not contend that it is necessary for the schoolboy to master these sciences as a student of a university, but he must learn the elements of them and as they relate to his business. The farmer must learn chemistry only as it relates to soils, while the university student masters that science as it relates to minerals, the precious metals, and compounds.

Now, gentlemen, I am for the Lever bill, but the Lever bill is nonsense without following it up with a bill providing for the school for vocational education. The Lever bill can be of service only to the thinking farmer and by keeping up the campaign among the adult farmers, so they will not send their boys off to

"hunt the calves."

When you have had an opportunity to duplicate my experience you will find that some few farmers will refuse your doctrine, even after you have convinced them by your arguments. This reminds me of my personal experience. Some years ago I delivered a lecture on seed corn and how to produce corn, at the Cottonwood schoolhouse, located in the Washita Valley, some 4 miles from my home. Nearly all of the farmers in the entire valley for many miles were present, including some tenants on my farm. I delivered a speech for two and one-half hours on the subject of corn, applying the science to many things I knew within their own experiences and observations, so as to give the reason for each of these experiences, that I might convince them of the truth of all. I explained to them that the key to seed corn was the one word "uniformity"; that only one of a variety should be planted in the same plot; that an early and late corn must not be mixed to secure a heavy yield; and pointed out that the selection must be determined by the soil, the rainfall, and the climate; that they must know that the same seed would be unsuited for Minnesota, where the rivers run up hill and the Irish vote the Republican ticket, and at the same time for a locality like South Carolina, where the rivers run down hill to the sea and the "niggers" positively refuse to vote. The fol-lowing week I rode over my farm to discuss with my tenants the question of seed. I found they all understood my lecture perfectly well and that all of them, with one exception, had first-class seed. This particular one had the worst lot of seed corn I ever saw planted that would germinate. He had red, yellow, white, and blue grains, little and large, short and long, gourd seed and shoe-peg shape: mixed together—a perfect Duke's Mixture of seed corn. I said to him, "You have got a bad lot of seed corn." He said, "I know it." I replied, "Couldn't you do any better?" "Didn't want to do any better," said he, "because this land of yours will produce 45 bushels of any corn and you get one-third rent; 15 bushels, and that's enough rent for any man." Of course that ended the argument. I did not grow impatient because I have long ago learned that it requires considerable patience, and, for a public man, sometimes to exercise a good deal of courage, to battle for the public's interest. I have learned that men will take a cold, a cussing, or a rail off your fence; indeed, anything, except good advice.

The self-conceited scholar, with an eye constant upon astronomy, as great as that science be, who looks down with disdain upon Mother Earth, does but betray his own ignorance. No greater truth was ever uttered than this statement by Gen. Albert Pike, the scholar, poet, archeologist, linguist, philosopher:

There is no legal limit to the possible influence of a good deed or a wise word or a generous effort. Nothing is really small. Whomsoever is open to the deep penetration of nature knows this.

And in this other saying:

Alexander of Macedon has left a saying behind him which has survived his conquests: "Nothing is nobler than work." Work only can keep men and kings respectable. And when a king is a king, indeed, it is an honorable office to give tone to the manners and morals of the nation; to set the example of virtuous conduct. Work and wages will go together in men's minds in the most royal institutions.

I have this further to say about the American farmer. I say it here; I have said it to them at home. The American farmer is the most learned farmer in all the world about politics, general history, banking and coinage, and the science of government. He is the most learned farmer in the world about every man's business except his own. [Laughter.] The German farmer knows his business, although sometimes he knows little else. But he can come to our country and settle on a clay hill, where an American farmer would starve to death, and make the land more valuable, while he is earning a living at the same time.

I repeat again, my friends, consider the law of production and the great increase of population that will be brought to us in another generation, and be convinced of the fact that we can not spend too much money in developing the youth that will bring another generation of farmers that will equal the farmers

of all the world.

I said awhile ago that I would oppose this resolution if university professors alone would constitute the board. Because a university has to do with those peculiar sciences that create a mental aristocracy, of classics, and things of a character that cause the university student to overlook or to look with disdain upon those things that relate purely to life and to the soil, and so naturally, conscientiously, he is opposed to it. University students do not understand its necessity, and that is the reason why you have never seen a success achieved in joining the university with an agricultural and mechanical college. You only combine their number, but you either destroy the university or you destroy the agricultural training as such and agricultural and mechanical educa-We need them both in our great civilization. They both must be taken care of, as I before stated, and it is the duty of government to provide for the education of every youth to the fullest extent of known knowledge of the sciences and of the arts and of literature, and that, too, at the public expense. But we must do it with discretion, in the light of experience, without sacrifice to either.

Now, why does not the agricultural and mechanical college meet the condition of the farm? Because the agricultural and mechanical colleges in the various States must needs have such a large curriculum and such a heavy course that the moment the graduate steps out of school he has a better opportunity in other lines to meet the requirements of science. He therefore

never goes back to the farm.

The consequence is we are educating the boy away from the farm. We need that agricultural and mechanical college continued for the purpose of creating the sort of scientific knowledge that is needed for the tremendous demands of life. But in addition we need a district or secondary agricultural college in every congressional district in the United States. [Applause.] What for? A college that will teach the boy nothing more than a two years' course, and that confined to practical farm needs, and when he leaves he will go back to the farm—this will educate farmers' boys for the farm.

If he wants to go further, he can do so by going to the State agricultural and mechanical college or pursue the other course in the university. And the result will be that he will have that knowledge that will be necessary to make him a farmer and to increase the sum of knowledge in his community, and the

boys will not all be going to some other station.

Why do they go to other stations? Because the record shows that out of 28 States, with 28 universities and 28 agricultural and mechanical colleges, the highest average wages paid to any graduate are paid to the agricultural and mechanical college graduates. And why should they go back to the farm under the conditions the farmers now have to meet, where hardships meet them on every hand, and where in the finances of the country we have overlooked their interests and have not made provision whereby they could bring their resources and get credit at the Therefore wisdom suggests that we encourage the States to put agricultural instruction into the common schools, and that this Congress provide for a secondary agricultural and mechanical college in every congressional district in the United States, under a provision of law whereby there shall be appropriated annually 3 cents per capita, according to the population in every State, on the condition that the State shall put up the balance to sustain the institution, furnish the building and sufficient land for demonstration and experimental farm, the institutions being limited to a two years' course and confined to

questions of soil, farm management, construction of houses and barns, road building and machinery, insect pests and allied sciences, requisite to make of him a farmer but not a scientist, the States being required to meet certain conditions, which should be named in the law, but otherwise, as in the case of our State agricultural and mechanical colleges supported by the Morrill, Hatch, Adams, and other funds, to have complete control over such secondary agricultural and mechanical institutions. Such a system would educate the farmer's boy for the farm rather than from the farm. Provision should be made whereby each State should have its quota according to the population, and in those congressional districts which are wholly confined to the cities special information should be provided to train the boys of mechanics and artisans, whose labors would be in the shop and at the forge and at the machine. A portion of the fund should be supplied to the normal schools of the State. in order to train the teacher in a practical knowledge of these subjects, to the end that teachers may be supplied to the common schools with a knowledge of the subject at hand.

I may be pardoned, Mr. Chairman, to call our attention to our party declaration in favor of this policy, and I may be pardoned the personal reference to state that I drew the first plank and had the honor to submit to, with the privilege of discussing before, the platform committee of our party at Denver in 1908, which was the first declaration on this subject ever adopted by any American political party. In 1912 all three of the leading political parties in general terms announced the same principle.

The Denver platform is in these words:

The Democratic Party favors the extension of agricultural, mechanical, and industrial education. We therefore favor the establishment of district agricultural experiment stations and secondary agricultural and mechanical colleges in the several States.

My friends, this subject is a deep one, too deep for so short a discussion as we are giving it now. If it be the purpose of this resolution to announce that we are not ready for a real vocational educational bill, then the resolution ought to be passed; but if you gentlemen do not intend to pass one of that kind, you ought to defeat the Lever bill, because the Lever bill, without that increased knowledge, would mean a greater power in the hands of the Secretary of Agriculture to "coordinate," as he calls it, but to control and dictate policies to Congressmen in their districts. Unless you amend it in such a way as to take away that authority that will be the effect of it, as it has been recently revised.

The gentleman from Georgia made a suggestion a while ago, in a question, about the authority of this Government to do these things. I would be the last man in the world who would want this Government to assume the authority of the States. I would want this under the control of the States, just as the agricultural and mechanical colleges are operated to-day. Then you are within the Constitution. You are keeping the doctrine of leaving to the States those peculiar things that confront them

and are necessary to their welfare and being.

In passing I want to say, you will find in all this fight those who want to put agricultural education where it does not belong. You will find those who want to confine it to too narrow a course; but in my opinion it ought to be taught in every public institution except the university, not for the purpose of crippling the university but because in the university it will not serve any wholesome purpose. It ought to be in the normal schools so as to train the teachers. In the past the trouble has been that when State after State has adopted a provision for teaching agriculture there have been no teachers who understood the subject, and the regrettable part about it all is that we can not get the people satisfied or interested in the subject until some great pestilence like the boll weevil or the foot-and-mouth disease, amounting almost to a calamity, comes upon them.

My friends, you have heard a good deal about the boll weevil. When that little bug came across the Rio Grande and spread across the Sierra Blanca country, Dr. J. H. Connell, now the president of Oklahoma's agricultural and mechanical college, but then the editor of a great scientific journal at the heaviest salary of any man in the Mississippi Valley, went to the legislature of Texas and said to them, "Appropriate money to pay every farmer in those two counties not to raise any more cotton for two years." The politicians in the legislature, ignorant as they were, said, "Oh, there is no little Mexican bug that can destroy the Texas cetter gron"

destroy the Texas cotton crop."

What was the result? The boll weevil crossed the Sierra Blanca country and year after year spread farther, destroying the cotton crop of the State, bringing poverty and bankruptcy in its path, like Sherman's march to the sea. Finally the legislature had to pass an appropriation offering a reward of \$50,000 for any man who could give them any idea of how to curtail the ravages of that little insect. What was the result? Land

values went down, merchants went bankrupt, bankers went out Disaster and woe were upon every hand. the boll weevil has crossed the Mississippi River; but Texas learned a lesson. She put into her schools a course of instruction in agriculture, and the next generation of farmers will be better than the present one. So with the other Southern States. So after all it was a blessing in disguise. It seems that we never get action until something confronts us, until we meet with

some difficulty which must be conquered.

How true is this philosophy of Morals and Dogma:

What we call accident is but the adamantine chain of indissoluble connection between all created things. The locust, hatched in the Arabian sands, the small worm that destroys the cotton boll, one making famine in the Orient, the other closing the mills and starving the workmen and their children in the Occident with riots and massacres, are as much the ministers of God as the earthquake; and the fate of nations depends more on them than the intellect of its kings and legislators.

I will state to you candidly that I am not uneasy about our soils' feeding the American people, with proper knowledge. As a matter of fact, we have swamp lands enough to add to this Republic in point of productivity nine States, but it would be unwise to drain them now. We can irrigate every foot of be unwise to drain them now. We can irrigate every foot of land east of the Rocky Mountains, and any first-class civil engineer will tell you we can do it. And we can do it as cheaply as the cost of building the Panama Canal. Some day it will be done, but it ought not to be done now. Why? Because the method now used is a wasteful method. The farmers must be taught how to preserve the soil first. We have practiced a system of waste long enough and on too much of our land already. The people must wake up to the necessity of conserving what we now have, and when they learn better methods of preserving the soil that they have wasted in many of our States there will be a great saving of our agricultural resources. instance, in some of the Southern States they import \$10,000,000 worth of guano to fertilize the soil. That amount goes out annually never to return. I am happy to know that my State was not settled until a knowledge of agriculture began to take hold of the people, and we have a soil that will last under intelligent treatment for a thousand years.

When the American farmer understands his subject, and the American business man and professional man understands it as they ought, then we can drain the swamp lands. Then we can irrigate the West, and then we shall be enabled to support with less difficulty than now, by the increased product, a population greater than that of the Chinese Empire.

I am only pleading now for that active support behind this principle that will bring in another generation a production that will keep pace with population. Because, as sure as "the night follows the day," if you do not increase this power, with your doctrine of universal peace-which I hope may come without further wars for the next hundred years—as sure as fate revolution, anarchy, and social death will follow in the wake of our civilization. Many of our troubles are not political troubles. Many of our troubles are social troubles that have to do with inspiring the youth of the land toward a change in thought, toward a change in sentiment, and toward a change in their hab-

its, hopes, and ambitions.

Permit me to recite a little instance in my community. young man by the name of John Golryan, a German, educated in Germany, came to that community and had lived here four years. He was employed by J. L. Neeley, half a mile from my home, to pick cotton. Every morning when the dew was on and he could not pick it he was out gathering butterflies and millers. He was asked what he was going to do with them. He said, "I am going to send them to Germany and sell them to teach the pupils entomology in the public schools." They said, "Why don't they catch them in Germany?" He replied, "Our people know so much how to destroy the insects that they have destroyed them all in Germany." Then he was asked, "Why do you want to teach them further?" He said, "We have got to keep them from coming back." Christmas week he turned the laugh on them when he received from 5 cents to \$4.50 apiece for those little butterflies. Now, imagine the ridicule and sarcasm of an ordinary American at the very idea of catching butterflies to teach the science of "bugology"; and yet the toll of insects in the United States equals 35 per cent of America's annual production. Imagine the laughter and scorn and ridicule that would meet, to them, such a "freak idea"; but the time will come, and shortly, and you will have to meet it, because with everything comes destruction of that thing.

As you increase the farm products you increase the insects that destroy them. You will pretty soon find what my old Latin teacher told me about the meaning of ad infinitum. He said, "As you have learned in your entomology, you will find big bugs have little bugs on their backs to bite 'em, and the little bugs have still smaller bugs ad infinitum." I fail accurately to quote it, but you have the idea.

That is true in politics. The blg bug politician has a little one on his back to bite him. [Laughter.] But the insects from one plant will eat another plant. You can pass all the bird laws you want to, but until you increase the knowledge of bugs-a very easy task-that are beneficial and bugs that are harmful and bugs that are parasites, so that you know those that are harmful from those that are beneficial; until you do that you will have this continual annual toll by insects. cotton-boll worm, the fruit worm, bud, corn, and tomato worm is the same worm, and hence worse than the boll weevil, but much easier to destroy. If all farmers knew this worm, they could destroy it in one season.

My friends, the cotton-boll weevil awakes in the spring, and by the 1st of September the generations coming from one pair will amount to 154,000,000, equal to the population of the Chinese Empire. What a blessing it would have been if a lark had been there to catch that pair in the beginning. [Laughter.] But, my friends, we will have to suffer a bit more with the high cost of living that you ascribe to first one thing and then another. With all the questions that will confront us, you will finally decide that it does not all come from tariff or banking laws or monopoly important political problems, to be sure, but this is metapolitical-but a large part of it comes from a lack of production; and when the American people understand that, then they will comprehend these simple truths.

Furthermore, when they do that they will irrigate the lands in the West; they will drain the swamps; they will do two things at the same time, drain away the malaria and give a richer soil to the Republic. You will find all these conditions

meeting us at the turn of every corner.

The man who understands what bugs are harmful and talks about it in the average community is regarded by his fellow farmer as a crank. If every farmer knew it, instinctively they would destroy most insect pests and protect the birds without need of law. They would discover that the birds work for them free of wages and board themselves to boot. They would plow up the soil in winter and let the freezing kill the bug eggs, as they do in Germany, and at the same time increase the available fertility of the soil for plant life.

The American plan of education in all of the States has proceeded upon the wrong principle, because it has had for its ultimate object the preparation of the pupil for some profession or for running for public office. The child is usually told, as I was told when a boy, that every American had an opportunity to become President; and doubtless many of them believe, as I then believed, that to be true, while to know the utter hopelessness of such an exalted ambition is but to recall that out of the ninety-odd millions of American citizens and many other millions dead and gone we have had up to date but 27 Presidents.

It was natural that America's system should have begun upon this plan. We are only astonished that we have retained so long. When America was settled it was deemed then that only he who desired to engage in one of the learned professions or was preparing for public office should be educated, and therefore that no women need be educated; indeed, none but the "governing class." Then began the fight for popular education at public expense.

I have in my library a book, written 125 years ago by a learned New England divine, arguing against the public school; and you would be astonished at his ingenious argument against it. But popular education finally won, and all the States have long ago made provision therefor by statute. The only mistake made was that while changing from the principle of limiting education to the few that we did not change the substance as well and adopt that learning which would prove useful to the many-useful to those who never intend to pursue a profession or to run for public office. The German system is based upon the principle of training the child in something that he can use in after life; consequently the German, Dane, and Swede farmer may know little of anything else, but he does know more about his own business than the American farmer. Statesmen are not altogether responsible. The people themselves have brought it about, largely due to parsimony in the matter of compensating the schoolmaster. The German pays his schoolmaster the same salary he does his judge, and the teacher with 30 or 40 years' experience becomes the master over the primary grades. The young graduate just entering the profession is put in control of the higher classes. Any great scholar can train the advanced student, but it requires the shrewdest of the profession to start aright the young and plastic mind of a child.

Teachers are therefore constantly reciting their experiences of
the necessity and difficulty of unlearning the pupil or correcting
the mistake in the method and mental habit of the child formed under the tutelage of some mere boy or girl who has neither experience as a teacher nor knowledge of the philosophy of scholarship. Consequently, it may be said that as many scholars have been ruined by faulty systems of education as have been made by them. Hence, we need not wonder that in the substance, too, of education we have traveled so long the wrong road. In part this is all due to our limited statesmanship, but largely because the American people will not have any

All our institutions, political, social, and otherwise whatsoever, are but a reflex of the people themselves. So this great problem is more profound than the problems of education or of political statesmanship. It is a sociological problem. The minds, methods, tastes, social desires, heart throbs, hopes, and ambitions of the American people must needs be changed, and that, too, by an evolution that is impossible of attainment until the end of one or two generations. It is a process of social growth and development—a growth and development under a wise, persistent, constant policy. In a great measure this responsibility rests upon the people themselves to build by Divine guidance another generation wiser than themselves. Increased production and the problem of feeding future generations will tax the abilities of our most learned statesmen and test their courage to maintain a wholesome system, once discovered and inaugurated, against the blind, stubborn opposition of many who will be incapable of comprehending it.

We have but begun the march of progress, and have yet to breast the long slope up the Pikes Peak of our civilization. The burden is upon us to scale these heights or we must needs slide back again through a period of squalid decay, leaving nothing gained for the race and the progress of man during the many strenuous centuries through which he has passed; dare we cow-

ardly decline the strident step?

Upon this point of the people's responsibility and what they will accept again permit me to quote from Gen. Albert Pike, the most learned American. In his Morals and Dogma he

All truths are truths of period and not truths for eternity; whatever great fact has had strength and vitality enough to make itself real, whether of religion, morals, government, or whatever else, and to find place in this world, has been a truth for the time, and as good as men were capable of receiving.

So, too, with great men. The intellect and capacity of a people has a single measure—that of the great men whom Providence gives it and whom it receives. There have always been men too great for their time or their people. Every people makes such men only its idois as it is capable of comprehending. With men who are too ligh intellectually the mass have as little sympathy as they have with the stars. The profoundest doctrines of Christianity and philosophy would be mere jargon and babble to a Pottawatomie Indian. Catholicism was a vital truth in its earliest ages, but it became obsolete, and Protestantism arose, fourished, and deteriorated. The doctrines of Zoroaster were the best which the ancient Perslams were fitted to receive; those of Confucius were fitted for the Chinese; those of Mohammed for the idolatrous Arabs of his age. Each was truth for the time. Each was a gospel, preached by a reformer, and if any men are so little fortunate as to remain content therewith, when others have attained a higher truth, it is their misfortune and not their fault. They are to be pitted for it and not persecuted.

Under our faulty educational system if a well-educated boy is not adapted to a profession he becomes a vagabond. It is a costly, fatal mistake. It is the cost of a life, because he has no training for anything else, and to gain his education he has grown to be a veritable bundle of nerves. With the loss of muscle he is unable to work. He reads fiction exclusively, which excites his emotions and passions. He becomes morose, moody, remorseful, takes to cards to steady his mind, then to drink to drown his troubles. He has bad associates; he is a vagabond—when otherwise, but for his faulty education, he would have been a good, happy, and prosperous citizen. This is hell to been a good, happy, and prosperous citizen.

contemplate.

You may reply that "my boy, I am sure, will become a great lawyer or a great physician," as the case may be; that "our family before us were all successful practitioners, and therefore there can be no doubt of his success." Hence, he does not need this agricultural knowledge; he does not need a knowledge of the earth and air and creation upon it. The best education is that education that gives you a knowledge of the soil, of the atmosphere, of animal life, of nature. If he becomes a lawyer, he will then know better how to question the witness who is a The best practitioner at the bar is the lawyer who can get in as much of his own evidence as possible and keep out that of his adversary. This is best illustrated in the story of a great lawyer of whom I once heard, who, although he was a great scholar and knew the law, was unacquainted with book-keeping. Procuring a case in bankruptcy involving several millions of dollars, the first thing he did was to attend an up-to-date business college until he had mastered all the intricacies of bookkeeping and accounting. When the case was called he was enabled to get every material fact from the witnesses and

the experts who went upon the stand. This he could not have done had he not known as much about bookkeeping as they did. In truth, the lawyer, the great lawyer, like the great statesman, must fill the philosopher's definition of a great scholar; that is, to know something of everything and everything of somethingthe law. Hence, the lawyer needs this training to complete his education for the law.

I do not care if you are a banker-you may follow it where you will-but the man who gets the closest to the soil, along with other intellectual powers, is the greatest man in every

community.

True enough, the man who digs in the ditch all of the time will be as narrow as the ditch. But show me the man who stays behind the counter all the time, and I will show you a man who gets as narrow as the distance between the shelves and his counter. Show me the man, whatsoever the profession or occupation, that goes into the suburbs of a city, builds himself a home with a plat of ground about it, with a garden, a minia-ture farm as it were, who takes an interest in it and occasionally digs in the soil, and I will show you a man in every community who is the oracle of that community, who controls its destiny. Show me the woman who takes a personal interest in her flowers and garden, studies them, and occasionally digs in the dirt, and I will show you a woman that is healthy, happy, a good housewife. Show me a hen that scratches in the dirt, and I will show you the hen that lays the egg. Such is the eternal divine decree. Agriculture? It is not narrowing. If a man wants to be a statesman, how can he legislate on a tariff bill unless he knows those troubles and difficulties that confront the cotton farmer, the wheat farmer, and every other farmer in the Republic? When gazes in the air and never looks down he lives a dream life, that either makes of him a great professional man or, failing in his ambition, a vagabond on society.

As a simple, concrete illustration of the needs of scientific agriculture to add to the knowledge of a statesman we have but to recite that our best Presidents have been those who have possessed the most comprehensive knowledge of all mankind. Intelligence, philosophy, genius; virtue, integrity, patriotism—all these are required to preserve civilization, especially in republics. Statesmen with this scholarship are invariably practical men; too many of the exclusively "classical" school are

dreamy, theoretical, and impractical.

The best lawgiver is he who has the widest range of the knowledge of life-all elements of society-of the mansions of the rich, the hovels, huts, and cabins of the poor; all institutions of learning, the churches of the pious and good, and the slums

and dens of debauchery and prostitution.

The most notable instance of the truth of this philosophy is but to recite the career of the immortal Lincoln, who knew everything from the lowest strata of society to the most profound problems of statesmanship and philosophy. He is the only ruler in all history who could exercise supreme power, as he did upon the suspension of the writ of habeas corpus, without abusing that power. He knew every stratum of society, and this made him to be acquainted with and gave him sympathy for the heart throbs, the difficulties, and problems of every American citizen. This universal knowledge raised his mind above class or local prejudice and made it as broad as the Republic. [Applause.]

Mr. FESS. Mr. Chairman, I think that the Members of this House owe a vote of thanks to the distinguished Member from Oklahoma [Mr. Murray] for having spoken so edifyingly and with such elaboration upon this theme, one of the most eloquent I think that can engage the attention of the American Congress. I do not know that I have heard from this floor or elsewhere a more sane, constructive presentation by a man in public life of what education ought to be and what the country ought to do in regard to the legislation leading to a better education than the address that has just been delivered by the gentleman from Oklahoma [Mr. MURRAY].

I ask the indulgence of the membership of this House for a few moments for further discussion of this theme, not because I have been interested in education all of my life, but rather because I see such a difference of opinion here in the membership, which speaks loudly for the passage of this resolution. One Member opposes this resolution, or rather fears it, on the ground that it does not supply sufficient money to carry it into effect. I call attention to the fact that when it was originally introduced into the Senate, it carried an appropriation of \$25,000, which was reduced by amendment to \$15,000. That seemed to be the will and judgment of the other end of the Capitol, and our committee coincided with that view. Then another Member, just as honestly and with equal equipment of knowledge, speaking from long experience, makes the state-

ment that we do not need this commission because we can get the information from the organization of the National Educational Association of the United States, which, as he properly says, has a department that each year devotes a certain time to the investigation of this particular subject. No one on this floor can speak with greater authority on that subject than he, because, being once the head of the school department of his State, identified and affiliated with the National Educational Association, he speaks from a mind of experience.

These two statements are in contradiction, and they come from men very sincere in their views. Not only on that phase of it, but here arises another man who says that if this commission is to be composed of university men he will oppose it, and another will rise and say that if it is to be composed from the rural sections he will not be in favor of it; and both of these statements are certainly just as sincere each one as the other.

That means that there is no unanimity of opinion and conviction upon this movement here. Another friend to whom I spoke said that he was opposed to the commission idea altogether, and another one is afraid that you are going to take the education out of the States and put it into the hands of the General Government. Another one is afraid that it is a scheme by which you are going to bury some particular bill or some particular plan of education.

My friends, I hope that none of these various opinions will stand in the way of the successful consummation of a movement that is now initiated, which it seems to me is to fulfill a mission, without which the mission will not be fulfilled.

I do not want-because I spoke in extenso once before on this theme-to take undue time to discuss the value of education from a vocational standpoint, but I do ask just time enough to clear up a little of the dust that has arisen, and one item of it is this: Some one said we have already provided for agricultural education in a bill that has passed this House. Another one said there is a provision in the other end of the Capitol which provides for industrial education. That is true; but Members must not confuse the idea of agricultural education with vocational education; neither must we confuse the idea of industrial education with vocational education. Industrial education is vocational education, it is true, but vocational education is more than industrial education. Agricultural education is vocational education; that is true; but vocational education is more than agricultural education.

What this bill means to do is to make possible a suggestion here to combine the agricultural demands on education and the industrial demands on education. In other words, it comprehends the work of the hand on the farm and in the shop and everywhere where the brain directs manual labor of the worker. What seems to me so very important is that with all of these differences of opinion, where one wants this thing and another does not see the need of it, another wants that thing, and still another something else, that here is proposed a rational method by which we can get what we all want. There is no difference, certainly, as to the end to be reached. The difference is in the means by which we are to reach the end. There is not a man on this floor who does not believe that the man who is in the shop will do better work when his hand is directed by a brain that is trained. This holds true on the farm and in every walk of life. There is not a man on this floor who does not also believe that the boy who goes into the shop who can see something ahead of him, due to the fact of vocational training, that that boy will be happier in the shop with training than without it. It seems to me that if we want to educate the boy back to the farm we must make it possible for the boy to see that the farm is not drudgery; that the farm, on the other hand, is an opportunity; that it is a place for achievement. But when the boy is sent to the farm because he can not go anywhere else, when he is there because of the stress of circumstances that have forced him there, when he is there under such conditions he is not happy. But when he goes there with an open mind, secured by vocational education, he sees opportunity unfolded, a chance to accomplish, and therefore he goes to the farm because he seeks it by choice as an opportunity. He does not run away from the farm. And what we want to do is to promote a system of vocational education that sends boys to the farm to remain on the farm because it is a place to employ their minds as well as their hands; a system of education that will send our boys to the shops, who will remain in the shops because they are doing skilled labor from the standpoint of the shop, and not because they can not leave it. What we want is a system of education that will make the man and the woman happy in the work that they are trying to do. That is culture. This is not and should not be simply a workaday world. In other words, it is not an opportunity simply to make a living. It is an opportunity to make a life, and that is better than simply to make a living.

Now, I say to the Members of this House that here is an opportunity, if we want to put something in definite form so we can make certain, that with all we have we shall still retain and add to it the thing we do not have, but that we need, here is an opportunity to do it. And I want it to come in this particular administration when at the head of the Government there is a man interested in education from the kindergarten up to the university. Do not be afraid that in his appointments on this commission that there will be any advantage taken in any sense. It will be representative of the university; it will be representative of the college; it will be representative of the secondary school; it will be representative of our common-school system. I have faith that there will not be any risk to run on this line.

Mr. SHERWOOD. Will the gentleman yield?

Mr. FESS. I will yield to the gentleman.

Mr. SHERWOOD. I am in full sympathy with the purposes of this commission, and I think I learned the most part of what I know in the college over which the gentleman presides

Mr. FESS. A great honor we had. Mr. SHERWOOD. In looking over this Committee on Education I find it is a first-class committee made up of profound scholars and students of sociology. Why can not this committee investigate this question and report to the House without the expense of any commission?

Mr. FESS. The gentleman from Ohio [Mr. Sherwood] asks a very rational question, and it pains me to have to differ from him. I have great respect for him, first, because I have known him for so long, and, secondly, because he is an honored alumnus of the college over which I have the honor now to preside, the one that was opened by Horace Mann in 1853. And so I say it pains me to differ from the General. He asks the question why this Committee on Education can not report a bill with just as much effectiveness as the commission and thus save the expense of the latter. My answer is thisand I speak from the standpoint of a college man, once identified with a great university in Ohio, later with a great university in Illinois, and now at the head of a college in Ohio: I am not now sufficiently acquainted with the demands of this great country, so supremely broad and whose demands are so varied. I am not sufficiently acquainted with the problems, although I have been a student of them, as a member of that committee generally to speak definitely on this particular theme and say that I want this particular plan or I do not want that. But, on the other hand, I can name to you men who have made their life's work a study of vocational educa-tion. I do not want to name them here. That would indicate that the committee wanted to suggest who should be appointed. But I will say to the gentleman from Ohio that I could name men in this country, representing every portion of it, who possess very full knowledge now and without much further investigation could report to us a definite plan upon which to work. They certainly would not ignore the Lever bill nor the Page bill in their recommendation. But to do it they must have official recognition, such as this resolution provides. And for that reason I do not believe that this committee, even with the high conception I have of its ability, is ready to outline I want a commission made up of competent men the plan. educationally, because education has been their chief study, to make a report and submit it to this House and let it be referred to our committee. Then this House will act upon our recommendation. It is a good deal better than for us to undertake it with the little knowledge we have of the subject. As I said before, if it should favor the taking of education out of the States and putting it into the hands of the Federal Government, I would vote against it, as I do not believe in too much Federal control in education. If, on the other hand, it was for the purpose of burying any particular bill, I would vote against it, for I do not believe in subterfuge or introducing a measure in order to cripple some other measure. If I thought it was a wasteful and unnecessary expense, I would vote against it. But, my friends, at divers times we in an hour's consideration vote out of the Treasury millions of money, with little or no comment when it is for certain purposes, not always the most necessary, and then question the wisdom of \$15,000 for this purpose, the purpose of the education of our boys and girls.

Mr. COX. Will the gentleman yield? Mr. FESS. With great pleasure.

Is the gentleman willing to announce that he Mr. COX. would be willing to vote now for any bill recommended by a commission that would be appointed under this proposed resolution?

Mr. FESS. To that I would say I would not want to sur-render my right as a Member of the House and forfeit the privilege of keeping an open mind upon any question. I do not think my good friend from Indiana asked that question for any other purpose than to trap me. Of course, I would not agree to do any such thing as that. I do not think I would be in much danger

Will the gentleman yield again? Mr. COX.

Mr. FESS. Certainly.

Not with a view of trapping the gentleman at all, Mr. COX. for the gentleman was explaining very enthusiastically that he did not believe the committee that now has jurisdiction and control over this legislation and power to report, had the knowledge, but he stated to the gentleman from Ohio [Mr. SHERwood] that he thought he could name nine men representing every section of the country who could frame a bill that would be perfectly satisfactory to this House, and hence I propounded the question as to whether or not the gentleman was now willing to commit himself and say that in the event this resolution was passed and nine men were appointed, who got to work and framed up a bill, he would now commit himself to that kind of legislation?

Mr. FESS. I would not agree to commit myself to that sort of legislation submitted by anybody, no matter how high a regard I might have for the personnel of the commission. did not mean to minimize the influence of the members of the Committee on Education, and I did not mean, either, in any way to reflect upon their ability. I hope that I did not say anything that would lead the gentleman to think so. That was

the furthest from my mind.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentle-

man yield?

The CHAIRMAN. Does the gentleman from Ohio yield to the gentleman from Illinois?

With pleasure.

Mr. BUCHANAN of Illinois. I would like to ask the gentle-man if he does not think if this Committee on Education had \$15,000 appropriated to it they could secure experts who would be able to compile all the information necessary to enable the committee to frame a bill that would meet the approval of the gentleman and others interested in the legislation?

Mr. FESS. In answer to that, I would say that probably the committee could do better work with \$15,000 than they could without any money, but I would rather give the money to other persons chosen by the President for the specific purpose, to a commission whose duty is limited to that purpose, rather than to a committee that has a multiform duty. words, I want to get back to the suggestion of my friend from Indiana [Mr. Cox], to say that in any great movement the clarifying judgment of the men who have spent their lives along the line of interest is most valuable.

If it would not be out of order, I should like to say that just a week ago I was in conversation with one of the men whose names have been mentioned frequently in New York in connection with the reform of their school system. This man does not live in New York, but in Ohio. The commission in New York City, headed by John Purroy Mitchel, who has come to more The commission in New York prominence recently than he had attained at that time, asked this Ohio man, who had made a superb record of cooperation between the college work in the institution in which is now the dean and the handwork or manual labor of the student in the shop-a record that has been published all over the country. This commission asked him to make a report, with recommendations, upon the school system of New York, with a view of affiliating the public schools, or secondary work, of New York City with the vocational work. That report has been made and is in my hands. I mention this in connection with my statement that men can be found, not in Congress, who can make a report

Mr. SHERWOOD. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield to his colleague? Mr. FESS. In a moment, General. Now, while I would not be so indiscreet as to say that that man should be chosen on the commission, for that would be presumptuous-and I would not want to be so regarded—yet I will say that I think the com-mission to be formed by President Wilson would be made up of talent and character similar to that. Now I will yield to the gentleman.

Mr. SHERWOOD. The gentleman, with whom I have had a long acquaintance, has convinced me by his talks on this floor that he is competent to handle this question without a com-mission. Further, the gentleman said, in replying to the gentle-

man from Indiana [Mr. Cox], that he would not pledge himself to vote for the report of the commission. I will go further than that and say if the Committee on Education will report a bill and the gentleman will indorse it, I will vote for it. [Applause.]

Mr. FESS. The gentleman would be taking great chances.

However, I deeply appreciate the compliment. [Applause.]
Mr. Chairman, I do not care to take undue time. I am so intense and so anxious about the fate of this resolution that really I am afraid I might say something that would lose ground I therefore ask the most careful attention to it and consideration of it from every standpoint, and I sincerely trust that there will not be such serious opposition as will lead to defeat

of this movement. [Applause.]
Mr. WILLIS. Mr. Chairman, will the gentleman yield for a

Mr. FESS. I would be very glad to. The CHAIRMAN. The gentleman had yielded the floor. Mr. WILLIS. I ask unanimous consent, Mr. Chairman, that his time be extended.

Mr. FESS. I will be glad to yield to my colleague.

The CHAIRMAN. Without objection, the gentleman will proceed

Mr. WILLIS. The gentleman knows that recently, when this bill was before the House, I opposed it vigorously. I opposed it, as I stated then, because a bill had already passed the House in the interest of agricultural training and another bill had passed the Senate in the interest of vocational training, and was fearful that this resolution would have the effect of delaying the desired legislation that the gentleman has been so eloquently describing. What is the gentleman's opinion as to whether the passage of this resolution will expedite or delay legislation along these lines?

Mr. FESS. In answer to that question I shall be just as fair and open minded as I always was with this same gentleman from Ohio when he was a student of mine in the university for four years, and I am glad of the product, as shown here upon the floor. [Applause.] If I thought that this resolution was for the purpose of delaying any legislation leading to vocational education, either agricultural or industrial, I would give him my word of honor that I would vote against it.

I feel confident that the commission will be a distinct advantage to all legislative effort looking to a better system for our

people.

It is a beginning of that most-needed system, both State and Federal, that regards that sort of education that looks to the fullest preparation of our youth to do best the work to which they are destined to pursue when the door of the schoolroom clos 3 upon them. It is not to supersede, but to supplement.
Mr. TREADWAY. Mr. Chairman, it is not my purpose to

detain the House with any lengthy remarks on this resolution at this time. Possibly a word may not be out of place on the subject of the previous action or lack of action on the part of

the House, looking to the adoption of this resolution.

A hearing was held by the Committee on Education on July 23, and at that time statements were made by gentlemen in advocacy of the immediate adoption of this resolution on the part of the House, looking to haste rather than delay. question of delay has been brought up here this morning, but the whole object of this resolution was to hasten action and get a prompt report from the commission, if appointed. When the Committee on Education-of which I am a member-was having a hearing, I was disposed to object to the phraseology of the resolution. I refrained from doing so out of my deference and regard for the chairman and other members of the committee, and because they did not altogether agree with me in my line of thought regarding the objection I had to the phrase-

The words to which I object in the resolution are those contained in line 5, and I propose at the proper time to offer an

amendment striking out the words "report a plan."

It seems to me that when we as a body adopt that resolution we assert affirmatively that we believe in Federal aid to industrial education. I am a firm believer in industrial education in every particular. I have advocated it in my own State. am very glad to advocate it here; but I do think that there is a great question involved as to the relationship between the Federal Government and the States in the question of education, and I referred to that attitude of mine when this matter was up for discussion before the House on October 2.

It seems to me that when we single out one particular line of education and say that the Federal Government will assist financially and by direction of methods, and that sort of thing, in that particular line of education we are then going away

beyond what the Federal Government has ever done in relation

to the question of education.

I am very glad to find that some of the Members of the House feel that the Committee on Education are able to shape legislation along this line; but be that as it may, if we authorize the appointment of a commission at all, I do feel, more strongly than I did when the matter was before the committee for discussion, that we ought to ask the commission, before it reports a positive plan for Federal aid, to study the question of the relationship between Federal and State aid for vocational education. In other words, Mr. Chairman, I do not wish to see any method adopted which will in any way detract from voca-

tional and agricultural education in our States. In Massachusetts we are carrying on education along vocational and agricultural lines, and are doing it very successfully. When the Federal Government dips into this question it can not help but be something in the nature of an experiment, and I do not think that we ought to experiment in any way. shape, or manner with the educational interests of our children. Let us not involve here the question whether education shall be conducted by the States or by the Federal Government. But if it is advisable to have Federal aid, let us first know that this commission or some other organized body, such as a committee of this House for instance, approves of Federal aid to industrial education; so that in addition to striking out the words "report a plan," I also intend at the proper time to offer an amendment at the end of section 1 in the resolution to insert the words-

And to study and report upon the relationship between Federal and State aid for vocational education.

That, I think, is the first question we ought to decide before actually bringing up the question of whether or not we approve of Federal aid.

Will the gentleman yield for a question?

Mr. TREADWAY. Yes; certainly.

Mr. FESS. If you strike out the words "report a plan" and also the relationship, what would be left?
Mr. TREADWAY. The clause would then read:

Whose duty it shall be to consider the need for national aid to vocational education and to study and report upon the relationship between Federal and State aid for vocational education.

Mr. FESS. I understood the gentleman to say he was going to move to strike out that last.

Mr. TREADWAY. No; to consider the need and to study and report upon the relationship between Federal and State aid for vocational education.

I reserve the balance of my time, Mr. Chairman. Mr. POWERS. If you strike out the words "report a plan," you do not leave anything for this commission to do except to study the relationship of State and national aid, and to report upon that proposition.

Mr. TREADWAY. I should say in answer to that that we

still allow the commission to consider the need.

I understand, Mr. Chairman, that the phrase "report a plan" binds Congress affirmatively to Federal aid to industrial education, a positive instruction to this commission to bring in a system, some method or scheme which they consider should

become a law. That is what I personally object to.

Mr. POWERS. Is it not true that the report of this com-mission under this resolution does not bind Congress at all? It does not commit Congress to a proposition of Federal aid. The only thing this resolution does is to commit Congress to a proposition that they would like all the information possible on the question, and when we get that information, when this commission makes its report to Congress, Congress can either reject or adopt the report which may seem wise at that time.

Mr. TREADWAY. That is true, and at the same time it does state that such a report, "report such a plan," would

have the weight of the recommendation of that commission,

which I still say I do not believe in.

Mr. MANN. Will the gentleman yield?

Mr. TREADWAY. With pleasure.

Mr. MANN. Under the language of the resolution "to consider the need and report a plan," does not that require the commission to report favorably upon the need of Federal aid to vocational education?

Mr. TREADWAY. Mr. Chairman, that illustrates the exact thought that has been in my mind from the beginning of the discussion of this resolution. I claimed in committee, and still claim, as the question of the gentleman from Illinois indicates, that the principle involved in the resolution, namely, reporting

activity under the resolution for this commission to consider the need. This House does not care about the commission considering the need, it wants the result of the consideration. it not be preferable for your amendment to say "to consider the need and report the result of the investigation"?

Mr. TREADWAY. I should be willing to accept such phraseology, and shall be glad to confer with my colleague when the

time comes for amendment.

Mr. SHARP. Mr. Chairman, I have had great pleasure in listening to the speeches of those who preceded me, and especially to the gentleman from Oklahoma, and the gentleman from my own State of Ohio. In the one case the speaker announced himself as a lifelong educator. The other gentleman from the West, as might naturally be supposed, spoke eloquently and interestingly upon the phase of the measure as it relates to agriculture. I shall take but a short time of the House to speak in the capacity of a business man, one who has devoted a good many years of his life to practical problems that one has to confront in business affairs. I have always taken a great interest in educational matters as they are involved in a business education, because they are fundamental to success

Some time ago a former distinguished President declared for reforms, by which he wished to secure for everybody in this country what he termed "a square deal." I wish to appeal to the House if it is a square deal-whether we consider ourselves responsible or not-to longer permit a condition, if we can possibly bring about a reform, whereby the doors of education beyond the lower grades—the doors of opportunity—which after all is the greatest thing which a self-reliant American ought to ask for, are closed by social and economic conditions, if not by mandate of law, to 8 out of 10 of the youths of this country.

That seems to be a startling statement, and I challenged its accuracy when I first read it in the statistics. But some years ago I had occasion to prepare a bill, whereby the \$2,000,000 that had been appropriated for the erection of a memorial monument to Abraham Lincoln should be devoted instead to building a great educational institution of a vocational character in this country. I did not have the backing and the sentiment I ought to have had, as my bill came on the legislative program rather late in the day. The work had been all practi-cally carried out for the legislation and final consummation of the other plan, and my measure was defeated.

But, nevertheless, in the preparation of that bill I had occasion to go quite deeply into the subject of vocational education.

Indisputable facts prove that a somewhat larger proportion

than 80 per cent of the children in the United States are compelled for one reason or another to quit our public schools before they attain the age of 14 years. In most such instances this means that four out of five of our boys and girls are permitted to go no further in their studies than the grammar grade. If further comparisons were made, the proportion of those who are fortunate enough to graduate from our public high schools would be found to be indeed very small to the whole number who enter them. Is it any wonder that such an unequal dis-tribution of opportunities should result in such a deplorable and unequal distribution of wealth and power and all that these advantages bring? Shall we condemn the ragged little fellows who, reared in some alley between the high walls of frowning buildings in our crowded cities, whose opportunity, as in the case of many such, to learn their letters only comes from seeing them printed on signs, for the criminal careers they too often follow in later years? I must confess that, though I have tried in my service as a Member of this House to be just to all classes of my fellow men, yet I have given the benefit of the doubt to the weak rather than to the strong. When I come to think of the tremendous gap which in future years may separate two boy playmates one of whom from the very opportunities of his environment can unhindered prosecute his studies through the highest institutions of learning, the other one of whom must leave school with only the rudiments of education in order that he may with his feeble strength contribute to the common fund for the support of the family-I do not wonder at the tenseness of some of the sociological problems of the present day. And such instances are not the exception but indeed furnish the warp and woof of our social and economic problems of to-day.

Just now we read in the papers that those close to the confidence of the President are being daily consulted in reference to antitrust legislation; and, as a business man with quite a number of years of experience, one who has been accustomed time and again to sitting around the long tables of the a plan, commits us favorably to Federal aid.

Mr. ROGERS. Will the gentleman yield?

Mr. TREADWAY. I will.

Mr. ROGERS. If you strike out, as your first amendment contemplates, the words "to report a plan," it leaves the sole our great industrial concerns and control our transcontinental railroads; but how may of us ever stop to think that there is another combination that is greater than the dollar, because that combination created the dollar and controls the power that the accumulated millions of dollars exert upon our affairs day by day. I refer to the combination of brains, brains coming from educational advantages. You have read of the remarkable feats of great chess players. We have had a good many of them, and some of them can be blindfolded and play a number of games at the same time. We have marveled at their power. There are men just as expert and just as skilled in the game of finance as those chess players are in their chosen field of operation; and for the ordinary man, indeed, I might say for the extraordinary man, to go up against that kind of game, whether the players were blindfolded or not, would be sheer folly. That is the reason why we have these great kings of finance, handicapped though they are by laws enacted to curtail their power; and yet they can still consummate almost any kind of a financial enterprise that they will.

What are we going to do to regulate them? Enact laws and put them upon our statute books? That will do some good; but I say that if a community of interests can be instituted in a cooperative and common purpose, where everybody is taken in as joint shareholders in our trusts, there can not be very much harm done to anyone. So I say that the opportunities for a useful education should be so universal and so widely disseminated throughout the country that the children of the poorest and humblest can all partake of its advantages. The ancient Greeks placed above their temples the words "Knowledge is power." That is more true to-day than ever before, and That is more true to-day than ever before, and it is largely due to opportunity that these men whom I have mentioned have had in their youth that has brought them the success which they found in later days. We may have laws on our statute books, or in preparation on our calendar here, a multitude of bills for regulating these evils, for providing a panacea for this or that particular wrong, but until we get at the foundation of it all and provide a better means for the under fellow to assert himself, for the submerged eight-tenthsnot one-half-to get a better opportunity, we will never satisfactorily reach the remedy that we seek.

Just one thought before I conclude, because there are others to speak and I do not wish to tire your patience. This question was asked by the gentleman from Oklahoma [Mr. Murray], and it was a very pertinent one. His question affords me an opportunity to give my reasons to account in part at least for the state of affairs that he depicts. He asks pointedly the question that even if we do want instructors in our agricultural colleges, where are we to get them? He might with equally good reason ask if we want expert instructors in this special vocational work, where are we to get them? They are to-day sending abroad for these vocational instructors. Mr. Chairman, I believe that in order to make such a resolution as this fully effective there must be an endowment, national or otherwise, for

the establishment of such institutions,
I respect the constitutional right of the States. I am a State rights man to the proper limit of such doctrine, but if we can not get our remedy in any other way I do not care particularly if we step over the bounds and ask the Nation with its abundant resources to come in and aid our States in this splendid work of giving all possible opportunities to our youth. I think it is necessary, as I have said, as a condition precedent to this, that there should be a great institution founded, either national in its character or of such a character that each one of the States will have a normal school that shall have for its exclusive purpose instruction of instructors to carry on the work that Germany and other European countries have carried on to such a successful completion during the past 50 years. Why do we not get them? The gentleman from Oklahoma asks that question. Let me answer. It is but a plea for the school-teacher, without whom, after all, this new movement must fail. my privilege three or four years ago to speak upon this floor in favor of a more generous recognition of that great number of semipublic officials, if you please, the school-teachers. I want to say that as long as you permit the injustice to continue of paying these worthy employees, more needed and valuable in their good work than any other single class of people in the United States, only a mere pittance, a fraction of what they ought to have, just so long will you have difficulty in getting the best kind of talent for this important work.

You who have children as I, see them go away in the morning at an early hour and remain under the tutelage of the teacher for five or six of the best hours of the day. That teacher, who is the instructor not only of their mental training, but the monitor of their moral conduct, receives only a fraction of what we pay to a popular baseball player in this country and scarcely

more than what we pay the ordinary street laborer in our cities. And then ask the reason why we do not get more and better talent of school-teachers in this country. Let us, as Members of this House, commence to-day to bring about not only the educational reforms contemplated in this bill, but give better recognition to the teachers. If it is only to enact a minimum wage scale, then do that. Let us recognize the high standard and their proper estate in order that the school-teachers, the faithful instructors throughout our country, the joint guardians of our children, may be more generously and justly compensated, and then we have performed a small part, at least, of the work that this resolution contemplates. [Applause.]

Mr. MANN. Mr. Chairman, this resolution provided for the appointment by the President of a commission of men," which I am glad to notice the committee recommends to be changed to "nine," so that it would be possible to appoint nine women or a portion of them men and a portion of them women, and directs that commission to consider the need and report a plan for national aid to vocational education. The resolution is undoubtedly the result of a number of years of study of other matters. For a good many years Congress has been increasing somewhat the appropriations in the agricultural appropriation bill, a portion of which was designed to give practical instructon to farmers at home or close to few years ago a constituent of mine by the name of Howard H. Gross organized a body of men and urged the giving of additional instructions to farmers. In the course of his work he came to me for advice-not the first gentleman who has ever come for parliamentary advice. I advised him if he wanted to get consideration by Congress of a proposition of that sort to talk with the distinguished gentleman from South Carolina [Mr. Lever], then a member of the Committee on Agriculture and now, I am glad to say, the chairman of that very able committee. At least in part as a result of this, though doubtless the effort would have been made if I had never been heard of, the so-called Lever agricultural-extension bill was drawn and introduced. It passed the last House and went to the distinguished body at the other end of the Capitol. Meantime the Senator from Vermont, Senator Page, had introduced into the Senate a bill covering not only the agriculturalextension work but vocational education extension work. The Lever bill designed an expenditure at the limit, when the limit was reached, of about \$3,000,000 a year. The Page bill in the Senate proposed an expenditure when the limit was reached, as I now recall, in the neighborhood of \$20,000,000 a year, and I am not sure it was not larger than that, it took a good deal to figure and find out how much.

The House passed the Lever bill. It went to the Senate, and when the matter came up in the Senate the Senate struck out all after the enacting clause of the House bill and inserted the Page vocational-education bill in the Senate. The House bill, with this Senate amendment, was sent to conference. The conferees were unable to agree, the Senate at that time insisting upon keeping all, or at least a considerable portion, of the Page bill, and the House conferees declining to go to that extent. Now the Lever bill has been again introduced into the House, reported by the Committee on Agriculture. It has been introduced into the Senate by the Senator from Georgia and favorably reported yesterday, I believe, in the Senate. Meanwhile the gentlemen who are interested in this agricultural-extension bill saw looming ahead of them the danger of another conflict with the Page vocational-education bill, and out of this a resolution was introduced into the Senate proposing to study one subject while they passed a bill on the other, not the first time I have seen a frame-up of this kind. In other words, the design of this measure was to placate the gentlemen who are in favor or the larger measure while they passed the other that cost less money, and I have no doubt that that placation was secured. The joint resolution as originally introduced provided for a report by the 1st of December, or the 1st of this month, the expectation undoubtedly being that there might be two bills; possibly one would be passed without a trade, and possibly a trade could be made for the passage of both. Speaking only for myself, I have no doubt whatever of the propriety of passing the Lever agricultural-extension bill.

And I have no doubt whatever that sooner or later we will pass a law providing for national aid to vocational education. I question very much—although I shall not vote against the resolution—the propriety of the resolution in its present form. The original design was to appoint a commission of nine without pay to report in a few months upon a proposition than which there is none bigger before the American people. You can not expect that nine persons without pay will in the course of a few months determine offhand a problem from which the Com-

mittee on Education shrinks and which the Congress of the United States in its two bodies has been unable to solve. If this commission is appointed and it makes a speedy report, all it can report will be the Page bill in the Senate, and we really do not need the services of a commission to have that bill reported to the House, because we have already had it before both Houses of Congress

Mr. SHARP. Will the gentleman yield for a question? I

merely ask it for information.

Mr. MANN. Certainly.

Mr. SHARP. Upon what assumption does the gentleman state that when this commission does make a report it will be merely a report favoring the Page bill? Did I understand the gentle-

Mr. MANN. It would be impossible for a commission of nine, without pay, in the course of a few weeks or a few months to present a plan on this great subject. When a commission of this kind is appointed without pay, the first thing they will do will be to select a secretary with pay, and the secretary will present the report of the commission, or prepare it, at least. If my distinguished friend from Ohio [Mr. Sharp] and myself were appointed on such a commission, we would not know what to do without a great deal of study, and we would not give it that study unless we could devote our time to it and were paid for it.

Mr. TRIBBLE. Will the gentleman yield?

Mr. MANN. Certainly.

Mr. TRIBBLE. Does not the gentleman think that, owing to the fight that is going on in the Senate between Senator SMITH and Senator PAGE, and the other side, even if we go ahead at this end of the Capitol and pass the Lever bill, or some other bill, that that bill will be blocked by the Senate until this

commission reports?

Mr. MANN. I do not. I believe the Lever bill will pass the House before very long. I do not know whether it will pass the House ahead of the Smith bill passing the Senate. They are the same bill. If the Smith bill passes the Senate soon, that will be the bill that will be taken up in the House when the Committee on Agriculture is reached. If the Lever bill passes the House first, I know enough of the author of the Smith bill in the Senate to feel assured that it will not be long before the Lever bill comes to a vote in the Senate, regardless of whether this commission is or is not appointed, although I have no doubt that under the understanding that exists as a matter of good faith to the gentlemen in the Senate who are supporting the Lever bill they will expect the House to pass this resolution, and I have not the slightest doubt but that the House will do so.

Mr. Chairman, the subject of vocational education is so great that I hesitate to express an opinion upon it myself, and I would like to have read in my time a statement made by the first vice president of the Illinois Steel Co. of Chicago, who probably has given as much attention to the subject of vocational educa-

tion as anyone in the country.

The CHAIRMAN. Without objection, the Clerk will read. The Clerk read as follows:

THE NEED OF VOCATIONAL EDUCATION.

(By Theodore W. Robinson, first vice president Illinois Steel Co., Chicago, Ill.)

In the development of civilization the result of all change has been for ultimate progress. The world has grown better, but change has often meant temporary retrogression, in times past even to the destruction of the highest exponents of civilization. We are now in a period of marked transition. History records no other such wonderful development as that of the United States. No people have ever been so well fed, so well housed, nor have enjoyed such high social standards. No other era is comparable to ours in the production of wealth and no country has seen such a rapid accumulation of riches. Yet our institutions and our methods, by which so much has been accomplished, are being questioned and attacked. Public opinion is demanding a new social order. Insistence upon change is deep-seated and extends much farther than mere political expediency. Change, it is true, is the law of human nature, but why the present widespread unrest? What are its manifestations, its causes, its remedy? These are matters of concern that are pressing upon us. We have been rapidly making history of late, and this Nation, whose birth in the family of nations is as of yesterday, is still an experiment in self-government.

SOME CHANGES OF A GENERATION.

Our population to-day is three times what it was 50 years ago, and in that period our wealth has increased ninefold. There has been unprecedented industrial expansion. The cost of the necessities of life has largely increased. The growth of our farms has not kept pace with the growth of our cities. Our standards of life have been wonderfully altered. Our food products of late have relatively and actually decreased in quantity but have enormously increased in value. Aggregation of capital has reached unparalleled proportions; and our labor, with shorter working hours, is receiving higher wages than ever before. These are some of the changes of a generation. But in our public schools, the very basis of our modern civilization, there has been but relatively little change. It would be hackneyed to say that our greatest institution is our public school were it not that ignorance on the one hand and indifference on the other cause that fact to be too often forgotten.

Our most important industry is the dissemination of knowledge to our youth; and whether the intelligence of American manhood and womanhood is to be high or low, whether efficiency on the farm and in the factory is to be increased or decreased, depend directly upon the strength of our educational system. The character of a nation is the composite character of the individuals making up that nation, just as the wealth of a nation is the aggregate of the wealth of its individual inhabitants. Anything, therefore, that makes for the moral and mental elevation and the increased efficiency of our people makes for the moral and industrial superiority of our country. Only by combining a high type of citizenship with material welfare may we hope to command the contentment that makes for orderly progress, and only by proper education may we expect to insure these essentials. What, then, is our educational system, what is its strength, wherein lies its weakness?

OUR SYSTEM OF EDUCATION.

The school system of the United States consists essentially of a

cational system, what is its strength, wherein lies its weakness?

OUR SYSTEM OF EDUCATION.

The school system of the United States consists essentially of a kindergarten period, usually of two years, eight grades of elementary school with a period of eight years, a high-school period of four years, and a college or professional school period of four years, Graduation from the high school admits to the academic colleges and to most of the schools of law, medicine, engineering, agriculture, architecture, dentistry, and pharmacy, whether in State-supported universities or in privately endowed institutions, such as Harvard and Yale. Under most of our State laws education is compulsory from the age of 6 to 14 years, inclusive. Nevertheless, of our population of 10 years of age or over there were, according to our last census, five and a half millions who were illiterate. The number of pupils enrolled in our public and private schools and colleges in 1910, not including special educational institutions, aggregated over 20,000,000, or 21.3 per cent of our total population. Our public schools represent an investment of one and a quarter billion dollars, and it costs \$450,000,000 a year to operate them.

For the promotion of intellectual culture and for professional training our educational system is unexcelled. Our grade schools and our high schools afford a satisfactory preparation for higher education, but higher education is for the few. Of all persons under process of education in 1910, 92.30 per cent were in our universities, colleges, and professional schools. This terrific educational mortality is emphasized by the fact that 80 per cent were in our universities, colleges, and professional schools. This terrific educational mortality is emphasized by the fact that 80 per cent were in our universities, colleges, and professional schools. This terrific educational mortality is emphasized by the fact that 80 per cent were in our universities. Colleges, and professional schools. This terrific educational mortality i

THE NEED OF VOCATIONAL SCHOOLS.

A generation ago our schools were much better adapted to meet the requirements of the community than they are at the present day. While then, as now, the grammar school led to the college or professional career through the high school or academy and elementary training was largely based on the cultural needs of those destined for higher education, the conditions and the environment were nevertheless quite different. Life was then comparatively a rural existence. Specialization of labor and the modern demands of industry were largely unknown. The apprenticeship system, now largely obsolete, afforded a satisfactory opening to an industrial career, and the office was an efficient threshold to a commercial future. The demands of industry were early responsible for the establishment of the scientific school, and such institutions at the Massachusetts Institute of Technology, Van Rensselaer, Stevens, and others of a similar type are institutions of higher education. Later the manual training school was inaugurated, and while much was anticipated from the innovation it has proved of little value beyond its cultural worth.

the manual training school was inaugurated, and while much was anticipated from the innovation it has proved of little value beyond its cultural worth.

As the importance of readjusting our educational methods became more apparent, the necessity of a vocational training that should provide practical instruction in agriculture, commerce, industry, and the art of home making became better appreciated. The National Society for the Promotion of Industrial Education has conducted an active and effective propaganda. The American Federation of Labor and the National Society of Manufacturers have investigated and indorsed the movement. There is legislation pending before Congress providing for national grants of money to States which shall establish vocational schools. Legislation has been enacted in Massachusetts, Wisconsin, Indiana, and several other States. Some work has been done by private initiative, and E. G. Cooley's report on vocational education in Europe, compiled and published under the auspices of the Commercial Club of Chicago, is one of the most valued contributions on the subject.

The general plan of vocational education is to add schools to our public-school system which shall be designed with a special view of meeting the occupational needs of the community in which they may be located. As is the case with the high school, they should be supplementary to the present grade schools. They should be open to both sexes and should provide instruction both to those who could devote their time to continuous study and to those who, while at work, could devote a few hours a week to special courses. Part-time attendance should be compulsory for all children under 16 or 18 years of age who are not in other forms of school.

WHAT GERMANY IS DOING.

should be compulsory for all children under 16 or 18 years of age who are not in other forms of school.

WHAT GERMANY IS DOING.

There is perhaps no greater object lesson of the possibilities of vocational training than the phenomenal industrial advance of Germany during the last generation. With but 7 per cent of our land area, and with a population 30 per cent smaller than our own, Germany's imports and exports of merchandise in 1910 not only exceeded those of the United States but surpassed those of all the other nations of the world excepting only the United Kingdom. This has been accomplished primarily because 40 years ago German statesmen were sufficiently farsighted and progressive to inaugurate the comprehensive system of vocational education by which the German youth acquire a better training for their life's work than the youth of any other nation. In Germany to-day education is a public duty, in which both statesmen and men of affairs actively concern themselves. But interest in vocational education is by no means confined to Germany. England, Scotland, France, Austria, Switzerland, Norway, Sweden, and Denmark have all made rapid strides toward remodeling their educational methods and, facilities. Perhaps Scotland and Switzerland, after Germany, have done the most effective work in this regard, and in England a great impetus has been given to the movement by the personal interest evinced by Lord Haldane, lord chancellor of Great Britain.

THE UNITED STATES BACKWARD IN VOCATIONAL EDUCATION.

The United States, of all great nations, is the most deficient in caring for the vections of the states of the processing of the provise of the provise of the contraction of the provise of

The United States, of all great nations, is the most deficient in caring for the vocational education of its people. Our great educational problem is how to extend the education of the 90 per cent of the children

who are in the grade schools and how best to provide for them a training for civic and industrial intelligence. This is a fundamental question deeply involving our national life.

Fifty years ago we were torn by a struggle of sectional differences. We now have entered a struggle of factional differences which the ballot must decide. The problems that followed our Civil War were preeminently economic problems directly or indirectly dealing with the development of our natural resources. The development of our agricultural and mineral lands, the opening of waterways, the building of railroads, the replacement of manual by machine labor, the extension of the factory system, were all developments of farm, transportation, and manufacture involved in the production of wealth. Our important problems to-day, however, are largely questions of supervision and regulation, and the division of industrial reward rather than the promotion of industry itself. They are still economic questions, but they deal with the distribution of wealth rather than with the production of wealth. People are discontented not so much because there is a lack of opportunity for individual effort as because the natural tendency to question the division of the product of industry is being aggravated by the increased cost of living. Example is a force that goes far toward inducing poverty to vie with opulence. Because no people of any land have ever enjoyed such prosperity as we enjoy minimizes but little the contrast between those of modest circumstance and those of superlative fortune.

Fortunately we have no such vested rights as exist in some of the older countries to help temper public sentiment by traditional class distinction. We have our classes of society—and there always will be classes with lines of demarcation more or less indefinite—but we have no class into which any one of our citizens may not enter provided he possess the necessary intelligence and economic qualifications. From dependence to self-support, from poverty to riches, are s

Mr. MANN. Mr. Chairman, I ask unanimous consent that the balance of the article may be printed in the RECORD as a part of my remarks. How much time have I remaining?

Mr. STAFFORD. Mr. Chairman, reserving the right to object I thought the reading of the article may be reserved.

ject, I thought the reading of the article was reaching that part that was becoming illuminating as to vocational education, and that the part that had been read was merely preliminary.

Mr. MANN. I hope the gentleman will do me the honor to read it in the RECORD.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent to print the balance of the article is the Present

mous consent to print the balance of the article in the RECORD as a part of his remarks. Is there objection?

There was no objection.

The following is the balance of the article:

IMMIGRATION.

A grave and increasing responsibility is placed upon our educational system by the large immigration that we are receiving from foreign countries. An analysis of our population shows that it is approximately made up of 89 per cent of the white and 11 per cent of the negro races, and that only 54 per cent of our whole population is of native parentage. During the last 10 years there has been an average yearly influx of nearly a million allens. These people represent a most valuable asset in our material growth, but in their proper amalgamation lies that great question of citizenship upon which the future of this country so largely depends. These embryonic citizens are not, as formerly, representatives of the hardy Anglo-Saxon races of the North. It is the Poles, the Slavs, and the Latin people with whom we now have to deal. While they are capable of high character and efficiency, the problem of education and amalgamation in their case is fraught with greater difficulty than if they were racially more closely allied to our ancestry.

ancestry.

The sentiment of a people is more or less reflected by their political affiliations and activities. For a generation we have had two dominant political parties in this country. Overnight, as it were, a third party sprang into existence, and over 4,000,000 of our citizens followed its standard. It is not pertinent to discuss here what may or may not have caused such an unusual political departure, or whether the principles enunciated by the new party are new or old, desirable or undesirable. The fact is given as evidence that there is an extensive desire for change, which neither the influence of personal magnetism nor the possible dereliction of party duty can explain. Further evidence is found in the rapid growth of socialism.

SOCIALISM.

In 1912 the Socialist Party polled in this country more than twice as many votes as it did in 1908. Twenty years ago the Socialist Party cast 21,000 votes. Last year they polled nearly 900,000 votes. The growth and purpose of socialism abroad is largely due to conditions peculiar to the Old World. The purpose of socialism in this country is recorded in their late party platform, which ends as follows: "Such measures of relief as we may be able to force from capitalism are but a preparation of the workers to setze the whole power of government, in order that they may thereby lay hold of the whole system of socialized industry and thus come to their rightful inheritance."

The menace of socialism can be minimized by a vocational training, which will increase the intelligence and future earning power of our children. It is not difficult to inculcate the fundamental principles of industrial economics in an elementary way, and it does not require a mature mind to comprehend that the source of all wealth is the soil, that wealth can only be produced by the joint effort of capital and labor, that there always will be differences in individual character and ability, and that no social plan can be maintained which goes contrary to these basic truths.

SOCIAL AND INDUSTRIAL CHANGES.

SOCIAL AND INDUSTRIAL CHANGES.

SOCIAL AND INDUSTRIAL CHANGES.

If public opinion is to be directed through constructive channels, it must be in part by promoting a wider knowledge of the economic and industrial changes that have been taking place and by commanding a better appreciation of their influence upon society. In the last few years there has been a striking change in our rural and urban population. From 1900 to 1910 the population of the United States increased 21 per cent. During this period the rural communities gained 11.2 per cent and the urban 34.8 per cent. As an economic and social necessity it behoves us to increase wherever possible the interest of our people in our farms. How much we have relatively fallen behind in our agricultural life is partially shown by the fact that we

should now have two and a half millions more people engaged in farming had the number that were so engaged 30 years ago been proportionately maintained. While from 1900 to 1910 our population increased 21 per cent, during the same period the number of our farms increased but 10.9 per cent, our total farm acreage increased 4.8 per cent, and the increase of our crop production was in volume only 10 per cent. In the last five years the number of sheep in this country has actually decreased more than 3,000,000, and the number of cattle has decreased more than 15,000,000. As a natural sequence, the value of our food products and the value of our farm lands have greatly increased.

Much of the soil of Europe, which has been under cultivation for centuries, is producing by methods of intensive farming, more than double the amount that our comparatively virgin soil is producing. For the period of 1903 to 1912 the average yield of wheat per acre in the United States was 14.1 bushels as compared with 30.1 bushels in Germany and 31.7 bushels in the United Kingdom.

These facts have an important bearing upon the necessity of providing vocational schools in the agricultural districts which shall be supplemental to the present country schools and which shall be equipped for practical instruction in such elements of sclentific farming as fertilization, rotation of crops, drainage, and breeding. If we are to extend our rapidity appreaching limit of agricultural home maintenance, we must dignify agricultural labor and make it more productive.

OUR FOREIGN COMMERCE.

OUR FOREIGN COMMERCE.

The social character of a community in all ages has been profoundly influenced by the degree of its material prosperity. The prosperity of this country is bound to be influenced to an accelerated degree by the extent of its foreign commerce. The share which manufactures form in our exports and which manufactured materials form in our imports has largely increased during recent years. The total value of our exported manufactures increased in round figures from \$122,000,000 in 1880 to \$1,022,000,000 in 1912. On the other hand, the total value of foodstuffs exported in 1912, amounting to \$419,000,000, was actually \$41,000,000 less than the value of foodstuffs exported in 1880. Perhaps more impressive are the figures showing the change in percentage which foodstuffs and manufactures, respectively, hear to our total exports. From 1880 to 1912 our foodstuffs fell from 55.77 per cent of our total exports to 19.29 per cent. In the same period our manufactures increased from 14.78 per cent of our total exports to 47.02 per cent.

our total exports to 19.29 per cent. In the same period our manufactures increased from 14.78 per cent of our total exports to 47.02 per cent.

This great change in the character of our export trade reflects our rapidly changing industrial conditions. If we are to continue to successfully compete in the markets of the world and still maintain the American standard of wages in the face of the low wages of foreign countries, we shall not only need a comprehensive system of industrial education, but shall also require the economics which are possible only through the concentration of business. How much the latter has already influenced our foreign trade is partially exemplified by the increase in our exports of iron and steel. In 1890 the value of our iron and steel exports was \$25,000,000; in 1912 their value was over a quarter of a billion dollars.

But concentration of business is being attacked as monopolistic. Those who fear the danger of monopoly should remember that business concentration is an important factor in modern industrial development, and that monopoly is but a preventable perversion of its great power for social progress. Between the evils of monopoly on one hand and the waste of unrestricted competition on the other, there is a zone for concentration and cooperation that should be within the law. Concentration of business through large corporations, with its resulting increase in efficiency and the elimination of waste, is an economic necessity which can no more be successfully replaced by small units of activity than can the power loom of the factory be successfully replaced by the hand loom of the home.

If we are to properly build up our commerce, we must better develop our latent haustrial possibilities. There are to-day hundreds of thousands of children between 14 and 16 years of age who, for want of proper educational incentive and opportunity, are either idle or without fixed employment. A system of education which would provide for these children in our commercial and industrial centers

HIGH COST OF LIVING.

The method of living of our so-called plain people is on a much higher plane than has existed in any other nation or in this country at any other time. We properly have been concerned of late with the rapid increase in the cost of living. The movement is world-wide, but perhaps its influence upon existing social conditions is nowhere so strongly emphasized as in this country. Although the results of our high cost of living are largely social in their effect, the causes are principally economic in their character.

That the high cost of living is due to the cost of high living is an aphorism that represents but a partial truth. Our people, it is true, live on a much more extravagant scale than ever before; but it is also true that food, raiment, and habitation cost much more than heretofore. Any intelligent discussion, therefore, of the reasons leading to the increased cost of our manner of living must take into consideration two factors—first, the increased cost of necessities; second, the increased cost of luxuries. It is obvious that the causes leading to the increased cost of our necessities are many and complex. There are, however, two basic causes for their increased cost:

First, The decrease in the number of men engaged in producing our necessities from the soil in proportion to our total inhabitants.

Second. The cumulative effect of increased wages throughout the country.

Second. The cumulative effect of increased wages throughout the country.

With equal efficiency, no standard of living made possible by the wealth produced by 10 hours of labor in the factory or on the farm could be maintained with fewer hours, unless wages or the value of the product be increased. As a Nation we are proportionately working fewer hours than ever before, and we have a greater number of the inefficient and the idle in our midst. Between 1900 and 1910 the average price of land increased from \$15.57 per acre to \$34.40 per acre. The result of proportionately fewer men working shorter hours with more valuable land has been an increased cost for which labor-saving devices have not compensated. These are the underlying economic conditions which through the natural law of supply and demand are responsible for the increased cost of the necessities of life.

The other and perhaps more influential factor in our high cost of living is the increased cost of luxury. The demand for luxury is a manifestation of prosperity and is bred from an innate desire for comfort, power, and prestige. It is both material and psychological in its

character, and is an ever-expanding force in our modern civilization with which the sociologist and the economist must frankly deal. It has put a strain upon our whole social and industrial fabric that would have been deemed impossible a generation ago. Can anyone rightfully question the vital bearing that education has on these matters or doubt the necessity of obtaining greater agricultural and industrial power through a comprehensive system of vocational training?

The Nation's welfare can be maintained only by increasing the productiveness of its labor and by judiciously directing it in reproductive channels. Labor expended in the fields or in the manufacture, transportation, or distribution of the necessities of life is reproductive. But labor expended in the production of luxuries is principally lost in an economic sense.

acconomic sense.

Our latest large industry, the manufacture of the automobile, is more or less illustrative of this point. According to an investigation made by the Automobile Magazine, there were in this country at the beginning of 1913 over 1,000,000 or egistered machines, less than 55,000 of which were commercial cars. Last year we produced 378,261 cars, with a sale value of \$542,500,000. On the basis of the average value of last year's output, the value of all the cars registered in this country would be approximately \$1,500,000,000. If we assume that \$500 per car per year approximately represents the cost for maintenance and operation, it appears that it costs \$500,000,000 annually to operate these machines. This is more money than is spent each year in operating the entire public-school system of the United States. These figures are startling, especially when we learn that only 6 per cent of all these cars is for industrial use, and 94 per cent is essentially devoted to purposes of recreation.

is for industrial use, and 94 per cent is essentially devoted to purpose of recreation.

In the development of the commercial car, however, the automobile industry is destined to be the source of great reproductive activity, and hence an important agent in the future production of wealth, although its result thus far is largely represented by the opportunity it affords for luxurious recreation. Reasonable recreation and reasonable luxury are essential for the best ethical development, but the price has to be paid, and the bill is found in our high cost of living.

SUMMARY.

It is evident that we are passing through momentous changes. The decline of agriculture and the growth of industrialism, the increased cost of living and the change in our methods of living, are some of the causes that have produced the present widespread demand for a new social order. We are facing many serious economic and industrial problems, the proper solution of which is important to the capitalist and vital to the wage earner. If we are to have orderly progress, we must command a high standard of national character and intelligence, and this means a better and more universal education.

The educational problem that faces this country to-day is not primarily a school-teacher's problem. Rather does it demand the initiative and cooperation of the earnest, intelligent layman. If our schools are to be truly democratic, if the needs of our modern life are to be properly reflected in the education of our boys and girls, our men of business and our men of labor must more thoroughly recognize their educational obligations.

Vocational education is not a passing social expedient, but one of our most far-reaching national questions. It means not only greater industrial efficiency, but also increased economic truth, morality, and civic duty. It is not a question for coming generations alone. Every year more than a million of our youths attain their majority, and the children of 14 years, with whom we are especially concerned, will within seven years come into their political rights. Our Nation is one of political freedom, and very rapidly our people are coming to better appreciate the extent of their sovereign power. Let us remember that what our laws and institutions shall be must depend upon the will of the people, and this will depend largely upon the character of their education.

You, gentlemen of the Iron and Steel Institute, are essentially interested in the industrial questions of this country; but back of our industrial entering the control of the people are continued to the restriction of the control of th

the people, and this will depend largely upon the character of their education.

You, gentlemen of the Iron and Steel Institute, are essentially interested in the industrial questions of this country; but back of our industrial questions lie our political, ethical, and social questions, and underlying all—and greater than all—are our educational questions. If you believe that we are in the midst of a far-reaching change, if you believe that this transition is fraught with grave importance to you, your children, and your institutions, if you believe that only by sane thinking, sober judgment, and trained intelligence can the dangers of ignorance, intemperate speech, and class legislation be avoided, then it behooves you to use your influence toward providing better educational facilities for the people. While every true American must have faith in the ultimate satisfactory adjustment of our difficulties, the situation demands more than optimistic indifference or laisser-faire consideration. Once let the business men of this country properly awaken to the needs and possibilities of a school reformation and contribute a portion of the time and money now spent in trying to forestall socialism and victous legislation, and there will be much less socialism and victous legislation to fight. In the best interests of both labor and capital, and as a matter of patriotism, civic duty, and business sagacity, it should be a privilege for every intelligent man, whether he be rich or poor, to take an active part in improving America's greatest institution—the public school.

Mr. MANN. Mr. Chairman, how much time have I remain-

Mr. MANN. Mr. Chairman, how much time have I remain-

ing?
The CHAIRMAN. The gentleman has 40 minutes. Mr. MANN. Mr. Chairman, I yield the balance of my time to the gentleman from Alabama [Mr. Hosson]. [Applause.]

Mr. HOBSON. Mr. Chairman, how much time have I-40 minutes?

Mr. MANN. Forty minutes. The CHAIRMAN. The gentleman from Alabama has 40 minutes

Mr. HOBSON. Mr. Chairman, I desire to express my appreciation, and I believe the appreciation of many others, for the kindness and thoughtfulness of the gentleman from Illinois [Mr. Mann] in granting me this time. I shall take advantage of this opportunity, Mr. Chairman, to bring to the attention of the House an event that occurred in this city yesterday, the 10th of December, an instance of the exercise by the people of the right of petition granted by the Constitution of the United States. The right of petition is a right that is part of the heritage of Anglo-Saxon people a right that we part of the heritage of Anglo-Saxon people, a right that was part of | finality in such matters as this.

the Magna Charta and part of the Bill of Rights. the first amendment to the Constitution of the United States, establishes "the right of the people peaceably to assemble and to petition the Government for a redress of grievances.'

This right, Mr. Chairman, was exercised by a committee of 1,000 men, expanded to 2,000 by the action of local bodies; a committee authorized by a convention of the National Anti-Saloon League held in the city of Columbus, Ohio, in the second week of November. At the same time the National Woman's Christian Temperance Union exercised the same right. At the same time the commission of the Federated Churches, the Temperance Commission of the Federated Churches of America, exercised the same right. At the same time members representing some 97 national uplift organizations exercised the same These organizations held a convention the day after the Anti-Saloon League convention in Columbus, Ohio, and they took action similar to the action that was taken by the Anti-Saloon League convention.

I shall not take time now to read the names of all the organizations that were participants in this convention, but will add a partial list at the end of my remarks. I will remark, how-ever, that in addition to these 97 there are coming now from ever, that in addition to these 97 there are coming how from all quarters, the result of special action by uplift bodies, official bodies—National, State, and by counties—indorsements and pe-titions of a similar nature. Among national organizations I may mention the following:

The General Conference of the Methodist Episcopal Church, the General Assembly of the Presbyterian Church, the National Council of Congregational Churches, the General Synod of the Lutheran Church, the United Societies of Christian Endeavor, the International Order of Good Templars, the Baptist Association, the Methodist Church South, the Southern Presbyterian Church, the Disciples of Christ, the United Brethren, the Epworth League, the National Council of One Hundred.

The ones that I referred to before were national bodies. due course an enumeration of all these organizations will be properly filed with the Government under my authority to print:

Altogether there now reside in prohibition territory, made prohibition by the vote of the people, 47,000,000 of American citizens. Approximately 55 per cent of all the American people now live in territory made prohibition by their own votes.

Mr. BARTHOLDT. Mr. Chairman, will the gentleman yield

for a question?

Mr. HOBSON. Pardon me. After I have finished my consecutive statement, if the gentleman will get me additional time I shall be glad to answer his question.

Mr. BARTHOLDT. This refers to the gentleman's statement. The CHAIRMAN. The gentleman declines to yield. Mr. HOBSON. The gentleman can refer back to it; and since I have declined to yield, Mr. Chairman, I ask that you kindly cut that interruption out of my time.

The CHAIRMAN. The gentleman declines to yield.

Mr. HOBSON. I will say to any gentleman that after I am through making my statement I shall be delighted to answer any questions, and I assume that the gentleman from Missouri [Mr. Bartholdt] will then be glad to ask for an extension of my time by unanimous consent.

Over 55 per cent of the American people now live under prohibition, brought about by their own votes, and between 71 and 72 per cent of all the area of continental United States is now what is called "dry," prohibition territory, made so by the vote of the people. Therefore, Mr. Chairman, this petition,

through representatives, practically represents a petition on the part of a majority of the American people.

Permit me to add, Mr. Chairman, that perhaps never before has there been such a large petition, proportionately to the population, in the history of this Government. Permit me also to add that there is no question in the world that this majority in large measure, perhaps larger than in any similar case before, represents the conscience of this Nation. Think of it, Mr. Chairman. The conscience of the American Nation, and the actual petition of a majority of the citizens that live under the

This for the petitioners.

What of the petition, Mr. Chairman? The petition is for a redress of grievances through the passage of House joint resolution 138. Before discussing the question of the grievances themselves I desire to submit this principle o the Members here who may disagree with me on the merits of the joint recolution.

While it is not an absolutely accurate proposition that vox populi, vox Dei, the American Government is founded upon the principle that with the mass of men resides wisdom, and not only wisdom but right. The Almighty made this earth not for a few, but for all His children; and where a majority come to a deliberate conclusion, that conclusion has the moral right of To state it otherwise, Mr. Chairman, irrespective of the merits of these grievances, a majority of the people of the United States have asked for a referendum, through the constitutional

means provided for referendums.

I wish to submit the proposition, plain and simple now at this stage, to the Members of this House who may disagree with some of us as to the merits of the resolution, that we are not asking you to pass upon the merits of the grievances. The American people demand of us the right to settle those merits themselves. [Applause.]

But, Mr. Chairman, I venture this statement, that never in the history of the right of petition, since it was first developed at Runnymede, have there ever been greater grievances for

which redress is respectfully asked.

There is a great unity of law in all life upon our planet. The central law of all life is its development, its evolution. There is nothing in a type or species, plant or animal, that inherently tends to its decay. On the contrary, there is the universal impulsion for betterment and improvement if environment and conditions are favorable. You can produce and do produce a thoroughbred race of corn, a thoroughbred race of horses, a thoroughbred race of dogs, of animals and plants; and yet in over 3.000 years of history of an intelligent race we have never appoximated toward the development of a thoroughbred race of men. If you will take any aggregate built on social groups amongst animals and plants, with a favoring environment that aggregate will go on forever, speaking in human terms.

And yet every historian of the world has been compelled to record that a nation is only born to die, that creatures the highest in development, in the image of their Maker, when taken in the aggregate in the form of a great nation, can only rise to fall; and any student of human history must close the pages with a feeling of sadness when he looks down the vista and sees the favoring environment; yes, and the favoring heredity both in operation, but ending in the wreckage and ashes of empires and civilizations, so that humanity in social groups, in the aggregate, has to start all over again, and would have been exterminated but for the fact that undegenerate fragments were always able to break away from the degenerating empires and go out into the forest and there put in operation the great laws

of evolution and build a new empire.

Mr. Chairman, humanity has unquestionably by its own hands brought into its life a great destroying principle such as does not exist in any living organism. Science has definitely established that destructive principle as alcohol. In hearings that will be conducted in systematic form before the committee having H. J. Res. 168 under consideration evidence will be introduced showing beyond any peradventure of doubt that science has established simple, elemental facts about alcohol as completely as it established the law of gravity; facts vital to the survival of humanity, facts which unfortunately even men of highest education do not know, and facts that are cut off substantially from the popular means of education, but facts that are true. And I venture this proposition: Man has one place where he can stand, and that place is on the truth; and when the truth is established, no decree of a judge, no edict of deadly interests like the liquor interests, no stifling of the avenues of education, no human agency in the hands of man can suppress and destroy that eternal truth, because it has the Almighty beneath it. [Applause.]

We who propose to champion the cause of the American people in this, which we believe to be their just demand for the right of referendum, will invite those who differ with us in opinion to appear before the same committee and bring in reputable scientific research to offset, if they can, these findings of science—not theories any more, but findings of science which have been established. One is that alcohol is the toxin, the excretion of a form of life, and therefore comes under the universal law that the toxin of one form of life will poison the life that produced it and will poison all more highly organized life.

So that alcohol stands out on the start as a protoplasmic toxic poison. The form of life that produces this is the yeast germ, the lowest form of life with which we are acquainted, so that all forms of life with which we are familiar are higher. This is the reason why you can put any organic matter into alcohol and nothing living can get into it. We can then say that alcohol is a poison to everything that has protoplasmic prin-

ciple of life

The second fact established will be this, that alcohol, as a low oxide derivative of a hydrocarbon, partakes of the characteristics of similar derivation—strychnine for instance. These low oxide derivation not only are general poisons, but they have peculiarities. Each one has an affinity for certain particular tissue upon which it has a deadly attack. Strychnia, for instance, has an

affinity for the spinal cord. That is the reason why it throws the victim into convulsions and he dies in spasme. Alcohol has an affinity for the cells of any living creature that are the latest in that creature's evolution.

Every type of every species has a certain building evolution, not in all lines, but one particular line. Man attained his physical evolution ages ago. The individual finishes his physical growth in two decades. Man is evolving in the building up of the upper part of the brain, the part of the brain in which is seated the moral sense, the location of the knowledge of right and wrong, the conscience of God, of duty. Nature is not trying to produce a race of physical giants, but nature is struggling against these terrific odds, to which I will refer, to produce noble men, noble women. I will venture here in illustration that there is not a colleague of mine present who does not unconsciously, through his whole being, have the impulse and the feeling of trying to have his children better than he is and conditions for their development better than his. A man may drink himself, but if he is a good man he does not want his boy to drink. A man may be wet in his politics, but if he is a good citizen he would love to see the youth grow up sober.

Now, you can take a color of a plant that has been produced by evolution and apply alcohol internally to it and the color will at once stop developing. You can even have the color begin to fade; you can put the color back to the state where it was when it grew wild. The same holds with the animals. Take the dog, who has been domesticated for many thousands of years, and under the administration of alcohol he will develop many of the qualities of the wolf. Take the red man and put him under the effect of this toxic poison and he will revert to the characteristics of the savage. You can take the black man

and you can make a cannibal out of him.

Let me ask you in passing to note how the question of criminality is thus absolutely bound up in this matter of alcoholic degeneracy. You can take a white man in the highest forefront of evolution and apply these processes to him and it will be absolutely scientific in the results. You can watch it, you can measure it. If you keep up the process he will revert to the qualities of the semicivilized and go down to the semisavage. He will, indeed, descend below the brute.

There are about 3,000 murders in this country during the year where women are murdered by their own husbands. There are 2,500 cases where men kill their own children and 16,000 cases where they desert their helpless children. There is not a brute of the field who stands so low. The man who is so fallen started out in his lofty position in creation the highest form of life in this part of the universe, a creature so high above all the rest of creation that he can master even the instinct of self-preservation.

I will apply that to say, in my judgment, in political life a man is not fully prepared to go into political life and do his best unless he is not afraid of defeat, unless he would stand for the right and fight for the right, even if he knew he was going to go down with the right, rather than stand by the wrong if he knew it would take him to victory. [Applause.] I will say, further, that I do not believe a man has truly learned to live until he has found things for which, if need be, he would be willing to die.

Take a man in the dignity of his manhood and he is just a little lower than the angels. The spark of the Almighty is there. There he is on that lofty pedestal, and he takes a fall—down, down, down through the evolutionary processes of 10,000 years; nature's slow, patient laws building up throughout the generations to have the result torn down, down, down, until there is the creature in the image of his Maker, below the brute.

Mr. Chairman, I shall not discuss this further. These matters of scientific proof will be laid before our committee in extenso. Here is how the matter under consideration is so vital. Nature is not going to be mocked. In every living thing nature is trying to build up, and every living thing in plant, animal, man, will prosper, on the whole, just in proportion as he or it takes his or its legitimate and fullest part in

cooperating with nature in this building process.

If you want to be blessed in this world, join with nature to help bring about nobler men and women in the world; but if you wish to be damned, reverse nature's processes by tearing down, by degenerating. When the process of degeneracy sets in nature signs a death warrant and proceeds to exterminate. It will be shown fully in the hearings just how nature proceeds. I may mention here that she does it, first, by shortening the life of the individual, and, second, by blighting that individual's offspring, and both in direct proportion to the degree of degeneracy. The shortening of life is absolutely mathematical. I

can take 50,000 young men of the age of 20 and I can tell you within two weeks the average age at which they will die if you tell me how much alcohol they consume on the average. If total abstainers, they will live to the average age of 65 years; if moderate drinkers, they will die at the average age of 51; if heavy drinkers, they will die at the average age of 35. For the young man to be a moderate drinker will cost him 14 years of his life; to be a heavy drinker will cost him 30 years of his

Mr. Chairman, the question of life is the most important question for the consideration of government. The American people are now consuming alcoholic beverages at the rate of

25 gallons per capita every year. As a consequence Americans are dying at the rate of 1,000 to every 61,000 of the population every year. Records show that where total abstainers are involved the mortality is only at the rate of 560 per 61,000. I recognize the limitations of the statistics thus far as bearing chiefly on adult males, but further investigation shows that the shortening of life of the adult male entails stupendous mortality in the offspring, far greater than the shortening of life in the male, so that these figures are under instead of over, meaning that 44 per cent of the deaths in America are premature, cut short by alcohol. It means that alcohol kills between 600,000 and 700,000 citizens every year, about 2,000 every day that the sun rises. There is no question that deals as vitally as this with the preservation of human life. [Applause.]

That is but one method of extermination. The second is more terrific, the blighting of the drinkers' offspring. Simply for both parents to be moderate drinkers will increase the mortality of their children under the age of 1 year, infant mortality, nearly 80 per cent. It will go up from 13 per cent to 23 per cent, and the dangers in maternity, the disturbances in the processes of reproduction, the chances of accident, go up four hundred-odd per cent. If both parents are alcoholics, one child out of every seven will be born deformed and will be incurable, one child in every five of those that survive will become insane, one child in every three will become epileptic or hysteric, and only one child in six will be normal. Whereas, if both parents are total abstainers, there will be no dangers in maternity, none whatever, not any more than amongst animals, and 9 out of 10 of their offspring will be absolutely normal. When children are normally born—and every child has this right to be well born. When children are without the evils of degeneracy in their veins, they will have a normal development-and given a fair decent environment, they will rise in the end to one degree higher and nobler than the average of their parents, following the species' evolution.

There is only one thing that is more organic, more vital, from the standpoint of nature than the life of a nation to-day and its citizens, and that is the future of that nation. Nature gives more importance to the evolution of the species than she even does to the living generation. Here is a thing that more than war, pestilence, and famine, more than all other causes combined, tends not only to blight the life of the living, but to interfere with evolution of the unborn generation, blighting the very purposes of the Almighty for the future development of the [Applause.] I will not now dwell upon the lowering by alcohol of the character of the citizens and then the undermining of the foundations of our liberties and free institutions; I will not dwell upon the staggering economic loss imposed by the liquor traffic, nor upon the appalling production of crime, pauperism, and insanity. These will be set forth in the hear-

Now, the question is this: A majority of the American people, acting through their representatives here, petitioned for a redress of these grievances. What is the nature of the redress? As seen, the disease goes down deep into the springs of national life, the deepest, most organic disease known to the body politic and the body social. Therefore the treatment of such a disease must be organic. Well, who are the organs, the tissues? The people themselves. The cure therefore must deal with the people themselves

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. HOBSON. Certainly, I will.

Mr. MANN. Mr. Chairman, I ask unanimous consent that the time of the gentleman be extended for 30 minutes.

The CHAIRMAN. The time of the gentleman from Alabama

has not expired yet.

Mr. MANN. I understand.

Mr. HOBSON. The gentleman is very generous, and I want

to say to my colleagues—
The CHAIRMAN. The Chair will entertain the motion when

the time of the gentleman has expired.

Mr. MANN. But the Chair can entertain the motion to extend the time before the time of the gentleman expires.

Mr. HOBSON. I want to say to my colleague from Missouri [Mr. BARTHOLDT] and my colleague from Connecticut [Mr. Donovan] and others

The CHAIRMAN. Does the gentleman from Alabama desire to yield in order that the motion of the gentleman from Illinois

Mr. HOBSON. Yes; in a moment. I want to say to them, if they desire time now or at any other time. I would be glad to extend the courtesy. I know that we are going to fight, but there are the courtesies that precede hostilities that civilized warfare entails, and this is one of them. [Applause.]

Mr. BARTHOLDT. Will the gentleman yield? The CHAIRMAN. The gentleman from Illinois asks unanimous consent that at the expiration of the time of the gentleman from Alabama he may be given 30 minutes additional.

Mr. BARTHOLDT. I shall not interrupt the gentleman. The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. BARTHOLDT. I decline to accept time from the gen-

The CHAIRMAN. The gentleman from Alabama will be recognized for 30 minutes after the expiration of the time which he now has.

Mr. BARTHOLDT. I propose to take the floor in my own

right after the gentleman finishes his statement.

Mr. HOBSON. Mr. Chairman, we are dealing with an organic disease, and to properly treat it we must apply organic Organic treatment is a treatment that goes down to the organs and tissues themselves, to the people. Now, there are two parts to that organic treatment. One part is to get whatever cure you have down to the tissues. That is the That is the main part.

The truth is the foundation cure. The truth must reach the people, and the people must be allowed to act on it. For years the great organizations to which I have referred have been conveying the truth to the people, and they have unanimously agreed that they will proceed harmoniously with redoubled energies to take the truth about alcohol yet more effectively to the American people. You might as well make up your minds, men in public life, you are going to face a condition where the average American citizen soon will know the truth about alcohol.

The second part of the treatment is this, to give the tissues a chance to exercise their health principles to throw off the morbid disease, and that is all this joint resolution does. To this resolution I invite your careful attention.

I desire to point out to my colleagues that the section of House joint resolution 168, that embraces the principle of prohibition, only touches the channels of trade. I will read it. It is very brief:

Section 1. The sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purposes in the United States and in all territory subject to the jurisdiction thereof are forever prohibited.

I want my colleagues to understand from the start and, as far as we can have them—the American people—that there is no desire, no intent on the part of this resolution to invade either the individual right or inherent liberties of a citizen, or to climb over the wall that civilization, particularly the Anglo-Saxon civilization, has built around the home. There is no pretext that its enemies can make that this could infringe individual liberty.

It is only when this principle of death and degeneracy leaves the domain of the individual and of the home and appears in the circulation, to go out to other individuals, other homes, does the law fall; but in the domain of the State the law's sweep is complete, as it should be. The eternal principle is that a just government exists for the purpose of promoting the highest welfare of its people, which consists, first, of life, and, second, of development—the development of character in the individual and the passing on of an undegenerated heredity to the children. Since the government exists for the purpose of promoting those two things, the distribution by sale of the deadly agency that strikes at life and offspring must be com-pletely prohibited by a just government. This resolution is so drawn that if it is incorporated into the Constitution of the United States the strong arm of the Nation will absolutely cut off its sale.

There is a second clause in this resolution that deals with incidental matters, namely, in regard to the use of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, and scientific purposes, and in the arts. As a rule, those forms are not in the forms of the usual beverages, and so it is only an incidental matter.

Gentlemen, we have the proposition before us of whether we are going to give the American people a chance to save life, their own lives; to save homes, the foundation of the State; to save their children, the hope of the future; are going to give them a chance to perpetuate our Government and perpetuate our civilization or not.

I know that there have been efforts made to inject this question into politics, and we ought to face that proposition squarely. The fundamental principle, in my judgment, is this: That all parties exist rightfully to promote or carry out all the purposes of government, which are to cooperate with nature and fulfill the will of God in the world, promote the highest welfare, the development of noble men and noble women.

I know that it has been thought by some that the liquor question is dangerous in politics, and, my friends, it is dangerous. If there is a man on this floor who is afraid of danger he had better run to cover in the next few years. [Applause.] Yes; and I know just about how dangerous it is myself. will not intrude my experience in my own district and in my own State upon the attention of this House further than to say that the hand of the vast interests now wrapped up in this trade is deep in our political life, it is deep in our social life, it is deep in our business life—simply another illustration of the fact that it is organic, and the hand of the interests is raised to destroy me because I have dared defy them in the interests of the people.

Yes; and I know that there are shrewd men, wise men, that direct in harmony and according to great plans and policies the political and other activities of these great interests. I know how vast are their resources and how unhesitatingly they use these resources. I know they regard not the law of man or the law of God. I know that historically these interests have come down the ages, struggling with the life principles and health principles of other social groups that finally went down in destruction and degeneracy, and in that way they have inherited fighting knowledge and fighting power. Do not forget this. I for one do not underestimate the power of this enemy

But, my friends, I wish here to lay down a principle. Do not let any party believe that its permanent interests are bound up with the liquor traffic. I am a Democrat, and fundamentally so, brought up that way. I do not imply any depreciatory inference to others brought up in a different atmosphere. probably believe the same things about other parties. have been brought up to believe that the Democratic Party is founded on the principle that the world is made for all the people and not a few [applause], and that great party policies should be so shaped as to give them all equal opportunity and promote their welfare. I know the Democratic Party was never intended to join hands with the liquor interests in the debauchery of our citizens. [Applause.]

Being the good Democrat that I am, I do not hesitate to make the statement that neither has any other party been founded for any such purpose. [Applause on the Republican side.]

In great vital matters, as herein involved, all parties should

join for the common good.

I know that there are men in my party who differ with me, and I think our party should consider this question now carefully at this, the opening stage. We have great leaders who have taken different views; a Democratic leader, a great Alabamian, has recently announced at Dothan, Ala., in effect, that if prohibition continues to be injected into Democratic politics, either prohibition will be ground into dust or else the Democratic Party will die. If I misquote the gentleman, he is present, I hope he will correct me. The report of the speech practically announces that, and I refer to it here, because the gentleman referred to being the floor leader of the majority of this House in a sense became the spokesman of the Democratic Party.

My friends, I do not take second place to any man in love of his party; certainly not to any man who thinks that his party's life lies in the hands of the liquor interests. But let me tell you-for we might as well draw the line-if the Democratic Party can only live by joining the liquor interests, to debauch the American people, then in God's name let it die. [Applause.]

Mr. UNDERWOOD. Mr. Chairman [applause]—
The CHAIRMAN. The gentleman from Alabama.

Mr. UNDERWOOD. I wish to say to the gentleman from Alabama [Mr. Hobson] that I regret that he, in presenting the petition of his people in this Congress in the splendid oration that he is delivering, should have drawn into his speech a partial statement of mine that misinterprets what I did say. some other time, and at some other place, I shall properly interpret my own remarks. The gentleman does not do so at this

[Applause.]
HOBSON. Mr. Chairman, the reasons for my bringing

newspaper favorable to my opponent. The principle, as I interpreted it, was in the report of a speech on an occasion when he was introduced as the greatest man in the world, and where he appeared and was set forth as the leader of the Democracy. But I will say this, since I have seen fit to bring it up: That I felt justified for the sake of the cause. I will ask unanimous consent that he be given all the time he wishes in which to tell us what he did say, and I feel that he ought to take this occasion to tell us.

Mr. UNDERWOOD. Mr. Chairman, I wish to say to the

gentleman from Alabama-

Mr. HOBSON. After I have concluded, I shall ask unanimous consent

Mr. UNDERWOOD. I am not going to detain the House now with an interpretation of my views. I stated to the gentleman that he made a partial quotation of my speech. I do not know

where he got it from.

Mr. HOBSON. I got it from the Montgomery Advertiser.

Mr. UNDERWOOD. I do not believe that the floor of the House, with the public business before us, is the proper place for the gentleman or myself to drag our personal issues. plause.] I will ask for an extension of the gentleman's time, if he needs more, because I do not wish to take up his time. But I wish to say to the gentleman now that I occupy the position on the floor of this house as the leader of his party. I can not, occupying that position, engage in a controversy with the gentleman from Alabama about our personal matters that may work an injury to my own party; and more than that, I think that when the gentleman attempts to inject a personal issue be-tween himself and myself on the floor of this House he injures his own cause in the estimation of many of his own followers, [Applause.]

I hope the gentleman from Alabama, for the balance of the time during which there is a political controversy between us, will allow it to be settled on the fields of Alabama, and let us on the floor of this House address ourselves to the great questions of the day that we believe in, without attempting to inject our own personalities into them. [Cries of "Good!" and pro-

longed applause.]

Mr. HOBSON. Mr. Chairman, the gentleman refers to the time of the House for use for public business. As far as that is concerned, other public business for the day is done. But I want to ask my colleague-and especially you who would applaud my opponent taking refuge behind the mark of the question being personal—I want to ask you if there is any question you can name that is of greater public moment than the question whether our people are to be forever debauched or not? [Applause in the galleries.] I will say to my opponent—I use this word, for he has brought that in—I called him a colleague, and I was dealing with principles and not with men; I was dealing with him as the leader of the party in the House and not as my opponent—I will say to my opponent that there can be no more fitting time and place than here and now to deal with the principle involved, when we are starting out upon the consideration, nonpartisan, I trust, of this great questionmy friend must realize that papers all over this country are quoting his statements in Alabama. The country will not allow the differences between us and the issues between us to be personal. On the contrary, the liquor interests on one side and the temperance, prohibition, and moral forces on the other have made it a national question, and he can not escape this [Applause in the galleries.]

Mr. UNDERWOOD. Mr. Chairman.—
Mr. MANN. Mr. Chairman, I rise to a question of order.
Mr. UNDERWOOD. Mr. Chairman, if the gentleman will

allow me just a minute.

Mr. MANN. No: I am not-

Mr. UNDERWOOD. I do not like to be misquoted. Mr. MANN. I am not on that subject at all. The long-continued practice of the House forbids applause in the galleries, and I hope that the Chair will remind the present occupants of the galleries that as good citizens they ought to observe that

The CHAIRMAN. The Chair has been reluctant to make that suggestion to the galleries; but the point of order is well taken. Mr. HOBSON. Mr. Chairman, may I ask this before we proceed-

Mr. UNDERWOOD. The gentleman made a statement that I want to contradict.

It is about the applause. When Members on Mr. HOBSON. the floor apparently indulge in partisan applause, can we not extend the rules to the galleries this one time?

Mr. HOBSON. Mr. Chairman, the reasons for my bringing that question up here are legitimate and logical, as I stated. I will not take the article and read it. It was reported by a

reluctant to enforce that rule, and did not do so until the gentleman from Illinois suggested that it ought to be enforced.

Mr. UNDERWOOD. Mr. Chairman, I hate to inject myself into the remarks of the gentleman from Alabama, but I can not sit in silence and allow him to assert that I am the candidate of any interest without challenging the truthfulness of that statement. I am not the candidate of any liquor interest; I never have been the candidate of any liquor interest; I have not received a dollar from any liquor interest; I do not intend to receive a dollar from any liquor interest; and I have asked the people of my State to elect me on other issues. The gentleman from Alabama states that this is one of the issues of the campaign. He has the right to state that. He says it is the main issue. He has the right to make that statement. But I challenge his statement when he says that I am the candidate of that interest, because it is not true.

Mr. HOBSON. Mr. Chairman, I do not care to go back into a discussion that would become personal as between us, but my opponent insists on making the matter personal. I laid the question of my opponent's affiliation with sinister interests before Congress in due order. What I said about the gentleman then and what I say about him now is absolutely true. My opponent voted for liquor in the election in his home county, and every straight liquor man in Alabama and every straight liquor paper in Alabama to-day is lined up like a solid wall

behind him.

The temperance people and the prohibition people and the moral elements of the State at large can not be deceived by any such explanation as has been made by my opponent. He said the same thing about Wall Street; and his management denied that Wall Street had ever given them a dollar, just as he is denying this to-day. Whereas Wall Street, as shown by some testimony, had financed his campaign, he said he did not know anything about this financing then, and, naturally, I do not ex-

pect him to know anything about the financing now.

I am not impugning the gentleman's character, and my colleagues here were premature on that first day when they imagined that I had done so then. I will say it to my colleague now: I would resent it if any man anywhere reflected on his character, and I denounce the reporter that reported me as doing so. I know that the gentleman is of the highest type of character and that he lives on a high moral plane himself; but that only makes him the more dangerous and makes it the more pitiful that we should find such interests as Wall Street trying to capture our party and such interests as the deadly liquor interests trying to capture the State of Alabama behind such a high-class reactionary leader as is my opponent.

I will take this occasion under my leave to print to insert the

record of resolutions adopted by the great national temperance organizations, showing that they fully realize that the senatorial fight in Alabama is the first battle of this great war as inst the liquor interests, showing that they know that the liquor interests are behind Mr. Underwood. The World's Woman's Christian Temperance Union, in convention at New York, and the National Woman's Christian Temperance Union, in convention at Asbury Park, N. J., in October, both adopted unani-mously resolutions described in their official organ, the Union

Signal, of December 4, as follows:

[From the Union Signal, Evanston, Ill., Dec. 4, 1913.]

CONGRESSMAN HOBSON'S CAMPAIGN.

On October 25, 1913, the World's Woman's Christian Temperance Union, in convention assembled, in the Academy of Music, Brooklyn, N. Y., with delegates from 34 nations, unanimously and enthusiastically resolved to send to Hon. RICHMOND PEARSON HOBSON a message of highest appreciation of his heroic work for national constitutional prohibition, and all good cheer in his senatorial campaign, with earnest

highest appreciation of his heroic work for national constitutional prohibition, and all good cheer in his senatorial campaign, with earnest wishes for his success.

The convention heartily indorsed the proclamation of Mrs. Lillian M. N. Stevens, president of the National Woman's Christian Temperance Union, for national and world-wide prohibition.

The National Woman's Christian Temperance Union convention, at Asbury Park, indorsed the senatorial candidacy of Congressman Hobson, of Alabama, and voted to send him financial assistance. His name was frequently mentioned in the convention and was always heartly applauded. It was voted to widely circulate in every community, as far as possible, Congressman Hobson's resolution for national constitutional prohibition introduced into Congress, and to support it in every possible way.

The national convention of the Anti-Saloon League at Columbus, Ohio, November 13, unanimously adopted a similar resolu-tion indorsing my candidacy, described in their official organ, the Alabama Citizen, of November 22, 1913, as follows:

CAPT. HOBSON INDORSED. A feature of the closing hours of the convention was the great ovation given Congressman Hobson, and the adoption by the thousands of delegates of a resolution indorsing Mr. Hobson's candidacy for the United States Lenate. This was introduced by Senator Don C. McMulen, of Tampa, Fla., who said, preparatory to reading his resolution: "My sympathies in this contest are with Capt, Hobson, for the reason that I am for prohibition, and I know no way to obtain it

except by electing to office those who are in sympathy with the movement. Mr. Underwood may be all right on the tariff question, but I have no doubt Capt. Hobson's attitude on this question is fully as acceptable to the people of his State as Mr. Underwood's.

"What I do know is that in 1912, when a large element of the voters of the State of Florida were in favor of Woodrow Wilson for President, that Mr. Underwood's henchmen, or somebody else in Mr. Underwood's name, invaded our State with a large campaign fund, and by the political trick of appealing to our voters to support Mr. Underwood's cause was a southern man and our neighbor carried the State for him in the preferential primary. This movement was led and Mr. Underwood's campaign in our State managed by the leader of the whisky forces in Florida, and his able first lleutenant in the work was the man who led the fight for the race-track gamblers in Florida when we drove them out. I know not what Mr. Underwood's attitudes at home are, but in his effort to secure the delegation from Florida against President Wilson he allied himself with the element who are conspicuous chiefly for their opposition to every movement that has a semblance of moral reform connected with it. Probably he was like Lorimer, of Illinois—knew nothing of it."

"Whereas the twentieth convention of the Anti-Saloon League of

was like Lorimer, of Illinois—knew nothing of it."

"Whereas the twentieth convention of the Anti-Saloon League of America has launched a nation-wide campaign looking to an amendment to the Constitution of the United States prohibiting the manufacture, sale, importation, and exportation of intoxicants; and

"Whereas the issue will be made by the liquor interests in the election of Congressmen and United States Senators in every State in the Union, and, having already been made an issue in Alabama, where the liquor interests are combined to compass the defeat of that sterling and aggressive champion of prohibition, RICHMOND PEARSON HOBSON:

"Beselved That we give our processed laborated That the laborated That we give our processed laborated That the laborated

Hobson:

"Resolved, That we give our unreserved indorsement and moral support to Congressman Hobson in his campaign for election to the United States Senate and call upon the Christian and moral citizenship of America, and Alabama in particular, for their prayers and cooperation to secure victory for the principle of prohibition, which is involved in the election of Congressman Hobson."

Ex-Gov. Handley, of Indiana, made a brief seconding speech, after which the resolution was adopted by the immense delegation standing amidst tumultuous applause. Capt. Hobson was called to the stand and thanked the convention for the manifestation of interest in his race. He was given another great ovation of several minutes duration. His speech was the chief feature of the closing session of the convention.

It was the greatest antisalon convention in the history of America.

It was the greatest antisaloon convention in the history of America. It was an epochal convention in that the final steps for the destruction of the liquor traffic in all America has been taken. "On to Washington" is now the battle cry of America's temperance hosts, and the warfare will not cease until this enemy of the human race has been destroyed.

But, Mr. Chairman, I did not intend to go into the personal part of this matter. I only dealt with a principle, but my opponent tried to get away from that principle and refused to take you frankly into his confidence by pretending that the question was personal. If I did not correctly express what he said or tell correctly his position, why does not he tell us himself? Why does not he correct me? I want to say to him here and now that the time is at hand when men in all parties have got to come into the open. [Applause.] We are not going to have candidates in any party become the means of the enemies of the people carrying out their deadly purposes or having the people misled by any such deceit and by representations simply dealing with high personal integrity. It is general with such mastering leaders as my opponent to live on a different plane in public life from which they live on in private life.

Mr. Chairman, I did not intend to speak so long and to bring such matters into my remarks to-day, but since the question of the strife has come, let me tell you, Mr. Chairman, the Halls of Congress have reverberated in times gone by with action taken by this body under the mandate from the American people to declaring war. I here give notice to my colleagues around me that the right of petition exercised yesterday by the representatives of the conscience and the conviction and the physical ma-jority of the American Nation is a mandate for this body to declare war upon a deadlier enemy than all the other enemies combined.

Yes; there have been many very grave, far-reaching consequences hinging upon the declarations of war made by Congress in the past, but there never has been a declaration of war upon which hinged so much of the life, the hope, the joy, the fear, the anguish, the disease and suffering, torture and death of untold millions in the perspective of history. This war is the final, supreme declaration of war on the part of an intelligent being, human kind, acting under the providence of God, which will bring to bear the inherent life principles that in all other living organisms have saved life from extermination. The eternal truth is established. God has not created man in vain. There can be but one outcome. The great destroyer himself is going to be destroyed.

The CHAIRMAN. The time of the gentleman from Alabama has expired.

Mr. MANN. How much more time does the gentleman want? Mr. HOBSON. I do not ask any more time. My friend from Missouri wants to speak, and I beg his pardon for having kept the House so long. I will use the privilege to print to insert the official resolution, addresses, and proceedings touching the petitions of the people, additional insertions, not now on hand, to follow at future dates.

Resolved, That we the World's Woman's Christian Temperance Union, in triennial convention assembled in Brooklyn, N. Y., October 23-28, 1913, representing 45 nations, will use our utmost infinence on behalf of the resolution introduced in the United States Congress by Hon. Richmond Pearson Hobson, of Alabama, providing for an amendment to the National Constitution, as follows:

"Section 1. The sale, manufacture for sale, and importation for sale of beverages or foods containing alcohol is forever prohibited in the United States and in all territory under their jurisdiction."

LILLIAN M. N. STEVENS, Acting President.

Anna A. Gordon, Secretary,

At the annual meeting of the National Woman's Christian Temperance Union, held in New Jersey October 30 to November 5, 1913, plans were made for a campaign for national constitutional prohibition and the convention unanimously

\*Resolved\*\*, That the National Woman's Christian Temperance Union use its extensive equipment and its utmost influence in the effort to secure an amendment to the National Constitution in accordance with the resolution introduced in Congress by Hon. RICHMOND PEARSON HORSON, of Alabama, prohibiting the sale, the manufacture for sale, the exportation for sale, the transportation for sale, the importation for sale of beverages or foods containing alcohol.

LILIAIAN M. N. STEVENS,

\*\*President.\*\*

ELIZABETH P. ANDERSON,

\*\*Secretary\*\*.

### A DECLARATION OF PRINCIPLES.

The Anti-Saloon League of America in national convention assembled submits the following declaration of its purposes and the reasons that underlie and impel them:

The preservation of the general welfare is the highest purpose of government. The general welfare rests upon the intelligence and morality of our people. By the general concurrence of opinion of every civilized, uncivilized, and Christian community the liquor traffic is an acknowledged source of crime and misery to society and an organized agency for the corruption and debauchery of government.

No right of property or of personal liberty can prevail against the right of the people to protect public morals and promote the general welfare.

right of the people to protect public morals and promote the general welfare.

This Nation can not endure if it continues to exchange public morals for public money. The morals of the Nation are more valuable than any revenue this traffic can yield.

It is wrong for the Government to accept revenue from the liquor traffic or to issue liquor dealers' tax receipts in dry territory.

In order that Federal legislation relating to the interstate shipment of intoxicating liquors may be made effective, we urse upon the legislatures of the various States the passage of laws prohibiting common carriers from transporting and delivering such intoxicating liquors into prohibition territory.

tures of the various States the passage of laws prohibiting common carriers from transporting and delivering such intoxicating liquors into prohibition territory.

We urge Congress to enact a law forbidding the use of the mails to the liquor traffic for advertising or soliciting the purchase of intoxicating liquors in such territory.

The executive officer who refuses to enforce the law for the preservation of public morals is as grave a public enemy as the lawbreaker himself; and laws should be passed in all the States providing for the speedy and summary removal of every executive officer guilty of nonfeasance in office.

We declare it to be the sense of the league that when officials of the National Government interfere in an election in a State the people have a right to expect them to take care that the candidates for whose election they intercede upon national issues shall not be out of harmony with the convictions of the people upon moral issues in that State.

The Anti-Saloon League has always been both nonsectarian and omnipartisan. The league never opposes a party, a candidate, or an official who faithfully attempts to preserve public morals by the enactment or enforcement of laws intended for their preservation; but whenever a political party or politician or executive official prefers the liquor traffic above the public morals we come to a stand. On that issue we fight. Nice and cunning distinctions will no longer do. Of cavil and evasion we have had enough. We want the decision and the action of the statesman. Henceforth we know this cause only, and for it, whenever necessary, men shall be set aside and parties abandoned.

We declare our settled conviction that license and regulation are inadequate to exterminate the liquor traffic. The license system, instead of eliminating the evils of the traffic, has become its last and strongest fortress.

The liquor traffic is national in its organization, character, and influ-

adequate to exterminate the liquor traffic. The license system, instead of eliminating the evils of the traffic, has become its last and strongest fortress.

The liquor traffic is national in its organization, character, and influence. It overflows the boundaries of States and refuses to be regulated or controlled. It is a Federal evil; a national menace, too powerful for State authority, requiring national jurisdiction and treatment. It beggars the individual, burdens the State, and impoverishes the Nation. It commercializes vice and capitalizes human weakness. It impairs the public health, breaks the public peace, and debauches the public morals. It intimidates and makes cowards of public men. It dominates parties and conventions. It cajoles, bribes, or badgers the makers, interpreters, and administrators of law, and suborns the public press.

It claims for itself a special right and privilege asserted by no other interest in all the land, however great or powerful; a right and privilege to infract municipal ordinances at will, to violate and break legislative resolves and enactments, and to set aside the constitutional provisions of sovereign States, however solemn and sacred. Refusing all domestic regulation and control, it leaves the American people but two alternatives—the abject surrender of their inherent right of self-government or its national annihilation. Between such a choice free men can not hesitate. We therefore declare for its national annihilation by an amendment to the Federal Constitution which shall forever prohibit throughout the territory of the United States the manufacture and sale, and the importation, exportation, and transportation of intoxicating liquors to be used as a beverage. To the consummation of this high purpose we hereby pledge, as pledged our patriot fathers 137 years ago for the Nation's independence, "our lives, our fortunes, and our sacred honor."

Trusting in Almighty God, we call upon all patriotic citizens to give their support theero.

PROCLAMATION FOR NATIONAL CONSTITUTIONAL PROHIBITION [Lillian M. N. Stevens, president National Woman's Christian Temper-ance Union, Portland, Me., Sept. 10, 1911.]

[Lillian M. N. Stevens, president National Woman's Christian Temperance Union, Portland, Me., Sept. 10, 1911.]

Whereas modern science has definitely established for all time that alcohol is a toxin, the worst product of the ferment germ; a poison to every living tissue, destructive and degenerating to the human organism, striking at the health, character, and life of the individual, blasting the lives of children unborn, and undermining the integrity of the family;

Whereas "wine is a mocker," and the maintenance of alcoholic beverages in the channels of trade always causes their widespread use among the people, entailing incalculable economic loss in productiveness and heavy burden of taxation; turning out multitudes of slaves and solons of drink; lowering in an appaling degree the average standard of character of citizenship, upon which the Nation's institutions and liberties must rest; bringing about the untimely death of many thousands of citizens, exceeding in numbers all those destroyed by war, pestilence, fire, flood, and famine combined;

Whereas this terrible disease has been running for long centuries and is now gnawing at the vitals of the nations and civilizations of to-day, gripping the Governments of the world, and is interwoven into the political, commercial, and social life of the peoples, constituting thus the deepest seated, most chronic organic disease known to the body politic and body social;

Whereas such a disease for a permanent cure requires of necessity deep, continued organic treatment for the whole body, for which partial superficial devices like legalization and local regulation have always proved and from their own nature must always prove utterly inadequate;

Therefore, in the name of the World's and National Woman's Christian Temperance Union, we hereby make this proclamation for a great crusade to carry the vital truth to the peoples themselves in all lands, and through them to place prohibition in the organic law of all nations and ultimately in the organic law of the world, a

Address of Mr. Ernest H. Cherrington delivered at Washington, D. C., before Congress and the people on December 10, 1913, on behalf of the committee on 1,000 presenting to Members of Congress the proposed joint resolution calling for an amendment to the Federal Constitution prohibiting the manufacture, transportation, and sale of intoxicating liquors.

This committee of 1,000 men, coming as they do from every State of the Union, represents a vast multitude of men and women in every walk of life.

As American citizens they appear at the doors of the Capitol of this great Republic, in harmony with the spirit of Article I of the amendments to the Federal Constitution, which guarantees "the right of the people peaceably to assemble and petition the Government for a redress of grievances."

#### PURPOSE OF THE COMMITTEE OF 1,000.

The gentlemen composing this committee are here in no spirit of bombast or parade, but on serious business. They are not fanatics who have narrowed their thought and vision to a single propaganda, but thoughtful, patriotic men. who realize that there is more than one question before the public and more than one problem for society to solve.

They are a part of the incorporate body politic which you represent. They are stockholders in the great institutions of American society, whose legal destinies, for the time being, rest in your hands.

They do not expect or desire the representatives of the people in this great Federal legislative body to be alone concerned with the particular needs of the temperance reform. They recognize and are intensely interested in the questions of the hour, with which their representatives in Congress must grapple—the tariff, the currency question, the vital issues of war and peace, the imminent industrial problems, the problems of taxation and revenue, and other important issues.

Because they are thus seriously interested in these vital questions which touch the very heart of the Nation by touching the well-being of American men and women, in the home, in the shop, in the business enterprise, and in the moral and religious institutions, they are, therefore, all the more intensely interested in the varied and important issues involved in the proposed legislation which is hereby committed to your care.

### WHERE PROHIBITION HAS BEEN ADOPTED.

WHERE PROHIBITION HAS EEEN ADOPTED.

The absolute prohibition of the sale of intoxicating liquors for beverage purposes has been adopted by nine States—Maine, Kansas, North Dakota, Georgia, North Carolina, Oklahoma, Mississippi, Tennessee, and West Virginia—having an aggregate population of 14,685,961.

The legislatures of 31 other States (Alabama, Arizona, California, Colorado, Connecticut, Delaware, Florida, Idaho, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Montena, Nebraska. New Hampshire, New York, Ohio, Oregon, Rhode Island, South Carolina, Texas, Utah, Vermont, Virginia, Washington, and Wisconsin) have by law prohibited the sale of intoxicating liquors in certain classes of political subdivisions, prohibition becoming operative whenever a majority of the electors in a regular or special election indicate by vote that they wish the provisions of the law to apply. Under the operation of the laws in these States 26,446,810 people are living under prohibition by legislative enactment.

In three other States (Arkansas, Iowa, and South Dakota) the electors indicate that they do not wish the provision of such law to apply. In these three States there are 3,693,201 people living in prohibition territory.

In the States of Wyoming and New Mexico the legislatures have pare-

tory.

In the States of Wyoming and New Mexico the legislatures have prohibited the sale of liquors in all sections except certain classes of incorporated municipalities. In still other States the legislatures have arbitrarily placed certain areas under prohibition legislation, thus adding to the aggregate population in prohibition territory.

PROHIBITION POLICY OF THE FEDERAL GOVERNMENT.

PROHIBITION POLICY OF THE FEDERAL GOVERNMENT.

The United States Government, moreover, has prohibited the traffic in Indian countries, in certain portions of the Territories, in military forts and reservations, in the United States Navy, in the National Capitol Building, in national and State soldiers' homes, and in other specified areas under Federal control.

As a result of the operation of these several provisions, at the present time more than 47,000,000 of the population of the United States live under prohibition, and more than 71 per cent of the area of the Nation is, by Federal, State, or local decree, prohibition territory.

NO INTERFERENCE WITH INDIVIDUAL RIGHTS.

No Interference with individual rights.

In seeking this proposed change in the supreme law of the land the temperance forces of this Nation are not seeking in any way to interfere or encroach upon the rights of any American citizen of any class of American citizens. The voice of the Supreme Court of the United States has for all time clarified the atmosphere as to the question of individual rights in the retail-liquor business. The decision handed down by that great tribunal in the Christensen case 23 years ago, reads in part as follows: "There is no inherent right in a citizen to sell intoxicating liquors by retail. It is not a privilege of a citizen of the State or of a citizen of the United States."

We believe that just as the time came when the problem of human slavery compelled recognition at the hands of the Federal Government, so has the time arrived when the American liquor problem can be dealt with adequately only by the Nation as a whole.

In this connection it is most significant that at no time during all the long agitation against human slavery did any Federal authority, much less the Supreme Court of the United States, so strip the institution of human slavery of all rights to exist as that supreme authority has already repeatedly done in the case of the institution of the liquor traffic.

WHAT PROHIBITION AMENDMENT MEANS.

This proposed amendment to the Constitution should, we believe, be submitted by Congress to the States, and should be ratified by the States because of what such action will mean to the general moral, political, social, and economic well-being of the people of this Nation.

In urging upon Congress the importance of this proposed legislation the temperance forces of this country, whom we have the honor to represent, are not requesting Congress to try an experiment. The results of the many experiments by States and subdivisions of States covering long periods of years furnish abundant evidence of the social, economic, political, and moral effect of a prohibition policy.

In the proportion of population under prohibition the 48 States and the District of Columbia naturally divide themselves into four classes: First, the prohibition States; second, the near-prohibition States; third, the partially license States; and, fourth, the license States.

The first class, or the prohibition States, represents a population of 14,685,961, and consists of 9 States, each of which has adopted prohibition for the entire State. The second class, or the near-prohibition States, represents a population of 26,573,611, and consists of 17 States, in each of which between 50 per cent and 90 per cent of the population lives in prohibition territory. The third class, or the partially license class, represents a population of 28,418,784, and consists of 13 States, in each of which between 25 per cent and 50 per cent of the population lives in prohibition territory. The fourth class, or the license States, represents a population of 22,293,910, and consists of 9 States and the District of Columbia, in each of which less than 25 per cent of the population lives in prohibition territory.

EFFECT OF PROHIBITION ON CRIME, PAUPERISM, AND INSANITY

EFFECT OF PROHIBITION ON CRIME, PAUPERISM, AND INSANITY.

The Supreme Court of the United States is authority for the declaration that "the statistics of every State show a greater amount of crime and misery attributable to the use of ardent spirits obtained at these retail-liquor saloons than to any other source."

No State of the Union has given prohibition so fair a trial as has the State of Kansas. To-day that State presents the unparalleled record of almost two-thirds of the counties of the State without a single prisoner serving sentence for crime, while in some of the counties a jury to try a criminal case has not been called in 10 years.

The Federal census reports for 1910 show that the number of paupers in almshouses per 100,000 population, in the prohibition States (8 of which were under prohibition in 1910) is 46; in the 17 near-prohibition States, 54: in the 13 partially license States, 123, and in the 9 license States, 129.

The relation of the liquor traffic to the alarming growth of insanity among our people is engaging the interest and attention of the world's best scientists. The United States census reports for 1910 show the number of insane in hospitals per 100,000 population in the 9 prohibition States to be 119; in the 17 near-prohibition States, 150; in the 13 partially license States, 242; and in the 9 license States, 276.

PUBLIC EDUCATION ENCOURAGED BY PROHIBITION.

PUBLIC EDUCATION ENCOURAGED BY PROHIBITION.

The relation of the prohibition policy to public education in the United States also presents an interesting study. The census reports do not give what should be considered a fair comparison in this connection, because of the fact that most of the prohibition States are Southern States with large percentages of negro population, which, in the very nature of the case, tends to make a poorer proportionate showing for the public schools than in States not having such a large negro population

the public schools than in States not having such a large negro population.

In spite of this fact, however, the census reports for 1911 show the number of children enrolled in the public graded and high schools of the nine prohibition States to be 76 per cent of the total number of children of school age, while in the nine extreme license States the proportion is only 69 per cent.

Similar contrasts are shown in the Federal census reports in the number of persons to every family in the several States, the number of families owning their own homes, the criminal statistics for State penal institutions, and other data touching either directly or indirectly upon the liquor problem.

The voice of the courts, the reports of the statistical departments of the several States and of the United States Census Bureau, the record of every community, county, city, or State, where both the prohibition and license policies have been given fair trials, all bear unimpeachable testimony to the fact that the prohibition of the liquor traffic reduces crime, pauperism, and insanity, increases legitimate business, tends to clean politics, elevates public morality, and promotes the general welfare.

NATIONAL PROHIBITION ONLY HOPE FOR CITIES.

This amendment to the Federal Constitution, moreover, should be adopted because it presents the only hope for the speedy solution of the growing liquor problem in our great centers of population.

We have reached a stage in the progress of the movement for prohibition when the activities of the liquor traffic are centered in the cities of the Nation. The urban population in the 9 prohibition States is only 20 per cent; in the 17 near-prohibition States it is 28 per cent; in the 13 partially license States it is 58 per cent; and in the 9 license States it is 71 per cent. The Gibraltar of the American liquor traffic, therefore, is the American city.

One-half of all the people now living in license territory in the United States live in four States—New York, Pennsylvania, Illinois, and New Jersey. One-fourth of all the people in this Nation who live in saloon territory live in six cities—New York, Chicago, Philadelphia, St. Louis, Boston, and Cleveland. One-half of all the saloons in the United States are located in 14 cities. There are fewer saloons south of Mason and Dixon's line than there are in the city of Chicago. Thirty-six States of this Union have fewer saloons in the aggregate than the city of New York. These significant facts, together with the well-known fact that the vices of the Nation center in our cities, thus adding complications to complications, make the great moral and social problems of the city practically unsolvable so far as the city alone is concerned.

IMMIGRATION COMPLICATES CITY LIQUOR PROBLEM,

IMMIGRATION COMPLICATES CITY LIQUOR PROBLEM,

The rapidly increasing immigration, especially from the countries of southern Europe, presents a condition in this connection which tends to make the city liquor problem even more complex. The millions which are being added to our population each decade are for the most part being poured into the license cities and States of the Nation. The foreign-born population of the 9 prohibition States is 4 per cent; that of the 13 partially license States is 18 per cent; while that of the 9 license States is 22 per cent.

license States is 18 per cent; while that of the 9 license States is 22 per cent.

A very large portion of those who come to our shores come from countries where the per capita consumption of intoxicating liquors is almost three times as large as it is in the United States of America. Taking into account this one item alone, and taking it for granted that the immigrant represents an average in the country whence he comes, it would be necessary to convert to total abstinence upon the average more than 2,000,000 average Americans per year in order to offset the natural increase in the per capita consumption of intoxicating liquors because of immigration.

BURAL STATES MUST HELP CIVIES

RURAL STATES MUST HELP CITIES.

It is not difficult, therefore, to see that the forces struggling for sobriety in these vast centers of population must have the assistance of the rural communities and the rural States in order to extricate themselves from the entangling meshes woven by the liquor traffic in the cities. It is not only proper and right that the rural States of a Republic like ours should have a voice in the nation-wide problems which center in the cities, but from the standpoint of the welfare of the cities themselves such a course is imperative.

In all questions which touch the moral and civic well-being of all the people in a State the sovereign will of the people of that State as a whole must be superior to the will of a single city. It is likewise equitable and just that on like questions the sovereign will of the people in all the 48 States of this Union should be supreme.

CONGRESS SIMPLY ASKED TO REFER OUESTION TO STATES.

in all the 48 States of this Union should be supreme.

CONGRESS SIMPLY ASKED TO REFER QUESTION TO STATES.

If time was when this Nation could not exist half slave and half free, certainly time is soon to be when, according to all signs, this Nation can not exist half license and half prohibition.

While we confidentially believe that the only solution of this problem lies in national prohibition, we do not ask by the proposed legislation that the Members of Congress adopt this same belief; what we do respectfully request, and all that is asked by this proposed bill, is that this question be put to the legislatures of our several States. The passage of this bill of itself by Congress would not mean prohibition. It would simply mean that Congress had given to the States the opportunity to decide the question, in harmony with the will of all the people.

PROHIBITION NOW OF NATIONAL POLITICAL IMPORTANCE.

PROHIBITION NOW OF NATIONAL POLITICAL IMPORTANCE.

PROHIBITION NOW OF NATIONAL POLITICAL IMPORTANCE.

When more than 47,000,000 of our population live in territory from which the saloon has been banished by the sovereign will of the people, and when a very large percentage of the population in the remaining license territory of the Nation is earnestly and actively favorable to prohibition legislation, it is certainly not presumptuous to assume that the time has come when this question should be considered of national political importance. Rather it would seem presumptuous to insist that such an issue of such vital concern to the public peace, the public health, the public morals, and the public welfare, and which has assumed such enlarged proportions during recent years, should be considered to be outside the realm of national political thought and action. PREAMBLE TO CONSTITUTION AN ARGUMENT FOR PROHIBITION.

Resting our cause, therefore, on the enduring and eternal principles of justice and righteousness, we respectfully and earnestly submit to you this proposed legislation, confident in the belief that its enactment into law will in no small degree conserve and promote the interests of the Nation in which we live.

In full harmony with the avowed and declared objects of free government, so forcibly and fittingly set forth in the language of the preamble to the Constitution of the United States we present to you this proposed amendment to that sacred document "in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity."

THE GREAT TEMPERANCE COMMITTEE CALLED BY THE COUNCIL OF ONE HUNDRED—NINETY-SEVEN NATIONAL ORGANIZATIONS UNITE IN A COMMON EDUCATIONAL PROGRAM AGAINST THE LIQUOR TRAFFIC.

MON EDUCATIONAL PROGRAM AGAINST THE LIQUOR TRAFFIC.

The national convention of the united temperance forces of the North American Continent, which convened in Columbus on the 14th of November, immediately following the great gathering of the National Anti-Saloon League, was successful beyond the highest hopes of its most sanguine promoters.

Five hundred and fifty-two official delegates from 97 national organizations, with more than 700 visitors, crowded the auditoriam of the First Congregational Church. Without a dissenting vote a complete educational program was adopted, and the plans of The Council of One Hundred made effective by intrusting this educational program to a permanent executive committee.

The Council of One Hundred convened at 9 o'clock in the morning. Here the report of the promoting committee of seven, which had charge of the preliminary plans leading up to the convention, was received. At 11 o'clock the council made its report to the general convention. The remainder of the morning session and the entire afternoon session were devoted to the discussion of plans and policies for making the work of the gathering effective throughout the Nation.

Repeatedly the eloquence of the convention speakers swept the delegates to their feet. Not a discordant note was sounded. The spirit of the entire meeting is expressed in the works of the closing paragraph of

the call of The Cownell of One Hundred: "Emphasizing, therefore, the points upon which all temperance organizations of the Nation are in agreement, and convinced that the time has arrived when without prejudice to or interference with the fundamental principles and policies of any particular organization, all temperance organizations should unite in a comprehensive, nation-wide program of education of the perment of the meeting of the permanent executive containts of the general convention 17 subcommittees were authorized and the chairmen of the majority of these committees appointed. On the 9th of December the committee will again meet in Washington, D. C. At this later meeting the complete plans for the greatest temperance educational movement in the history of the country will be finally adopted and anounced. The subcommittees appointed and to be appointed will make possible the covering of the whole temperance education field in a most thorough manner.

The Council of One Hundred is not to be a new organization in the sense that it will occupy the field and do the work of any temperance society pushing a definite campaign. Rather it is to be a clearing house for plans and methods and a fountainhead of information and inspiration, from which every organization on the continent can draw.

There were many inspiring instances that emphasized the spirit of unity which pervaded the entire gathering. While The Council of One Hundred was in session Dr. Howard H. Russell, founder of the Anti-Saloon League, and the Hon. Charles Reading Jones, formerly national gathering that awaited the report of the committee.

The address of Temporary Chairman Dr. Ira Landrith, of Nashville, Tenn., was masterful and in exact harmony with the great idea of the gathering. Among those called to be his vice chairmen was Hon. Joshua Levering, a former candidate of the Prohibition Party for President. Mr. Levering presided briefly during the afternoon.

Unparalleled in the history of the great temperance reform was the realising of the u

local antialcohol congresses, especially in the great centers of population."

We make the following specific recommendations:

"(1) The compilation from time to time by the permanent committee of reliable statistics on the varied phases of the drink habit and liquor traffic, these statistics to be recommended for the use of all temperance forces, to the end that in statements involving statistics there may be no inaccuracles.

"(2) We recommend that all school officers, teachers, parents, guardians of children, and clergymen unite to secure in all public schools the instruction concerning alcoholic drinks and other narcotics prescribed by the laws of every State.

"(3) We urge that normal schools, teachers, institutes, conventions, and summer schools provide thorough and adequate preparation for teaching the laws of health, including the facts about alcoholic drinks.

"(4) We recommend that special emphasis be laid upon the relation of abstinence to business and industrial efficiency and safety.

"(5) The use of posters and the indorsement of health officers and other officials, as in Great Britain and France, be attached wherever possible.

"(6) That antialcohol exhibits be used in store windows, and in connection with fairs, conventions, health, industrial, and other general exhibits.

"(7) That in each community some person or persons be charged with the duty of securing due publicity for temperance news in the public press.

"(8) That all public health campaigns shall include full recognition.

eral exhibits.

"(7) That in each community some person or persons be charged with the duty of securing due publicity for temperance news in the public press.

"(8) That all public health campaigns shall include full recognition of the part alcohol plays as an active agent in producing disease, degeneracy, and death.

"(9) That for the training of leaders in the nation-wide antialcohol movement we recommend a general temperance educational plan similar in methods to the missionary educational movement.

"Finally, to this educational campaign we summon all educational forces of the Nation, including the public press, Sabbath schools, churches, and public and private schools, colleges, universities, brotherhoods, women's clubs, philanthropic organizations, employers' insurance companies, boards of health, and all moral and social uplift organizations."

The temporary officers of the convention were: Dr. Ira Landrith, president; Joshua Levering, vice president; and Mrs. Frances Beauchamp, secretary.

The promoting committee of seven, which made public the call of The Council of One Hundred and had charge of preliminary plans for the national convention, was composed as follows: Daniel A. Poling, Columbus, Ohio, National Christian Endeavor, temperance and citizenship superintendent; Ernest H. Cherrington, Westerville, Ohio, editor of the American Issue; Dr. Ira Landrith, Nashville, Tenn., president International Young Men's Christian Association; George F. Cotterill, Seattle, Wash, national grand chief templar, Independent Order of Good Templars: Cora Frances Stoddard, Boston, Mass., executive secretary Scientific Temperance Federation: Lillian Burt, Columbus, Ohio, superintendent voters' information bureau, Ohio Women's Christian Temperance Union; Harry S. Warner, Chicago, Ill., secretary Intercollegiate Prohibition Association.

The permanent officers of The Council of One Hundred as elected by the convention are: President, Daniel A. Poling; vice presidents, Dr. P. A. Baker, Hon. Virgil G. Hinshaw, Mrs. Florence

Cherrington, Westerville; secretary, Cora Frances Stoddard, Boston; Daniel A. Poling, Columbus, Ohio; Charles L. Huston, Coatesville, Pa.; W. F. Cochran, Baltimore, Md.; Harry S. Warner, Chicago, Ill.; Rev. Father J. J. Curran, Wilkes Barre, Pa.; W. A. Rankin, Tarkio, Mo.; Rev. Clarence True Wilson, D. D., Topeka, Kans.; Hon. Richmond P. Hobson, Washington, D. C.; Edwin C. Dinwiddle, Washington, D. C.; Oliver W. Stewart, New York City; Mrs. Ella A. Boole, Brooklyn, N. Y.; Wilbur F. Crafts, Ph. D., Washington, D. C.; Mrs. Zillah Foster Stevens, Alton, Ill.; Booker T. Washington, Tuskegee, Ala.; Willard O. Wylle, Chicago, Ill.; Prof. Charles Scanlon, Pittsburgh, Pa.; Rev. A. J. Barton, D. D., Waco, Tex.; Mrs. Suessa B. Blaine, Washington, D. C.; Howard H. Russell, Westerville, Ohio; John F. Cunneen, Chicago, Ill.; Ben H. Spence, Toronto; Charles Stelzle, New York City; Dan B. Brummitt, Chicago, Ill.; Wm. P. Hall, New York City; Dan B. Brummitt, Chicago, Ill.; Wm. P. Hall, New York City; T. D. Crothers, M. D., Hartford, Conn.; W. D. Upshaw, Atlanta, Ga.; Mrs. Lillian Burt, Columbus, Ohio; Charles D. Bulla, Nashville, Tenn.; Wm. G. Calderwood, Minneapolis, Minn.; W. W. Buchanan, Winnipeg. Mr. BARTHOLDT. Mr. Chairman, I greatly regret that this

Mr. BARTHOLDT. Mr. Chairman, I greatly regret that this discussion in its last stages has taken a political turn, because I intended seriously and sincerely, as best I could, and without any preparation, to answer some of the arguments made by the gentleman from Alabama [Mr. Hobson], and to answer them, not in behalf of the liquor traffic, but in behalf of American

I can not hope to equal, or even approach, the grandiloquence of the gentleman from Alabama, whose speech and oration we have heard on this floor before, and who has delivered the same address on the Chautauqua platform a dozen or a hundred times. Nor can I hope to receive the applause of the galleries, because I know what element constitutes the multitude who are occupying that part of the House just at this time.

Speaking of the influence of the galleries, I am reminded that at one time in French history it became necessary, to transfer the capital of France from Paris to Versailles, a small town about 25 or 30 miles distant from Paris. Why was that done? It was done for the purpose of protecting the legisla-

tors against attempts at intimidation.

Oh, these gentlemen in the gallery who are laughing have not read history, but I have. [Laughter.] Every man who is now shouting for prohibition in the streets of Washington can be duplicated by two men who are shouting for the maintenance of the liberties the fathers of the Republic have given you.

I call attention to the danger that threatens this Republic if this example is to be repeated very frequently. If you bring the temperance forces to Washington for the purpose of intimidating Members, you can bring the millions of the Federation of Labor and you can also bring for the purpose of intimidation the 2,000,000 members of the German-American Alliance who are again determined, as that element was before in our history, to defend the true genius of American institutions. I do not think it is healthy for the country, Mr. Chairman, to allow this thing to go on. [Laughter in the galleries.] Never mind, you may intimidate village councils and members of State legislatures, and even some Congressmen, but you can not cow or

intimidate me. [Applause.]

The gentleman from Alabama [Mr. Hobson] started out with the statement that 47,000,000 people were now living under prohibition. That is a very adroit statement to make, namely, that the territory which is now prohibition, or dry, is inhabited by a population of 47,000,000 people. He very wisely conceals the fact that in the States which have gone dry the majorities in favor of prohibition have in most cases been very, very small, and that in most of the counties that went dry it was simply by a majority of, say, the 51 over the 49. Consequently, when you deduct the minorities that have voted against prohibition from the 47,000,000, I do not think the gentleman will continue insisting that half of the American people are for prohibition.

Mr. HOBSON. How many temperance people are there in the

others that are wet?

Mr. BARTHOLDT. The gentleman is adroit in other respects. He uses the arguments which can properly be made in favor of temperance and sobriety and against the injurious use of strong liquor, and in which every sane man believes, in favor of prohibition.

I want to tell the gentleman that sobriety and temperance are not identical with prohibition, because prohibition is an attempt to make a man sober by law, a thing which you can not do. You can not make a man sober by law any more than you can make him honest by law, and prohibition leaves out of consideration the question of manhood entirely. If a man is honest simply because he has had no opportunity to steal, we do not take much stock in his honesty. If a man remains sober because he has never had an opportunity to indulge, we do not take much stock in his sobriety. But we do rightly give credit to a man who remains honest in spite of opportunities to steal, and we do believe in a man who is sober in spite of all chances to drink. That is the kind of manly citizenship I believe in rearing; it is the philosophy to which I subscribe, and in which over 10,000,000 German-American citizens in this country believe. They do not stand up for the liquor traffic, They stand up for the inherent right of the American citizen to so shape his conduct that he will be regarded by everyone

as a decent and respectable member of society.

Why is it that that great Empire of Germany across the ocean has solved that question without any prohibition laws? Will the gentleman from Alabama [Mr. Hobson] state here before the assembled multitudes of his adherents that Americans are unable to control themselves, are less able to control themselves than are the Germans on the other side of the ocean? As an adopted citizen I deny it, because I have more respect for American manhood than he has. [Applause.] Why is it that the Germans are the most sober nation on earth? [Laughter in the galleries.] They are—they are, in spite of your laughter, and the results show it. Compare the Germans with the Turks. The Turks are a prohibition people. Prohibition is not only a part of their laws but a part of their religion. They are not allowed to drink. Compare the Turks with the Germans, and there you have the difference between a nation that is prohibition by religion and a nation which is free.

Do you remember what that great English bishop said when that same question was up for consideration and when the liberty of England was threatened just as is the liberty of America to-day? He said he would rather see England free than sober. That is historical, and you know what he meant by that. He would rather endure the excesses that might be committed by the one out of a hundred-and that is all the percentage you can show-than to deprive the other ninety-nine of their liber-You wish to deprive 99 people of their liberty for the purpose of keeping one sober.

The gentleman has spoken upon the effect of alcohol. I am not going to enter into any discussion of that; but if I were to call for testimony on that question I would call for experts, for medical men, for gentlemen who have made a scientific investigation of that question. I would not take the word of the gentleman from Alabama.

You say that you have got to remove temptation. That is your stock argument. This idea is based on the assumption that we Americans are children, that we are not men, that we are not imbued by the Creator with manhood and determination to do right, to live morally and decently on our own account. No, we are children and must be controlled by and lead in the strings of law. That is the assumption and, therefore, you say you have got to remove temptation. Why, the best remedy for the great evil you complain of would simply be for men not to If you can imbue the coming generation of children with the correctness of your idea, if you can show them that liquor is as injurious as you think it is, even if moderately consumed, then the drink question is solved. The people simply would not patronize those places and you do not need any laws, you do not have to go to the State legislatures, and you do not have to come to the Congress to invoke the power of the National Government in a question of this kind. You say we ought to remove temptation. Let me say to my friend from Alabama that temptation has been in this world ever since the first human being was born.

The Creator himself put temptation into the Garden of Eden. [Laughter and applause.] But I suppose that was a mistake. If the logic of our prohibition friends is correct, then the Creator made a mistake in that, and the Saviour also made a mistake at the wedding at Cana when he turned water into wine. I suppose if Carry Nation had lived at the time of the Para-dise and had heard the logic of my friend from Alabama she would have proceeded straightway to the Garden of Eden and chopped down that fateful tree with her little hatchet. remove temptation! Why, if you want to remove everything that might tempt man you will have in the first place to abolish all money, because there is no question but what money has been the cause of a great many sins and crimes in this world. You would have to abolish every gun on your naval vessels [applause], because you might be tempted to touch the trigger and kill somebody. [Laughter and applause.] Oh, you would have to abolish women [laughter and applause], because there is no question but what women are a temptation to some [laughter and applause]; and when you would get through, Mr. Chairman, removing temptation, why, there would be nothing left but the stones to cry to heaven, bewailing the idiocy of men, who were made in the image of their Creator. That is as far as you will get when you proceed to remove temptations. What should be done, gentlemen, is not to attempt the impossible task of removing temptation, but to strengthen man's resistance against it. [Applause.]

Now, I want to say to my friend that those of us who still uphold the principle of personal liberty and still believe that the genius of our institutions permits a man to regulate his own conduct in matters of eating and drinking, that those who still have in their hearts the true American spirit, agree with him that the proper way to approach this question is by moral suasion and to tell our boys and our girls how injurious it is to drink and to eat to excess. If the gentleman will accompany me on that road I will go with him, and he will go with me, I think, but you can not accomplish it by legislation, and that is the reason that this prohibition amendment will not become a law in a thousand years to come. [Applause.]

There is another feature of this question, Mr. Chairman, which is neither moral nor philosophical, but very practical, and to which every statesman who feels the responsibility of his position will give his serious attention. It is its financial Where will you go, and what will you do, to replace the \$250,000,000 which national prohibition will keep out of the Treasury? We are taxed more now than we ought to be. Will you tell me that you will raise this tremendous amount by direct taxation on top of the income tax just now imposed for the first time? Our prohibition friends in their fanatical zeal will, of course, answer this question in the affirmative, but let me tell you confidentially that the party which would undertake such a thing, and I do not care which one it is, would never see daylight again. It is one thing to pin the white ribbon to your coat and march to the Capitol, but to go down deep into your pockets and pay for the "moral uplift" is a horse of another

color. I know human nature, believe me. It may be exhilarating sport to reform the other fellow, but wait until you ask our farmer friends to foot the bill.

I predict that not one of you who vote for it will ever come back to tell the tale. And this reminds me of the wonderful spirit of statesmanship with which the eloquent advocate of this fad is imbued. He declared the other day in favor of the immediate establishment of a naval equilibrium in the Atlantic and Pacific Oceans, by which he meant a Navy equal to that of Japan in the one and equal to that of Germany in the other That means the immediate construction of 24 new dreadnaughts, at an expense of about \$300,000,000. In other words, he wants \$300,000,000 for the immediate needs of the Navy in addition to the regular appropriations, and at the same time he endeavors to cut down our income by \$250,000,000, a total of \$550,000,000, or half our total annual expenditures. My friends, I say frankly that such statesmanship is beyond my comprehension, and I doubt whether there is a single man on this floor who understands it. In all seriousness, no man who is responsible either to himself or anybody else will ever dare to make two such propositions in the same breath. [Applause.]

I notice that the constitutional amendment offered by the gentleman from Alabama [Mr. Hobson] prohibits "the sale and the manufacture for sale" of intoxicating liquors. This means that every man can manufacture for his own use as much as he pleases, and what would be the result? That every house in the country would or could be turned into a distillery. Therefore the proposition should really be styled "A bill to promote home drunkenness." It will make a barroom out of every private house, and, what is worse, instead of the milder beverages, strong drink of the worst kind would be consumed, because the milder drinks, such as beer, which contains only half as much alcohol as even the average grape juice, can not

be made by the fireside.

In considering this question you must always remember that while you may change the laws on this subject you can not change human nature, and the spirit of temperance which is not born of conviction will never result in voluntary abstention nor does it in reality exist. It surely can not be legislated into the human mind or heart by congressional enactments.

With a great flourish of trumpets our friends proclaim that half of the territory of the Union is dry. If it were really dry, then the consumption of liquor should have been decreased by just 50 per cent, providing the prohibition laws were actually prohibitive. But what are the facts, Mr. Chairman? Why, the consumption of whisky, according to the figures of the Internal-Revenue Department, has enormously increased; in fact, in the last 10 years, during the time the Prohibitionists had their greatest successes, it has almost doubled. Prohibition, consequently, means an increase of the strong drinks at the expense of the milder ones, and it has therefore had the effect of increasing drunkenness instead of diminishing it. And with these few rambling remarks, which I hope will give the gentlemen on the floor as well as those in the gallery something to think about, because many of the latter have never heard but one side

of the question, I will leave the subject for the present with the promise that the real arguments, backed by facts and figures, will be made later on. [Applause.]

Mr. HUGHES of Georgia. Mr. Chairman, I make the request for unanimous consent that general debate now close.

Mr. MANN. Mr. Chairman, reserving the right to object, which I shall not do, is it the intention of the gentleman, then,

to move that the committee rise?

Mr. HUGHES of Georgia. Yes, sir. Mr. MANN. Would it be practical if no one objected after we went back into the House to get unanimous consent to make this resolution subject to be taken up to-morrow after the disposition of bills on the Private Calendar?

Mr. HUGHES of Georgia. I hope so.

The CHAIRMAN. Is there objection? [After a pause.] The Chair hears none.

Mr. UNDERWOOD. Mr. Chairman, as I understand it the gentleman can not close general debate in committee. I suggest that the Clerk read the first paragraph in the bill.

Mr. MANN. He could by unanimous consent. Mr. UNDERWOOD. Not in committee.

Mr. MANN. He can close it by unanimous consent.

Mr. UNDERWOOD. Not general debate.

The CHAIRMAN. No one else desiring to participate in general debate, the Clerk will read the bill for amendment. The Clerk read as follows:

Resolved, etc., That the President of the United States is hereby authorized to appoint a commission consisting of nine men whose duty it shall be to consider the need and report a plan not later than December 1 next for national aid to vocational education.

Mr. HUGHES of Georgia. Mr. Chairman, I move that the

committee do now rise and report the bill.

Mr. STAFFORD. Mr. Chairman, I understood the gentleman from Georgia to say that he moved to report the bill. To that I object.

Mr. HUGHES of Georgia. I did not mean to report the bill.

Mr. MURRAY of Oklahoma. Mr. Chairman-

The CHAIRMAN. The question is on the motion of the gentleman from Georgia [Mr. Hughes] that the committee do now rise. The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. Moon, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration Senate joint resolution (S. J. Res. 5) providing for the appointment of a commission to consider the need and report a plan for national aid to vocational education, and had come to no resolution thereon.

Mr. HUGHES of Georgia. Mr. Speaker, I ask unanimous consent that this be made the special order to-morrow at the conclusion of consideration of bills on the Private Calendar.

The SPEAKER. The gentleman from Georgia [Mr. Hughes] asks unanimous consent that this resolution be made the special order for to-morrow after the Private Calendar is disposed of. Is there objection? [After a pause.] The Chair hears none.

SITTING OF COMMITTEE DURING SESSIONS AND RECESSES.

Mr. BURNETT. Mr. Speaker-

The SPEAKER. The gentleman from Alabama [Mr. Bur-NETT] is recognized.

Mr. BURNETT. Mr. Speaker, I desire to offer a resolution which I send to the Clerk's desk.

The SPEAKER. Is the resolution privileged?
Mr. BURNETT. Yes, sir. It is that the committee may be permitted to sit during the session.

The SPEAKER. The Clerk will report the resolution.

The Clerk read as follows:

Resolved, That the Committee on Immigration and Naturalization be, and it is hereby, authorized to sit during the sessions of the House of Representatives and during the recesses of said House.

The SPEAKER. Is there objection?

Mr. GOLDFOGLE. Mr. Speaker-

The SPEAKER. For what purpose does the gentleman from New York [Mr. Goldfogle] rise?

Mr. GOLDFOGLE. Mr. Speaker, reserving the right to object, I desire to ask the gentleman from Alabama what occasion there is to sit during the recess of the House.

Mr. BURNETT. Well, I do not think there will be any. recesses will embrace the Christmas recess, and I did not know but the committee might desire to sit at that time. But I will not insist on that feature of it if the gentleman objects.

Mr. GOLDFOGLE. I object.

Mr. BURNETT. I desire to eliminate that feature, then.
The SPEAKER. Does the gentleman from New York [Mr. Goldfogle] object to the whole resolution, or just that part

Mr. GOLDFOGLE. I understand the gentleman from Alabama is willing to modify his resolution.

The Chair desires to ask the gentleman a The SPEAKER. simple question. Does he object to the whole resolution, or only that part of it?

Mr. GOLDFOGLE. Only to that part of it. The SPEAKER. To strike out what words?
Mr. GOLDFOGLE. "During the recesses of the House."

Mr. MANN. Let us have the resolution reported as modified. The SPEAKER. The Clerk will report the resolution as

The Clerk read as follows:

House resolution 345.

Resolved, That the Committee on Immigration and Naturalization be, and it is hereby, authorized to sit during the sessions of the House of Representatives.

The SPEAKER. Is there objection?

Mr. SABATH. Mr. Speaker, reserving the right to object, I desire to ask the chairman whether there will be any need to sit in the afternoons?

Mr. BURNETT. I think so, sir, in order to conclude the consideration of the bill. We sat this afternoon for hearings, but I do not know whether we had a right to do that or not.

Mr. SABATH. That was only for hearings, but I believe the duties will be finished, and, therefore, I do not think it will be

Mr. BURNETT. It is necessary, Mr. Speaker, I think, that we have that right. I hope the gentleman will not object.

Mr. SABATH. At the present time I object.

BURNETT. Mr. Speaker, I move the passage of the

The SPEAKER. The gentleman can not get it considered. That is disposed of.

Mr. MANN. I did not understand that my colleague objected?

Mr. BURNETT. He did object.

#### EXTENSION OF REMARKS.

Mr. HOBSON. Mr. Speaker, I ask unanimous consent to insert in my remarks, as I intended to ask at the time, the list of the parties and official resolutions in connection therewith.

Mr. MANN. That is in connection with the petitions that

were presented?

Mr. HOBSON. With the petitions; yes.
The SPEAKER. The gentleman from Alabama [Mr. Hobson] asks unanimous consent to insert in his speech, when it is printed in the RECORD, certain documents that he named.

Mr. MANN. No; not documents.

Mr. HOBSON. No, Mr. Speaker; let me make it clear. Simply instead of reading the names of those bodies that took part in the presentation of the petition I want to print them. I indicated the idea at the time. I also desire to print the resolutions instead of taking the time to read them. I wish simply to print the official resolutions and the enumeration of those bodies that passed them.

The SPEAKER. Is there objection?

Mr. BARTHOLDT. I reserve the right to object, Mr. Speaker.
Mr. DONOVAN. Reserving the right to object—
The SPEAKER. The gentleman from Connecticut [Mr. Dono-

VAN] and the gentleman from Missouri [Mr. BARTHOLDT] reserve the right to object.

Mr. DONOVAN. I do. The gentleman from Alabama is so seldom here that I can not appreciate the courtesy of giving him extra privileges. He has been here at this session a little over two hours, outside of to-day. He has no more important business to pay any attention to or to give any of his time to.

He has drawn his salary the same as any other Member, and— Mr. FITZGERALD. Mr. Speaker, I make the point of order that that is not in order. The gentleman can not do that under the guise of reserving a point of order.

Mr. HOBSON. Mr. Speaker, I ask unanimous consent that the gentleman be allowed to continue.

Mr. FITZGERALD. I object to the abuse of such privilege. The SPEAKER. It is an abuse of the privilege of reserving the right to object.

Mr. DONOVAN. Does the Chair so decide?
The SPEAKER. The Chair so decides.
Mr. MANN. I ask, Mr. Speaker, that the Chair put the request.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. Hobson]? [After a pause.] The Chair hears none, and it is so ordered.

Mr. BARTHOLDT. Mr. Speaker, I would like to ask the

Mr. Speaker, I would like to ask the same privilege of extending my remarks in the RECORD.

The SPEAKER. The gentleman from Missouri [Mr. BAR-THOLDT] asks unanimous consent to extend his remarks in the Is there objection? [After a pause.] The Chair RECORD. hears none, and it is so ordered.

### SITTING OF COMMITTEE DURING SESSIONS.

Mr. BURNETT. Mr. Speaker, the gentleman from Illinois [Mr. Sabath], as I understand, withdraws his objection to the resolution (H. Res. 345) that I offered a few minutes ago.

The SPEAKER. The gentleman from Alabama [Mr. Bur-NETT] asks unanimous consent for the present consideration of

the resolution that has been read.

Mr. MANN. Mr. Speaker, reserving the right to object, I simply want to say this in connection with that: I shall not object to the request, but I would like to have gentlemen understand that I expect to ask that a quorum of the House shall be in the House most of the time to attend to public business here. I think committees ought to aim to meet at other times.

The SPEAKER. Is there objection? Mr. DONOVAN. Mr. Speaker, a parliamentary inquiry.

The SPEAKER. The gentleman will state it.
Mr. DONOVAN. Will the Chair state what the reservation of a right to object constitutes? Is not a Member entitled to

make an explanation of the reason why he objects? The SPEAKER. The gentleman from New York [Mr. Fitz-

GERALD] raised the point of order. The Chair was not going to raise the point of order himself, but whether Capt. Horson had been here every minute or never had been here has nothing to do with his request to extend his remarks in the Record.

Mr. DONOVAN. Of course the Chair knows he is very seldom

here. [Laughter.]

The SPEAKER. The Chair knows a good many things that he is not bound to tell. [Laughter.]

Mr. UNDERWOOD. Mr. Speaker, I ask that the Chair put

the request.

The SPEAKER. Is there objection to the request of the gentleman from Alabama [Mr. BURNETT]? [After a pause.] The Chair hears none. The question is on agreeing to the resolution. The resolution was agreed to.

#### WITHDRAWAL OF PAPERS.

Mr. HAWLEY, by unanimous consent, was granted leave to withdraw from the files of the House, without leaving copies, the papers in the case of Almira M. Brayton, H. R. 8928, Sixtysecond Congress, no adverse report having been made thereon.

#### CHANGE OF REFERENCE.

The SPEAKER laid before the House the following request for unanimous consent:

That the Committee on the Public Lands be discharged from further consideration of H. R. 9828, a bill for the cession to the State of New York of certain lands in the bed of the Harlem Ship Canal, heretofore ceded to the United States, now to be abandoned for the more direct channel, and that the same be referred to the Committee on Rivers and Harbors.

Mr. MANN. I reserve the right to object to that last request. I do not know how long the practice has been in vogue that gentlemen go to the Speaker's desk and submit a request for the change of reference of a public bill, but it is not a very

good practice.

The SPEAKER. The Chair agrees with the gentleman.

Mr. MANN. The House ought to know whether the chairmen of the two committees are agreeable to such a request when it is submitted, because any Member may go and get a request submitted in this way through the Chair, and the bill may be transferred without anybody on the committee knowing it.

The SPEAKER. The request in this case was made by the chairman of the Committee on Rivers and Harbors.

Mr. MANN. I did not know that; but he wants the bill transferred to his committee. I do not know what the position of the gentleman from Oklahoma [Mr. FERRIS], chairman of the Committee on the Public Lands, may be.

Mr. UNDERWOOD. Mr. Speaker, I think the gentleman is right, and that the matter had better go over.

### DEMOCRATIC CAUCUS.

The SPEAKER. The chairman of the Democratic caucus requests the Speaker to announce that immediately after adjournment a Democratic caucus will be held in this Hall.

# ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 20 minutes p. m.) the House adjourned until to-morrow, Friday. December 12, 1913, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the Secretary of the Treasury, submitting a supplemental estimate of appropriation for the fiscal year ending June 30, 1915, in the sum of \$2,500, for buildings and grounds, Military Academy (H. Doc. No. 465); to the Committee on Military Affairs and ordered to be printed.

2. A letter from the Secretary of War, transmitting report of the National Forest Reservation Commission for the fiscal year ended June 30, 1913 (S. Doc. No. 307); to the Committee

on Agriculture and ordered to be printed.

3. A letter from the Secretary of the Treasury, transmitting communication from the executive officer, Grant Memorial Commission, submitting an estimate of appropriation in the sum of \$5,000, for unveiling and dedicating the memorial to Gen. Ulysses S. Grant (H. Doc. No. 466); to the Committee on Appropriations and ordered to be printed.

4. A letter from the Secretary of War, transmitting detailed statement of all expenses incurred from June 30 to December 1, 1913, for attendance of officers and employees at meetings of societies and associations; to the Committee on Expenditures

in the War Department and ordered to be printed.

5. A letter from the Secretary of Commerce, transmitting letters from the Acting Commissioner of Navigation concerning items appearing in the estimates of the Bureau of Navigation for the coming fiscal year (H. Doc. No. 467); to the Committee on Appropriations and ordered to be printed.

### REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII, bills and resolutions were severally reported from committees, delivered to the Clerk, and referred to the several calendars therein named, as follows:

Mr. FITZHENRY, from the Committee on the Judiciary, to which was referred the bill (H. R. 2504) to amend section 2 of an act entitled "An act to incorporate the National Society of the Daughters of the American Revolution," reported the same with amendment, accompanied by a report (No. 128), which said bill and report were referred to the House Calendar.

Mr. GEORGE, from the Committee on the District of Columbia, to which was referred the bill (H. R. 9842) to require the recital of the real consideration in deeds to property in the District of Columbia, reported the same with amendment, accompanied by a report (No. 129), which said bill and report

were referred to the House Calendar.

Mr. MOON, from the Committee on the Post Office and Post Roads, to which was referred the bill (H. R. 7967) to amend the act approved June 25, 1910, authorizing a postal savings system, reported the same without amendment, accompanied by a report (No. 127), which said bill and report were referred to the Committee of the Whole House on the State of the Union.

Mr. PROUTY, from the Committee on the District of Columbia, to which was referred the bill (H. R. 10234) to provide for the cost of street paving in the District of Columbia, reported the same with amendment, accompanied by a report (No. 130), which said bill and report were referred to the

House Calendar.

Mr. FLOYD of Arkansas, from the Committee on the Judiary, to which was referred the bill (H. R. 8673) providing for the compensation of clerks in United States district courts, and for other purposes, reported the same without amendment, accompanied by a report (No. 131), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

### PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials

were introduced and severally referred as follows:
By Mr. EVANS: A bill (H. R. 10302) to accept the cession by the State of Montana of exclusive jurisdiction over the lands embraced within the Glacier National Park, and for other purposes; to the Committee on the Public Lands.

By Mr. CONNELLY of Kansas: A bill (H. R. 10303) to pro-

vide for the erection of a public building at Lincoln, Kans.; to the Committee on Public Buildings and Grounds.

By Mr. PARK: A bill (H. R. 10304) to provide for the survey of the Flint River, Ga., from the mouth of said river to Montezuma, Ga.; to the Committee on Rivers and Harbors.

By Mr. MOON: A bill (H. R. 10305) to detach the county of Polk, in the State of Tennessee, from the southern division By Mr. DONOHOE: A bill (H. R. 10327) for the relief of of the eastern district of Tennessee and attach the same to the Morris Dietrich; to the Committee on Claims.

northern division of the eastern district of Tennessee, and for other purposes; to the Committee on the Judiciary

By Mr. ESCH: A bill (H. R. 10306) to establish an agricultural plant, shrub, fruit, and ornamental tree, berry, and vegetable experimental station at or near the city of Mauston, Juneau County, in the State of Wisconsin, on reclaimed swamp

land, to the Committee on Agriculture.

By Mr. DONOHOE: A bill (H. R. 10307) to regulate the compensation of adult male unskilled laborers in United States

arsenals; to the Committee on Military Affairs.

By Mr. IGOE: A bill (H. R. 10308) to provide for the improvement, construction, and repair of sidewalks in the District of Columbia, and for the assessment and payment of the cost thereof; to the Committee on the District of Columbia.

By Mr. BORLAND: A bill (H. R. 10309) to amend an act to regulate commerce by forbidding common carriers from limiting the time for filing claims; to the Committee on Interstate and

Foreign Commerce.

By Mr. BULKLEY: A bill (H. R. 10310) to amend an act approved September 18, 1913, entitled "An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exposition, and for the protection of foreign exhibitors"; to the Committee on Patents.

By Mr. JOHNSON of Washington: A bill (H. R. 10311) providing for the homestead entry of certain lands in the State of Washington, and for other purposes; to the Committee on the

Public Lands.

By Mr. BYRNS of Tennessee: A bill (H. R. 10312) to provide that the United States shall in certain cases aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads; to the Committee on Roads.

By Mr. JOHNSON of Kentucky: A bill (H. R. 10313) to amend an act entitled "An act making appropriations to provide for the expenses of the Government of the District of Columbia for the fiscal year ending June 30, 1914, and for other purposes," approved March 4, 1913, and for other purposes; to the Committee on the District of Columbia.

By Mr. DEITRICK: A bill (H. R. 10314) to provide for the survey of the Mystic River, Mass.; to the Committee on Rivers

and Harbors

By Mr. BORLAND: A bill (H. R. 10315) to amend an act entitled "An act to codify, revise, and amend the laws relating to the Judiciary," approved March 3, 1911; to the Committee on the Judiciary

By Mr. LLOYD: Resolution (H. Res. 343) limiting expenditures for telegrams sent or received by Representatives, Delegates, and Resident Commissioners; to the Committee on Ac-

By Mr. CRAMTON: Resolution (H. Res. 344) authorizing a survey of St. Clair River, Mich.; to the Committee on Rivers and Harbors.

### PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 10316) granting a pension to Augusta J. Houser; to the Committee on Invalid Pensions.

By Mr. AVIS: A bill (H. R. 10317) for the relief of heirs or estate of Mary A. Rock, deceased; to the Committee on War

Also, a bill (H. R. 10318) granting an increase of pension to John A. McDermott; to the Committee on Invalid Pensions.

By Mr. BOWDLE: A bill (H. R. 10319) granting a pension to Ella Bloom; to the Committee on Pensions.

Also, a bill (H. R. 10320) granting an increase of pension to Sidney Van Bibber; to the Committee on Invalid Pensions. By Mr. BUTLER: A bill (H. R. 10321) granting an increase

of pension to Charles B. Marshman; to the Committee on Invalid Pensions.

By Mr. WILLIS: Papers to accompany bill (H. R. 10301) granting an increase of pension to Jonathan Lydick; to the Committee on Invalid Pensions.

## SENATE.

# FRIDAY, December 12, 1913.

The Senate met at 10 o'clock a. m.

Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D. George T. Oliver, a Senator from the State of Pennsylvania, appeared in his seat to-day.

Mr. SMOOT. Mr. President, I suggest the absence of a

quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst	Gronna	Overman	Smith, Mich.
Bacon	Hollis	Owen	Smith, S. C.
Bankhead	Hughes	Page	Smoot
Borah	Johnson	Perkins	Sterling
Brady	Jones	Pomerene	Stone
Brandegee	Kenyon	Ransdell	Sutherland
Bristow	Kern	Reed	Swanson
Bryan	Lane	Robinson	Thompson
Burleigh	Lea	Saulsbury	Thornton
Burton	Martin, Va.	Shafroth	Townsend
Clark, Wyo.	Martine, N. J.	Sheppard	Vardaman
Colt	Myers	Sherman	Walsh
Crawford	Newlands	Shively	Warren
Dillingham	Norris	Simmons	Weeks
Gallinger	O'Gorman	Smith, Ga.	Works

Mr. SHAFROTH. I wish to announce that my colleague [Mr. THOMAS] is confined to his room on account of a slight illness. He will not be here to-day.

Mr. BRYAN. I desire to state that my colleague [Mr. FLETCHER] is detained from the Senate on important public

Mr. WEEKS. I wish to state that my colleague [Mr. Lodge] is absent on account of illness. I desire to have this statement stand for the day.

The VICE PRESIDENT. Sixty Senators have answered to the roll call. There is a quorum present. The Secretary will read the Journal of the proceedings of the preceding session.

The Journal of yesterday's proceedings was read and approved.

# FINDINGS OF COURT OF CLAIMS.

Mr. BRYAN. Mr. President, I desire to state that an examination was made of the claims reported by the clerk of the Court of Claims to the Senate, and that the reference by the Chair to the Committee on Claims was a proper one, for the reason that in none of them is there a judgment, but they are simply reports of findings of fact and statements of conclusions.

### PETITIONS AND MEMORIALS.

Mr. THOMPSON presented petitions of Horace L. Hall, of Topeka, J. D. Bowersock, of Lawrence, and T. N. Erwig, of Goodland, all in the State of Kansas, praying for the early passage of the pending banking and currency bill, which were ordered to lie on the table.

Mr. WEEKS presented a memorial of the Council of Jewish Women of Boston, Mass., remonstrating against the segregation of races in the departments of the Government, which was referred to the Committee on Civil Service and Retrenchment.

Mr. BORAH presented a petition of sundry citizens of Boise, Idaho, praying for the enactment of legislation granting relief to the members of the United States Military Telegraph Corps who served in the Civil War, which was referred to the Com-

mittee on Pensions.

Mr. SMITH of Michigan presented petitions of the Trades and Labor Council of Lansing; of Local Union No. 184, Cigar-makers' International Union of America, of Bay City; of the Pattern Makers' Association of Detroit, and of Local Union No. 217, United Garment Workers of America, of Kalamazoo, all in the State of Michigan, praying for the enactment of legislation to make lawful certain agreements between employers and laborers, and persons engaged in agriculture or horticulture, and to limit the issuing of injunctions in certain cases, and for other purposes, which were referred to the Committee on the Judiciary.

He also presented a memorial of sundry citizens of Baldwin, Mich., remonstrating against the enactment of legislation compelling the observance of Sunday as a day of rest in the District of Columbia, which was referred to the Committee on the

District of Columbia.

He also presented memorials of the Chamber of Commerce of Muskegon, of the Board of Commerce of Detroit, and of the Mendelssohn Club of Detroit, all in the State of Michigan, remonstrating against the adoption of certain provisions contained in the so-called La Follette seamen's bill, which were ordered to lie on the table.

He also presented a petition of the Board of Commerce of Detroit, Mich., praying for the enactment of legislation providing for the prevention of floods along the Ohio and lower Mississippi Rivers, which was referred to the Committee on

He also presented a petition of the Federation of Labor of Detroit, Mich., praying for the enactment of legislation granting to the city of San Francisco the use of the waters of the Hetch Hetchy Valley, which was ordered to lie on the table.

Mr. OLIVER presented a petition of sundry citizens of Unity-ville, Pa., and a petition of Carrick Court, No. 84, Guardians of Liberty, of Pittsburgh, Pa., praying for the enactment of legislation to further restrict immigration, which were referred to the Committee on Immigration.

He also presented a petition of the Board of Trade of Philadelphia, Pa., praying for the enactment of legislation providing for the collection of the income tax at its source, which was

referred to the Committee on Finance.

He also presented a petition of sundry citizens of Pittsburgh, Pa., praying for the enactment of legislation granting relief to members of the United States Military Telegraph Corps who served in the Civil War, which was referred to the Committee

He also presented a petition of the Commercial Exchange of Philadelphia, Pa., praying for the enactment of legislation granting protection to the lower Mississippi River and the reclamation of its alluvial lands, which was referred to the

Committee on Commerce.

He also presented a petition of the Produce Exchange of Philadelphia, Pa., praying for the establishment of a regional reserve bank in that city, which was referred to the Committee on Banking and Currency

He also presented a petition of the Manufacturers' Association of York, Pa., praying that an appropriation be made for the purchase of homes for American ambassadors in foreign countries, which was referred to the Committee on Foreign Relations. He also presented a memorial of the Philadelphia Board of

Trade, of Philadelphia, the Chamber of Commerce of Philadelphia, the Philadelphia Commercial Exchange, and the Philadelphia Bourse, all in the State of Pennsylvania, remonstratdelpina Bourse, an in the State of Pennsylvania, remonstrating against the enactment of certain provisions contained in the so-called Glass-Owen banking and currency bill, which was referred to the Committee on Banking and Currency.

Mr. TOWNSEND presented a memorial of the Detroit Hotel

Association of Michigan, remonstrating against the passage of certain provisions contained in the so-called La Follette sea-

men's bill; which was ordered to lie on the table.

Mr. ROOT presented a petition of sundry citizens of Syracuse. N. Y., praying for the enactment of legislation granting relief to persons who served in the United States Military Telegraph Corps during the Civil War; which was referred to the Com-

mittee on Pensions.

Mr. NELSON presented a petition of the Commercial Club of Fairmont, Minn., praying for the enactment of legislation authorizing the Secretary of the Treasury to employ necessary competent consulting architects outside the classified service; which was referred to the Committee on Public Buildings and Grounds.

COMMANDANT OF MARINE CORPS.

Mr. THORNTON. From the Committee on Naval Affairs I report back favorably without amendment the bill (H. R. 10081) to make the tenure of the office of the major general com-mandant of the Marine Corps for a term of four years. I ask unanimous consent for the present consideration of the bill. The department very earnestly desires to have it passed as soon as possible. I will state that every member of the committee has agreed to this report with the exception of two, who are out of the city

Mr. SMOOT. Let the bill be read.
Mr. THORNTON. I will state that there is a communication from the department embodied in the House committee report which I will ask to have read for the information of the Senate, and also a communication from the Secretary of the Navy to the chairman of the Senate committee, which I ask may be read.

Mr. GALLINGER. Let the bill first be read.
Mr. THORNTON. Yes; after the bill has been read.
The VICE PRESIDENT. The bill will be read.
The Secretary read the bill, as follows:

The Secretary read the bill, as follows:

Be it cnacted, etc. That hereafter when a vacancy shall exist in the position of commandant of the Marine Corps the President may appoint to such position, by and with the advice and consent of the Senate, an officer of the Marine Corps on the active list not below the grade of field officer, who shall hold office as such commandant for a term of four years, unless sooner relieved, and who, while so serving, shall have the rank, pay, and allowances of a major general in the Army; and any officer appointed under the provisions of this act who shall be retired from the position of commandant of the Marine Corps, in accordance with the provisions of sections 1251, 1622, and 1623, Revised Statutes of the United States, or by reason of age or length of service, shall have the rank and retired pay of a major general; if retired for any other reason he shall be placed on the retired list of officers of the grade to which he belonged at the time of his retirement: Provided, That an officer serving as commandant shall be carried as an additional number in his grade while so serving, and after his return to duty in his grade until said grade is reduced to the number authorized by law: Provided further, That nothing herein contained shall operate to increase or reduce the total number of officers in the Marine Corps now provided by law.

Mr. THORNTON. I ask that the report and the letter from

Mr. THORNTON. I ask that the report and the letter from

the department may be read.

The VICE PRESIDENT. The Secretary will read as requested.

The Secretary read as follows:

The Secretary read as follows:

Mr. Padgett, from the Committee on Naval Affairs, submitted the following report to accompany H. R. 10081.

The Committee on Naval Affairs, to whom was referred the bill (H. R. 10081) to make the tenure of office of the major general commandant of the Marine Corps for a term of four years, having had the same under consideration, report the same favorably without amendment and recommend that the bill do pass.

Under existing law, the commandant of the Marine Corps has no definite term of office, but serves until his retirement. Provision of the bill under consideration restricts the term of office to four years, giving to the commandant of the Marine Corps the same status as regards the term of office as the chiefs of the bureaus in the Navy Department and as the Chief of Staff of the Army.

The bill meets the favorable recommendation of the Navy Department, as set forth in the following letter from the Secretary of the Navy to the chairman of the committee:

NAVY DEPARTMENT, Washington, December 6, 1913.

JOSEPHUS DANIELS.

CHAIRMAN NAVAL COMMITTEE, House of Representatives, Washington, D. C.

CHAIRMAN NAVAL COMMITTEE,

House of Representatives, Washington, D. C.

Dear Mr. Padoett: There is submitted herewith a draft of a bill limiting the tenure of office of the major general commandant of the Marine Corps to four years, which would place that officer on the same status as chiefs of bureaus in the Navy Department and as the Chief of Staff of the Army in so far as tenure of office is concerned.

I strongly recommend consideration of this bill and its enactment into law at as early a date as possible, inasmuch as it is desired that the successor to Gen. Biddle, who is soon to be retired, should be appointed for a four years' tenure instead of for life, as would be the case under existing law.

It is believed to be conducive to efficiency as well as to the best interests of the service that there be rotation in office for the commandant of the Marine Corps, as well as for chiefs of bureaus, for the reason that it would permit of the headquarters of the corps being kept in closer touch and sympathy with existing conditions throughout the service, insuring a wiser and more efficient administration of the affairs of the corps.

The evils which might possibly result from a life tenure of office are too apparent to require special mention.

It will be noted that the bill, if passed, would not prevent the President from reappointing an incumbent of the office at the expiration of the four years' term, but would permit him to make a change in case the same should be deemed advisable, which, in the opinion of this department, is a sine qua non of executive authority in the administration of the Government for its best interest and efficiency.

The bill, in so far as it refers to retirement, places the commandant of the Marine Corps in the same status in that respect as chiefs of the staff bureaus.

The provision in the bill for the commandant, after the expiration

Staff bureaus.

The provision in the bill for the commandant, after the expiration of his term of office, to return to a position on the list of officers of the Marine Corps to which his seniority entitles him, as an extra number until such time as the numbers in the grade shall have been reduced to that required by law, is necessary to prevent overfilling a grade.

The early consideration of this bill is respectfully requested.

Sincerely, yours,

NAVY DEPARTMENT, Washington, December 10, 1913.

Hon. B. R. TILLMAN,

Chairman Senate Naval Committee, Washington, D. C.

My Dear Senator: A few days ago I submitted to the chairman of the House Naval Committee a bill limiting the tenure of office of the major general commandant of the Marine Corps to four years, which would place that officer on the same status as chiefs of bureaus in the Navy Department, and as the Chief of Staff of the Army, in so far as tenure of office is concerned.

This bill (H. R. 10081) was introduced by Mr. Padgert on the 8th instant, and I am informed this afternoon that it has passed the House, I strongly recommend its consideration by the Senate Naval Committee and its enactment into law at as early a date as possible. It is desired that the successor to Gen. Biddle, who is soon to be retired, should be appointed for a four-year tenure instead of for life, as would be the case under existing law.

It is believed to be conductive to efficiency as well as to the best interests of the service that there be rotation in office for the commandant of the Marine Corps, as well as for chiefs of bureaus, for the reason that it would permit of the headquarters of the corps being kept in closer touch and sympathy with existing conditions throughout the service, insuring a wiser and more efficient administration of the affairs of the corps.

The evils which might possibly result from a life tenure of office are too apparent to require special mention.

It will be noted that the bill, if passed, would not prevent the President from reappointing an incumbent of the office at the expiration of the four years' term, but would permit him to make a change in case the same should be deemed advisable, which, in the administration of the Government for its best interest and efficiency.

The bill, in so far as it refers to retirement, places the commandant of the Marine Corps in the same status in that respect as chiefs of the Marine Corps, to which his seniority entitles him, as an extra number until such time as the numbers in the grades shall have b

The VICE PRESIDENT. Is there objection to the present consideration of the bill?

There being no objection, the bill was considered as in

Committee of the Whole.

Mr. WARREN. I wish to ask a question of the Senator reporting the bill. As I heard the reading, a statement made in the letter suggests that this officer would have the same rank and term as the Chief of Staff of the Army. The Chief of Staff of the Army may be not always a major general; he may be a general officer, but not necessarily a major general, and his term is limited by law to four years, and before reappointment he must have served at least two years in the field. Has that angle of the subject been considered by the Committee on Naval Affairs?

Mr. THORNTON. I do not understand that it has. What the Committee on Naval Affairs has considered is the recommendation that the position of commandant of the Marine Corps be changed from a life tenure, as it is under existing law, to a four years' tenure, with the privilege of reappointment if it is desired to reappoint him.

Mr. WARREN. It leaves it practically in the same position

as now, if it is sought to make reappointments.

Mr. THORNTON. Not as it is now. If the Senator please, under existing law it is a life tenure, and now it is sought to make it a four years' tenure, just as a chief of bureau.

Mr. WARREN. Yet it might be made so by reappointment

from time to time,

Mr. THORNTON. That is possible.
Mr. WARREN. So that it is not the plan of those supporting the bill to prevent such a tenure. It is a matter to be left to the pleasure of the head of the department whether a man shall be reappointed.

Mr. THORNTON. Yes, sir. In accordance with their ideas of his efficiency. The term is for four years to start with, and then at the end of four years, if it is considered that it would be best for the good of the service to reappoint him, the privilege is given to reappoint him.

Mr. WARREN. Mr. President, of course it is not possible to compare it exactly with the corresponding officer of the Army, because in the Army there are regular grades-major generals, brigadier generals, and so forth-but the peculiar situation in the Marine Corps is that we have a major general but no brigadier generals, so that the next grade to major general is colonel of the line. I do not know that I object to the bill, but I wanted to know whether that has been considered, because while it is part of the Navy the Marine Corps is really Army Infantry and should be, perhaps, part of the Army, the only difference being that the Marine Corps is sometimes upon ships and the Infantry usually on land. Could the Senator tell me when Gen. Biddle's time expires, or has he reached the age at which he could be retired?

Mr. THORNTON. I think that time is very nearly at hand, although I am not sure about it.

Mr. STONE. I think Gen. Biddle has resigned on account of ill health.

Mr. WARREN. He has not resigned, but wishes to be retired perhans

Mr. STONE. Well, he wishes to be retired. At all events, the action about to be taken is urgent. I think he would have some two years or more to serve before he reached the age of retire-

Mr. WARREN. He looks like too young a man to be retired for age.

Mr. THORNTON. I will say that the appointment is to be made at once, but it is desired that it should not be made until the law is passed.

Mr. WEEKS. Gen. Biddle has applied for retirement under the law, although his term has not expired. He is appointed for life, and I think he is not within four or five years of the retiring age-that is, 64 years-but having served sufficiently long to comply with the law, he has applied for retirement. is the purpose of the department, as I understand, to grant his application.

The question of limiting the term of the commandant of the Marine Corps is one which has been considered and discussed for a long time. All other bureau heads of the Navy Department are appointed for a four-years' term, but the commandant of the Marine Corps, I repeat, has always been appointed for It is the general opinion of the officers of the service as well as of the department that it would be better to limit this term to four years, so that the commandant may be in more intimate touch with the actual service which he is to command. I think there is no objection to the bill either on the part of officers in the service or anyone else. I hope it will be passed.

The bill was reported to the Senate without amendment, ordered to a third reading, read the third time, and passed.

#### BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. GALLINGER:

A bill (S. 3637) for the relief of the legal representatives of George W. Soule; to the Committee on Claims. By Mr. LEA:

A bill (S. 3638) to provide that the United States shall in certain cases aid the States and the civil subdivisions thereof in the construction and maintenance of rural post roads; to the Committee on Post Offices and Post Roads.

By Mr. BORAH: A bill (S. 3639) for the relief of Mary E. Nicolson; to the Committee on Claims.

By Mr. SHEPPARD:

A bill (S. 3640) to provide for the purchase of a site and the erection of a public building thereon at Canadian, State of Texas; to the Committee on Public Buildings and Grounds.

By Mr. JONES:

A bill (S. 3641) making an appropriation for the construction of a dry dock at the Puget Sound Navy Yard; to the Committee on Naval Affairs.

By Mr. SMOOT:

A bill (S. 3642) granting an increase of pension to John D. Beasley (with accompanying papers); to the Committee on

By Mr. WEEKS (for Mr. Lodge):

A bill (S. 3643) granting a pension to Jane M. Brown; to the Committee on Pensions.

By Mr. CRAWFORD:

A bill (S. 3644) granting a pension to John Koehler (with accompanying papers); to the Committee on Pensions.

By Mr. OLIVER:

A bill (8. 3645) granting a pension to Mary M. Lose (with accompanying papers); to the Committee on Pensions.

By Mr. STONE:

A bill (8. 3646) for the relief of James W. Fitzmorris; and A bill (S. 3647) for the relief of the estate of Susan H. Montgomery; to the Committee on Claims.

A bill (S. 3648) granting an increase of pension to Perry C.

A bill (S. 3649) granting an increase of pension to Thomas

W. Gardner;
A bill (S. 3650) granting an increase of pension to James A.

A bill (S. 3651) granting an increase of pension to James Enloe;

A bill (S. 3652) granting an increase of pension to Catherine R. Rice;

A bill (S. 3653) granting a pension to Berry Weese

A bill (S. 3654) granting a pension to Irvin M. Smith; A bill (S. 3655) granting an increase of pension to T. C. Lyon:

A bill (S. 3656) granting an increase of pension to Frealing Walker

A bill (S. 3657) granting an increase of pension to John W. Webb:

A bill (S. 3658) granting an increase of pension to James W. Porter; and

A bill (S. 3659) granting an increase of pension to John McCool; to the Committee on Pensions.

A bill (S. 3660) to extend the penal laws of the United States respecting bribery or attempts to bribe officials so as to embrace officers and representatives of any Indian tribe; to the Committee on the Judiciary.

By Mr. OWEN:

A bill (S. 3661) granting a pension to Phebe M. Nichols; to the Committee on Pensions,

By Mr. O'GORMAN:

A bill (S. 3662) to promote the erection of a memorial in conjunction with the celebration of the centenary of the Battle of Plattsburg during the year 1914, in commemoration of the one hundredth anniversary of Macdonough's victory in the naval battle fought in the war of 1812, the last naval engagement between English-speaking peoples; to the Committee on the Library.

By Mr. KERN:

A bill (S. 3663) for the relief of Reezes Hammond; and

A bill (S. 3664) for the relief of John W. Washburn (with accompanying papers); to the Committee on Military Affairs. A bill (S. 3665) granting an increase of pension to Abraham

Smith (with accompanying papers); and

A bill (S. 3666) granting an increase of pension to Joseph H. McCain (with accompanying papers); to the Committee on Pensions.

By Mr. POINDEXTER:

A bill (S. 3667) for the establishment of a bureau of postal highways and the extension of Federal aid in the construction and maintenance of good roads in the several States and Territories and the civil subdivisions thereof; to the Committee on Post Offices and Post Roads.

By Mr. NELSON:

A bill (S. 3668) to increase the efficiency of the Porto Rico Regiment of Infantry; to the Committee on Military Affairs.

A bill (S. 3669) for the relief of Charles J. Allen, United

States Army, retired; to the Committee on Claims.

A bill (S. 3670) granting a pension to Gertrude Phares; and A bill (S. 3671) granting a pension to Sarah Beardsley (with accompanying paper); to the Committee on Pensions.

OMNIBUS CLAIMS BILL.

Mr. TOWNSEND submitted an amendment intended to be proposed by him to the omnibus claims bill, which was referred to the Committee on Claims and ordered to be printed.

PROSECUTIONS UNDER WHITE-SLAVE ACT.

The VICE PRESIDENT. The Chair lays before the Senate a resolution coming over from a preceding day, which will be read. The Secretary read the resolution (S. Res. 235) submitted by Mr. Jones on yesterday, as follows:

Resolved, That the Attorney General of the United States be, and he is hereby, directed to advise the Senate what instructions, if any, have been sent to the United States district attorneys for the various districts in the State of Washington relating to the enforcement of the act of Congress, commonly known as the Mann white-slave act, and whether or not instructions have been given to the United States attorneys for said districts not to prosecute any cases under said act, except those of an international character.

The VICE PRESIDENT. The question is on agreeing to the resolution

Mr. WARREN. Does the Senator from Washington wish to give any reason or explanation for the passage of the resolution?

Mr. JONES. I think the resolution explains itself-it simply asks for information. I will say to the Senator that I have received a letter from a very reliable attorney in Tacoma, stating that he had been given information that instructions had been sent out such as those recited in the resolution. I can not believe that such instructions have been sent out, and I simply want an authoritative statement with reference to the matter—simply to get authoritative information as to whether such instructions have been sent to district attorneys in the State of Washington. That is all the explanation I have to make of the

matter,
Mr. WARREN. Mr. President, I desire to record my opinion

to say that, so far as the State which I have the honor in part to represent is concerned, there seems to have been on the part of the Department of Justice in Washington vigorous prosecution of not only those who came from foreign countries, but those passing from one State to another. In Wyoming there have been some half dozen indictments, and in each case conviction has followed indictment. It happened very recently that trial was held of an important citizen in the sense of his being a strong partisan—and for that matter, of the same party as is the Attorney General. He was a man of wealth and was prosecuted because of alleged participation in white-slave traffic, crossing the State lines and commercializing vice. It happened that in the court room when instructions from the Attorney General to the district attorney were examined they proved to be most vigorous and forceful. In few words the district attorney was directed to prosecute without delay, to the finish, on the law and the facts and merits of the case. It was said that the prosecuting attorney had previously been admonished that political bias should have no place in such proceedings. The case went forward, and the man was convicted on two of six counts and sentenced for a period of, I think, two and a half years. The case is now, as I read from the newspapers, pending on notice of appeal to the circuit court of appeals. I thought I ought to say this much, for I have believed, and I think the Senator from Washington, when he receives the answer to his resolution, will find that the Department of Justice has been vigorously following and carrying out the provisions of the white-slave law.

Mr. JONES. I desire to say that I have not any doubt that that will be the case. I do not expect any other report from the department, except that no such instructions have been sent out.

Mr. WARREN. I so understood the Senator.

Mr. JONES. I simply introduced the resolution because it has been stated in my State that such instructions have been sent out, and I thought that we would simply get an authoritative statement from the department that would no doubt refute any such suggestion, because I have not any doubt that the department is enforcing this law most vigorously. It was really in justice to the department that I introduced the resolution, so as to give them an opportunity to present to the Senate an authoritative statement to refute the rumors that have been circulated in the State. That was the sole purpose of the resolution.

Mr. KENYON. Mr. President, I simply want to ask the Senator if any prosecutions are being conducted in his State at this time under this act?

Mr. JONES. I do not know of any, although there may be

Mr. KENYON. There have been, of course, various opinions as to the extent and scope of this act by different Federal judges.

Mr. JONES. No doubt. I will say that this resolution relates to rumors that such instructions have been sent out.

Mr. ROBINSON. Mr. President, in view of the Senator's statement that he places no confidence in the rumor himself and that he recognizes it, to paraphrase his language, as a slanderous charge against the Department of Justice, I think he ought to acquaint the Senate sufficiently with the source of his information and the character of the rumors so as to enable the Senate to determine whether we desire to take notice of rumors of that sort. To dignify them by passing a resolution, rumors of that sort. to say the least, whatever may have been in the mind of the Senator from Washington when he introduced it, is an implied suggestion that there is a foundation for the charge.

Mr. President, I said a moment ago-

Mr. ROBINSON. Just a moment. I suppose it is a wellknown fact that for some time there has been activity on the part of the Department of Justice in various parts of the United States in attempting to enforce this law, and I again suggest to the Senator that, if he recognizes the rumors as unfounded and believes them to be untrue, and knows in advance the character of the report that must come in as a result of this resolution, he ought not to dignify such rumors by asking the Senate of the United States to pass a resolution, which is an implied insinuation, in one sense at least, against the Department of Justice.

Mr. JONES. Mr. President, I did not state that I knew in advance what the report of the department would be. know what it will be. I simply said that I could hardly be-lieve that it would be otherwise than I have indicated; but I will say that the letter I have received came from a very rematter.

Mr. WARREN. Mr. President, I desire to record my opinion that no such instructions have been generally sent out. I wish from very reliable sources; in fact, almost, he claims, from the agents of the Government; that, as a matter of fact, such instructions have been sent out. It is possibly more than a rumor; but, as I have said, it seems to me that the department would not send out such instructions as that. Whether it has or not, however, I do not know, and the purpose of the resolution is simply to find out whether, as a matter of fact, such instructions have been sent out. If they have not been sent out, then, of course, this gives an opportunity for the department to inform the Senate to that effect. If they have been sent out, then it seems to me that we ought to know it and to know the character of the instructions. If instructions have been sent out, they may be entirely proper; I do not know.

Mr. ROBINSON. Will the Senator acquaint the Senate with

the name of the attorney who makes the charges?

Mr. JONES. I have no hesitation about doing that. He is Mr. Roland, of Tacoma, a man whom I have known for a great

Mr. ROBINSON. I understood the Senator in his first statement upon this matter, in reply to what was said by the Senator from Wyoming [Mr. WARREN], to say that he anticipated that no other report could or would be made than that no such instructions had been given. I repeat, if the Senator believes that there is a foundation for this charge, whatever may be the sources of his information, then he is justified, in my judgment, in presenting and pressing this resolution; but if he recognizes it as a mere rumor, as I understood him to state in his first statement, and if he realizes that the only effect of it will be to hamper and restrain and discredit a great department of this Government in an honest and earnest attempt to discharge its duty and enforce this law, then I suggest to the

Senator that this resolution ought not to be pressed.

Mr. JONES. Mr. President, the purpose of this resolution is just exactly the opposite. The reason I made the statement I did was because I have the utmost confidence in the sincerity of purpose and the activity of the Attorney General's office in this matter. I have not any doubt that the department is trying to enforce the law honestly and faithfully; and that was probably the reason why I suggested that I anticipated what the report would be, because I can hardly conceive that the department, acting as I believe the department is acting, would send out such instructions. It probably is more of a rumor, as I have said, but the attorney to whom I have referred has stated personally as to what he has heard and almost to the effect that it comes from an agent of the Government, so that it seemed to me an injustice to the administration not to give them an opportunity to present the facts in the matter. is no party proposition in this at all, because I have just as much confidence in the Attorney General's office as it is being administered now as I would have if it were being administered by a Republican. So far as that is concerned, there is absolutely no partisanship in this matter, yet it seems to me that it is being dignified with more importance in that respect than it is entitled to, because I am simply asking for the information which I hope, and which I will frankly state I have believed, would refute the statements that have been made. I may be mistaken; it may be that such instructions have been sent out.

Mr. ROBINSON. Will the Senator yield for just one more

statement? The VICE PRESIDENT. Does the Senator from Washing-

ton yield to the Senator from Arkansas?

Mr. JONES. Certainly.

Mr. ROBINSON. When the Senator says that any question as to the propriety of passing this resolution is dignifying it with more importance than it should receive he makes a very grave To ask a question of this character of the Department of Justice implies a well-founded belief in the mind of the Senator introducing the resolution that the implied charge is true, and it could not have any other effect than to discredit

the Department of Justice.

I repeat, Mr. President, if the Senator has information upon which he believes that this state of facts exists it is right and proper that the entire country should know it. If the Department of Justice has given instructions to its representatives not to enforce any criminal statute, it ought to be exposed, for it is ground not only for the severest condemnation but for the gravest action upon the part of Congress. The Senator can not be unmindful of the fact that when he asks a question of that sort and asks the Senate to dignify the question with its solemn indorsement it is indicating, at least that there is in the mind of the Senator, ground for such a suspicion.

Mr. KERN. Mr. President-

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Indiana?

Mr. JONES. In just a moment I will. I want to say that I do not think the fact that I introduced this resolution bears out the suggestion of the Senator from Arkansas that I believe these rumors are true, but I will say that my information was so reliable that I thought I was justified in offering the resolution. That is the sole purpose of it. As I said a moment ago, I hope and believe that the statements are unfounded, and yet they come from such a reliable source that I thought the resolution ought to be introduced and we ought

Mr. KERN. Mr. President—

The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Indiana?

Mr. JONES. Certainly.
Mr. KERN. Mr. President, I think I can explain this matter in a moment. I have not had any communication with the Attorney General at all, but I have before me a letter from him, through his private secretary, on this very subject. In view of the resolution, I think it would be fair that I should lay it before the Senate.

The letter is as follows:

DEPARTMENT OF JUSTICE, OFFICE OF THE ATTORNEY GENERAL, Washington, D. C., December 11, 1913.

Hon. John W. Kern,

United States Senate, Washington, D. C.

Dear Senator: For your information and for such use as you may desire to make of it, I am inclosing herein a statement of the attitude of the present Attorney General in the matter of the enforcement of the so-called white-slave law. The statement is made by Assistant Attorney General Wallace, who has immediate charge of the enforcement of the law. Very truly, yours,

J. T. SUTER, Private Secretary.

He incloses this memorandum:

MEMORANDUM.

No order to stop white-slave prosecutions in cases not involving commercialism has been issued and no new regulations as to the enforcement of the act have been made since the incumbency of the present Attorney General. On the contrary, the Department of Justice has adhered to the practice adopted immediately after the passage of the law and followed during the previous administration.

I believe that statement ought to answer the inquiry suggested by the resolution.

Mr. JONES. I hardly know whether it does or not. I will say that the gist of this matter is really in the last clause of the resolution. It is stated positively that instructions have been sent not to prosecute any of these cases except international cases. There is the statement from a gentleman in my State, and I do not know whether the memorandum goes directly to it or not.

Mr. KERN. This statement is very clearly to the effect that the same policy is being pursued that always has been pursued.

Mr. JONES. I can not see any harm that would come from the passage of the resolution, and a response to it from the Attorney General's office. I hope it will be passed.

Mr. KERN. I move the reference of the resolution— Mr. SUTHERLAND. Mr. President— The VICE PRESIDENT. Does the Senator from Washington yield to the Senator from Utah?

Mr. JONES. I yield the floor, Mr. President. Mr. OWEN. I call for the regular order.

Mr. SUTHERLAND. Mr. President, I have no doubt the Senator from Washington has introduced this resolution in good faith, but it seems to me it is a resolution that ought not to be passed by the Senate upon the information that is laid before the Senate.

I think nobody for one moment believes that the Attorney General has issued any such instructions as have been stated in the letter which the Senator from Washington has received. I suggest to him that upon information contained in a letter from a citizen of his State, there being nothing more about it, he ought not to ask to have passed a resolution the very passage of which does reflect upon the office of the Attorney General.

It seems to me it would answer the purpose of the Senator sufficiently if he were to refer to the Attorney General the letter he has received from his correspondent, and no doubt he would get a reply from the Attorney General. I do not think, however, that the Senate of the United States ought to pass a resolution of this kind upon Cat information alone.

Mr. ROBINSON. Mr. President, if the Senator from Washington insists upon pressing the matter, I suggest that the

resolution go to the appropriate committee.

Mr. JONES. Mr. President, I will say to the Senator that I rose for the purpose of asking that the resolution might go to the committee, and then I may possibly follow the suggestion of the Senator from Utah. If, however, I do not think it best to do that, if my letter may be referred to the committee, the committee can take such action as it sees fit in view of the memorandum read by the Senator from Indiana.

Mr. ROBINSON. If the resolution goes to the committee, the committee can ascertain whether or not there is any foundation for this implied charge, which goes directly to the integrity of the Department of Justice.

Mr. JONES. I want simply to repeat what I said a moment

Mr. OVERMAN. Mr. President, if the resolution goes to the committee, we will have to consider it, of course; and I think the Senator can accomplish what he wants by referring the letter to the Attorney General. He will give him a respectful answer

The Senator has here a letter from the Attorney General denying these assertions. I think the Senator should send the letter received by him to the Attorney General, and he will receive a respectful reply. Then, if the reply is not satisfac-tory, the Senator can introduce a resolution on the subject.

Mr. JONES. The Senator thinks it would be better, then, to

allow this resolution to lie on the table?

Mr. OVERMAN. I think if the Senator will reconsider the matter he will withdraw the resolution temporarily. Then, if he does not get a respectful reply, or is not satisfied with the

reply he gets, he can introduce a resolution.

Mr. JONES. I have no objection to that course, I am sure, because, as I said a moment ago, there is no Senator on the other side of the Chamber who has any more confidence in the administration of the Department of Justice than I have; and no Senator on that side is any more desirous of not reflecting on the department than I am, because I have every confidence in it. I offered this resolution simply because of the reliable source from which the facts came to me, and it occurred to me that a report upon such instructions as have been issued would settle the matter clearly.

In view of the suggestion made by the Senator, however, I ask leave to withdraw the resolution, and will follow the

course suggested by the Senator from Utah.

The VICE PRESIDENT. Is there objection? The Chair hears none, and the resolution is withdrawn.

# ELECTION OF SENATORS.

Mr. WALSH. I ask unanimous consent to resume consideration of Senate bill 2860, providing a temporary method of conducting the nomination and election of United States Senators. The bill had the attention of the Senate some days since, and I express the hope that we may be able to reach a vote on it this morning.

Mr. NEWLANDS. Mr. President, is the regular order the

banking and currency bill?

The VICE PRESIDENT. The banking and currency bill is the unfinished business, which will come up at 12 o'clock today, unless, by order of the Senate, it is laid before the Senate prior thereto.

Mr. NEWLANDS. I had arranged to address the Senate on the banking and currency bill at this time. It would be very much more convenient for me to go on with the discussion of the matter now. I move, therefore, that the banking and currency bill be taken up.

Mr. WALSH. Let me say to the Senator that I am sure this matter will be very speedily disposed of. I recognize that he is entitled to the floor just as soon as the banking and currency bill comes up. This matter was temporarily laid aside a few

Mr. GALLINGER. Mr. President, not a word that is being said can be heard on this side of the Chamber. These matters are of interest to us all.

Mr. ROBINSON. I may assure the Senator from Montana that this matter can not be disposed of in a very short time. I am informed that there are a number of Senators present who wish to speak on it. One Senator on the other side of the Chamber whom I have in mind expects to discuss the subject very fully. I think I shall ask leave to say something concerning it myself. I suggest to the Senator from Montana that he take a time when there will be a better opportunity for a fair discussion of the matter.

Mr. WALSH. Mr. President, I do not think this matter ought to be longer delayed. Everybody recognizes that it is a matter of urgency and that the necessity for an act of this kind may arise at any moment. Some complications have already arises by reason of the fact that we have no provision with respect to the matter in a great many of the States. I

The currency bill will be properly before the Senate for consideration at 12 o'clock.

I trust there will be no objection to the present consideration of this measure.

The VICE PRESIDENT. Is there any objection? Mr. NEWLANDS. Mr. President, I shall object.

Mr. WALSH. Then, Mr. President, while I do not like to differ with the Senator-

Mr. BACON. I wish to make a suggestion to the Senator from Montana, with his permission. After the currency bill has passed the Senate we will be waiting on the conference committee for several days, and there will be ample opportunity then to take up and dispose of this bill before taking a recess for the Christmas holidays.

Mr. ROBINSON. That is exactly the way it seems to me. Mr. WALSH. Let me say to the Senator from Georgia that my own judgment about the matter is that as soon as the currency bill is passed the Christmas holidays will in fact ensue,

and there will be, in fact, no quorum here.

Mr. BACON. I think the Senator will find himself mistaken about that. I think there will be a quorum here until the conference report is adopted, or until, by joint resolution or concurrent resolution, a recess of the Senate is taken for the holidays. I do not think Senators are going to leave the city before that time. I think the Senator may absolutely rely upon that fact.

Mr. CLARK of Wyoming. Mr. President, with the permission of the Senator from Montana, I suggest to the Senator from Georgia that we have another special order following immediately upon that of the unfinished business.

Mr. BACON. That is a special order for a special hour-2 o'clock. It will be in order on the first day when this is not in

order, but it is not in order until 2 o'clock.

Mr. CLARK of Wyoming. Not unless it is moved to take it up before that time, the same as in the case of this bill. This is not in order until after the morning business

Mr. BACON. Under the ruling of the Chair, the Alaskan matter is a special order at 2 o'clock, and not at the close of the morning hour.

Mr. CLARK of Wyoming. I do not understand that to be the case, except as to the first day of the Alaska bill.

Mr. BACON. It is a special order for a special hour. Mr. CLARK of Wyoming. Does the Senator mean to say that the Alaska bill, during its entire consideration, can not be taken up until 2 o'clock?

Mr. BACON. I mean to say that as a special order it will first come up at 2 o'clock.

Mr. CLARK of Wyoming. That is what I understand, too. Mr. BACON. Very well.

Mr. CLARK of Wyoming. That, then, gives from the close of morning business up to 2 o'clock on the first day, during which time the bill of the Senator from Montana can be considered.

Mr. BACON. That is exactly what I intended to express. I do not know that I was fortunate in doing so.

Mr. CLARK of Wyoming. There is not much more time than

there is this morning, then.

Mr. SUTHERLAND. Mr. President, the Alaska bill is upon the Calendar of Special Orders. As I understand, it will come up whenever the calendar is in order, immediately upon the conclusion of the routine morning business. That, as I understand, is what the rule provides. If the election bill goes over until the currency bill is out of the way, we shall be immediately confronted with the special order, which it is going to take considerable time to dispose of.

This election bill has been before the Senate in one form or another for three months. It has been upon the calendar for some fime. It is an urgent matter, as the Senator from Montana has said. Complications have already arisen because the Senate has delayed passing the measure, and other complications are likely to arise at any time. If we can not dispose of the matter this morning, let us at least begin its consideration. We have practically two hours every morning before the currency bill is in order, and if we can not dispose of the election bill this morning, it will only take another morning, at the outside, to dispose of it.

I very much hope the Senator from Montana will move to proceed with the consideration of the bill, notwithstanding the ob-

Mr. SMITH of Georgia. Mr. President, I wish to ask the Senator from Montana if, in his opinion, the bill reported from the committee will reach the case of vacancies that occur in the Senate? Does it not rather apply to the regular elections, and is it not necessary for it to be amended still further to reach do not know why it should give way now to any other measure. I cases of vacancies and the pressing cases that are before us?

Mr. WALSH. I will answer the Senator from Georgia by saying that the bill as originally presented to the Senate covered only the case of a general election. The substitute reported by the committee was framed for the express purpose of meeting the case of a vacancy, and it is believed that it does meet that

As I am speaking upon the matter, I desire to say that about a week ago I gave notice that upon the conclusion of the routine morning business on Monday, as I recollect, I would ask consideration of this measure. I did so because I knew it was a matter of considerable consequence and that Senators probably desired to study the bill. When it came up it was agreed that it should go over in order that further study might be given to it. We then had it up for consideration the other day, and at the suggestion of the distinguished junior Senator from Georgia I have twice allowed the matter to go over from one day to another. I do not see why there should be any further postponement, and I feel that I have been reasonably considerate and deferential to my associates with respect to the measure, which really has already received some consideration from the Senate.

With all due deference to my very much esteemed friend from Nevada, I see no reason why he can not address the Senate at 12 o'clock as well as now, and I trust he will not insist upon

his attitude.

Mr. NEWLANDS. Mr. President, so far as I am personally concerned, I had arranged last night for time to address the Senate this morning upon the currency bill. My arrangements were so made for to-day that it will be impossible, I think, for

me to speak at all unless I speak now.

Regarding the comparative importance of the measures them-selves, I have to say that I regard it of the highest importance that the banking and currency bill should proceed in a regular and orderly way to a final and speedy adjustment. The Senator from Nebraska [Mr. Hitchcock] last night opened up a very interesting field of discussion, and there are several who wish to speak with reference to the subject matter upon which he spoke. This seems the opportune time for consecutive discussion.

I doubt whether we will have time to consider the very important measure which the Senator from Montana is presenting to us. So far as I am concerned, it is simply a matter of comparative urgency. I should like to insist upon my contention that the banking and currency bill should be taken up; and if the Senator has made a motion to take up the election bill I would move as a substitute that the banking and currency bill be taken up.

Mr. WALSH. I have not yet made any motion. I was ask-

ing unanimous consent. I desire to say to the Senator from Nevada that the situation is simply this—I can be heard at this time, or not heard at all. He can be heard at this time, or

heard an hour later.

Mr. NEWLANDS. I am pretty sure the bill for which the Senator wishes to secure consideration will take more than an hour; so I move, Mr. President, that the banking and currency bill be taken up.

Mr. WALSH. I move, as a substitute for that, that the Sente proceed to the consideration of Senate bill 2860.

The VICE PRESIDENT. The Senator from Nevada [Mr. Newlands] moves that House bill 7837 be laid before the Senate. The Senator from Montana [Mr. Walshi] moves to amend by laying before the Senate Senate bill 2860. The question is by laying before the Senate Senate bill 2800. The question is on the motion to amend proposed by the Senator from Montana. [Putting the question.] The ayes seem to have it.

Mr. NEWLANDS. I ask for a division.

Mr. JAMES. I ask for the yeas and nays.

Mr. SUTHERLAND. Let us have the yeas and nays.

The yeas and nays were ordered, and the Secretary proceeded

to call the roll.

Mr. CHILTON (when his name was called). eral pair with the junior Senator from Maryland [Mr. JACKSON]. In his absence I withhold my vote, unless it may be necessary to make a quorum.

Mr. SHEPPARD (when Mr. Culberson's name was called) My colleague [Mr. Culberson] is unavoidably absent, and is paired with the Senator from Delaware [Mr. DU PONT]. This

announcement may stand for the day.

Mr. OLIVER (when his name was called). I am paired with the senior Senator from Oregon [Mr. CHAMBERLAIN]. I transfer that pair to the Senator from Maine [Mr. Burleigh] and

Mr. OWEN (when his name was called). While I regret very much to do so, I feel obliged to be recorded "nay this question.

Mr. THORNTON (when Mr. RANSDELL's name was called). I desire to announce that my colleague [Mr. Ranspell] has been called from the Chamber by departmental business. If he were present, he would vote "nay."

Mr. SMOOT (when Mr. Root's name was called). to announce that the senior Senator from New York [Mr. Root]

is unavoidably detained this morning from the Senate.

Mr. SIMMONS (when his name was called). I have a general pair with the junior Senator from Minnesota [Mr. CLAPP]. Under the arrangement I have with him in respect to the currency bill, I feel at liberty to vote. I vote "nay."

Mr. ASHURST (when the name of Mr. SMITH of Arizona was called). My colleague [Mr. SMITH of Arizona] is un-

avoidably detained from the Senate. He is paired with the Senator from New Mexico [Mr. Fall].

Mr. SMITH of Georgia (when his name was called). I have a general pair with the senior Senator from Massachusetts [Mr. LODGE]. I transfer that pair to the junior Senator from Nevada [Mr. Pittman] and vote "nay."

Mr. WARREN (when his name was called). I am paired with the senior Senator from Florida [Mr. FLETCHER]. I do not see him in the Chamber, and I do not know how he would vote on this question. I therefore withhold my vote.

Mr. WILLIAMS (when his name was called). I wish to transfer my pair with the senior Senator from Pennsylvania [Mr. Penrose] to the junior Senator from Louisiana [Mr. Ransdell] and vote. I vote "nay."

The roll call was concluded.

Mr. BRANDEGEE. Has the Senator from Tennessee [Mr. SHIELDS] voted?

The VICE PRESIDENT. He has not.
Mr. BRANDEGEE. I am paired with that Senator for several hours this morning. Therefore I withhold my vote. If I were at liberty to vote, I would vote "yea."
Mr. McLEAN. I have a pair with the senior Senator from

Montana [Mr. Myers]. I transfer that pair to the Senator from New Mexico [Mr. Carron] and vote "yea."

Mr. WARREN. I have already announced my pair with the Senator from Florida [Mr. Fletcher]. I transfer that pair so that the Senator from Florida will stand paired with the Senator from North Dakota [Mr. McCumber]. I vote "yea."

Mr. DILLINGHAM (after having voted in the affirmative). When I voted I overlooked the fact that I have a pair for this morning with the senior Senator from Maryland [Mr. SMITH]. I will transfer that pair to the Senator from Minnesota [Mr. CLAPP] and let my vote stand.

Mr. CHILTON. I transfer my pair with the Senator from Maryland [Mr. Jackson] to the senior Senator from South Carolina [Mr. Tillman] and vote "nay."

Mr. GALLINGER. I was requested to announce a pair between the senior Senator from New York [Mr. Root] and the senior Senator from Colorado [Mr. THOMAS].

Mr. SMOOT. I desire to announce the unavoidable absence of the senior Senator from North Dakota [Mr. McCumber]. I will let this announcement stand for the day.

The result was announced-yeas 31, nays 34, as follows: YEAS 31

Market Market Street Street	11.	AU UI.

So Mr. Walsh's motion was rejected.

BANKING AND CURRENCY.

The VICE PRESIDENT. The question recurs on the motion of the Senator from Nevada [Mr. Newlands] that the Senate proceed to the consideration of House bill 7837.

The motion was agreed to; and the Senate, as in Committee of the Whole, resumed the consideration of the bill (H. H. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of

banking in the United States, and for other purposes.

Mr. NEWLANDS. Mr. President, we were all greatly interested in the remarks of the Senator from Nebraska [Mr. HITCHCOCK]. I am sure we all admire his firmness and tenacity of purpose. I am sure that we are all sympathetic with his animadversions upon the tyranny of the caucus system. But at the same time we all realize that the Democratic Party is responsible for this Government, and the question before us is how we can make the will of that party efficient in government with a due recognition of the rights of the minority as well as the majority for free discussion and debate before a conclusion of the subject is reached. I think we will all agree with the Senator from Nebraska, I think the President himself will agree with the Senator from Nebraska, that to decide finally upon a party measure before the minority is heard in debate is not a fair expression of popular government.

DISCUSSION OF THE CAUCUS SYSTEM.

I must confess, Mr. President, that this question has much embarrassed me. I have always stood for the maintenance of the rights of the minority to free discussion and full debate. I have always stood against secret and executive decision of important questions. But at the same time the difficulty always recurs as to how the party will can be made efficient in government without some form of counsel between the representatives of the dominant party and some form of decision that will reconcile varying views.

Now, Mr. President, what has been done in this case, and what ought to be done? In this country we have no responsible ministry, whose function it is to present in the legislative body a government measure. The initiative here is with the individual Senator or the individual Representative. It is apparent that that is a very feeble and ineffective method of pre-

senting a party proposal called for by a party platform.

Obviously the only way to do is to do as has been done in this case. The President takes the initiative, through the power of recommendation given to him by the Constitution. With a view to shaping his recommendation he calls in counsel with him the chairmen of the committees of the Senate and House having jurisdiction of the subject matter, and then gradually enlarges the counsel in such a way as to embrace many, perhaps all, of the Members of the dominant party upon these committees and others who in experience and debate have acquired familiarity with the subject. Thus a so-called administration measure is framed as the result of mutual counsel, which, I submit, is a much better method than the presentation of a bill by an individual Member as his individual act.

Thus far, however, the measure is, of course, purely tentative. It goes to the committee of the House and there is considered in full, is amended, and added to, and then, after being perfected, is presented to the House. Thus far the entire party in the House is not brought into counsel, and the question is at what time the entire party membership should be brought into

counsel.

FULL DISCUSSION OF BILLS IMPORTANT.

My judgment is that the best method to pursue in such a case is, first, to exhaust debate in the House, to give the minority and the majority Members of that House a full opportunity of discussion, and then, after the debate is practically closed, or in the closing hours of the debate, to call the party in conference regarding the measure. I care not whether it is called a conference or a caucus, the action will not, of course, bind the conscience of any Member or the convictions of any Member, and will be persuasive only with him. His responsibility rests ultimately with his constituency. If an action of independence is sustained by his constituency, he is acquitted. If it is not. he stands condemned by the party judgment of his constituency.

Now, Mr. President, when that bill comes to the Senate it is still purely tentative. The matter is referred to the Senate committee, and there every Senator, whether of the minority or the majority party, has not only the right but is expected to express He is not to surrender his judgment to the judgment of others, whether expressed in the presidential chair or in the House of Representatives, but he is to exercise his individual judgment in the shaping of the measure. been done by the Senate committee of this body, and the utmost independence of view has been maintained. The result has been two reports, one prepared entirely by members of the dominant party and the other prepared by one member of that party in union with members of the minority party. I believe that those two reports have been of great service and will be of still profit from the able discussion of the Senator from Nebraska

further service in this discussion; but the very fact that the members of the majority party differed as to the details of the measure made it necessary to call the members of that party into conference. They held a conference, attended for the most part by a bare majority of the majority of the Senate.

The bill was further considered, was amended and altered in some particulars, and then reported as the tentative judgment of the majority party in the Senate. Obviously if that judgment were regarded as binding upon the majority Members of the Senate, a great wrong would be done to representative government and to free and deliberate consideration and debate. Obviously as yet the minority in the Senate have not been heard; obviously it is violative of every principle of free government to come to a final conclusion without hearing the minority.

FREEDOM OF ACTION AS TO AMENDMENTS.

So far as I am concerned, I shall regard myself free to vote according to my judgment and my convictions upon all the processes that relate to the perfection of this bill; but if in the debate and in the votes such a contrarity of views upon the part of the majority members is expressed as to indicate a failure to ascertain and give effect to the will of the party as such, I shall expect that in the closing hours of the debate, after full hearing of the minority and after hearing all the varying views in reference to this measure, a party conference will be held, and in the interest of party solidarity I will support the conclusion reached by it unless it so violates my conscience and my judgment as to warrant me to go back to my constituents and insist upon it that I was right and the was wrong.

Mr. HITCHCOCK. Mr. President—
The VICE PRESIDENT, Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. I do.
Mr. HITCHCOCK. I want to say that the Senator from Nevada has admirably stated the only possible excuse for a conference; that is, that after a full and open debate in the Senate before all the country, upon which both sides of the case may be heard, then for the purpose of harmonizing minor differences, for the purpose, if possible, of getting the solidarity that may be desired to make a homogeneous bill, there may be some reason for holding a conference; but to first hold a conference and to attempt, as has been attempted, to bind Members before debate is one of the most illogical, one of the most damaging, processes that can be undertaken in legislation. I commend the Senator for the fairness with which he has stated the proposition.

Mr. NEWLANDS. But, Mr. President, I think the Senator from Nebraska, the Senator from Nebraska having been absent endeavor by this conference to bind the votes of the majority

Mr. LEWIS. May I interrupt the Senator from Nevada to ask a question of him, so that he may enlighten the able Senator from Nebraska, the Senator from Nebraska having been absent from the conference?

Mr. NEWLANDS. Certainly.

Mr. LEWIS. Is it not true that in the conference there was full debate, contest, dispute, and exchange of views by those engaged in the conference before there was any conclusion in the form of a vote or direction by the conference?

PROTECTION OF RIGHTS OF MINORITY.

Mr. NEWLANDS. There was, so far as the majority Mem-

bers of the Senate were concerned.

Mr. HITCHCOCK. Mr. President—

Mr. NEWLANDS. But I claim that that, of course, does not exhaust consideration or debate. The minority party had not yet been heard, and it is our duty to hear them; and not only to hear them, but to thoroughly consider their views and their arguments before coming to a final conclusion. I regard that as just as essential to free government as I regard the conference as essential in the process of gradually solidifying a party judgment.

Mr. President, this is my interpretation of what that conference meant: The party, as such, was still in the tentative process of formation, taking up by one step after another the various forms of consideration within the party that were necessary to reconcile differences among themselves, but still reserving to the minority the sacred right of the expression of their views, and insisting upon the duty of the majority to listen and not to turn a deaf ear to argument or persuasion. With this process believe the President of the United States is sympathetic, and that process can be entirely reconciled with his utterances and his expressions in the past, both in speeches and in writings, and I believe that the Democratic Party in the Senate will derive [Mr. HITCHCOCK]; will derive profit from the able discussion of the Senator from Ohio [Mr. Burron]; and from the various speeches which have been made opposed to the general outline

and policy of this bill.

Toward the close of this debate, if by that time by a general process of getting together we have not reached in the majority such a harmonious conclusion as to enable us to act without a conference, I shall expect, then, a conference to be held as the highest duty of the majority to the party which they represent, that party being to-day the only efficient instrumentality of government, and requiring firmness of will, firmness of purpose, and firmness of execution in order to accomplish its real duty as the servant of the people.

Now, Mr. President, pursuing the line of independence which

I think I have the right to pursue-Mr. SHERMAN. Mr. President-

The VICE PRESIDENT, Does the Senator from Nevada yield to the Senator from Illineis?

Mr. NEWLANDS. Certainly.

Mr. SHERMAN. As a casual inspection of the Chamber is sufficient to raise the doubt of the presence of a constitutional number. I therefore suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Ashurst Hollis Hughes Stephenson Sutherland Overman Bankhead Brady Brandegee Owen Page Perkins Poindexter Pomerene Reed Thompson Thornton Tillman Townsend Vardaman James Johnson Jones Kenyon Brandegee Bristow Bryan Chilton Clark, Wyo. Clarke, Ark. Crawford Cummins Kern La Follette Walsh Warren Robinson Lane Lewis Martine, N. J. Shafroth Sheppard Weeks Williams Sherman Smith, Ga. Smith, Mich. Smith, S. C. Smoot Cummins Dillingham Nelson Works Newlands Norris O'Gorman Gallinger Hitchcock

Mr. THORNTON. I desire to announce the absence of my colleague [Mr. RANSDELL] on departmental business.

The VICE PRESIDENT. Fifty-seven Senators have answered to the roll call. There is a quorum present.

NO INCREASE OF BANKING CAPITAL NECESSARY.

Mr. NEWLANDS. Mr. President, what is the condition with reference to which we are legislating? It relates to the banking and currency system. Where does the difficulty lie? Have we a deficiency of banking capital in this country? No. We have \$4,000,000,000 of capital and surplus in the national and State banks-a larger banking capital, proportionately, than that possessed by any other country in the world.

Mr. SHAFROTH. Forty per cent of the world's banking

Mr. NEWLANDS. As the Senator from Colorado suggests, it is 40 per cent of the entire banking capital of the world. Is it necessary, therefore, to increase that banking capital? No. Is there a deficiency in the credit facilities of the country in the shape of loans and bank credits? Our bank credits issued by the State and national banks, outside of our savings banks, amount to nearly \$15,000,000,000, a greater amount, proportionately, than that of any other country in the world. Is there a deficiency of bank deposits? No. The bank deposits are equal to the bank loans, aggregating about \$15,000,000,000.

Credits issued by the banks are being turned into deposits. and every depositor is issuing money when he signs a check which closes a transaction in trade, and these deposits are proportionately larger than those of any other country in the

Is there a deficiency in cash, in money? No. The basic money of the country has doubled within 15 years. We have in the banks alone a billion and a half of cash reserves, proportionately larger than the cash reserves of any other country in the world.

What, then, is the difficulty? There is no deficiency of capital, no deficiency of bank credits, no deficiency of bank deposits, no deficiency of cash reserves. Where is the difficulty?

The only difficulty we have is when the money does not run current in the arteries of commerce. Every little while we have a paralysis in the local exchanges of the country, which gradually creeps through and involves the entire country. At that very time, recollect, the banking capital is the same as before; the bank credits are the same as before; the bank deposits are the same as before; the cash reserves are the same as before. Why the change?

Why the change?

The answer is, simply because credits remain stationary instead of being paid and transferred to others, and the cash that, while possibly that is true as a general statement, the

remains stationary instead of running along in the channels of commerce

We may liken our entire commercial banking system to our transportation system. We have to-day the most perfect system of railway transportation in the world—more mileage, more cars, more facilities for carrying freight and passengers and yet that entire machinery would be paralyzed to-morrow if at 12 o'clock the cars should stop, paralyzed at the various stations at which they stood, and chaos would ensue in the business of the country. You would have a transportation system perfect in all its details, perfect in all its equipment; yet if the cars do not move, the transportation system ceases to be an efficient instrumentality of commerce.

So, it is important that we should keep the money moving; that we should keep the bank credits changing; that we should keep the bank deposits changing according to the requirements of business, the creditor of to-day becoming the debtor of tomorrow, and the debtor of to-day becoming the creditor of

to-morrow.

A SYSTEM OF INDIVIDUALIZED BANKS.

We have a splendid system of individualized banks. Jackson's time we turned against the centralized system which had been pursued abroad, and we destroyed the great central bank then existing. Ever since then we have pursued the policy of individualized banks, numerous banks. The States took them up first and made a sad business of it, each bank running as an individualized bank, issuing its own bank notes and attending to its own business with no union between the banks, and we passed through all the spasms of a wildcat and a red-dog cur-Then we organized a national-bank system, and, true to the instinct of individualized banks, provided for a free system of banking throughout the country, under which 7,500 banks have been created, offsetting, though fewer in number, in banking capital, and in resources, 18,000 State banks also thoroughly individualized. Whenever alarm seizes a community, instead of having the machinery enabling them to get together for union of purpose with a view to mobilizing their cash at the point of attack and overcoming the enemy, we find each individualized bank selfishly fighting for its own existence, holding on to its cash as the basis of the entire organization, refusing credits, and the whole machinery of commerce in that town paralyzed.

It is obvious, therefore, that there must be a union of the banks if we maintain this system of free and independent banks and decide not to go to the centralized form of banking with its branches. We must unionize the independent banks.

The question is, How shall it be done?

Obviously the process of evolution which has been going on for years marks the way. The organization of clearing houses in the various vicinities for the purpose of mutual protection and support marks the way. If, after accomplishing these local unions, each one thoroughly individualized as to its locality, we can federate all the local unions themselves into a national union organization at Washington, we then shall have the perfection of organization for mutual protection and support.

The only question is, How can we accomplish the federation of these great banking interests without submitting ourselves to the control of a money monopoly which in the future may prove as great a burden as the system, for the present, may be ful? It is obvious that we must guard it by governmental supervision and control in such a way as to make this federation, this union of banks, both local and national, effective for beneficial purposes, and prevent it from being used for oppression or extortion.

ANY ONE OF PROPOSED BILLS BETTER THAN PRESENT SYSTEM.

Mr. President, we have before us for our consideration three forms of organization-one sabmitted to us by the House, one presented by the Democratic section of the Senate committee, and the other presented by the Hitchcock section. All three of these forms are before us for consideration. All of them have excellent features. Any one of them is an improvement upon existing conditions; yet I assert that neither of them is as efficient as it might be; neither of them is as simple as it might be; neither of them is as persuasive as it might be; neither of them can be put into as quick and as efficient operation as it

All the bills provide for additional banking capital. tional banking capital is required in the United States. We already have a superabundance of banking capital.

Mr. WEEKS. Mr. President-

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Massachusetts?

large borrowings which come from some parts of the country at certain seasons of the year, and come from banks, would indicate that there is not enough capital in those sections to care for their business when it is in an unusual condition or at those

seasons when an unusual amount of capital is needed?

For instance, as I stated the other day, the Continental-Commercial Bank of Chicago is now loaning \$26,000,000 to banks located very largely in the Southern States, on account of the movement of the cotton crop; and I think the witnesses before the Banking and Currency Committee from the Southern States generally agreed that there was insufficient banking capital in

that part of the country.

Mr. NEWLANDS. Mr. President, there may be a deficiency of banking capital in certain localities, but I insist that there is a superabundance of banking capital in the entire country; and the scheme which we should frame should be one that would enable the utilization of the surplus of one region to meet the deficiency of another, and that is all. No additional banking capital is required. We already have a superabund-

What would be thought of a transportation system which, having thousands of railway cars, and a superabundance of railway cars in the New England States with a deficiency of cars in Texas, would immediately commence to construct new cars, when it could call upon New England for its excess of cars and transfer them to Texas?

Mr. HITCHCOCK. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. I do. Mr. HITCHCOCK. In stating that there is an adequate banking capital in the country, has the Senator taken into account the vast difference between the deposits of European countries and the deposits of the United States?

Mr. NEWLANDS. Does the Senator mean that they are less there?

Mr. HITCHCOCK. I do.
Mr. NEWLANDS. I have. I have taken the whole thing into consideration. Our banking capital is \$4,000,000,000. That certainly is a sufficient margin of security for fifteen billions of deposits. It is over 25 per cent margin. The moneys of the depositors being invested in current notes, and so forth, that ought amply to satisfy the amount of the deposits, and we have therefore a margin of safety of 25 per cent.

I was asking what would be thought of the perfection of a railway system which, having a superabundance of cars in New England and a deficiency of cars in Texas, would enter upon the construction of new cars to meet the deficiency in Texas. That is what we are doing with reference to banking

capital.

METHOD OF SUPPLYING BANKING CAPITAL.

But you say, "How can you have a reserve bank without banking capital?" Why, you supply it with banking capital in this bill in the cash reserves of the member banks which are transferred to the reserve banks. The cash reserves of the member banks, aggregating a billion and a half dollars in this country, are a part of the capital of the banks. When they turn over to the reserve banks one-third of those reserves in the aggregate-\$500,000,000-they are turning over to the reserve banks \$500,000,000 of capital; and, above that, it is practically dead capital in one sense and very live capital in another. It is dead capital in the sense that the member banks can not loan it out, but they are compelled to keep it within their vaults to meet the current checks of their depositors. is very live capital in the sense that for every dollar of cash in the vaults of a bank it can issue, under this new system, \$8 in bank credits, which are turned into bank deposits and which constitute the real currency of the country.

A bank having \$100,000 capital, starting with \$100,000 in cash, immediately loans out and establishes credits to its customers to the extent of eight times that amount, or \$800,000, and has written upon its books \$800,000 of bank credits, upon which it receives an interest of 5 or 6 or 7 per cent. Those bank credits are turned into bank deposits, and the depositors check against them. So every dollar of cash has an expansive

quality of eight to one under this system.

What we propose to do is to take and impound one-third of the cash reserves of all the banks, such third amounting to \$500,000,000 in the reserve banks. Why? Do we put them there for profit? No; the banks are making a profit. They are making a profit on the capital represented in part by the cash reserve in the shape of interest upon the credits written on their books to the extent of eight times the quantity of their cash. They are making this profit, and the cash is held simply to meet the ordinary checks of the depositors. They turn over a portion of that cash to the reserve bank, not for profit but for safety. How for safety? The reserve bank constitutes a union of the member banks, which enables them to mobilize their reserves. For the first time numerous individual banks, members of the reserve bank, are unionized for protection, and they are unionized through the reserve bank. That union is made possible by the presence in the reserve bank, in the aggregate, under this system of over \$500,000,000, provided all the State banks and national banks come in under the system.

Now, what is that reserve bank to do? Enter into a general competition with its member banks in the making of money? No; that is not its purpose. Its purpose is safety, insurance, and protection, nothing more and nothing less, and it should make no profit. It should make nothing whatever except sufficient to pay its operating expenses. Anything that it makes above that is a burden upon the commerce of the country instead of an aid to the commerce of the country, and profit-making puts the union of banks practically in competition with the

member banks throughout the country.

It will be the best test of the efficiency of this system if the reserve bank is never called upon to act at all, for it will then be evident that the money of the country is running through the arteries of commerce without obstruction or congestion, and that the exchanges are made without the occasional stringency and paralysis and obstructions which have thus far marked our commercial career. So, instead of entering these banks into a career of profit making I say that their highest purpose will be realized if they do nothing. The very fact that the banks are unionized, and the very fact that their forces are mobilized to meet any attack, will be an assurance of commercial peace just as the existence of an army is the guaranty of local peace and security.

#### A PROCESS OF NATURAL EVOLUTION.

Mr. President, what is the natural process of evolution? The natural process of evolution; the natural process of evolution; the natural process of evolution is to unionize all the banks, both State and National, within a State. Every form of organization in this country demonstrates that. There is no form of organization of any kind in this country—professional, commercial, benevolent, charitable, or financial—that does not first embrace the State and then embrace the Nation through the federation of the State organizations. That is true of har asfederation of the State organizations. That is true of bar associations, medical associations, engineering societies, art societies, boards of trade, commercial bodies. You have first the State organizations and then a national organization. Thus in economics and in professional, commercial, and artistic life, following the line of our political organization, we have the State as the basic unit and the union of States accomplishing the federation. as the basic unit and the union of States accomplishing the federation of these basic units for national and Federal purposes.

But it is said that if you organize all the banks in a State into a State federation or union or a reserve bank that many of them will be small in capital. That is true. But relatively the organization in the smallest State of the Union will be as strong as the organization in the most populous, for although the cash of the member banks in a small State may be inconsiderable in quantity, and one-third of that cash turned over to the reserve board may be small in quantity, yet the obligations of the banks are also small, the deposits of the banks are also small. The relation of that cash to the deposits in the smallest State in the Union is just as great as the relation of the cashto the deposits in the proudest and wealthiest and most powerful State. New York may have larger cash reserves, and as a result of that the reserve bank organized in New York will have, of course, a much larger amount of capital, but when you think of the relation of the cash reserves of New York to the deposit obligations of the banks there, you find that that relation is no greater and no less than the relation which exists between cash and deposits in the State of Nevada.

Mr. HITCHCOCK. Mr. President—
The VICE PRESIDENT. Does the Senator from Nevada

yield to the Senator from Nebraska?

Mr. NEWLANDS. I do.

Mr. HITCHCOCK. The statement made by the Senator from Nevada is undoubtedly correct; that is to say, in a remote region where the banks are few, the capital limited, the deposits low, the reserve bank established in that district would probably have a strength proportional to the needs of the district, just as a great bank in the city of New York would have in New York. But I want to put this question to the Senator: Is it not true that if you confine the operations of a reserve bank to a limited area and confine the membership of the bank to those in the same territory, you subject them all to the same influence?

Take, for instance, a bank in the corn country. At certain seasons of the year, when the corn crop is to be moved, there arises a great demand for money. All the member banks feel the demand at the same time. They all draw upon the reserve bank, and the reserve bank, as a consequence, in a short time finds its funds depleted because of the fact that the territory is limited and all the member banks are subject to the same influ-

On the contrary, if you could unite into one great district a number of regions, so that the cotton and the corn and the wheat belts could be in one region, when a demand for money arose in one part of the district it would be supplied with funds drawn from another part of the district, where a demand had The result would be, if you cover a great area of various climates and various industries, when a particular part of that region calls for funds they would be supplied from the common reservoir, from funds drawn from the other parts where they were not in use, and the result of that would be a comparatively small demand or need for emergency currency. But if you have your regions small and your reserve banks small there will be an almost instant exhaustion of reserves and an immediate demand for currency, which would not be necessary if the regions were large.

The result of this will inevitably be an inflation of the currency unnecessarily. The result will be a higher rate of interest to the borrowing public. The result will be the issue of currency for one part of the country when there is a surplus of ready money in another part of the country. All this can be cured by dividing the country into a small number of reserve districts, so that each will have within its borders a varied climate, a varied industry, and varied interests, and one will support the other without calling for the issue of asset cur-

I ask the Senator from Nevada if there is not force in that argument?

UNIONIZING THE STATE RESERVE ASSOCIATIONS.

Mr. NEWLANDS. I will state to the Senator from Nebraska that there is, of course, great force in his argument, that if the district system or regional system is to be followed the districts should be sufficiently large to include varying climate, varying production, and varying seasonal demands, in order that the surplus of one part of that district may be used to supply the deficiency of another part of the district.

I quite admit the force of that argument if the district sys-

tem is to be pursued. But the system which I suggest I have not as yet fully developed. It is true that the State reserve association would not cover an area so varying in climate and varying in production and in demand as a large district, enabling thus one region to supply from its abundance the deficiency of another. Under the system which I propose you will find that the State reserve association will take care of nine-tenths of the difficulties that may arise and nip them in

But there are conditions such as the Senator described, of seasonal demands in one part of the country, which must be met by the abundance of other parts. Those I would provide for by unionizing the State reserve associations, federating them after the manner of our Federal Government by the organization of a national reserve bank at Washington. To that bank I would turn over one-third of the reserve moneys turned over by the member banks to the State reserve banks. That money then would be in a central reservoir which could be applied anywhere throughout the country in aid of any State reserve bank, where the seasonal demand or the exceptional demand was excessive.

Mr. HITCHCOCK rose.

Mr. NEWLANDS. I will yield to the Senator in a moment. I want to follow that out. Let us see where that carries us. If all the State banks and the national banks come into this system, as they will all come in quickly, if you make no capital requirement of them beyond the turning in of one-third of their reserves, they will turn over to the reserve banks \$500,000,000, making one-third of the total cash reserves in the country today, which are one billion and a half. Under the system which I suggest these State reserve banks will turn over to the national reserve bank at Washington one-third, \$166,000,000. you will have in the local State reservoirs \$333,000,000, distributed, of course, according to the relation that their reserves bear to each other; and you will have in this central reservoir at Washington \$166,000,000 with a pipe leading to every one of the reservoirs in the States. You will have this Federal national reserve association at Washington, able to use not only that \$166,000,000 and to pour it into the reservoir of any individual

State or States, but you will have a capacity to pour in two or three hundred million dollars of Government funds which will be in its possession, and in addition an unlimited amount of Federal reserve notes to meet the condition of emergency

You will thus pattern our economic system after our political system, having in each State an efficient economic organization capable of meeting all the normal demands of the State, yet with a power, whenever there is a seasonal or an exceptional demand or a demand caused by a panic or stringency, to pour from this central reservoir the needed supplies.

That is the necessity of a central reservoir. Practically in your system you have avoided it by a clumsy method. You have pipes connecting the various reserve reservoirs with each other, and you empower your reserve board at Washington to command the directors of one reservoir to supply another when

NECESSITY FOR A CENTRAL RESERVOIR.

I claim that that is not sufficient. Under the method I suggest the Federal reserve board, which will be in control of the national reserve bank at Washington, will be in control of a central reservoir. So it will not have to direct a single regional bank to turn its reserves into some other reservoir, but it can turn them on directly itself as the occasion arises.

Thus the system I propose has the advantages of the centralbank system, which the gentleman logically supports, though he has been compelled by the exigencies of the moment to abandon it in this bill, and at the same time all the advantages

of the regional-bank system.

The VICE PRESIDENT. Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. I do.

Mr. HITCHCOCK. I think there is much force in what the Senator from Nevada says, that there should be one central reservoir not only for the purpose of uniting and harmonizing the reservoirs which he proposes to locate in each State and which this bill proposes to locate in the reserve banks without regard to State lines, but I want to say to the Senator from Nevada I advocated in the committee, and some other members of the committee advocated, the plan of having here in Washington a reserve bank which shall act as a clearing house for the others, and unite the others, in which each reserve bank should keep a part of its reserves. They would be just as available here for reserves of the reserve banks as they would be in their own vaults, and being here the reserve bank in Washington would act as a clearing house for the other reserve banks to settle differences which might arise between them. That fund also would be a fund that the Federal board here in-Washington could use for the benefit of any one of the four reserve banks which the section of the committee which I belonged to reported.

So I want to say to the Senator from Nevada I admit the validity of his argument, that if we have the regional reserve banks there should be a central reservoir to connect them and to which they could apply, which would act as a clearing house for them all, and to that extent I think his argument is unan-

swerable.

Mr. POMERENE. Mr. President-

Mr. NEWLANDS. Just allow me a moment. I will yield in a moment. I will simply supplement what the Senator has said by the statement that this central reservoir at Washington would fit into the system that I advocate of a State reserve bank in each State, or the system which the Senator from Ohio [Mr. POMERENE] advocates of from 8 to 12 regional banks, or the system which the Senator from Nebraska advocates of four regional banks. It would fit into all of them, and I hope before we get through we will establish it. Now I will yield to the Senator from Ohio.

Mr. POMERENE. Mr. President, I rose a moment ago to make a suggestion with reference to the fear expressed by the Senator from Nebraska [Mr. HITCHCOCK] as to the effect that the regional system we have provided for in the Owen bill might have. He stated that if in any one region there was a deficiency of currency and in another region a surplus there might be a temptation to issue new currency in the region where there was a deficiency, thereby unduly expanding the currency of the

I wish to call attention to the fact that if a member bank has occasion to go to the regional bank for the purpose of discounting commercial paper there are two methods of getting it if it is not in the vaults of the regional bank. One is that the regional bank board may go to the reserve agent, make the necessary hypothecations of commercial bills, provide the necessary gold reserve, and have reserve notes issued. That is one way to do it. But there is a further way under the Owen bill. If there is a surplus in one regional bank and a deficiency in another, it can take its bills to the bank where there is a surplus and have them rediscounted, and in that way there would be no

necessity of issuing new notes.

More than that, it must be borne in mind that over this entire scheme there presides a Federal reserve board, clothed with supervisory power over every act of the regional reserve board. I take it, if under certain circumstances the regional reserve board would be tempted to have new notes issued for a bank and that course did not meet the approval of the Federal reserve board, it would suggest to that bank there is a surplus of funds in another bank, and it could take its commercial bills there and have them rediscounted.

I think that whatever system is adopted here we must assume that both the board of directors of the regional banks and the Federal reserve board are going to exercise that sound business discretion which would be in keeping with the responsibility of

their respective positions.

A FEDERAL SYSTEM AS OPPOSED TO A REGIONAL ONE.

Mr. NEWLANDS. Mr. President, I realize the force of what the Senator says. I believe that the full powers exercised by the Federal board under the system which he advocates will do much toward compensating us for the lack of a central reservoir. But I believe that the Federal system which I suggest, which is neither the central nor the regional system, meets the requirements of the situation much more efficiently, for under it the Federal reserve board will not only have the same control over the State reserve banks that the Senator gives them over the regional banks, but it also would have the advantage of having directly within its own control a reservoir containing \$166,000,000. I think that the possession of that reservoir, the control of that reservoir, the control of that amount of money which can be used instantaneously for the relief of any State

reserve bank, would vastly increase the efficiency of the system. I think we are greatly indebted to both sections of this committee for the very thorough presentation which they have given us of all the problems that relate to the banking question. would not assume for a moment to arrogate to myself the information which they possess upon this subject. I am simply insisting that a modification such as I suggest of either one of these systems would advance the purpose which the advo-cates of those systems have in view. It is not in contradiction of those systems or antagonistic to them. It simply supple-ments them in such way as to make them more efficient.

I believe that this Federal reserve board, which, of course, would be in control of the Federal reservoir of Washington, should have the same power over the reserve banks that the pending bill gives them over the regional banks, and it should enable them to compel one reserve bank to come to the support of another where the one had an abundance and the other a deficiency. I would not take away that power. I would not substitute the control of the central reservoir for it. It is an additional power that would be of service.

I may say that this bill seems to me to have been worked out with great skill and with great scientific accuracy, and I have nothing but commendation for the work that was performed in

the presentation of all three of these measures.

Now with reference to the proposal that is before us-that is, the proposal to table the amendment offered by the Senator from Nebraska-as I understand the Senator from Nebraska, he proposes to amend the second section of the bill as it came from the House by substituting the second section of the bill which he proposes. I shall vote for the motion to lay that on the table, and I shall do it for the reason I shall state. As to section 2 I prefer the provision of the House bill to either the Owen or the Hitchcock amendment. I favor it for this reason: That whilst it does not provide for a reserve bank in each State, it does provide for at least 12 reserve banks, and does not prevent the organization of other reserve banks, nor does it prevent the board from having regard to State lines in the organization of reserve banks, for, though the bill provides that the districts provided by the House bill shall not necessarily coincide with the area of such State or States as may be wholly or in part included in any district, it does not prevent the organization of those districts with reference to State lines, and I would expect and hope that when this organization committee comes to the discharge of its duty, if it organizes 12, it will organize them in such a way as not to include in any manner a section of it in a State; for instance, that it will organize the New England States into one district, that it will organize the Pacific Coast States into one district, and that it will not cut up a State into two, three, or four sections according to what it may regard as the currents of commerce.

STATE RESERVE ASSOCIATION RATHER THAN REGIONAL ONES.

The currents of commerce have nothing whatever to do with the purposes that this bill has in view. There is no reason why

we should give this board the power to create economic sections regardless of State lines. No reason can be pointed out why they should do so. Make these zigzag lines, which are supthey should do so. Make these zigzag lines, which are supposed to embrace a particular region every part of which has an economic relation, a banking relation to every other part, and you will be confused by the character of the lines; the people will not carry them in their minds. The people now think by States and they think nationally, and you only confuse the public mind when you introduce these varying economic lines, varying always with the judgment of the particular reserve board that is in power. This bill has no relation to the currents of trade or to the currents of commerce; it has no relation to particular banking areas of influence and spheres of influence; its purpose is to have a reservoir in each State, and I trust a reservoir at Washington, in order to put out a fire wherever it occurs. When a stringency occurs in any particular region in any particular State-and it must be in a State or in one or more States or sections-it can always, through its State reserve bank, meet the difficulty.

We should encourage in the State a robust individuality that will make it the master not only of its own government, but, as far as practicable, of its own economic conditions. There is a State commerce and there is an interstate commerce. The Union of States has jurisdiction over interstate commerce and each State has jurisdiction over purely State commerce. We do not adjust that jurisdiction according to economic lines and the fancies or the imagination or the reasons of any board which may be created by law to fix arbitrarily. Every State should be complete of itself, with its own system of government, its own financial system, its own system of commerce, its own financial center—everything that relates to its industrial and productive upbuilding as well as to its government. It should be a complete unit, federated with other units in the Union of States, and not be confused in its operation by the creation of new regions or districts unknown to our Government and un-

known to our scheme of Constitution and law.

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER (Mr. Robinson in the chair). Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. I do. Mr. HITCHCOCK. I am surprised to hear the Senator from Nevada say that the currents of business and the currents of banking operations have nothing to do with the formation of this new system and that the only thing to be done is to find a method by which reserves can be impounded to be used in case

of necessity.

As the situation stands to-day, all of the banks of the country keep a part of their reserves in the reserve centers. use those reserves, or will use their balances, actively, and when a customer comes to a bank, as hundreds of them come every day, to get New York exchange or Chicago or St. Louis exchange for the purpose of paying bills or to meet obligations as they come due, the bank sells him that exchange by drawing a draft upon the reserve agent where it keeps its balance. want to ask the Senator whether he does not realize that in compelling the banks to shift their reserves to these reserve banks, to take them out of the banks which have heretofore acted as reserve agents, and put them into the reserve banks, we must not also necessarily provide that the reserves so placed in the reserve banks shall be available for the uses of business? When business men and merchants go to their bank and ask for exchange the bank must be able to draw a check or a draft upon the reserve bank, whether it be a bank in their own State or a bank covering a large area in a district. If that is true, and of course it is true, because these bills all provide that the reserve banks shall do an active business in carrying on these exchanges, that they shall re-ceive checks from all member banks and from all parts of the country, that they shall credit those checks when they are received and shall collect them, how will it be possible to disregard banking habits and banking customs? How would a reserve bank, for instance, in Nevada serve a bank in Nevada which found itself obliged to furnish New York exchange to one of its customers? Suppose a merchant in Reno, for instance, should go to a bank in Reno and ask for a draft in order that it might meet an obligation in New York, would a draft drawn by the bank in Reno upon the reserve bank in Nevada answer the purpose? I ask the Senator from Nevada that question.

PRESENT BANKING MACHINERY SHOULD BE UTILIZED.

Mr. NEWLANDS. My view, Mr. President, is that we can safely intrust the transaction of the banking business of the country to member banks; that the less we encumber the Federal reserve banks with transacting the business which is now done, and which ought to be done, by the member banks, the

more simple and efficient we shall make our entire administra-The banks of the country have already established their relations with each other; they are the growth of a gradual process of evolution; they each have their correspondent banks; they each have a portion of their cash deposited in correspondent banks, where their convenience will best be met. The only difficulty against which we are now legislating is a congestion of currency at any one point or a deficiency in the currency at any one point-a congestion caused by a panic, a deficiency caused by a panic or an excessive seasonable demand. It seems to me that all you have to do where this condition exists is to let the local reserve bank meet that condition by rediscounting the paper of any member bank that needs money instead of commercial paper, and then supplementing that by adding to the strength of the local reserve banks the strength of this great Federal reserve bank at Washington. That is all you need to meet the emergency outside of our foreign commerce; and I shall say a word with reference to foreign commerce in a moment.

I do not believe in this cumbrous system that is suggested of the reserve banks acting as a general clearing house and everything of that kind. The banks now have their machinery in the way of clearing houses, and so forth. If any State is suffering from a deficiency of money and has more commercial paper than it has money for its current demands, then it is the duty of the reserve bank to rediscount those notes and to substitute cash for them. It does not seem to me that it is any part of its duty to engage in the general functions of the banking business.

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Nebraska?

Mr. NEWLANDS. Certainly. Mr. HITCHCOCK. Mr. President, I should be disposed in theory to agree with what the Senator from Nevada says, that this legislation might better be more conservative, might better not go so far as to upset all banking conditions and to destroy the present methods of exchange, but we are not confronted by a theory, we are confronted by a condition. The administration has firmly determined to have these reserve banks perform those functions; and taking it as a necessary proposition, both wings of this committee have reported bills along that line, following in that way the bill as it came from That being the condition, it the House of Representatives. being practically settled, as I take it, whether we like it or not, that the reserve banks are to act as the great exchange buyers and sellers for their member banks, does the Senator from Nevada not see that it becomes absolutely necessary to recognize the existing channels of exchange which have grown up in the course of years in the country, and that if you make a region very small, if you confine the regional bank to a State, you dislocate that exchange, and you will have drafts on regional banks which will be, like checks upon individual banks, at a discount in another part of the country. Is not that an absolute conclusion?

Mr. NEWLANDS. I am not prepared to say that it is. I

do not believe

Mr. LIPPITT. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from Rhode Island?

Mr. NEWLANDS. I do.

Mr. LIPPITT. I see there are less than 20 Senators in the Chamber, and so I suggest the absence of a quorum.

The PRESIDING OFFICER. The Senator from Rhode Island suggests the absence of a quorum. The Secretary will

The Secretary called the roll, and the following Senators answered to their names:

Bacon Borah Brady	Hughes Jackson James	Oliver Overman Owen	Smith, Md. Smith, S. C. Smoot
Bristow	Jones	Page	Stephenson
Bryan Chilton	Kenyon Kern	Perkins Pittman	Sterling Stone
Clark, Wyo.	La Follette	Pomerene	Sutherland
Colt	Lane	Ransdell	Thompson
Cummins	Lewis	Reed	Thornton
du Pont	Lippitt	Robinson	Tillman
Gallinger	McLean	Shafroth	Townsend
Goff	Martine, N. J.	Sheppard	Vardaman
Gore	Myers	Sherman	Walsh
Gronna	Nelson	Shively	Warren
Hitchcock	Newlands	Simmons	Weeks
Hollis	Norris	Smith, Ga.	Williams

The PRESIDING OFFICER. Sixty-four Senators have an-

swered to their names. A quorum is present.

Mr. NEWLANDS. Mr. President, I was stating that I would vote for the motion of the Senator from Oklahoma [Mr. Owen] to lay the amendment of the Senator from Nebraska [Mr. Hirchcock] on the table. I shall then, if I have the oppor-

tunity, vote against the amendment proposed by the committee to section 2, for the reason that I believe that section 2 as it comes from the House is preferable to any of the amendments to the section which have been framed.

Mr. CHILTON. Mr. President-

The PRESIDING OFFICER. Does the Senator from Nevada yield to the Senator from West Virginia?

Mr. NEWLANDS. I shall only occupy a few moments more. Mr. CHILTON. I merely want to correct a misapprehension. The Senator spoke of the motion of the Senator from Oklahoma to lay the amendment of the Senafor from Nebraska on That motion was withdrawn, but the Record does not show it. It was announced by the Chair last night that that motion was withdrawn.

Mr. NEWLANDS. It will come up again-

Mr. CHILTON. I ask that the RECORD be corrected in that particular.

The PRESIDING OFFICER. The RECORD will be corrected as indicated.

JUDGMENT OF PARTY TO CONTROL FINAL VOTE.

Mr. NEWLANDS. Now, Mr. President, I stand for the provision as it left the House, and if the opportunity occurs I shall seek to amend that in the way I shall indicate. At present it reads:

Provided, That the districts shall be apportioned with due regard to the convenience and customary ccurse of business of the community and shall not necessarily coincide with the area of such State or States as may be wholly or in part included in any given district.

I should like to amend the latter portion of that so as to read as follows:

And shall as far as practicable coincide with the area of such State or States as are included in any district.

My purpose being to accomplish the organization of a reserve bank in each State, and I regard the House provision as a step in that direction. I shall also, if I have the opportunity, vote against any capital requirement above and beyond the actual deposit in the reserve banks of one-third of the reserves of the member banks, for I consider that a sufficient contribution of capital. I believe that the exaction of anything beyond that will delay the State banks and the National banks in coming into the system, and I regard it as of the highest impor-

tance that the entire system should be quickly organized.

I shall also, if the opportunity offers, vote for the transfer of one-third of the reserves held by the reserve banks to a Federal reserve organization at Washington, the deposits of which would aggregate in that way about \$166,000,000, thus adding to the reservoirs provided by these bills a Federal reservoir at Washington, from which assistance can be easily given to any one of the member reserve banks. In that way we will have the Nation acting through the Federal reservoir and the States acting through their local reservoirs, and the State reservoirs will be supplemented, according to the need of the hour, by supplies provided from the Federal reservoir.

I wish to state that I hope that this bill will be perfected by a free and full discussion regardless of party, and I believe that in the end it may be so perfected as to meet the views of both parties. If, however, there should be such a radical difference in the contending views as to require party judgment upon the matter, I will cheerfully yield to the decision of a party conference called for that purpose, but I do not believe that the majority party should come to any final conclusion regarding this bill, which as yet I regard as purely tentative, until the minority have had an opportunity to be heard and until debate upon the various subjects has been exhausted.

Mr. BORAH. Mr. President, before this amendment is disposed of, as it presents one of the controlling features of the bill, I desire to express briefly my views upon the amendment and the clause of the bill which the amendment seeks to change.

If I could bring myself to believe that the temporary benefits to be derived from the establishment of a central bank, owned and, in my judgment, controlled by the banks, would overcome the permanent evils to flow from such an act, I should not hesitate to vote for the administration bill. This is, in fact, a central bank. It is true that it does not take that name formally; but if it should prove to be efficient and workable it will be by reason of the fact that in its operations it will become more and more a central bank. If it proves a success as a banking proposition, it will come to be in all essential and vital particulars a bank-owned central bank with its several branches.

The board of Federal control and the several Federal reserve banks must ultimately come to work in harmony, and one in subordination to the other, if the plan is to work at all; and when that time shall arrive you will have, in practical operation, a central bank. In my opinion, you will not only have a central bank, but you will have a central bank dominated and directed in the matter of banking by the banks.

I have listened to the discussion of this bill on the part of its advocates, particularly by the Senator from Missouri [Mr. Reed], the Senator from New York [Mr. O'GORMAN], and the Senator from Colorado [Mr. Shafroth]. After listening to their arguments, to their explanations of the bill, its probable workings and its ultimate effect, we can come to no conclusion other than that it is regarded by its advocates as a central

bank owned by the banks of the country.

I think the argument presented by the Senator from Missouri a few days ago disclosed that in a most conclusive way and what ultimately must be the result of this law in the way of establishing a central bank. That was plainly the view also expressed by the Senator from New York upon yesterday.

I find last evening, in the discussion of the Senator from Colored IV.

Colorado [Mr. Shafroth], even a more explicit statement as to Colorado [Mr. SHAFROTH], even a more expirit statement as to that feature of the bill, when the question was squarely presented whether it was the design of the advocates of the bill to create anything other than a central bank owned by the banks of the country. The amendment which was presented by the Senator from Nebraska [Mr. HITCHCOCK] made the issue so clear and distinct that it was necessary to meet the proposition, which the Senator from Colorado did in this language:

I want to say to the Senator from Nebraska that it is nothing but human nature which prompts men to say that when our reserves and our capital are in a bank we want the control of it. I want to say that no matter how many men the Senator consulted, unless there was a fair discussion before the people and they determined to come into a system where \$400,000,000 of their money was to be controlled by appointments which might in the end drift into a political management, that can not be urged with force. \* \* \*

You might just as well tear this bill up now if you are going to insert in the bill a provision that when men put \$400,000,000 into banks, their own money, they can not control the board of directors who handle that money.

We have attempted to draw this bill upon the theory that it is a

We have attempted to draw this bill upon the theory that it is a bank of banks. We are not providing an investment for the people. The people have hundreds of opportunities to invest. We are not providing in this bill for something that will create a rate of interest for somebody.

Again, upon the following page, he says:

We have not any necessity for more people's banks, but we have a necessity for a bank of banks, for the purpose of giving discounts to banks so that they can prevent runs upon these institutions and thereby be of advantage to the people.

To say, as a matter of fact, that these banks should be people's banks it seems to me is contrary to the very principles of our bill. It is diametrically opposed to it. It is absolutely a butchery of the bill as it came from the House. You do not want to mix a bank of banks with a people's bank or a bank in which opposition or competition arises as against the other banks.

We would need no argument to show that this is a bank of banks, a central bank, owned and, in my judgment, controlled by the banks of the country other than the argument presented by the Senator from Missouri, the Senator from New York, and the Senator from Colorado; but I call attention also to a statement made by Mr. Hepburn, of New York, a noted banker of that city, in which he says:

The measure recognizes and adopts the principles of a central bank. Indeed, if it works out as the sponsors of the law hope, it will make all incorporated banks together joint owners of a central dominating

The New York Sun in an editorial upon October 29, 1913,

The \* \* \* bill really establishes a central bank system, in fact, although not in form.

I might quote other views upon this matter, but I take it that it is practically admitted-not only admitted, but one of the arguments in favor of it-that this is a central bank, a bank of banks, controlled by the banks, and that it is designed and intended to accomplish what a central bank would accomplish. can readily understand why it has taken a different form and a different name; but as a practical banking proposition, in its practical operations, in its final effect, and in its final results, if it is workable at all, it will prove to be a bank owned and bank controlled central bank.

When we come to examine the terms of the bill, we find these views fully sustained by the language of the bill itself. Take, for instance, the election of the directors. The directorship of the Federal reserve banks consists of nine members, three of whom are to be elected by the banks, and may be elected out of their own membership, as I understand. Three others are to be elected by the banks, but must be elected from certain avocaelected by the banks, but must be elected from certain avocations or certain lines of business; but they are elected by the same electorate, in the same way, and by the same power as the other three, which gives to the banks the positive and absolute control of the directorship of the bank. Indeed, it has been said here on the floor that it was one of the demands of the banks that they should have control of the directorship, and that is one of the arguments made by the Senator from Colorado

in favor of the proposition. I need not stop to argue what a tremendous advantage this gives in the matter of control, notwithstanding the power of removal. I venture to say that the power of removal will have practically no effect in the shaping of the business course, the business policies, of the banks. It can never be used effectively except for flagrant derelictions of duty-in the subtle building up of a system it will not be effectual.

Again, the stock of the Federal reserve banks can be owned only by the member banks. No one other than a bank is permitted to purchase the stock, and no one else is permitted to be an assignce of the stock. So we have, to begin with, the directorship under the complete control of the banks, and we have the stock ownership completely under the control of the banks, which places the Federal reserve banks, so far as the machinery and the management is concerned, completely and absolutely within the control of the member banks. We shall find that the real power of the entire system, the vital force which will move the entire machinery, rests at last upon and is organized around the Federal reserve banks. If we are correct, therefore-if, indeed, the friends of the measure are correct in saying this is a central bank-then we are correct in the conclusion that it is a privately owned and controlled central bank.

Mr. President, after we have disposed of the directorship and the stock ownership, an important question arises, and that is, Who is to issue this currency or to have the initiative with reference to its issuance?

It has been said that this is, in a measure, taking over the control of the currency of the country into the hands of the Government, but when we understand that the Federal reserve banks are in complete control as to directorships and as to stock ownership of the banks we have gone only a part of the way in determining their power and their influence over the entire currency of the country, because upon the initiative of these banks alone can this currency be put into circulation. The Government technically attaches its signature to the currency and technically issues the currency, but it has no initiative with reference to its issuance nor power, in my opinion, as a practical proposition, to prevent its contraction. the move of these Federal reserve banks, the stock of which is owned exclusively by the banks who have a majority of the directorship, is this currency to be put into circulation. True, the Government can negative, but it can not initiate or do anything affirmatively. It must wait until the banks see fit to put up the collateral, and when the banks cease to put up collateral it must stand by powerless and witness contraction.

I do not profess to be a financier; I do not profess to speak at all as an expert upon these subjects; but one who will study this bill from a lawyer's standpoint and undertake to locate the power and initiative of those who must act, either jointly or separately, with reference to the issuance of cur-rency, will have no trouble, in my judgment, in arriving at the conclusion that this bill will enable the banks of the country to inflate or contract the currency at will.

Speaking for myself, I do not believe that is a power which should be delegated to corporations or to private institutions. It is the business of the Government to provide a sound and sufficient volume of currency and money upon which to do the business of the country. It is a governmental power. It is one of the functions of sovereignty. The Government should exercise that power itself and not depend upon the initiative of private institutions.

I shall be glad to be told, if I am in error, by those who understand the subject of finance and currency from an expert or a banking standpoint; I shall be glad to be informed how and wherein the Government in this instance can exercise any power, except in one respect, and that is a negative power.

No money can be issued, no currency can be provided, unless the banks of the country say that they desire it. If \$300,000,000 of currency is put up, it is within the power of the banks to cease to put up their collateral, and then you must commence to collect the money with which to pay for the collateral that is up. Contraction immediately begins, and it is not within the power of the Government to prevent it.

This, sir, seems to me a tremendous power. When we con-template how such power fattens by what it feeds upon, it seems to me a fearful power. It congregates and assembles the whole money power of this country, the power which is to direct and control the currency and the credits of the country, and thereby the business and the wage of the country, and when assembled it turns it over in all substantial things to private interests. It delegates or delivers over to private corporations and to private interests thus assembled and combined the most potential instrumentality of commerce. It takes from the people a sovereign right and parcels it out to those whose prime interest must be that of gain, and, not satisfied with giving over to private interest the sole use and monopoly of currency and credits, it gives them the astounding privilege to say how much we shall have or how much we shall not have. When you consider how rapidly small things of this kind, small beginnings in the way of special privilege, grow into dominating forces, this seems to me a step that we must inevitably and sorely regret.

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER (Mr. Robinson in the chair). Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. BORAH.

Mr. BORAH. I do. Mr. HITCHCOCK. Is the Senator referring to both drafts of the bill as presented here by the Banking and Currency Committee?

Mr. BORAH. I am referring to what is called the Owen

bill, the administration bill, at present.

There has been a great deal said of late years as to the conduct of the banks in the business world. I am not one who believes in attacking indiscriminately and without sufficient foundation a large class of people, many of whom are among our best people and best citizens. We all know, however—we can not shut our eyes to the fact—that there are large banking institutions in this country which do not confine themselves to banking; in other words, they do not follow a legitimate line of banking. They enter into all kinds of speculation and promotion, the direction and control of business matters, and through their influence in the banking world direct matters upon the outside, wholly disconnected from banking.

I read here a statement which was published over the signature of the senior Senator from Wisconsin [Mr. LA FOLLETTE],

in his periodical, in which he says:

On the 13th of December, 1911, speaking at a bankers' banquet in Chicago—

Mentioning a prominent banker—this banker said:

"I believe the money power now lies in the hands of a dozen men. I plead guilty to being one, in the last analysis, of those men."

The same distinguished citizen, so influential and prominent in the banking world and a man of acknowledged great ability, speaking of this Federal directorship, said:

Speaking of this Federal directorship, said:

It is provided that each of these Federal reserve banks shall have nine directors, three of whom shall be elected by the member banks from bankers in the district, and three by the member banks from among the business men of the district who are not bankers, and who shall fairly represent the agricultural, commercial, and industrial interests of that section. Three additional are to be selected by the Federal reserve board at Washington, one of whom shall be designated by that board as Federal reserve agent and who shall have an office in the premises of the Federal reserve bank and be the chairman of its board of directors. The board thus constituted shall have the right to elect its own officers and manage its own business, subject to such supervision and control of the Federal reserve board as has been provided. So far as I can see, this is satisfactory, except that I think the Federal reserve agent, who it is provided will represent the Government on the board, should not be its chairman, even though, as I understand from the authors of the bill, this is meant to be only an honorary position, and it is not intended he should have anything to do with managing the business than his influence as one director would give him.

Mr. President, I would not lead any attack upon the bankers as such. They are just as good and no better, just as bad and no worse than the common run of mankind. They are a capable, vigilant, and most worthy class of people as a whole. I am not able, however, to bring myself to believe that it is a wise thing to establish in this country a power to control our currency and turn that power over to any class of men. Such a power should not be delegated, and especially it should not be delegated to so small and so powerful a class as has just been described by this able and farseeing financier. I do not care how high their standing or their character may be, such power is not to be delegated by a sovereign government to private corporations or to individuals. We have wandered far from the teachings of our fathers—that the duty of providing the currency of the country and regulating and controlling it belongs to the Government, and not to private individuals or to corporations.

In the investigation which was being carried forward a few days in the city of St. Louis with reference to the affairs of the 'Frisco road, it is said—this is taken from the testimony:

"Have the Frisco and the Chicago & Eastern Illinois not suffered by their relations with bankers?" asked Mr. Brown.

"Well, the bankers paid all they could afford to for the securities," said Mr. Yoakum.

said Mr. Yoakum.

"Could you have obtained higher prices from other bankers?"

"I don't know. We were not in a position to go to cutside bankers."

"Why not?"

"The system of banking looks to the directing influence of the railroads in making investments, and it is customary for a railroad corporation to stay as near the bankers interested as possible."

That was a polite and a courteous way of admitting a very far-reaching truth.

Mr. President, this bill, as it comes to the Senate, bearing the name of the distinguished Senator from Oklahoma, and the amendment which is proposed, present clearly and fairly to this body the question whether we are in favor of giving over to the Government the directorship of the Federal bank or leaving it in the hands of those whose prime interest must be that of personal gain. The issue is clearly presented. We can not dodge it. We can not evade it. We must meet it in this amenddodge it. We can not evade it. We must meet it in this amendment. To my way of thinking there can be no sound reason against Government control of the directorship, whatever may which reaches into a differbe said as to the stock ownership, which reaches into a different field of finance.

The question of control of the directorship, standing by itself, ought to be resolved in favor of the Government. There may be arguments as to the stock ownership which do not apply to this; but as to the control of these fountain sources of power under this great measure, it should be in the Government of the

United States alone

If, in this country, we have reached the time when the banks may say to us, "You must have this system or have none," almost time that the Senate of the United States shall say, "We will not conform to the business demands of the country, but the business demands of the country shall conform to the best interests of the Government." I shall show in a few moments by a brief reference to the German system that a government control may be in perfect accord with sound finance and safe banking.

Mr. BRISTOW. Mr. President-

The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Kansas?

Mr. BORAH. I do.
Mr. BRISTOW. I was interested in the quotation which the Senator read. If I remember rightly, that was a declaration by the president of the largest bank in Chicago; and he stated that 12 men, of whom he was one, controlled or could control the

finances of the country.

Mr. BORAH. Yes; I read that.

Mr. BRISTOW. He also stated that the method of selecting the directors of the regional national banks as provided in the Owen bill was entirely satisfactory to him.

Mr. BORAH. Yes; I read that, also.

Mr. BRISTOW. Does not the Senator think that is conclusive evidence that the position taken last night by the Senator from Colorado [Mr. SHAFROTH] and the Senator from Oklahoma [Mr. Owen] is in exact accord with that of the great financiers who say they now control the finances of the United

Mr. BORAH. Mr. President, as I said a moment ago, the Senator from Colorado, who is always frank and perfectly candid, stated without hesitation that this was designed to be a bank-controlled directorship; that the banks required that as a prerequisite of coming into the system; and as I understand, the distinguished Senator, having taken that position, goes further and says that in order to make the system a workable one it is necessary to satisfy the banks upon this matter and give them this power and this control.

Mr. SHAFROTH. Subject to the checks which we have upon it in the Federal reserve board, and the power to remove the three directors named by the banks who represent industry,

agriculture, and commerce. Mr. BORAH. Precisely.

Mr. SHAFROTH. My position was further to the effect that we would have no system at all otherwise, because the banks would not come into it if they did not have a majority of the directorate of the Federal reserve bank.

Mr. BORAH. That was the position I understood the Senator from Colorado to take.

I want to read, in this connection, a declaration by Mr. Webster, made in 1840. I shall have occasion in connection with another feature of the bill to quote more fully from Mr. Webster; but I wish now to read from his speech in Wall Street in 1840 upon this particular subject. He says:

In the next place, I hold that the regulation of the currency, whether metallic or paper—that a just and safe supervision over that which virtually performs the office of money and constitutes the medium of exchange, whatever it may be—necessarily pertains to government; that it is one of the necessary and indispensable prerogatives of government.

I ought not to have very much trouble in impressing that upon the mind of the majority members of this body. That question would be expected to meet with more opposition upon my side of the Chamber than upon theirs. But at the present time, under the tremendous influence and the immeasurable momentum with which we are moving along certain lines in these affairs, both parties in this Chamber are yielding to the proposition of the private control of that which belongs alone

to the sovereign power of the Government. We are giving over to private corporations powers which the Government alone should exercise

Again, Mr. Webster said in the same speech:

Again, Mr. Webster said in the same speech:

Hence it is true that, in the absence of all Government control and supervision, the wisdom and discretion regulating the amount of money, afloat at any time in the community are but the aggregate of the wisdom and discretion of all the banks collectively considered, each individual bank acting from the promptings of its own interest without concert with others and not from any sense of public duty. In my judgment such a regulator or such a mode of regulating the currency and of deciding what shall be the amount of money at any time existing in the community is unsafe and untrustworthy and is one to which we never can look to guard us against those excessive expansions and contractions which have produced such injurious consequences. Hence arises my view of the duty of the Government to take the care and control of the issues of these local institutions, and thereby to guard the community against the evils of an excessive circulation.

Mr SHIVELY Mr Prosident

Mr SHIVELY. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Indiana?

Mr. BORAH. I do. Mr. SHIVELY. The last excerpt which the Senator read was also from Mr. Webster?

Mr. BORAH. Yes, sir.
Mr. SHIVELY. And delivered in 1840?
Mr. BORAH. Yes, sir.
Mr. SHIVELY. I think Mr. Webster at that time occupied a position in favor of the old national bank as against the State banks; and was he not directing himself to a defense of a

central national bank?

Mr. BORAH. Mr. Webster, as it is known, had in previous years prior to 1840 advocated the extension of the charter of the Second Bank of the United States. Mr. Webster was undoubtedly a believer in the extension of that charter. But no one can come to any other conclusion, after a full examination of Mr. Webster's views upon this subject, than that he believed that the real vice of the Second Bank of the United States was that it was not sufficiently under public control; that while it was the best that that emergency would permit them to enjoyin other words, while he was not in favor of its destruction—in all his arguments in favor of the bank he urged more and more the complete regulation and control not only of our metallic money but of our paper money by the Government. Nowhere does he state that the vice of the Second Bank of the United States was that of too much of private control, but all in all his logic would lead to complete Government control. I can come to no other conclusion, after examining the speeches and in the light of the debate, that if Mr. Webster had lived at this time the logic of his position would drive him to a bank completely controlled by the Government, not only with reference to metallic money, but he would go further and he would make paper money issued by the bank equal in all respects as to money power to the metallic money which is its redeemer.

Mr. SHIVELY. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho

yield further to the Senator from Indiana?

Mr. BORAH. I yield. Mr. SHIVELY. Was there ever any serious question at that or any other time about its being the exclusive function of the Federal Government to control in the matter of metallic money? Was not the issue on a paper-money question?

Very largely so. Mr. BORAH.

Mr. SHIVELY. I do not recall any instances in which a public man argued seriously against the Government having full and complete control of the coinage and regulation of the metallic money. As I recall that long dispute, it was a contrometallic money. As I recall that long dispute, it was a controversy between those who believed in a national bank with cersupervisory power exercised by the Federal Government and those who were opposed to any such an institution.

Mr. BORAH. In what the Senator has said, is it presented

as a question or as a distinct statement?

Mr. SHIVELY. I presented the question whether, in the Senator's opinion, Mr. Webster's position had anything to do with the control of the metallic-money supply? While the question of metallic money was incidentally mentioned by him in his speech, I do not think there was any point of controversy on the question.

Mr. BORAH. I think the Senator is largely correct, which, to my mind, makes this provision here all the more conclusive along the line which I am seeking to direct the attention of the

Senate, because Mr. Webster was careful to say:

In the next place, I hold that the regulation of the currency, whether metallic or paper-

That is, whether coin or whether it is mere currency redeem-

may be, necessarily pertains to government; that it is one of the necessary and indispensable prerogatives of government.

It will be seen how far-reaching and how specific this statement is when analyzed. He goes so far as to say that the regulation and control of that which performs the office of money is an indispensable prerogative of government-an indispensable prerogative.

A stronger statement. This speech was made in Wall Street by Mr. Webster, was made under very extraordinary circumstances, and was perhaps the most explicit and advanced statement of his views on currency that he ever made. It is well worth the perusal of those who have become the devotees of

corporation issued and controlled currency.

Mr. SHIVELY. Did Mr. Webster go so far as to insist on a Government owned and controlled bank or simply a Government-

controlled bank?

Mr. BORAH. He did not in specific terms, as I remember, refer to a Government-owned bank, but what he was undertaking to show was the necessity of the Government in its way, whatever that might be, controlling the volume of the currency of the country

Mr. SHIVELY. I understand that to have been his position

in that speech.

Mr. BORAH. And depriving the private institutions of the power to inflate or to contract the currency. In other words, he looked upon banking and currency as separate and distinct affairs and belonging to separate and distinct fields of activity; that so far as building up individual credit was concerned it was the business of the individual or bank. He believed it the duty of the Government to furnish a sound volume of money and currency with which to do the business of the country, and then it was the business of the individual or the private corporation to build up his or its own credit. That was the view of Mr. Webster. I say this notwithstanding he argued for the extension of the charter of the second Bank of the United States. But his views went far beyond the provision of that charter in the matter of Government control.

So in this instance we are doing one of two things; we are either issuing this currency, and if so we should have the sole and absolute control of it, or else we are loaning the credit of the Government to private individuals and to private corpora-

tions to enable them to build up their credit.

Mr. SHIVELY. Mr. Webster's contention centered around the idea that the issue function is a distinctly governmental function as distinguished from a banking function.

Mr. BORAH. That was Mr. Webster's view?
Mr. SHIVELY. Yes.
Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield to the Senator from Nebraska?

Mr. BORAH. I yield.

Mr. HITCHCOCK. I understand the Senator from Idaho takes the position that under the bill reported by the Senator from Oklahoma [Mr. Owen] the regional reserve bank will be controlled by the banking interests and that so controlled it will practically have the power, under the terms of the Owen bill, to restrict or expand at will the currency provided for in the

Now, that vice does not belong to the bill which I had the honor to report. The Senator from Idaho is correct when he states that the Democratic Party is committed against the doctrine of permitting a bank or any other organization controlled by banks or private individuals to have the power to control the volume of the currency.

The Democratic platform of 1908 contained this clause:

We believe that in so far as the needs of commerce require an emergency currency, such currency should be issued and controlled by the Federal Government, and loaned on adequate security to National and State banks.

Under the terms of the Owen bill it will be issued by the Government, but it will be controlled by the five out of the nine members of the regional board of directors.

Mr. SHAFROTH. Mr. President, will the Senator from Idaho yield to me to make an observation?

Mr. BORAH. I yield.

Mr. SHAFROTH. The Owen bill does not give the power to bankers to contract the currency. It gives the power to bankers, subject to the control of the Federal reserve board, to expand the currency. But the bill of the Senator from Nebraska provides for an absolute retirement of the national-bank notes without providing any permanent currency in their place. Not only that, but the bill of the Senator from Nebraska gives no discretion in either the issuing of notes or the discounting of paper, whereas it is left to the Federal reserve board under the that a just and safe supervision over that which virtually performs the paper, whereas it is left to the Federal reserve board under the office of money and constitutes the medium of exchange, whatever it owen bill. So, if you take the question of expansion or contraction, the theory of the Senator's own bill is that bank after bank can come up, no matter what it is, and have its paper discounted and, within limits, of course, withdraw it. According to the Owen bill they can not contract the present amount of currency, but under the Hitchcock bill they can contract it.

Mr. HITCHCOCK. Mr. President-

The PRESIDING OFFICER. Does the Senator from Idaho yield further to the Senator from Nebraska?

Mr. BORAH.

Mr. BORAH. I yield. Mr. HITCHCOCK. The Senator from Colorado is mistaken; and he is also mistaken when he assumes that the Democratic Party is in favor of maintaining the present national-bank currency. The Democratic platform of the year 1900 contained this provision:

A permanent national-bank currency, secured by Government bonds, must have a permanent debt to rest upon; and if the bank currency is to increase, the debt must also increase. The Republican currency scheme is therefore a scheme for fastening upon the taxpayers a perpetual and growing debt.

The policy of the Democratic Party has been against this national-bank currency, and in providing for its retirement the section of the committee which I represent has not only conformed to good financial teaching but it has conformed to the teaching of the Democratic Party as expressed in its

Now, the Senator from Colorado is not correct when he states that no provision is made in this bill for supplying the currency needed to take the place of this other currency, because the bill specifically provides that every one of the thousands of banks joining this system shall have the privilege, as a matter of right, to secure rediscounts for its paper at the regional reserve bank, and no option is left in the board of directors to grant those discounts. Furthermore, no option is left in the board of control at Washington to grant the currency which the regional reserve bank may call for in order to meet the demands of the regional reserve bank.

Furthermore, it is especially provided in the bill that when the reserve banks buy the 2 per cent bonds now belonging to the national banks, serving as a basis for currency, they can use those bonds as the basis for securing currency from the Treasury or they can present them at the Treasury and secure 3 per cent gold notes, and they can use those gold notes as a

basis for securing currency.

Mr. SHAFROTH. Oh, yes; but that is all discretionary. Our bill provides that whenever you retire national-bank notes you shall reissue a note in its place. While it may be that your currency will fill the vacuum that would exist by retiring circulation, yet, as a matter of fact, we do not know whether this 30, 60, 90, and 100 day paper will maintain a currency sufficient to keep that. For that reason it seems to me our plan is safer.

Now, I will say that I am not in love with the national-bank currency, but I prefer the national-bank currency to no currency at all. It is infinitely better than none.

Mr. HITCHCOCK. The Senator is entirely mistaken in saying that it is discretionary. There is no discretion in the directors of the reserve board as to meeting the demands of the thousands of banks who serve the public. They must be met; the paper must be discounted; and if the reserve bank lacks the cash with which to discount it, it must apply to the Federal board, and the Federal board must issue the currency. is no discretion

Mr. SHAFROTH. I was referring to the one-year 3 per cent note as the basis of circulation. That is entirely discretionary. There is no doubt about that. As to the other point, my contention has been, and it is in accord with the testimony of a number of witnesses who appeared before us, that there would not be a sufficient quantity of this 30, 60, and 90 day paper to take the place of national-bank notes. It seems to me from the statement made by the Senator from Massachusetts-and it was a provision which he boasted of—that there would be a re-tirement of \$50,000,000 every year of the national-bank notes.

Mr. HITCHCOCK. The Senator states that there may not be enough 30, 60, and 90 day paper. Why has he put in his bill a provision that six months paper should be used? He knows that in a large part of the country the banks deal in little else than six months paper. He has made no provision whatever for them to get this currency or secure any of these discounts. He knows that the agricultural processes of the West and South make it necessary for borrowers to borrow on six months paper. He knows that when they borrow for six months the paper which they give is just as commercial, just as legitimate and liquidates itself automatically just as securely as the 60 or 90 day paper in the manufacturing or mercantile regions of the

East. Yet the bill makes no provision whatever for that great mass of paper in those thousands of banks.

Mr. SHAFROTH. Mr. President—
The PRESIDING OFFICER. Does the Senator from Idaho yield further to the Senator from Colorado?

Mr. BORAH. I yield.

Mr. SHAFROTH. The length of the date of the paper that can be discounted involves an entirely different question. The one thing that the banks have recognized is that they must have short-time paper. The Bank of England does not take any paper in excess of 28 days. The Aldrich bill provided for not exceeding 28 days. Every one of the banks of Europe provides for short-time paper. Such a thing as 180-day paper, except in relation to foreign drafts, is unknown in the banks of the world with relation to discount. It is not on the ground that it is not safe. Mortgages are perfectly safe. It is upon the ground that a bank must stand ready to cash drafts, to rediscount paper; that it must have the money ready and must come in readily and exactly on time.

There is not any question but that the paper of Woodward & Lothrop down here, if they gave a promissory note for 30 or 60 days, is as good paper as you could get in the world. Yet you could not discount that paper under this bill, and the reason why you could not is that this must represent a transaction in commerce. It means that if Woodward & Lothrop buy goods and give a draft in payment, that becomes a subject of discount, but if they give a note simply for adding to their already large building it can not be discounted. The experience of the banks of Europe has demonstrated that the one paper which never fails is the paper representing a transaction in commerce and

which is limited to a short period of time.

Mr. BORAH. Mr. President, I do not desire to lead the Senate back into ancient history for any considerable length of time, and I shall not; but I remind my colleagues and associates that we have tried in this country several times this bankers' bank, a central bank privately owned, privately controlled. Every time that we have tried it the bank itself, as a business proposition, as a banking proposition, has been efficient and successful, but the people of the United States, notwithstanding that these institutions have been efficient and successful of themselves as banking institutions, have invariably torn them down and cast them aside, because they were in contravention of what they believed to be fundamental principles of our Government; that it gave a concentration of power or a centralization of power which was calculated to intrude and always did intrude upon the real powers and functions of the Government, and ultimately seeking to control the Government both politically and financially.

The Bank of North America which was organized in 1781 as the result of the advice of Mr. Morris, the patriot financier of the Revolution. It was in many respects a most eminent success. At the time that the charter was granted we were practically bankrupt. We were unable to feed and clothe our soldiers; the soldiers were in mutiny; our lotteries and our loans had been exhausted; and it was a serious question whether we could maintain the victories which our soldiers were winning upon the field by reason of our breakdown in

a financial and business way.

This bank was organized. It gave us a stable and uniform currency. It enabled us practically to maintain that which our soldiers had won. Mr. Wilson, afterwards Associate Justice of the Supreme Court of the United States, said that it was the source and parent of our credit; that as such it was hated by

the enemies of America and loved by her friends.

Yet, Mr. President, notwithstanding the patriotic environments which surrounded the organization of that bank and the great service which it performed for the American people, within the short period of four years it was challenged by reason of its activity in politics, because it had a tendency to establish classes in this country, because it was monarchical in its nature, and such a war of pamphlets and such a debate ensued that within four years after the bank was organized its charter was repealed by the Congress of the United States. Why? It certainly was not by reason of its failure as a financial institution. It was not, certainly, by reason of its having failed to do that which its authors claimed it would do; but the people were opposed to that form of banking which enabled the banks of the country or the moneyed interest to control the money and the currency of the country.

The first Bank of the United States, as we all know, was organized as the result of the advice of the most remarkable genius, in my judgment, who ever dealt with the science of government, and that was Mr. Hamilton. It was a success from the hour it was organized. It paid 9 per cent of dividends from the day of its organization. Six hundred and seventy-one

thousand dollars was distributed to the Government alone as a result of the increase of value upon the Government's stock. Mr. Gallatin, Mr. Jefferson's Secretary of the Treasury, earnestly recommended the extension of its charter. It was in every sense a success as a banking institution. But so strong became the public sentiment against that institution, and its very success fed the opposition, that even such men as Mr. Clay and that class of men denounced it as inimical and unfriendly to republican institutions. It was refused its charter, not because it was a failure as a business and banking proposition, not because it had failed both to establish a uniform currency and bring us out of the quagmire of repudiation, but because the people looked upon it as unfriendly to our system of government, and it had to go.

As a result of its going we again suffered financial distress, almost universal bankruptcy, until the second Bank of the United States was established. The second Bank of the United States, when it was established, was provided with a board of directors of 25 men. The Government appointed 5; the stockholders, if I remember correctly, appointed 20. The Government had an interest in that bank. The first president of the bank, a Mr. Jones, was elected as the result of the activities of Mr. Madison and his Secretary of the Treasury, Mr. Dallas. From the hour, Mr. President, that that bank was organized it went into politics. It could not stay out of politics. They would not permit it to stay out of politics. It was a political institution from the hour it was organized until its demise.

It is a notorious fact, however, that as a business proposi-tion it was a success. It established a uniform currency. It did that which the Government could not do, it succeeded in restoring specie payments. In all the reports made by it in the later years of its life the business feature of it was a conceded proposition. Nevertheless, it was drawn so close to the Government that it became a question whether the Government would control the bank or the bank control the Government, and the impartial investigator of history will have to conclude that the bank got considerably the best of it. It advanced the salaries of Congressmen. Mr. Jones himself, the president, accepted \$1,800 as part of the profits on the speculation of the stock. Baltimore and Philadelphia became centers of corruption, both politically and financially, because of the conduct of the bank. Editors were purchased or large loans made to their papers, and they changed their views on politics as soon as the loan was made. More than one newspaper, when the investigation came, was found to have large overdrafts or mortgages with the banks. It was found that their views with reference to the extension of the charter and such things changed about the time the loan was made. In more ways than one the bank became active in politics.

I think the destruction of the second Bank of the United States, judged alone by the rules of business and economics, might be set down as a mistake. Business disaster, almost universal bankruptcy, suicide, and crime followed in the wake of its ruin. But judged in the light of the larger question of the ultimate interests and final success of free government, it was a wise and patriotic thing to do. There must always be in this country something more important than the mere question of business success. Whatever question there may be as to the method of its taking off, its taking off was necessary. The time was fast approaching when its great power, ramifying with its branches the whole country, was to dominate the affairs of the Republic, political as well as financial. Its impudent exertion of power was no less effective because subtle and silent and accompanied by delly discayonels.

silent and accompanied by daily disavowals. The commanding figure of this bank war, as we all know, was Andrew Jackson. Men still dispute his claim to statesmanship, but no one has ever doubted his patriotism. On the roll of those into whose every fiber, moral and intellectual, has entered that passion for country, which passes all other ties and obligations, his name by common consent is placed among the foremost. He was also democratic. He professed the faith, which is a common thing; he lived up to the faith, which is an uncommon thing. With an intuition amounting almost to inspiration he divined the forces which were at war with democratic institutions, and with a courage equal to the courage which he placed against the aggressions of a foreign foe he gave them battle. It never occurred to him to measure the injury to the passing hour any more than it occurred to him as he stood with his untrained frontiersmen waiting for the approach of the regulars to estimate the dead and wounded which might be found after the fight. He was convinced, intuitively convinced, that this miscegenation of government and monopoly was fostering a condition at enmity with the true interests of the Republic, and he counted not the cost which his countrymen might have to pay to be rid of it. Others might have pro-

ceeded with more wisdom as to methods, but none there was whose judgment was so accurate and reliable as to the necessity of action. And to this day, distressing as were the conditions which followed, universal as was the suffering which ensued, the people still range themselves on the side of Jackson and declare he was right—that the suffering was but an incident to a great contest for a great principle and a right theory of government. We will do well to consider this feeling so prevalent among our people, and justly so, in formulating a credit and currency system in the midst of these tremendous tendencies toward centralization and monopoly.

If the banks of the United States are able to say, "You shall have no system unless it is such a system as we will dictate," it is time for us to say, as Jackson said, "We will not estimate the cost which is necessary to establish a proper system." Give the Government control. Whatever else we do, let us not trifle with semipublic control; we should make it as complete as possible.

Mr. President, I shall vote for the Hitchcock amendment because it is a step substantially in the direction of absolute Government control. I should very much prefer to vote for a proposition which would establish a Government bank, under the absolute control of the Government. If I had my way about it, all currency would be issued through a Government bank. The private banks, under proper regulation, might establish their credit system, but they should not provide or put into existence the currency of the country. I would treat the currency question wholly apart from the banking question. In my judgment, the giving of this board of directors over to the Government is a substantial step in the direction of complete Government control.

Mr. President, I shall detain the Senate only a few moments longer; but I wish to briefly outline what I understand to be the German system of banking and currency. Germany had very much the same question to deal with which we have; she had the same diversified interests, the different banks—31 issuing banks—different States, with their different currency systems; and it took Germany five years to draw them into one uniform system, over which presides the great Reichsbank of Germany.

When the German Empire was formed its greatest problem was the establishing of a Federal banking and currency system—she had proceeded far in her commercial union, but her monetary affairs were different and most embarrassing.

She had a different coinage system in at least seven of her different States—also all the German States save one were on a silver standard. She had on hand a vast amount of paper money, both Government and bank notes. The State banks, which were private concerns mostly, were issuing notes. Before the foundation of the Empire there were 31 banks of issue.

The North German Confederation of July, 1867, and later the constitution of the German Empire of 1871 gave the confederation, and afterwards the Empire, the regulation of coinage, weights, and measures and the emission of funded and unfunded paper money, also the general regulation of banking.

Immediately after the peace with France the Imperial Government took up in earnest the money question and the subject of the mint in 1871. The coinage or mint act was not finally signed until July 9, 1873. This law established the gold standard.

In July, 1873, the Reichstag passed a law providing that paper money issued by the various Federal States should be withdrawn by not later than January 1, 1876, and replaced by imperial paper money.

April 30, 1874, the act concerning the imperial paper money was passed. It replaced all State paper and provided for a uniform imperial paper money.

As the individual banks of issue had all been private institutions, the subject of vested interests became the important question. The conviction finally gained ground that there had to be a central power, a central bank which would exercise a dominant influence over the diversified monetary institutions. They had in Prussia already a central bank which had exercised this directing influence to some extent, so they set about to transform the Prussian bank into a Reichsbank to act for all Germany.

In 1874 a bill was laid before the Bundesrath which abandoned for the time being the establishment of a Reichsbank and was content with simply formulating the general principles for the regulation of existing banks of issue. When the bill went to the Reichstag it was determined to consider first a central bank. On certain terms Prussia finally ceded to the Empire the Prussian bank. The act creating the Reichsbank was published March 4, 1875. The fundamental principles of the bank (a) the right of issuing notes through imperial law; (b) notes now

legal tender-a subject which I propose to discuss later; (c) circulation of foreign bank notes based on the standard of the Empire prohibited; (d) bank notes to be issued in denominations of 20, 50, 100, 200, 500, 1,000, and multiples of 1,000 marks; (e) bank pledged to redeem notes at all times full value; (f) issuing banks not allowed to accept bills; (g) must publish assets and liabilities four times a month; (h) limit of issue in excess of 5 per cent taxed; (1) reserve must be German coin, imperial treasury notes, notes of other German banks, gold bullion, or foreign coin; (j) Empire did not invest in the stock; stock owned by private individuals; (k) the officers of the bank can not own any shares in the bank; (l) the accounts are audited by a board of accountants of the Empire; (m) shareholders have little to do with the management except in the way of expert advice; they exercise their authority through a general meeting or selected committee; (n) the Reichsbank can not establish branches; (o) the Government shares a certain por-tion of the profits of the business; (p) bank limited to the kinds of business it may do.

At the head of the bank stands the chancellor of the Empire, who directs the whole management under and in accordance with the bank act. The directorate, according to law, must obey his orders. He is president of the curatorium, which supervises the Reichsbank on behalf of the Empire.

The directorium is the managing and executive body. Its members are official representatives of the bank. It is the central managing body of the bank, although it may check up higher offices. The directorium is a board with a president and vice president and six other members. President and members appointed for life, appointed by the Emperor after nomination by the Bundesrath. The bank has power to establish branches and has what is called main branches and subordinate branches. These branches are ultimately wholly under the supervision and control of the Reichsbank. The main branches are established only in the main places or cities. The Reichsbank may establish branches of its own motion or it may be ordered to do so by the Bundesrath.

The economic importance of the Reichsbank depends on its right to issue notes. This right enables the bank to adapt within certain limits the monetary circulation to fluctuating de-mands for money. It constitutes the bank of final resource of money in the Empire. Notes of the bank were made legal tender by act of June 1, 1909. The bank must have for onethird of the notes issued gold imperial treasury notes, bullion, or foreign coin in its vault. If the bank issues notes above a stated amount, it pays 5 per cent to the imperial treasury from the notes overissued. The note circulation in excess of cash reserves must be covered by discounted bills maturing in at least three months, upon which there are two or three parties liable. Every bank is bound to accept its own notes for payment at full face value at head office or branches. Notes were first issued for amounts of 100, 200, 500, or 1,000 or a multiple of 1,000 marks, but by the act of February 20, 1906, denominations of 20 and 50 marks are now allowed. The notes of the bank have increased rapidly—1876, 684,900,000; 1899, 1,141,800,000 marks.

As I have said, notes were first issued for certain amounts, but the law has been since changed, allowing larger denomina-

tions.

At least one-third of the notes issued must be covered by coin, imperial treasury notes or bullion, and if the limit of issue in excess of cash holdings is exhausted a 5 per cent tax is levied to the benefit of the national treasury.

The regulation that metal and imperial treasury notes equal at least one-third of the notes in circulation is absolute.

The Reichsbank must publish its current rate of discount, The central committee must be consulted regarding the discount rate to be fixed by the Reichsbank directorate.

Bills purchased must have at least two unconditional guar-

antors who do not belong to the same business.

The bank endeavors to require that a bill in the moment of its formation starts from a completed transfer of property be-tween the parties liable on it and when paid will balance the transfer.

A high discount rate is calculated to attract gold from abroad and to prevent a flow of gold to other countries, because it offers a favorable opportunity for investment of international capital.

The Imperial Bank is owned wholly by private shareholders, but is under the exclusive control of the Government.

The bank is allowed to fix the amount of uncovered notes. For all above that sum it must have in its reserves an equal amount of cash; but this is not inflexible, for the bank upon paying 5 per cent tax may issue uncovered notes in excess of the prescribed limits, but its reserves must never fall at any time to less than one-third of its outstanding circulation.

Mr. President, we see from this plan how Germany solved her financial problem, which was as difficult, certainly. as the one with which we have to deal. She has done so by establishing a Government-controlled bank, in which the stock is owned by her private citizens, the success of which, prehend, will not be questioned by anyone familiar with the financial history of that country for the last 20 years. If, as I said a moment ago, I could have my way, I should be glad to vote for a Government bank which would be completely controlled by the Government and the stock thereof owned by private individuals. I am not likely to have that opportunity and shall therefore vote for such amendments as lead in that direction. I believe the time is near at hand, however, when we will establish a bank controlled by the Government and owned by the people. Such a plan would not destroy our free banking system, but it would enable the Government to perform its functions in the matter of currency and banking.

Mr. STONE. Mr. President, I hold in my hand a clipping from the New York World of date December 7, which I wish

The VICE PRESIDENT. Is there any objection? The Chair hears none, and the Secretary will read as requested.

The Secretary read as follows:

hears none, and the Secretary will read as requested.

The Secretary read as follows:

WASHINGTON, December 7, 1913.

The fight which the National City Bank of New York has been waging on the Treasury Department and the administration since President Wilson entered the White House on March 4 reached a climax to-day when Secretary of the Treasury McAdoo served notice on Militon E. Alles, the Washington representative of the Wall Street bankers, that he and his employers must change their tactics in some respects or there will be an accounting.

The Immediate cause of the situation arose from the culmination of the skirmish between the local financial interests which resulted in the absorption of the United States Trust Co. by the Munsey Trust Co. last week. But a long series of circumstances which have been occurring with remarkable regularity since last March is behind the situation. The administration has had circumstantial evidence tending to support the bellef that the National City Bank has inspired much of the criticism against the Treasury Department for the purpose of discrediting its activities. The reasons given for the attitude of the New Yorkers have been twofold—first, a well-defined determination to defeat the passage of the banking and currency bill, and, secondly, resentment at having had an end put to the preferential treatment which it has reveited at the Treasury Department during the last 16 years.

Just as soon as Mr. McAdoo came to Washington a woman whom the National City Bank had instabled in the Treasury Department to get advance information on the conditions of banks and other matters of interest to the big Wall Street group was removed. Immediately the Secretary and Assistant Secretary, John Skelton Williams. It is alleged that many of these rumors have been traced to the doors of the Riggs Bank or the American Seurity & Trust Co., one of the local affiliates.

Several years ago Eldridge E. Jordan, a young Texan, scarcely out of the twentles, injected himself into the local financial s

conditions of the bank. He could not agree to terms with the majority owners.

Immediately thereafter money became scarce, loans were called on the United States Co.'s stock. A bank examiner was called in, and he announced that the stock had been impaired. A midnight meeting of the local Clearing House Association was called, and Secretary McAdoo was asked for help at 2 a. m. He responded that he would place with the local national banks enough money to save the situation and protect the depositors in the event that some plan could be worked out whereby the concern could be liquidated.

The local Clearing House Association refused to take a hand or to guarantee the depositors.

While the negotiations were under way the loans were called on the stock, the price was hammered down, and finally a run was started. Jordan went to New York and sought to get enough capital to make good the impairment.

He entered into negotiations with Frank A. Munsey, who owns a local trust company, established about six months. It has no close connection with any of the older banks.

R. Lancaster Williams, a brother of John Skelton Williams, is a director of the Munsey Co.

On the day of the run Munsey took the property over and announced that he would guarantee all the depositors. One of his agents promised to bring \$500,000 in cash the next day if it were needed.

The Treasury Department had deposited \$1,000,000 with the United States Trust Co., based upon collateral furnished by the other banks, which in turn was guaranteed to them by everything the trust company owned.

The \$500,000 promised by the Munsey agent did not arrive, and it was not needed, as shown by the subsequent restoration of confidence.

owned.

The \$500,000 promised by the Munsey agent did not arrive, and it was not needed, as shown by the subsequent restoration of confidence.

When the local banking ring awakened the next morning they found that Jordan was disposed of, but that in his place a greater competitor had been created. The fact that the new competitor had been established in part through their fear of runs on all the local banks, as evidenced by their \$1,000,000 loan, caused general resentment among the Riggs directors.

Finally Secretary McAdoo was advised that all the stories that tended to reflect upon his administration emanated from the Riggs National Bank. Yesterday Mr. McAdoo put Charles C. Glover, president of the bank, on the "mat," but he insisted that he was not guilty of inspiring the statements.

Then Mr. Alles was called to the Treasury Department and the interview satisfied Mr. McAdoo that the representative of the National City Bank had furnished some of the charges. Mr. McAdoo then told Ailes that he was extremely weary of the campaign which the National City has been connected with and that he was determined to put a stop to it.

Mr. STONE. Mr. President, I have had that put into the RECORD because I believe it is in the main a statement of facts; and if that be so, then it discloses a most regrettable situation and one that ought to meet with general condemnation. I do not intend to make that article in any special sense the text of the brief speech it is my purpose to make, although it is quite apropos. I have read it because it is not only pertinent, but

because it strikingly illustrates a situation.

Mr. President, I have no intention of indulging in any general, much less any harsh, criticism of the banking fraternity, although what I have to say will be addressed chiefly to bankers. In Missouri I have the pleasure of a personal acquaintance with many-I think I may say with most-of the bankers of that State. Among these gentlemen I have numerous warm personal friends, whom I hold in high esteem. I also have the pleasure of knowing many successful bankers outside my own State, and among those there is a considerable number whom I esteem as personal friends. I know bankers just as I know other people. They are engaged in a legitimate and honorable business, and are entitled to the same consideration here and elsewhere to which other people engaged in other lines of legitimate and honorable business are entitled to; neither more nor less. Taken as a whole, I believe that bankers are as honorable, as patriotic, and as devoted to good citizenship as the average run of men; no more, no less. rule, I am sure that bankers want to be right and to do right. Nevertheless, I believe that they are more sensitive than most men to extraneous influences, or perhaps I should say to influences within the circle wherein they move and have their being, than any other class of business men. They hold in their keeping the accumulations of other men; they sustain a trust relation to their several clienteles; they accept in trust deposits made with them, which they are bound to keep and return whenever the return thereof is legitimately demanded; they use these trust funds in numerous ways in the course of their business; they loan them or invest them for profit to themselves or their institutions; but over the banker always hangs the responsibility of accounting for the funds he receives when they are demanded. Naturally, the banker is sensitive about his good name and credit, for credit is the very soul of the bank. This situation and this sensitiveness make the banker, great or small, susceptible to influences that come down to him from sources to which he has been accustomed to look, and with which he has been more or less intimately allied. If words of caution or warning are sent down the line from the great financial centers, the bankers along that line take alarm. If words of advice are sent down the line from New York, Chicago, St. Louis, the general run of bankers may be surprised and fail to comprehend the meaning of the oracular cautions handed down to them; nevertheless, they take heed. If they are told that there is financial and industrial trouble brewing and that they had better begin to put their houses in order; that they had better curtail credits; that they had better call in their resources, the general run of bankers, like the general run of other people, may be mystified, themselves seeing no cloud on the horizon. But the insinuating voice of the oracle puts fear in the heart, and the banker, sensitive about his credit, begins forthwith to follow the admonition conveyed to him. He may, in fact, suspect that the alarm sounded is a false alarm, and that back of it is some sinister purpose, but he is afraid to take chances, and so he often unwittingly and even against his own judgment contributes to further a purpose vicious in itself and inimical to the public welfare. All this is largely the result of a rotten banking system that has grown up in this country, under the operation of which a few great banks in the financial centers have been able to dominate the policy of banks and bankers almost universally, and thus to further their own projects.

Mr. President, I believe there are bankers in this country who are the enemies of the public welfare, at least indifferent to it, and who would sacrifice the industrial interests of the country if they deemed it necessary to promote their own selfish ends.

I have no kind of doubt that in the past a few great banks have fomented policies and projects that have paralyzed the industrial energies of the country in the belief and expectation that in the end they would accomplish results that would sustain and perpetuate their tremendous power over the financial and business industries of the country. I believe there is a combination, well established and long continued, between a number of the great central banks which, under our present monetary system, have in their hands and under their control a sufficient volume of the available money of the country to enable them with too great success to sit as arbiters on the financial policies of the Government and on the industrial enterprises of the people. What is the use of men here or elsewhere denying this patent truth or to offer explanations or apologies about it?

I am asked why I do not read the statements made before the Banking and Currency Committee and before other committees, made by a number of these great bankers, and be disarmed of all suspicion by their soothing assurances. What would I expect these men to say? What would any man who has not been inoculated by some palliating and seductive virus expect them

to say?

I have myself known of more than one occasion when bankers refused credit to men who opposed their political views and purposes. I have been told by men of high character and large business connections that they have asked credit of banks and were told that their credit could not be extended, no matter how ample the security, as long as they advocated certain political policies and sought to advance the success of a certain political party. Why, Mr. President, this is an old story, going, anyhow, as far back as 1896.

Take the Aldrich bill, for example. Most of the big banks of the country were for that bill; they were for one great central bank, and for it because, with good reason, they believed they would be able to control it. When Senator Aldrich and others were going over the country exploiting this scheme, the big banks of New York and Chicago were engaged in raising a munificent fund to aid in bolstering up the Aldrich propaganda. Like the Tarifa brigands, who levied tribute on passing ships, these banks levied tribute on other banks throughout the coun-I have been told by bankers of my State, and bankers of real importance, that contributions to this exploitation fund had been demanded of them, and that, although they were not in sympathy with the propaganda, they had contributed nevertheless, because they were afraid of being blacklisted or boy-They were coerced by a species of terrorism.

How can any sane man doubt that we have had a sort of bank oligarchy in this country, composed of the great central banks, and that the great bulk of our banks, widely scattered, have in a sense sustained the pitiful relation of vassals to the reigning lords. Then, again, does not everyone know that the Treasury of the United States has for years been a sort of nurture house for the production of men who would go forth to serve these great financial institutions? Did these men serve their masters when they were holding positions of public confidence and trust?

The great banks have for years sought to have and control

agents in the Treasury to serve their purposes.

Let me quote from the World article I have just had read:

Just as soon as Mr. McAdoo came to Washington a woman whom the National City (Bank) had installed in the Treasury Department to get advance information on the conditions of banks and other mat-ters of interest to the big Wall Street group was removed. Immediately the Secretary and Assistant Secretary, John Skelton Williams, were criticized severely by the agents of the Wall Street group.

I know nothing about this charming woman, this Wall Street Delilah, installed in the Treasury of the United States to shear the Samsons of that department beyond what is here stated in this article I have presented. It would be curious to know the exact facts about this woman, but I have not sought any information on the subject, because I did not care to be involved in any controversy involving a dame of such dangerous potentiality. Modestly and with due regard to prudence, I shrink from an encounter of that kind. But there are some things I do know, and all of us know, about which I have no occasion to be either modest or prudent. Any Senator here can give a long list of notable men, now trumpeted as financial authorities, who have graduated from the Treasury into the control of great banks in the great cities. I would not cumber the time of the Senate by recounting the list of these delectable worthies, but I will refer to two or three who have been somewhat obstreperous in recent performances.

The Hon. Alonzo Barton Hepburn was some years ago the Comptroller of the Currency. He was a somewhat advanced student when he entered the Treasury school. In a comparatively short time he graduated into the presidency of the Third National Bank of New York, was afterwards president of the National City Bank of New York, and later still was made the president of the Chase National Bank, of New York, and he is now, so I am informed, chairman of the board of directors of the Chase National Bank. He is director not only of the Chase National Bank, but he is a director of the Bankers' Trust Co.; the Columbia Trust Co.; the Fidelity Trust Co., of Newark; the Maryland Trust Co., of Baltimore; the New York Life Insurance Co.; the First National Bank; First Securities Co.; American Agricultural & Chemical Co.; American Car & Foundry Co.; American Cotton Oil Co.; Safety Car Heating & Lighting Co.; Union Typewriter Co.; United Cigar Manufacturers' Co.; Sears-Roebuck Co., Chicago; Studebaker Co.; and the Lord knows what else. Yes; there is something else—he is the president of the New York Clearing House Association and of the National Currency Association. In the compsociation and of the National Currency Association. In the comptroller's office, where, presumably, the public interests alone are to be safeguarded, this man graduated into a lynx-eyed, hard-fisted, and rotund financial Pooh-Bah. In reciting his various official stations I omitted to say, what I now make haste to amend, that he is the director general appointed to guide, in the best possible way, looking to successful results, Republican politics among the bankers of the country.

Some weeks ago somebody or somebodies were smart enough to assemble a convention of American bankers at The honorable Alonzo was there-not only there, but ubiquitous and very smart, as usual. We are all familiar with the resolutions adopted by that august assembly. With more or less gusto they have been exploited even here in the Senate. Returning from this convocation, several Missouri bankers stopped at Washington en route, and did me the honor of calling. These gentlemen told me that everything done at Boston seemed to have been prearranged, cut and dried, and that the honorable Alonzo was the predominating guide, philosopher, and

friend.

Not long before that a like performance occurred at Chicago, acting under the inspiration and guidance of influences equally devoted to the public interests as those which controlled at Boston. I refer to what is known as the committee of the bankers' conference assembled at Chicago, representing the American Bankers' Association. Among those present were the honorable Alonzo B. Hepburn, chairman of the board and representing the Chase National Bank, New York, and the honorable George M. Reynolds, president of the Continental & Commercial National Bank, of Chicago, and the honorable James B. Forgan, president of the First National Bank, of Chicago, and other equally eminent bankers and adroit financial politicians. I desire to read what was said by one or two country bankers who attended that famous and widely adver-I am about to read will suffice. First, I will read an extract from the testimony given or statement made to the Banking and Currency Committee by Mr. H. A. Moehlenpah, president of the Wisconsin Bankers' Association, residing at Clinton, Wis. He said, among other things:

That leads me to say, Senator-

Addressing himself to the junior Senator from New York, who had asked a question-

who had asked a question—
at this conference, the committee meeting in Chicago, when we were
closing that conference, I turned to Mr. Forgan and Mr. Reynolds,
when they were preparing the conference report to take it into the
larger conference, and said, "Does this report stop me from taking
part or getting my friends to take part on the floor of this conference?" They said it did. I said, "That does not seem fair." I told
them that that did not seem fair, that I did not understand the workings fully of such a conference, and they said that they desired to make
a unanimous front; "It is necessary that we do it." He said, "You
can bring in a minority report." I thought what that meant, and I
said, "I have not the time or the ability to go into that conference
and make a minority report if I wished to." They said, "You had
better keep quiet, then, and we will make a unanimous report, and if
you have anything to say, you can say it some place else." I presume
he meant such a place as this—

The committee room—

The committee room-

although I never thought I would have such an opportunity.

We went into that conference; that report was made. This gentleman here from Arkansas—

Referring to Mr. Rogers-

expressed my feeling when Mr. Hepburn, with the gavel in his hand, said, "There is no further objection to this section? It stands approved. Section No. 2." This gentleman got up, after they had reached the third or fourth section in the proceedings—he stood up, but I do not think they paid any attention to him, and he says, "God, this steam roller is working fine." approved.

1 wish now to read a statement made before the Banking and Currency Committee by Mr. George W. Rogers, cashier of the Bank of Commerce, of Little Rock. My friend the senior Senator from Arkansas put into the Record a day or two ago a

telegram from Mr. Rogers, from which I gather that Mr. Rogers is not entirely pleased with all the provisions of the pending bill. He wants some amendments made to it. Maybe he is right. Maybe he is wrong. The only thing I have in mind is that he is the same Rogers from whom I am about to quote, and he is not enamored of all the provisions of the scheme or plan that is being formulated here; so, therefore, he is an impartial witness.

Here is what he says, among other things, speaking of this Chicago conference, which he attended as representing the bank-

ers of Arkansas.

That committee was stacked; that was the coldest deal I ever went against in my life.

Then there is "Laughter" here. He even moved the sedate and, in some respect, unsympathetic Banking and Currency Committee to mirth.

We were invited there simply and solely to set the stage, to have a crowd, to carry a spear and sing a song and dance around, so that the stage would be full while the bigwigs could have the spot lights played on them. The plot laid out was that they should make their speeches, that the talks would be made, that the chairman appoint a committee on resolutions, and then they took us out and fed us, and the committee were to bring in their resolutions in the afternoon, have them adopted, and they would give us a banquet at night and send us all home drunk and happy. [Laughter.]

And I talked to them like my friend says his Democratic friends did. I put on a front, and I never did let them know how weak we were. I told them if they did not give us a reasonable opportunity to be heard we would go and have a convention of our own; that if they wanted to throw down the gauntiet for a fight between the 300 large reserve city banks and the 26,700 country banks we were there. I told them also that some of them were accused of being great men and great financiers, but that for five hours they could employ a lawyer to plead not guilty for them. [Laughter.]

So much for that as disclosing the value that should be attached to those Boston and Chicago assemblages.

enough to be said on that subject.

Now, Mr. President, with some trepidation I venture to personalize another of these Napoleons of finance. I refer to the Hon. Frank A. Vanderlip. He, too, is a graduate from the Treasury Department, having been an Assistant Secretary. For some reason the New York City Bank, which is the Rockefeller bank, seemed to feel under such profound obligation to this honorable and distinguished public servant that it transferred him, possibly to the public good, certainly to his financial advantage, from his official position in the Treasury to the presidency of the bank I have named. He has since blossomed into a great financier. He seems to lay the flattering unction to his soul that he knows as much or more than any other man about what is good for the banks of the country and the people of the country. Like a noted character in fiction he is "devilish sly," so he thinks. He came to Washington to tell the Banking and Currency Committee what kind of a bill that committee should write. Of course, what he wanted was a central bank à la Aldrich, or something else as near to it as the circumstances of the environment would make possible. He laid one, two, possibly three plans before the committee, and certain newspapers, in fact a number of newpapers, made a great ado about it. They exploited Vanderlip as a new Daniel come to judgment. He was accompanied to Washington by Mr. Henry P. Davison, one of the leading men of the J. Pierpont Morgan syndicate, and, I think, by one other of these marvelous financiers of the same type. After these gentlemen had expounded their patriotic views to the committee, delivered wholly in the public interest, I am told they sought an interview with the President, assuring him of their intense and most affectionate desire to cooperate with him and the Congress in formulating a measure wholly for the general good. I am told that the President rather curtly informed these gentlemen that he did not care for any conference with them. Of course, this must have jarred these financial Goliaths to the tips of their toes. It was something wholly new to them, and therefore wholly unexpected. It had been the habit of former Presidents not only to receive them with deference but to summon them for confidential and intimate council; but here they fronted a President who was a sure-enough President of the people, and who did not intend, so far as he was concerned, that this important legislation should be constructed by men devoted to what is ordinarily and correctly described as "the interests of Wall Aside from shattering their ambitious hope of wield-Street." ing a guiding hand in the framing of this legislation, they naturally felt a deep resentment that men of their toploftical import should be treated so cavallerly. It is easy to understand how they felt, and easy to understand how anxious they are to get

these Treasury graduates. I refer to the Hon. Milton E. Ailes. He served in various confidential positions in the Treasury. Under some benign influence he was promoted with exceptional rapidity, finally being exalted to the responsible station of Assistant Secretary of the Treasury. In this position he served several years, resigning to accept a lucrative position in the Riggs National Bank in Washington. The Riggs Bank is perhaps the leading financial institution of Washington, and it is a matter of current knowledge that it is allied with big New York concerns, such as those to which I have made reference, and that those concerns in a large measure operate in Washington through this local institution. Mr. Ailes is now said to be the Washington representative of the Wall Street bankers. He is in close touch with Vanderlip and men of that ilk. derlip, Ailes, et id genus omne, stirred by sinister motives and thirsting to satisfy their resentment, have been striving to discredit the administration of the Treasury and the President. According to the World article, which I have had read, the Secretary of the Treasury, justly indignant at the malicious attacks made upon him, has sharply called Mr. Glover, president of the Riggs Bank, and Mr. Ailes to account. The World

Mr. Alles was called to the Treasury Department, and the interview satisfied Mr. McAdoo that the representative of the National City Bank had furnished some of the charges. Mr. McAdoo then told Alles that he was extremely weary of the campaign which the National City has been connected with and that he was determined to put a stop to it.

Mr. President, I have said enough on this head and will not pursue it further, although like evidences might be multiplied to show that there is a scheme, a covert scheme, sinister and selfish, to defent a wise measure of legislation the country needs and demands.

Mr. President, I pause for a moment to call the attention of the Committee on Banking and Currency to a matter that I conceive to be of great importance. When the Democratic conference was considering this bill it was determined, as I understood at the time, that no Secretary of the Treasury, Assistant Secretary of the Treasury, or Comptroller should, within two years following his separation from the Treasury Department, accept or be permitted to accept, a position in a national bank. We'might not be able by legislation to say what a Secretary of the Treasury or a comptroller might do, or what position he might accept, but in the public interest I hold that the Congress can enact a law making it an offense for a national bank or a member bank under this system to employ one of these men.

My friend the chairman of the Banking and Currency Committee has reported an amendment which it is his purpose to offer to the effect that no member of the Federal reserve board, which, of course, includes the Secretary of the Treasury, shall be eligible to appointment to a position in a national bank or a member bank under this system. I do not think that the amendment covers fully the action of the conference.

Mr. OWEN. Mr. President-

The PRESIDING OFFICER (Mr. Hollis in the chair). Does the Senator from Misseuri yield to the Senator from Oklahoma?

Mr. STONE. Surely.

Mr. OWEN. I will advise the Senator that the Senator who made the proposal in the first case drew the amendment as it stands here. I think the Senator from Missouri is right—that it was intended to be broader—and as far as the chairman is

concerned he will favor making it broader.

Mr. STONE. I am glad to hear the chairman say that. In fact, he had stated it to me in a conversation I had with him on the subject two or three days ago. I believe that the amendment should be broadened, and I hope the honorable committee will consent to broaden it so that no Secretary of the Treasury, Assistant Secretary of the Treasury, or Comptroller of the Currency shall be employed in one of these banks for a fixed period following his severance with the Treasury Department, and in that way I would hope to minimize, if not to prevent, the evil of which I am complaining. Having a Secretary of the Treasury, an Assistant Secretary of the Treasury, or a Comptroller of the Currency, to whom have been committed the responsible duty and the high trust of guarding the public interest in that in many respects greatest of all our departments, resigning his office to take lucrative employment in the great banks of New York, Chicago, and other cities is to my mind a scandal that ought not to be permitted. I hope that this amendment will be broadened in the way I have indicated.

Mr. President, I come now to ask this question: Why should the banks of the country longer stand in dread of the mailed hand in New York or in any other great central reserve city? Has not the time come for a declaration of bank independence? Why can not the banks agree to mobilize their reserves at convenient points throughout the country where they can be util-

ized under a wise, safe, well-regulated banking system? Whenever the people need money, not only to move crops, but for any legitimate business enterprise, and whenever ample security can be offered, why should there be a halt? After all, aside from our gold, which has universal value, the credit and business of the country must rest upon the wealth of the It takes many hundreds of millions of dollars in excess of our visible and available gold to do the business of the country. Why can not the unquestioned solvent commercial assets of the country, within guarded limits and regulations, be utilized to supply the currency that men need to carry on their enterprises? It is done in other countries; why not in this land of ours? For years it has been almost universally agreed that our existing banking system is inadequate, and by most people it is believed to be extremely bad, if not vicious. For years past there has been a constant striving for a radical reform in this direction. As to the method of procedure and the nature of the reform, there have been sharp conflicts of opinion. I am not going to weary the Senate by going into a discussion of these differences at this time. Senators are necessarily more or less familiar with this subject, or ought to be. Moreover, this field has been so fully covered in all its phases by hearings, reports, and speeches in both Houses of Congress that there is no reasonable occasion for any further exploitation of the subject in this behalf, for no man could do more than step into tracks ahead of him or repeat with his own embellishments the arguments already made. We have a bill before us, which has passed the House of Representatives. This bill has been carefully considered by the Senate Committee on Banking and Currency. And right here, perhaps, as well as any other time, I wish to say that I think that many, perhaps most, of the criticisms made here and there of the members of the Banking and Currency Committee have been premature and ill-advised. I confess that I myself felt some impatience that the committee did not sooner take definite action on the bill in hand, but I have not doubted the sincerity or patriotism of the members of that committee, nor doubted the loyalty of the Democrats on the committee to the Democratic Party responsible for this important legislation. My own colleague, a distinguished member of that committee, has been made the subject now and then of criticism.

Mr. President, I wish to say that I have known Senator REED for 25 years. A braver, truer, or more knightly gentleman ever lived. He is utterly incapable of being unfaithful to any trust or indifferent to any duty. He is a man who thinks for himself, and whenever the burden of a great responsibility is upon him he has the courage, no matter what the environment or pressure, to devote his best thought to the serious work of trying to find out just what he should do, and then he has the courage to do it without regard to personal consequences. duty calls him he responds, and in the discharge of his duty as he sees it he goes resolutely forward without asking favor and without fear. He has performed his duty as he saw it, and in many respects confessedly rendered most valuable service. He unsuccessfully advocated some provisions which he thought should be incorporated in the bill, and advised against some provisions that have been embodied in the measure; that sort of thing was inevitable, but he was instrumental in adding various important and salutary amendments. All he could do was to express his own best thought, and to do that was his bounden duty; but in the end Senator REED came, as all of us having the immediate responsibility of this great work had to come, to an agreement with his colleagues, at least in the main, and that meant some concession, some yielding here and there. That is the course my colleague has pursued, and the tremendous strain of work he has undergone and his honest desire to do the right thing, and his unquestioned fidelity to the public interest should make those who have criticized him not only revise their judgments but do justice to a faithful public servant. Nor is that all I wish to say on this line. I can not but believe that all of the members of the committee have been influenced by high and honorable considerations of public duty. Whatever criticism I have felt in my heart, I withdraw. I wish now to pass all that by and forget it. We have two bills before us—one the bill reported by the Democrats of the Banking and Currency Committee, and one reported by the Republicans of that committee. As I have said, I am not going to discuss the differences be-tween these two propositions. That has been done already so thoroughly that any speech made hereafter on that subject will not be for the enlightenment of the Senate, but for reasons peculiarly personal to the orator. I do not care to glean in a field from which every head of grain has been taken, or to delve into a mine from which practically every nugget of value has been extracted. All I have to say is this, that the two bills are substantially the same on all essential principles involved.

The differences relate almost wholly to matters of detail. For example, the Republican proposition favors the establishment of only four Federal reserve banks, while the Democratic proposition favors not less than 8 nor more than 12. The reasons for the one and for the other have been given to us and to the country. Both plans favor this general form of a banking system; both favor the establishment of regional banks.

The difference relates to the number of banks. The views of both sides of this question have been fully stated by able advocates, and I do not feel that I could add anything worth while to the arguments already made. It is a matter of detail. Again, there has been a difference of opinion as to the number and personnel of the Federal reserve board. That is another detail which has been fully discussed. I do not see that I could add anything to that. And so on down the line we find that the differences relate chiefly to matters of detail rather than to fundamental or essential questions of organization. In all fundamental and essential points I believe the plan proposed, while not perfect-perfection could not be expected-is still sound and good. In substance it embodies whatever there is of virtue in a central bank—that is, in the concentration of power and control—while, at the same time, it avoids or minimizes the vices and dangers of such a bank. The plan will centralize all power necessary for supervision and control without the hazard of a nation-wide financial, industrial, and political despotism. We should not forget that conditions in the United States are not to be compared to conditions in European countries. What might be wise in England or France, countries of small area, with crowded populations and congested industries, might be wholly unsuited to a continental country like ours. It may be that there would be strength in centralization, but would there be equal opportunity, equal consideration to all sections, and at all times a due regard for the public safety and welfare? To my thinking the decentralization of our reserves, as proposed in this bill, will not weaken the banking system we are about to launch, but will make it more responsive and useful to the people without impairing

Mr. President, it is gratifying to note that Republicans as well as Democrats approve the general plan and policy of this legislation. I have listened to the speeches made here by the Senator from Massachusetts [Mr. Weeks], the Senator from Minnesota [Mr. Nelson], and other Republican members of the committee, and, generally speaking, I have been delighted at the broadgauged and liberal spirit with which they have discussed this important subject. They have stated their views frankly; they have expressed a preference for the plan they proposed; but they have said that the plan proposed by the Democratic members of the committee, although differing from their plan in numerous details, is nevertheless a good, workable bill, infinitely superior to the existing banking system with which this country is cursed. All this should be most gratifying to every Senator and to the country, and moreover it ought to be an assurance that should give confidence to the

business men of the country.

Mr. President, I have said about all I wish to say. clude with this thought: We have the greatest country in the world. Our people are a busy people, a producing people. America is a great hive of industry. No mortal man can give a sound reason why the business of the country should not at any time and at all times go on in a normal way. Our vast fertile fields are here, as ever, ready to produce whatever our people need and more than our people need; our flocks and herds are here, browsing and growing; our mines are here, with mineral wealth incalculable, awaiting development and devotion to useful ends; our factories are here, and the artisan is ready to work and the country and the world ready to take and consume. Mr. President, any halting in the industries of this country, particularly at this time, must be artificial and the outcome of some preconcert of sinister influences. As I view the situation, the one thing the people need is to get money to carry on their business enterprises, supplemented by confi-If there be a lack of confidence, why should there be? dence. If there be a lack of confidence, will,
I have already said that a comparatively few great bankers

and a contract credits. Pass the word down the line and alarm the banking world with the notion of some impending crisis, no matter how vague or improbable, and, even though business may be like a hound straining at the leash and eager for the chase, business is sure to halt, if credit halts. Let the bankers begin to talk pessimism and to surcharge the air with doubts, and forthwith men who were ready to venture into business enterprises take their cue and stand

hesitant, waiting, Micawber-like, to see what may turn up.

Mr. President, let us pass this bill as speedily as possible, establish this new and, I believe, sound system of national

finance. Let the banks of the country enjoy greater opportunities and a wider liberty; let the chains that have shackled them be shaken off; let business men appreciate that at last they can go forward with greater security and confidence, feeling assured that as long as they are solvent and have prime commercial assets they will have nothing to fear. When the full light of this happy day shall come, the dawn of which is already breaking, the country will spring forward like a giant refreshed, and all the disasters of needless panics will remain with us only as a memory—a memory which will excite in the minds of the next generation surprise and wonder at the amazing stupidity of their progenitors.

Mr. SMOOT. Mr. President, I have listened with a great deal of interest to the remarks made by the Senator from Missouri [Mr. Stone], and I would not refer to them at this time if it were not for one impression which the Senator has endeavored to create in the minds of Senators and upon the country. I do not propose to speak of any of the political questions referred to by him, but to the one thing, it seems to me, the Senator had in his mind to impress upon the Senate and the country, and that is that any halting of enterprise to-day must be by some concerted movement, to alarm the banking interests of this country, and as a result the bankers of the country are curtailing credit.

We have heard that charge made during the discussion of We have heard that charge made during the discussion of this bill a number of times. I have examined all the bank reports that I could find, the quarterly reports called for by the Secretary of the Treasury, to see if there was a curtailing of credits, as compared with one year ago, based upon the amount of deposits; and, Mr. President, I can not find that such has been the case. I call the attention of the Senate now to the statement of the National City Bank, of New York, which seems to be the chief offender, in the opinion of the Senator from Missouri, to see what the loans of that bank were on the 6th of December, 1912, as compared with the loans on November 25, 1913. From this statement I expect that every Senator will admit that instead of curtailing credits, particularly to merchants and manufacturers of this country, that institution has extended them, and they amount to millions and millions of dollars more than they did a year

The amount of loans to merchants and manufacturers and secured by collateral on December 6, 1912, was \$39,140,549.18. On November 25, 1913, that had increased to \$59,240,371.02, an increase of over \$20,000,000 to merchants and manufacturers by

this one institution alone.

The amount of loans to depositors and others not members of the stock exchange on collateral December 6, 1912, was \$44,-156,658.50. On the 25th of November, 1913, it was \$41,166,743.

The amount of demand loans to members of the stock exchange on stock-exchange collateral was \$27,681,320.01 on December 6, 1912. On November 25, 1913, it was \$28,591,000.

The amount of time loans to members of the stock exchange on stock-exchange collateral December 6, 1912, \$1,475,000. On November 25, 1913, it was only \$735,000.

The amount of loans and rediscounts to inferior banks and trust companies on collateral—that, of course, would be mostly bills payable—on December 6, 1912, was \$7,869,000. On November 25, 1913, \$14,180,106.25.

amount of loans on merchandise on December 6, 1912,

\$798,866. On November 25 of this year it was \$965,777.95.

The total net deposits in the National City Bank of New York on the 6th day of December, 1912, was \$150,789,555. The total deposits on November 25, 1913, was \$175,843,367.

So that as far as the percentage of deposits is concerned they are loaned to a greater extent now than they were on the 6th day of December, 1912, nearly \$30,000,000 more loaned to the business interests of this country than a year ago by this one

I do not believe it is going to do the Democratic Party any good, I do not believe it is going to do the business of the country any good for Senators to try to make it appear that the banks of this country are restricting credits for the purpose of crippling business when in reality they are extending them; nor do I believe it is going to help to bring about confidence in this country. As all Senators know, without confidence in the business world there is bound to come stagnation of business, and I hope and trust that speeches made in the Senate or elsewhere intended to make the people of this country lose confidence in the business integrity of its business men will cease.

If Senators want a panic, speeches made with the intention of impressing upon the people the idea that those who are controlling the banks of this country are restricting credits for that purpose is a splendid way to bring it about. I wish to say that it is an easy thing to bring it about. As far as I am concerned,

however, I would rather see the Democratic Party continue in power for years to come than to see a panic brought about in

this country with its wreckage and suffering.

Of course we do not expect all men to agree upon the details of a bill. We all admit that our present banking system is not a perfect one. I want to say, however, that it is not a rotten one, as stated by the Senator from Missouri. If we had an elastic emergency currency I believe we would have as good a system as there is in all the world.

Senators have referred to the fact that no bank in this country has availed itself of the emergency currency provided by the Vreeland-Aldrich bill of 1908. The bill was never passed for the purpose of having bankers avail themselves of that currency unless as a last recourse in times of stress, and such a condition has not occurred. It was an emergency measure pure and simple, and the penalties attached to the use of the currency in that bill are so severe that no banker in this country could afford to use it in ordinary times, and if they did every other banker in this country as well as the business men of the United States would conclude his business was in distress.

I believe in the creation of a great central bank—the Bank of America, with a capital greater than that of any other bank in all the world. I should like to have seen it located away from a political center. Divorced from any political control or influence, if possible. I should like to have seen a central bank of \$100,000,000 capital. I should like to have seen the stock of that bank owned by the American people and controlled by the Government, with capital, deposits, and reserves sufficient to assist in case of need any section of this country at any time of the year to any amount needed, whether for the moving of cotton or grain, or increasing and enlarging of business enterprises. If we had a central bank of this kind, there would be no question that our currency system would be solved for the next 100

I do not believe it will be finally solved by the passage of this bill. I believe that the great majority of the Senators in this body believe that the best currency system would be a great central bank. It is unfortunate indeed that the Democratic platform declared against it. I believe if it had not so declared we could have agreed upon a great central bank; and what a blessing it would have been to this country, to the business man, and to every man, woman, and child in the countryfor I want to say to you that any bill that may be passed cre-

ating a currency system of this country affects every soul in it.

Mr. President, I do not at this time desire to extend my remarks upon the currency bill, but, if necessary, at some future time I may make some extended remarks. I am not going to do so to delay the passage of the bill. I know it is almost needless for me to go over the ground that has been already covered by others. I know the bill is going to pass the way the Democratic caucus decide it shall pass. It seems to me it is almost cratic caucus decide it shall pass. It seems to me it is almost useless for me to take the time of the Senate in discussing the provisions of a galvanized caucus bill. I have made these few remarks for one purpose, and one only, and that was to impress upon the people of this country and upon the Senators that the oft-repeated charge that the banking interests of this country are curtailing credits can not be substantiated by the facts. The facts are what we ought to deal in, and nothing else.

Mr. STERLING. Mr. President, all the banks in the State

which I have the honor in part to represent belong to the class of banks known in the pending bill and in our legislation as country banks. These country banks have their views in regard to the feature of the bill relating to the time of maturity of the notes offered for discount at a Federal reserve bank. I think, perhaps, I should be derelict in my duty if, at some time during the course of this discussion, I did not give expression here to the views of the banks of my State,

I refer for that expression as it is found in certain letters written to me.

After the passage of the House bill I wrote to many bankers in South Dakota, sending them copies of the bill and inviting an expression of opinion from them in regard to its various features. While for the most part they have written at length, giving expression to their opinions on different phases of the bill, I desire simply to call attention to one feature, namely, that relating to the time of maturity of the notes offered for discount.

In one letter there is this statement:

Another feature I do not believe would work out satisfactorily to banks in our locality is limiting the rate of interest which they are allowed on the stock invested in by them to 5 per cent, limiting the time on which discount paper can be drawn to so short a time, as little paper is drawn out here for less than six months, and limiting the time of a farm loan to nine months, which feature is practically of no value to South Dakota.

From the president of the First National Bank, of Canton, S. Dak., I read as follows:

As to (b) on page 18, I am not clear, but every Federal reserve bank should have the right to rediscount paper for any of the banks or members of their respective zone, and instead of 45-day paper they should have the privilege of rediscount, running six months or even one year, as it would not be of any direct benefit to the banks in the agricultural districts, where papers as a rule have to be taken for that length of time. I feel that this provision has been injected by big business, who desire that their country correspondents come to them when in need, as is now customary.

Of course we admit that in conference and in committee the bill has been improved, and that such paper now may run for a period of 90 days instead of 45 days. Still, the improvement is not yet sufficient to meet the needs of the people and the bankers of South Dakota.

From the Wessington Springs State Bank I have a letter from which I read as follows:

In the first place it will reduce the loaning power of the money of the United States at least 20 per cent. Further, it only allows redis-counts or loans to run 60 days, when in this part of the country we want them for 6 months and a year would be better. Real estate loans can only be made for 9 months, when the average loan is made for 5

From the First National Bank of Millbank, S. Dak., I have a letter from which I read as follows:

The borrowing of money only on commercial paper running for 45 days' time would be of absolutely no benefit to us, as practically all our loans are farmer's notes, due either on demand or in the fall of the year.

From a letter received from the First National Bank, at Wessington Springs, S. Dak., I read the following.

After discussing other propositions involved in the bill, the

writer says:

Seventh, qualification of the notes which a stockholder bank may use with a reserve bank should be enlarged to include such notes as we take in agricultural sections. The notes most used by us are those secured by live stock, consisting of cattle, horses, sheep, and hogs. These notes, which are given in the spring, do not mature until fall, which makes a maturity of some six to eight months, and notes taken in October and November generally run until about March or April.

From the Bank of Wakonda I have a letter, from which I read the following:

The provisions in the bill for allowing State banks to come under its provisions will be of no value to the small country bank—

This will as well pertain to the national banks of South Dakota as to the State banks-

as its "bills receivable" are not and can not be of a nature that will admit of rediscount unless there should be a change in the bill as to the character of collateral to be offered.

The First National Bank of Madison, S. Dak., simply refers to real estate loans, the statement being that-

The real estate loan features offered would be of doubtful value to a member bank; as these loans are required for five years usually, they would be handled by State banks and trust companies who are permitted to carry this class of loans.

From Brown Bros.' State Bank & Trust Co., of Aberdeen, S. Dak., I have the following:

Agriculturists in this whole western region, as you know, and largely in the Southern States need from six months' to a year's credit when they borrow. They would have very little means of paying sooner, While we hope to become less and less a one-crop country, farm products generally mature in the fall. Therefore, the short time paper provision would not suit this region.

From the Merchants Bank of Bryant, S. Dak., I have a letter from which I read, as follows:

As I understand the provisions relating to rediscounts, the only class of paper that would be considered acceptable would be paper due in not to exceed 45 days, while most paper carried by the smaller banks is usually drawn for from six months to one year, which makes it appear that the larger banks would be the ones to profit by it, as their paper runs for shorter periods.

Mr. President, I think the Hitchcock bill is a great improvement over the Owen bill in this respect. This is the provision in the Hitchcock bill:

Notes and bills admitted to discount under the terms of this para-aph must have a maturity at the time of discount of not more than graph ... 180 days.

This time being allowed, there would scarcely be need of the renewal of the paper ordinarily taken in my State. It would run for a period for which personal loans are com-

monly made, or a period for which they could be readily made.

I think that the provision allowing 180-day paper to be discounted at the Federal reserve bank is sufficiently guarded by the further provision of this same section, for it is provided—

That not more than 50 per cent of the paper discounted for any member bank shall have a maturity exceeding 90 days, and in no case shall any member bank have more than \$200,000 of rediscounts having a maturity longer than 90 days.

The adoption of this provision giving the opportunity to discount paper running for 180 days would accommodate the people of my region and of my State, and our situation is similar

to that of many others.

A word or two further, Mr. President, in regard to the section we were considering last evening, section 2, of the bill. That section proposes to create four Federal reserve districts. In creating these Federal reserve districts we are striking out into a new and great field, and we may say, too, that it is a new and an untried field. We ignore in either of these bills the lessons of history. We ignore precedent. We ignore, in establishing four or eight Federal reserve districts, the example of France, of Germany, of England, and of all the civilized nations

I grant you, Mr. President, that there is a sentiment against a central reserve association or bank, and that, too, although it be Government owned and controlled. Whether that sentiment is just or unjust, it is not for me to say; whether it is a passing and a temporary sentiment or whether it is a fixed and abiding sentiment, I need not say; but I think we must acknowledge that the sentiment exists whether it be permanent or not and

whatever its source or its origin.

Now, what do we propose to do in either of these bills? We are to decentralize, if I may use that term. The process proposed by the bill is one of decentralization. We have no lamp of experience to guide our steps in this particular way. What would reason, then, seem to indicate? That we simply try the plan of decentralization first, with four reserve districts, with four Federal reserve banks. With this limited number we will recognize and apply the principle. If we err in establishing more than one central reserve bank but not exceeding four, as provided in the Hitchcock amendment, we make a mistake on the side of prudence and of caution. It would be a mistake easily cured and corrected hereafter; whereas if we err by way of excess and in the establishment of a greater number of districts, as provided in the Owen bill, the defect will not be so easily cured. If 4 are too few, we can easily expand; if 8 or 12 are too many, much disturbance and financial loss or wreck may result before there can be a readjustment. It would seem to me that since here we can so well apply and test this principle of centralization with only four banks, reason and common sense would dictate that we limit the experiment in the first instance to that number.

Mr. President, one or two things further in regard to this measure. Objection has been made to the appointment of five of the directors of the Federal reserve bank by the Federal reserve board, the contention being made on the other side that since the Federal reserve board is a bank for banks, therefore they should have a majority of the Federal reserve board. Along the same line and grounded on the same reason exactly is the objection to the stock subscription by the public in the Fed-

eral reserve bank.

Mr. President, is there anything really in the iteration and reiteration that it is a bank for banks, and therefore the bankers must have a majority of directors and the member banks must be the first to subscribe for the stock? I think not. We should endeavor to popularize this experiment; we should gain the confidence of the people in it. I can not help but think that every institution in this country, financial or otherwise, must have as its basis the confidence and esteem of the people. How sooner shall we get it for this new system than to have them feel that they have an interest in an institution so closely associated with the trade and finances of the country? Their loyalty and their support will be inspired by their self-interest in it.

Again, Mr. President, why should the bankers wish to control the Federal reserve board? The limitations upon the Federal reserve board, the limitations upon the Federal reserve board, upon their powers, upon their functions, upon their rights, are of such a nature that there is no need for the control of the directorate of the Federal reserve board by the banks. These rights, functions, and powers are all described and defined. The object in creating these banks is not primarily that they may make money, but to afford facilities for the member banks in the rediscounting of their commercial paper. There is little to invite individual enterprise or individual initiative on the part of the Federal reserve board di-rectors, and hence there is not, as in the ordinary banking business carried on for profit, need for individual or special control upon the part of the banks.

Mr. WEEKS. Mr. President—
The VICE PRESIDENT. Does the Senator from South Dakota yield to the Senator from Massachusetts?

Mr. STERLING. I yield.
Mr. WEEKS. The Senator from South Dakota has stated very clearly a difference which, I think, has not been referred to during this debate relating to the possibility of increasing or decreasing the number of reserve banks. It has been con-

tended that if we establish 8 or 10 or 12, and it is found that they are not necessary, then the number can be reduced. The Senator from South Dakota has stated—and, I think, very cor-rectly—that if we establish four and it is found that more would add to the efficiency of the system, it will be much easier to increase the number than to decrease the number which were established in the first place.

In justification of the statement which the Senator has made, I wish to call his attention to almost the impossibility of abolishing any Government institution or organization which has been established. For instance, there are in the Western country posts which were useful and necessary at one time. Now, the time comes when they are not necessary. Yet local sentiment and other interests are such that it is almost impossible to abandon those posts. The same thing applies to navy yards and other governmental institutions. So if experience is to be our guide, there is every reason why we should establish the smaller number, increasing later when experience demonstrates that more banks are necessary, rather than establish the larger number, hoping to reduce the number when experience demonstrates that we have too many.

Mr. STERLING. I thank the Senator from Massachusetts, and I appreciate the illustrations he gives, because it comes home to me, we having had some practical experience in regard

to these matters in our State.

Mr. President, it seems to me here is a great opportunity for Congress to test the principle of decentralization and to do it safely and wisely by the establishment, in the first instance, of only four Federal reserve districts, provided for in the Hitchcock amendment, and through public subscription to the

stock to make popular this great experiment.

There is just one further consideration, and I am reminded of it by remembering the statement made by the Senator from Nebraska [Mr. HITCHCOCK] last night. If we have but four regional banks the rate of discount will be more uniform, taking the country over and as a whole, than it would be if we had the greater number of banks with the power on the part of the Federal reserve board to make a different rate for the several districts.

Mr. CUMMINS obtained the floor.

Mr. NELSON. Will the Senator yield to me? Mr. CUMMINS. I yield to the Senator from Minnesota. Mr. NELSON. As I look around the Chamber I find 8 Senators on the other side and about 9 or 10 on this side. I therefore suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll, The Secretary called the roll, and the following Senators an-

swered to their names:

Smith, Ga. Smith, Md. Smith, Mich. Smith, S. C. Smoot Sterling Stone Hollis Hughes James Johnson Nelson Bacon Borah Brady Norris O'Gorman Oliver Bristow Overman Page Pittman Poindexter Bryan Burton Chilton Jones Kenyon Kenyon
Kern
La Follette
Lane
Lea
Lewis
McCumber
McLean
Martin, Va.
Martine, N. J.
Myers Swanson Thompson Thornton Clapp Clark, Wyo. Clarke, Ark. Poindexter Pomerene Reed Root Saulsbury Shafroth Sheppard Shively Simmons Townsend Vardaman Walsh Colt Cummins Dillingham Gallinger Warren Works Gore Hitchcock Simmons

The VICE PRESIDENT. Sixty-three Senators have answered to the roll call. There is a quorum present.

Mr. CUMMINS. Mr. President, before I begin the discussion of the question before the Senate, I beg to submit a parliamentary inquiry. It is quite possible that the question I am about to ask has already been answered in the rulings of the Chair, but I have not been present at all times, and therefore I wish to be certain with regard to it. I have an amendment which I desire to offer to what is known as the Owen substitute. My observations will relate directly to that amendment, although it concerns the same subject which has been debated and, in a general way, the same question that arises upon the amendment offered by the Senator from Nebraska [Mr. HITCHCOCK] to the bill as it passed the other House. Is the amendment in order at the present time?
The VICE PRESIDENT. The Chair has ruled that amend-

ments could be submitted, but that amendments to the original bill take precedence in the way of voting thereon. Amendments may be offered to either the original bill or to the amendment to strike out and insert at any time it is desired to do so.

Mr. CUMMINS. I do not at all question the propriety of the ruling just made by the Chair, and I should defer what I have to say with regard to the matter until the amendment which I shall propose is in order were it not that we apparently are

about to determine whether the new banks that are to be created shall be owned by the banks and controlled by the banks instead of being owned by the people and controlled by the Government. I ask unanimous consent, simply as a matter of information, that the amendment which I shall propose when it is in order may be read at the desk.

The VICE PRESIDENT. The Secretary will read the amendment intended to be proposed by the Senator from Iowa.

The Secretary. It is proposed to amend House bill 7837 as follows:

On page 5, in line 16, strike out the words "shall be required."
On page 8, in line 2, insert, immediately after the word "for," the
word "stock-holding."

On page 16, in line 5, strike out the word "three" and insert the word "two."
On page 16, in line 7, strike out the word "three" and insert the word "two."

On page 16, in line 12, strike out the word "three" and insert the word "five."

word "fre."

On page 16, in line 20, insert, immediately before the word "member." the word "stock-holding."

On page 16, in line 23, immediately before the word "member," insert the word "stock-holding."

On page 17, in line 5, immediately before the word "member," insert the word "stock-holding."

On page 22, in line 20, immediately before the word "member," insert the word "stock-holding."

On page 23, in line 20, immediately before the word "member," insert the word "stock-holding."

On page 23, in line 20, immediately before the word "member," insert the word "stock-holding."

On page 21 add, at the end of line 7, the following: "If there are no stock-holding member banks, or in the event of their failure to select directors as aforesaid, the Federal reserve board shall appoint the directors whose selections by stock-holding member banks is herein provided for."

On page 22, in line 18, immediately after the word "members." insert

vided for."

On page 22, in line 18, immediately after the word "members," insert the following: "but said capital stock shall not at any time exceed an amount equal to 6 per cent of the capital and surplus of the national banks and the stock-holding banks of the district wherein the Federal reserve bank is situated."

Mr. CUMMINS. Mr. President, I have preferred to offer the amendment, or will prefer to propose it at the proper time, to the bill presented by the Senator from Oklahoma [Mr. Owen], because I know, and every other Senator knows, that it is this bill in general form which will finally be adopted by the Senate; and it seems to me wise, therefore, to suggest as few changes as possible, the changes being sufficient to accomplish the purpose and to meet the issue, which is really between the bill proposed by the Senator from Nebraska [Mr. Hitchcock] and the bill brought forward by the Senator from Oklahoma [Mr. OWEN 1.

The changes thus proposed in the bill offered as a substitute by the Senator from Oklahoma constitute a single amendment and, if they are made, they will have the following effect:

First, the subscription of national banks to the capital stock of the Federal reserve banks is made voluntary and op-tional, instead of being compulsory and mandatory, as the bill now before us provides, and the stock not taken by the banks would be open for subscription by the public generally.

Second, the member banks would appoint four directors of each Federal reserve bank instead of six, as the bill now provides, and the Federal reserve board would appoint five directors of each reserve bank instead of three, as the bill now provides.

Or, to state the effect of the proposed changes in another form, they would convert the capital stock of the Federal reserve banks from a coerced capital into a voluntary capital with the national banks holding the first chance to contribute, but with the hope that the people at large would furnish the greater part and transform these new banks from instrumentalities of the banking institutions of the country into instrumentalities of the Government. They would substitute public control for private control.

Mr. President, I would not be entirely candid if I were not to say at this point that I am far from being satisfied with either of the bills now before the Senate. I prefer the bill as reported by the Senator from Oklahoma when compared with the House bill; I prefer the bill as reported by the Senator from Nebraska when compared with the bill reported by the Senator from Oklahoma; but, as I shall possibly suggest before I have finished, it seems to me that there is a vastly easier and simpler way to accomplish the purpose which we all have in view, to meet and overcome the acknowledged defects of our present system, than is found in either one of the several proposals which have taken the form, first, of the House bill; second, of the Owen substitute; and third, of the Hitchcock substitute.

Mr. President, the merits of the two proposals respecting the control of the new banking function that we are endeavoring to establish has been discussed at great length, and I shall be brief respecting this phase of the subject. I shall do little more than to record in the most emphatic terms that I am capable of using that to continue with the bankers the power of determin-

ing how and where bank reserves shall be invested is to acknowledge substantially that the ordinary selfish interests of business should be the potent influence instead of an unselfish, disinterested regard for the public welfare. The moment we decided, as we have decided, that the use of the reserves ought to be lifted above the stress and storm of conflicting financial and commercial demands, it ought to follow that their distribution and use should be given to a body of men who have no end to serve except the general good. In order to obtain a clear view of this matter, let us return to a simple statement of the complaint against the system that we already have.

It is said that the existing banking and currency system is, in its practical operation, defective in three chief respects:

First. That the volume of the currency used as money is incapable of that seasonal expansion and contraction so highly desirable in the ordinary transaction of business.

Second. That in times of fear or panic, when neither banks nor men are conducting themselves in a normal way, there ought to be a method of enlarging the volume of the currency through the conversion of certain private notes and bills held by the banks into additional money, or into paper that will be taken and used by the people as money

Third. That the reserves which banks are required to maintain as a margin of safety, in order that they may always be in condition to satisfy their depositors, and which are now held either in their own possession or by corresponding banks in the reserve or central reserve cities, do not perform their proper function in this, that the money constituting these reserves is not always at command of those parts of the country where it is most needed.

I do not concur with those critics who unsparingly denounce our banking and currency system. The history of our industrial, commercial, and financial development during the last half century is a complete answer to the assertion that it is fundamentally wrong. It has been a vital and effective instrumentality in the most marvelous growth the world has ever seen, and it is more than folly—it is unpatriotic—to condemn it in the terms so often used by those who are seeking to overthrow it.

On the other hand, like all other human institutions, it is unquestionably capable of improvement. I am upon this, as upon every subject with which the Government must deal, a progressive, and there is no doubt that our experience has demonstrated that there are certain demands now made by the industry and commerce of the country that are not fully and adequately met by existing law.

I believe that in the three particulars I have already mentioned our system can be made more efficient, and, moreover, I am inclined to the opinion that there is at least one other thing which the Government ought to do which has not received the attention of either section of the Committee on Banking and Currency, and which is quite as important as any of the reforms sought to be accomplished in the bills before us. I shall, however, bring forward that suggestion at a later period in the

I omit for the present all reference to the complaint in so far as the desirability of adding from time to time to the volume of our currency is concerned and confine myself to the apparently universal insistence that the bankers do not handle the money we have to the best advantage. I pause here to say that I must not be understood as disparaging the honesty or patriotism of the bankers. They do business just as everybody does business, are led by the same motives as the farmer or the manufacturer, and are governed by the same self-interest that controls every man engaged in trade or commerce.

We have discovered, so it is said—and it is reasonably well established—that in the warfare which grows out of the disposition of reserves when bankers have the sole use of them the people sometimes suffer. We are now trying to create a new power to control the use of these reserves, and we are told by our Democratic friends that, although the bankers are unable to use the power they have wisely, they shall be given still more power, in the hope that they will conduct a monopoly with better results to the people than they have exercised the limited authority which they have hitherto abused.

To me this proposal seems so wholly indefensible that they will be driven from it the moment the great body of American citizens fairly appreciate what it is. If we want the banking reserves and such other money as may be drawn into the new banks used for the general welfare, regardless of any private or special interest, there is but one power to invoke; that is the power of the Government, which represents, or ought to represent, nothing but the public weal. I grant you that the Government may not always serve the people well, but whether it serves them well or ill, it is the only organization that has been created or can be created to execute a trust in which every man, woman, and child of the Republic is a beneficiary

For instance, I believe that if the law regarding national banks were amended so as to prohibit any national bank from paying any interest whatever upon any demand deposit, the great objection to the use of the reserves would disappear. I think they would then perform the function for which they were intended much more effectually than they now perform it. If there were added to that amendment of our banking law a prohibition against loaning any money upon what are ordinarily known as speculative gambling transactions upon boards of trade, upon stock exchanges, produce exchanges, and the like, we then would have a great system of reserves accessible to the legitimate, safe banking investments that are offered in a country like ours.

Furthermore, I recognize that what I have just suggested would not wholly meet the one defect of inelasticity of currency, although I never have been persuaded that we have less money in this country than we really need in the transaction of our business. If the whole volume of our circulating medium could be persistently at work, we have enough gold and silver and token money to transact the business of the country. It is only because through selfishness, through greed, through misapplication, through fear, a certain part of our money falls at times to circulate properly that the country suffers a at times to circulate properly that the country suffers a scarcity in our monetary medium. Once that fear were re-moved, and once that cupidity and greed were regulated and prevented from having its full operation, our currency would expand and contract within its present limits so as fairly to meet all our commercial necessities.

However, I yield my opinion upon that point to those who have studied the subject more profoundly, and I am willing to accept what seems to be the general opinion in this Chamber-that there are times, or will be times, when we need more money, or currency that passes as money, than we now have. When those times come, it ought to be in the power of some department of the Government of the United States-I care not whether you call it a central bank or not; I call it a central bank, but it might just as well be called a department of the Treasury of the United States-to loan additional United States notes to the institutions and communities whose necessities seem to demand the exercise of this extraordinary power. ought to be able to loan these additional notes upon adequate security, with adequate reserves, for a definite time, at which payment would be expected from the banks which obtained the additional currency from their Government. In that way there could be no permanent expansion of the currency. Whenever the notes of the banks were paid, the currency they represented would be retired and the volume of our paper money would resume its normal proportions.

Moreover, I would have the Government of the United States guarantee payment in some form to every depositor in the national banks of the United States. I believe this public, unquestioned assurance from the Government of the States to the depositors in these banks would do more than anything else that could be done to prevent an abnormal, unusual, extraordinary demand upon the resources of the banks. At the end of each year I would levy a tax upon the national banks to reimburse the Government for the sums paid out during the year. In other words, I would create a compulsory insurance department in the Treasury of the United States, or in the Bank of the United States, or in whatever part of our great machinery this work might be carried on.

In this way, as I look at it, we would hardly touch, and certainly we would not disturb, the intricate, delicate relations which have been established in the commercial intercourse of

the people of this country.

I recognize that what I have said is not only meager in its suggestion of a plan, but entirely abstract and academic as I have made these observations simply that there may be placed upon the records of the Senate my reluctance to reach the conclusion that this great system which is about to be imposed upon us is necessary for the welfare of the country.

Mr. HITCHCOCK. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I do. Mr. HITCHCOCK. It happens that at the present time there is a run in progress on a national bank in Omaha, one of the smaller national banks of the city, caused by the reckless statement of a drunken depositor. It is a run said to be without any justification upon a bank which has the reputation of being entirely solvent—a bank having something like \$3,000,000 of deposits and \$600,000 of capital and surplus. I am informed in a

telegram that the spectacle is presented of crowds of depositors withdrawing their money from that particular national bank, crossing the street, and going about a block up another street to deposit their money in a State bank—a smaller institution, with comparatively small resources, but which has back of it the Nebraska guaranty of deposits law.

It is rather a strange spectacle, so I am told in this telegram, to see this crowd in a national bank withdrawing their deposits and going up the street to this comparatively small State institution, where they are putting in the cash they have withdrawn from the national bank. Of course, I am not here to say that they are wise in doing so; but it shows the weakness of human nature, which ought to be taken into account, I think, in framing legislation.

I do not approve the plan suggested by the Senator from Iowa for taxing these banks in order to provide a guaranty fund for the depositors of those that fail. I say I do not approve it; I mean by that I do not advocate it, because it does not seem to be necessary. The pending legislation affords an opportunity to accomplish the same purpose without imposing any tax. It affords the opportunity because the reserve banks which we propose to create undoubtedly will be operated at a profit, if their number is reasonably limited, that probably will be sufficient to pay reasonable dividends and to leave a net profit over and above the dividends and the surplus. That excess fund can be fairly used, a part of it to be paid to the United States Government as compensation for the deposit of Government funds, the other part of it to create an insurance fund to pay to depositors of those member banks which, unfortunately, may fail through

mismanagement or dishonesty.

It seems to me the Senator from Iowa is entirely right in taking the position that it is the proper duty of Congress to give such definite assurance to the depositors in national banks, by all proper provisions of law, that bank runs will cease to be. This is desirable, not only for the depositors themselves, but it is desirable for the banks as well and for the business interests of all the communities which depend on the banks. If it can be done-and I believe it can be done-by a provision in this bill, without levying any tax upon carefully managed banks, simply by using an excess of the profits that are legitimately secured by the operation of these reserve banks, it seems to me that is a purpose which ought to commend itself to everyone.

Mr. CUMMINS. Mr. President, not many years ago I suppose there was no man in the United States who felt more disinclined than I to adopt the proposal, which was then somewhat new, that the Government, in some form or other, should insure the safety of the deposits in the banks created and organized under its laws. Like the Senator from Nebraska, I have changed my mind with respect to it. I was reminded when the attack was made upon the Senator from Nebraska last night, and when he was reproached with having shifted to some extent his position upon this very intricate subject, of a line of Emerson. I may not quote it correctly, but it has lingered in my memory in this form for a great many years. As I remember it, he said, "Consistency is the hobgoblin of small men and mean minds." There is no virtue in consistency; there is danger in frequent vacillation; but the whole history of our country is simply an exemplification of the change which the minds of men experience as new conditions confront them and as new light illuminates the subjects in which they are interested.

Therefore, I frankly say that I have reached a conclusion with regard to the guaranty of bank deposits different from the one I so firmly held a few years ago. I believe it is a legitimate field for insurance. I believe that we could confer no greater benefit upon the people of this country than by devising a plan which will make sure every man who trusts a bank operating under the laws of the Government, a bank in a large sense certified by the Government as entitled to confidence, will be protected. I believe that if we were to give in some effective form this assurance there would never be a run upon a national bank. The money withdrawn from any such institution for purposes of legitimate business follows a general rule, and it will never exceed the amount of money which the bank retains in its possession in order to meet these demand obliga-

It is only when a fear, either reasonable or unreasonable, and the character of the fear is not material, enters the minds of the depositors that there is danger that they will not be able to withdraw the money which they have deposited, that a bank is unable to respond to depositors who ask for their money.

I know that the plan I have suggested has one objection. recognize its force. There is a sense in which it is a premium upon the indifferent and the reckless and the incapable and a burden upon the prudent and the thrifty and the competent; but we are distributing the burdens of government in that fashion in every field of public activity. While I recognize the abstract injustice of requiring the sound bank to pay something on account of the bad management of the unsound bank, the advantages of the proposal far outweigh the disadvantages.

The objection that I have to the scheme proposed in the bill offered by the Senator from Nebraska and the scheme in the bill presented by the Senator from Oklahoma is that it lacks that clear, definite assurance necessary to accomplish the pur-Who knows whether the profits of a Federal reserve bank will be sufficient after paying dividends upon stock, after paying all the expenses of operating the institution, after putting aside another proportion for the creation of a surplus? Who knows whether there will be in the fund enough to satisfy the depositors of a failed bank?

Suppose we had the system started now. Would the depositors who are now crowding the streets of Omaha in the attempt to withdraw their money from a national bank upon which suspicion has fallen be satisfied with the reflection that we will have Federal reserve banks, and that they may at some time earn a sufficient profit to create a fund out of which they may be indemnified? I fear that the promise held out in these bills is too vague to do what I assume the authors of the bills intended to do.

Mr. HITCHCOCK. Will the Senator from Iowa yield to me? I yield to the Senator from Nebraska.

Mr. HITCHCOCK. It is true that the provision in these two bills is not as specific and certain and does not provide such an immediate fund as that which would be provided by a tax. am not taking a position against the plan to provide a tax, but the Senator from Iowa has stated that there is some objection in certain quarters to taxing the thrifty, well-managed, and successful banks for the others. It seemed to my mind to be an entering wedge-at least, to make a start-in the direction of protecting these depositors.

I call to the attention of the Senator the fact that in the bill which I had the honor to report on behalf of one-half of the committee there is far more reason to expect that an adequate fund will be at once provided. In the first place, there are only 4 reserve banks, instead of 8, 10, or 12, which makes it much more probable that they will be profitably operated. If you divide the business of the country up into 12 parts, with the overhead charges that go with the 12 parts, there is much less likelihood that they will be operated profitably than if you divide the

country into 4 parts.

Then, in the second place, the bill reported by the Senator from Oklahoma provides that the dividends to the stockholders be 6 per cent, whereas the bill which we have reported provides the dividends shall be 5 per cent. Thus there is a margin of one-fifth in favor of our bill in that particular.

I do not criticize the Senator from Oklahoma for providing 6 per cent, because he has been practically driven to do so when he compels the bankers to take the stock in the regional reserve banks; but I cite the fact that the difference between the 5 per cent which we provide for dividends and the 6 per cent which he provides for dividends is of itself almost a practical guaranty of an insurance fund sufficient to pay the depositors in

If the Senator will permit me, before I sit down I want to call his attention to the fact that we have in European experience some guide as to the profits. As I recall it, the Bank of England pays to its stockholders about 10 per cent upon their stock. I think the Bank of France may pay even a little more, and the Bank of Germany nearly as much. If those experiences are of any value, it would indicate that our four regional reserve banks in this country ought to be very certain of earning an equal amount.

I will not interrupt the Senator further.

Mr. CUMMINS. I hope the Senator from Nebraska will not understand me as criticizing the bill that he has brought forward. I think the provision of his bill is better than the corresponding provision of the bill brought forward by the Senator from Oklahoma, because it is more certain to create the funds to which depositors may resort.

I was only saying that if I could write a bill upon this subject for the people of the United States, although I hope the Senator will understand I do not believe that any one man ought to write any bill for the people of the United States, I would make the assurance of payment to the depositors more definite and

certain than it is in either of the bills

There is one further thought in this connection that I wish to present. If the Government became responsible for the default of a national bank to its depositors, the inspection and the examination made by the officers of the Government would be far more effective, far more thorough, than they are now.

The Government would not permit a bank to continue in busiwhen it was apparent, or when it was reasonably clear, that the depositors might suffer and the Government be called upon to make good the obligations of the bank to its depositors.

Mr. NELSON. Mr. President-

Mr. CUMMINS. I yield to the Senator from Minnesota. Mr. NELSON. I have for many years been in favor of protecting depositors, not so much out of sympathy for them as for the purpose of preventing bank runs and panics.

In 1908, following the panic of 1907, it became evident to me that if we had had some system of protecting depositors which could have reached those institutions in New York, where the panic broke out, we could have avoided that panic. We had in that instance an illustration of what is done when a run starts in institutions that are not regarded as first-class banks or firstclass moneyed institutions, such as the Heinze bank and some of the loan and trust companies that were not regarded by experts as being safe and sound. When the panic broke out in those institutions the stronger and better banks, that claimed they were running their business in a proper and conservative manner, as good bankers ought to do, felt the necessity of doing something to stop the panic. How did they stop it? pending and resorting to clearing-house certificates. If at that juncture the depositors in those institutions had been assured that their deposits, either in the Heinze bank or in those loan and trust companies, would be safe, there would have been no runs and the banks of New York would not have been obliged in a body to violate our banking law by suspending.

In 1898, when the so-called Aldrich-Vreeland bill was under consideration in the two Houses of Congress, I made an effort to secure an amendment of that bill; and I will state the plan I worked upon. National banks are obliged to pay a circulation tax of 1 per cent upon circulation issued on other than 2 per cent bonds. On circulation issued upon 2 per cent bonds they pay a tax of one-half per cent. My proposition was not to make the banks pay any more, but to set aside half of that tax on the 2 per cent bonds as an insurance fund to protect the depositors; but my plan found no favor. I offered the amendment

and I got a few votes for it.

Now, I want to say to the Senator from Iowa that while there may be some doubt-clearly there is a doubt-if you make 12 regional banks, whether they will earn enough over and above the dividends to protect the depositors, yet there is one thing I am glad of, and that is that the world has moved since 1908, until to-day on both sides of the Chamber the great majority of Senators are willing to recognize the principle that depositors ought to be protected and taken care of. extent, while there may be something in the doubt which the Senator from Iowa suggests that there may not be sufficient funds to protect the depositors, yet after all we have recognized the principle. If this legislation goes through, whether in the form proposed by the Senator from Nebraska [Mr. HITCHCOCK] in his substitute or in that proposed by the Senator from Oklahoma [Mr. OWEN], we have recognized the principle, we have established it, and after we have once made a beginning we can easily fortify it. Therefore I think we have made the most gratifying progress in this direction.

While I am on my feet, with the permission of the Senator from Iowa, I should like to say there is another thing which is highly gratifying to me in this matter, Mr. President. I am advancing in years, getting old and gray, but for the last 14 years I have labored in season and out of season to get authority conferred on our national banks to loan money to the farmers on real estate mortgages. I met with great opposi-tion; at first I was laughed at and ridiculed. I introduced my amendment, and it came before the Finance Committee. They smiled at me, and, to use a slang expression, they laughed me out of court. I am glad to see what progress has been scored even in that respect. Both of these bills contain provisions for loans to farmers on farm mortgages, a class of paper and a class of security that our smaller country banks in the interior

have always regarded as the best security

Why, Mr. President, our First National Bank, at Alexandria, my home town, had a curious experience years ago. I may say that I live in a rural community. The great trouble with our bankers there is that while the farmers are well supplied and they fill up our little banks with money, our banks have no opportunity to loan that money out at home, but they must seek investments elsewhere. So our banks, in order to invest their surplus money, would go down to the Twin Cities and invest the money of their depositors in what we call "mill paper" and "wheat paper," and they would get, according to the season, from 4 to 4½ and 5 per cent. It finally happened that one of those big milling concerns went into bankruptcy, and our banks got caught pretty badly. They were paying their depositors 3

and 4 per cent, and they were getting, as I have said, only from 4 to  $4\frac{1}{2}$  and 5 per cent for the mill and wheat paper.

What have they done since that time? Our banks have sent their money out into North Dakota and loaned it on farm mortgages in that State at a cheaper rate than the little banks on the frontier could afford to do. This has been a great blessing to those people in North Dakota, and our local banks have been enabled to earn larger dividends than they ever before earned.

I remember that in 1894, while I was governor of Minnesota—

there was a panic then, as Senators will remember—several bankers from the southern part of Minnesota, which is the older and the richer part of the State, where money was plentiful, called on me and told me they had had little runs on their

They said the farmers who had made their deposits with them would come in a little nervous and a little fidgetty and want their money. The bankers would sit down with them and say, "Here, my good friend, you left your money with me and I am paying you 3 per cent interest on it; you can not expect me to keep that money idle and pay that interest. I have loaned your money out to John Jones, and taken as security a mortgage on his farm. I have not got your money here, but I have got that mortgage, and you can have that mortgage." So, those little banks in the southern part of the State stopped the runs by tendering those mortgages to the men who sought to get their deposits.

Almost the same thing happened in the case of the only mutual savings bank we had in Minnesota. One day Mr. Moulton—I think his name was—the president of the bank, a good strong bank, called on me, as though I could do him any good. He brought down a great pile of farm mortgages. He said, "I fear a run on the bank; it has not yet been made, but I am expecting it. Can you suggest anything?" I laughed at him, and said, "Why do you not do as those little banks down in Fillmore County, in southern Minnesota, have done? When your depositors come and want their money, pass them up your farm mortgages." He said that was a new idea, and he would try the experiment. Whether he tried it or not I do not know, but, fortunately, there was never a run made on the bank.

So, Mr. President, to sum up what I have said, this is the most gratifying moment of my legislative experience when I see these two reforms, for which I have labored and agitated so many years, to wit, allowing loans to be made on farm mortgages and making provision for the protection of depositors, are about to become a reality. There is a God in Israel. He sometimes moves slowly, but he has moved both the Democratic Party and the Republican Party to the accomplishment of these great reforms. [Laughter.]
Mr. CUMMINS. Mr. President, I have been delighted to hear

the experience of the Senator from Minnesota [Mr. Nelson] and delighted to be a witness at the moment of his victory, but I am only sorry that he was not able to introduce into one or the other of these bills a provision for the safety of depositors

still more effectual than the one which is found.

Mr. President, I had no thought when I began of being led into a discussion of my individual views in regard to the remedy for the conceded defects in our financial system. I intended to hold myself firmly to the question in hand. I recognize, of course, as I have said before, that the bill proposed by the Senator from Oklahoma will pass, and I intend to direct whatever I have to say from now on anyway to that bill and to bring forward amendments to it, hoping that some of them may command the approval of my distinguished friends on the other side. I. however, do not expect that they will. I am much in the frame of mind of the old lady whose son came home from school and said, "Mother, my teacher has asked me to define, if I can, the difference between hope and expect." The mother thought a moment, and said, "My boy, that is not difficult; there is your old father lying on the sofa overcome with drink; we both love him; I hope to meet him in heaven, but I do not expect to." [Laughter.] It is just that state of mind in which I use the words "hope" and "expect." I hope that the amendment which I have had read at the desk and which I will propose at the proper time will be adopted; I really do not expect it will. It would be adopted if the bill were really under discussion in the Senate; if the minds of Senators were really open to argument it would be adopted; but they are not open.

Without violating any confidence, I may be permitted to say that a few days ago I had a talk with a very distinguished Say that a rew days ago I had a talk with a very distinguished Member of the Senate who sits upon the other side of the Chamber. I will not name him, of course. I was complaining of the caucus. He said to me, "There is nothing wrong in the caucus; this whole subject is open." I said, "I hardly understand that, when it is generally given out that every Member of the Democratic majority, save two, has in one way or

another indicated his agreement, implied or express, to vote for the bill that was adopted in the caucus." He said, "That is so; but if you will convince enough of the Members on the Democratic side to bring about a reference of the question to the caucus, then the caucus will, with an open mind, reconsider the proposal." A half loaf is better than no bread, and I would rather undertake to convince enough to secure a reference of this amendment to the caucus than to have no opportunity at all to debate the great subject we now have before us.

Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from New York?

Mr. CUMMINS. I yield.

Mr. ROOT. May I ask the Senator from Iowa how he expects to accomplish that if a majority of the members of the caucus neither hear nor read his speech?

Mr. CUMMINS. Oh, Mr. President, that does not dismay me at all. I am a progressive in more things than politics. am quite willing to give an absent treatment. [Laughter].
Mr. WILLIAMS. Mr. President, and when, added to that,

there is the fact that a majority of the minority is also absent, it must be discouraging.

Mr. NELSON. They will probably catch what the Senator from Iowa says by the wireless telegraph. [Laughter.]

Mr. CUMMINS. Mr. President, I do not always concur in the sentiments expressed by the very distinguished and eloquent Senator from Mississippi [Mr. WILLIAMS], but he said something the other day that so completely commanded my assent that I am bound, now that he is here, to render him the tribute of approval and concurrence. He said that when Senators wanted to listen to an argument they would be here, and that no command of the Senate could coerce their presence. lieve in that; I do not want any man to sit here simply because it is his duty to fill a chair in this Chamber; I do not want him to be present unless he has a desire to listen to what I have to say; and I, for one, have never indulged in the practice of suggesting the absence of a quorum simply to secure an audience, and I never will.

But, replying further to the Senator from New York [Mr. Root], the atmosphere of the Senate Chamber is alive with intellectuality; its atmosphere has an element that is as elusive and evasive as that ether which conveys the wireless message from one continent to another through the air; and I am bound to say to the Senator that, somehow or other, whenever a Senator says anything here that really deserves to be remembered or that is really worthy of being heard, it gradually finds its way into the minds of the entire membership of the Senate. Therefore, I am not discouraged by the few vacant seats which I observe about me, although I must in candor say that there are more Senators in the Chamber at this moment than I have seen here before to-day. That is a high compliment to me, and I can only account for it by the hypothesis that some of them must have believed that an encounter was about to take place. Laughter.] As I said to my dear friend, the Senator from Missouri [Mr. Stone] to-day, there is only one thing that can fill the Chamber, and that is the expectation that one Senator will call another a liar or something-

Mr. WILLIAMS. Something interesting. [Laughter.]

Mr. CUMMINS. I mean in parliamentary language. savages, all of us; we like to see the blood run; and whenever any Senator here has a lance that is sharp enough to open a vein and the crimson fluid begins to flow these seats fill with the rapidity with which a crowd rushes into a country circus. I will disappoint anyone who has come in with any such expectation, for, having the completest confidence in the patriotism and integrity of every Senator, and having a great affection for most of them, my argument must be very peaceful.

With these general observations, I turn to the consideration

of that part of the Owen substitute to which my amendment re-I regret that there are some Senators here who do not know what my amendment is, but that is a misfortune which I must suffer. I propose to consider it, first, as to its justice

and fairness, and I must pause to state its effect.

My amendment to the Owen substitute, if adopted, would so change it that the subscription by the national banks will become optional instead of mandatory, and so that the member banks, those which enter the system, whether they are stockholding banks or not, will select four of the directors of each Federal reserve bank instead of six, as the bill now provides; that is, my amendment, by the change of a very few words, converts the Owen bill into a bill that will create Federal reserve banks the stock of which is owned by the people and the affairs of which are controlled and managed absolutely by the Government of the United States.

I need not say more with regard to its import.

I propose to consider the Owen substitute, first, as to its justice and fairness and, second, as to our constitutional authority to do what is proposed. It takes from the capital and surplus of every national bank 6 per cent and invests it in the capital stock of a Federal reserve bank. Having thus coerced the capital for the Federal reserve bank and required the national banks of the district to become the owners of the stock of the reserve bank it gives to the stockholding banks the control and management of the reserve bank.

I quite agree with my Democratic friends in one assertion which they constantly make. They say-and it can not be fairly disputed-that if the national banks of a regional district are compelled to furnish the capital of the reserve bank of that

district they ought to control and manage it.

I can not see how there can be reasonable difference of opinion with regard to that proposition. If the Government of the United States enters each national bank and forcibly takes 6 per cent of its capital and surplus and invests it in the uncertain security of the stock of another banking institution, the man who would propose that after the contribution of capital had been compelled in that way the Government should undertake to manage or control the institution is deficient in a sense of natural justice and fairness

It is, of course, because I believe that the regional banks or reserve banks ought to be controlled absolutely and completely by the Government of the country-that is, by all the people of the country-that I resist the proposal to compel the national banks to furnish the capital with which the reserve banks are

to be conducted.

Mr. REED. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Missouri?

Mr. CUMMINS. Certainly. Mr. REED. I understand the Senator's argument to amount to this: That if the banks contribute the capital of the regional banks it would be a great wrong and an imposition upon the banks if the Government were to name a majority of the

Mr. CUMMINS. The Senator from Missouri does not state my position with entire accuracy. My statement was that if the Government compelled the national banks to invest a part of their capital in the stock of the Federal reserve banks then the stock-holding banks should select a majority of the directors of the reserve banks.

Mr. REED. Yes. Now, does the Senator think that if the public bought this stock it would then be proper for the Gov-

ernment to name the majority of the directors?

Mr. CUMMINS. Entirely; because if the people, after the institution of this system, desire to contribute their money toward the capital of the Federal reserve banks, knowing that under the law the Government will appoint a majority of the directors, it is wholly fair and just.

Mr. REED. The Senator means, does he not, just to the

stockholders and also just to the banks?

Mr. CUMMINS. I meant wholly just and fair to the stock-

Mr. REED. Would the Senator favor a governmental con-trol in the directorate of the regional banks if the public purchased the stock and the banks were not compelled to take it?

Mr. CUMMINS. I would.

Mr. REED. The Senator would?

Mr. CUMMINS. I would. I do not believe any institution over which the Government has not any control ought to be created for the better distribution of the reserves of the banks.

Mr. REED. Now, if it be a wrong, a wicked, and an oppressive thing for the Government to require banks to contribute of their capital, their own money, to a regional bank, why is it not equally wrong and oppressive to require the banks to put their reserves in a regional bank which the Government controls?

I will add to my question-for I want to get the Senator's view fairly-does not the argument which denies the right to governmental control when the banks contribute the capital stock and the reserves, which are the real capital of the re-gional banks, also prohibit governmental control when the banks contribute only the reserves?

Mr. CUMMINS. No, Mr. President; I think not. I am about to enter upon the discussion of that subject.

Mr. REED. May I ask one further question? Is it because in one case the bank contributes its own capital and in the other case it contributes trust funds that have been placed with it to be sacredly held and guarded?

Mr. CUMMINS. The Senator from Missouri can not put me in the position of becoming an advocate of either of these bills. I have a choice as between them; but, as I said before the

Senator came into the Chamber, if I could prepare an amendment to our banking law it would be very unlike either of these measures. I am sure, however, that one or the other of them will become the law of the country; and I am proposing only such amendments as I think can be fairly adopted within the principle which one or the other of the sections of the committee has seemed to affirm in bringing forward these bills.

Mr. REED. I understand the position of the Senator to be. then, not that he "could be happy with either were the other dear charmer away," but that he could be happy with something else if neither of the bills were present? [Laughter.]

Mr. CUMMINS. That is rather accurate, too. I think I am exactly like the Senator from Missouri with respect to that. I have some reason to think that if he were writing a bill to cure the defects whose existence we all acknowledge, the bill would not take the form of either of these proposals.

That is not strange, with independent men looking upon a great subject of this sort. It is not remarkable that in trying to devise some cure for an ill that seems to be prevalent they would write different statutes. I think it is well that it is so.

The proposition I am now beginning to prove, if I can prove it, is, first, that the Government ought not to compel the national banks to contribute the capital of the Federal reserve banks. I will come to the question of reserves later. I may say, in a preliminary way, however, that there is a vast difference between the propriety of exacting a part of the capital of a national bank and the propriety of compelling the deposit of a reserve which the national bank is required by law to keep for the security of deposits.

I must repeat a sentence or two in order to make the connec-

tion with what I said before the first interruption.

They say-that is, the Democrats-and it can not be fairly disputed-that if the national banks of a regional district are compelled to furnish the capital of the reserve bank of that district, they ought to control and manage it. This is so obviously true that I have accepted it instantly, and I assume that if the Democratic majority come to believe that the banks of the district should not be permitted to control and manage the new function, namely, the Federal reserve bank, they will at once assent to the equally obvious truth that the banks should not be coerced into furnishing the capital for the new function.

It will be helpful at this point to segregate from the voluminous substitute the language which deals with this subject and which imposes upon the national banks the requirement to take a part of their capital and surplus and transfer it to the Federal

reserve banks.

I quote from pages 5, 6, and 7 the portion material to the

inquiry I am now pursuing.

Mr. President, I have said to my friend from New Hampshire [Mr. Hollis] that at 8 o'clock I would be glad to suspend the address I am now making in order to permit him to carry out the notice he has already given, and which I understand to be that he will address the Senate at 8 o'clock. That being true, and inasmuch as I have now reached a point at which I can very well quit before reading the quotation I have in mind, I shall be very glad if the Senate will take a recess until 8 o'clock.

# RECESS.

The VICE PRESIDENT. The Senate stands in recess until 8 o'clock p. m.

The Senate thereupon (at 6 o'clock p. m.) took a recess until 8 o'clock p. m.

# EVENING SESSION.

The Senate reassembled at 8 o'clock p. m.

#### BANKING AND CURRENCY.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, to furnish an elastic currency, to afford means of rediscounting commercial paper, to establish a more effective supervision of banking in the United

States, and for other purposes.

Mr. HOLLIS. Mr. President, I invite the attention of the Senate to a brief statement of the defects of our banking system, and to the specific remedies which are proposed by the Glass-Owen bill. I shall begin with a few definitions.

## DEFINITIONS.

Banking is the business of a bank.

A bank, strictly speaking, is an establishment for the custody, loan, and exchange of money and other funds, for the issue of currency, and for facilitating the transmission of funds by drafts, checks, and bills of exchange.

Currency is that which passes from hand to hand as a medium of exchange, including coin, Government notes, and bank notes.

#### A BANK IS A TOOL.

It is readily seen that a bank produces nothing directly, not even money; it may issue currency in the form of bank notes, but these notes are nothing but promises to pay lawful money.

A bank, therefore, industrially speaking, is a utility, or tool,

which makes human effort more efficient.

# CURRENCY IS A TOOL.

Currency is also a utility, or tool, for the same purpose.

It is, accordingly, the object of the pending banking and currency bill to make two important economic tools more serviceable to commerce and industry. More specifically, we purpose to make our coin, or real money, more efficient, and our banking business more efficient and more secure. We shall thus increase the sum total of things which satisfy human needs as surely as if we should perfect an electric storage battery or develop a spineless cactus.

#### COMMERCIAL BANKS ARE INVOLVED.

In this connection we are concerned principally with the commercial bank of the ordinary type—one which receives funds on deposit subject to check, makes loans on good security, and sells drafts or exchange on large commercial centers. We aim to make deposits and loans safer, to regulate borrowing, and to facilitate exchange

I desire to call the attention of Senators to the fact that there has been nothing in the proposition of the Democratic administration at this time looking toward furnishing to private persons credit or to private persons an opportunity for safe and remunerative investment. We aim solely, as I have said, to make deposits and loans safer, to regulate borrowing, and to facilitate exchange.

From the standpoint of the stockholder a bank is a moneyearning institution, and its success is measured by the size of its dividends.

#### BANKS AIM TO MAKE PROFITS AND NO LOSSES.

The officers represent the stockholders, and it is their duty to earn as much profit as is consistent with the safety of their own particular bank. They aim to make no losses and to keep all available funds profitably employed.

#### MOST PROFITS ACCRUH FROM BUSINESS LOANS.

Most bank profits accrue from interest on loans and invest-ents. Outside of New England, substantial sums accrue in the United States from cashing checks, and all over the country there are earnings from exchange accommodations. But the average commercial bank depends principally on its earnings from business loans.

After banking rooms and facilities are provided, a portion of the bank's capital is available for loans, but no bank would be successful if its loans were limited to its capital. Many times its capital is available from so-called deposits.

# LOANS ARE MADE FROM DEPOSITS.

Deposits are of two kinds, real and fictitious. Real deposits come in through the window of the receiving teller in the form of cash and checks from business men, farmers, lawyers, and the like, from people who sell goods or services to the community, and gather in rills of currency and turn them into the bank in a steady stream. Deposits of this character are usually larger than the capital of the bank, and they are deposited with a full understanding that they are to be loaned to borrowers for the profit of the bank. It is further understood that these deposits are to be paid to the depositors on demand in cash, unless there is a special contract for what is called "time." Banks frequently induce the inflow of deposits by paying a low rate of interest.

# FICTITIOUS DEPOSITS.

Fictitious deposits are created as follows: A customer desires to "borrow money," as the phrase goes. He gets a friend to sign a note with him, and he appears at the bank with a piece of "two-name paper," a well-recognized instrument of redit. The signers are responsible and the bank decides to extend the accommodation." credit.

If, now, the bank should hand to the borrower cash for the amount, say \$10,000, it would be clear that the loan was made out of funds on hand, part of the capital, part of the profits, or part of the deposits made by customers. Such is sometimes the

But more often no cash passes. The clerks make entries on the books of the bank, showing that the borrower has made a "deposit" of the amount, and that the bank holds the note among its assets. The borrower then has credit to the amount of his note, \$10,000, less the discount, or interest at the cur-

rent rate for the time the note is to run. This interest is

usually deducted, or discounted, in advance.

Loans may be procured in this way on collateral security, or on other notes payable to the borrower and indorsed by him to the bank, or discounted. Loans are frequently made in large cities on notes signed by a single merchant of undoubted credit.

But the point is that the borrower who does not receive cash, or a draft on another bank, has a "deposit" just as much as if he had paid \$10,000 in gold eagles to the receiving teller. He may proceed at once to draw checks against his deposit just like a real depositor. A substantial part of the loan frequently remains on deposit in this way for days and

#### LOANS AND DISCOUNTS.

When a bank makes a statement, the principal item among the resources is loans and discounts, which includes the notes which have been discounted. Among the liabilities the principal item is deposits, which includes real deposits and deposits created as the result of loans. The two items, loans and discounts, and deposits, usually offset each other, or nearly so, in normal times.

If loans were not made in this way, it is evident that the loaning capacity of a bank would be limited by the amount of its capital and surplus and the money actually deposited. When it can secure no more deposits, it must stop making loans. And it is the understanding of people in general, I firmly believe, that a bank loans no more than it receives in capital and actual deposits.

# FICTITIOUS DEPOSITS ARE LOANS OF CREDIT.

What, then, does the bank loan when it creates these fictitious deposits against which borrowers may check? Nothing more or less than the credit of the bank, by making entries upon its books.

Loans bear no fixed relation to actual capital and actual deposits, nor to surplus and undivided profits. The law and custom make no limit in that respect, and the bank could go on loaning its credit in the manner described to the amount of billions, making fictitious deposits and piling up interest indefinitely, if it were not for a legal restraint in the shape of reserves."

# RESERVES.

A reserve is a certain amount of cash, in specie or "lawful money," which a bank is required to keep in its vaults, or readily available, in case of emergency.

While the great bulk of a bank's business is carried on by check and draft and book entry, a certain amount of cash is necessary. Its customers require pocket money; traders need cash for many purchases; pay rolls must be met in currency. But in normal times a very small percentage of a bank's daily receipts and payments are in cash. When business conditions are shaky, more cash is demanded by those who are cautious and wish to remain on the safe side.

Experience teaches that comparaint hards checkly have

Experience teaches that commercial banks should have on hand for emergencies under present conditions a cash fund varying from 15 per cent to 25 per cent. This is substantially what every commercial bank keeps on hand for emergencies, whether it is a National bank or a State bank, whether the law requires it or not.

It is clear that every time a bank accepts a real deposit, or creates a fictitious one, it increases its liabilities, or, in other words, it increases the liability that a larger amount of cash may be called for. The Federal law recognizes this situation and imposes certain conditions respecting "reserves."

# RESERVE CITIES.

New York, Chicago, and St. Louis have been made central reserve cities; other large cities have been made reserve cities. National banks in the first group are central reserve banks; in the second group they are reserve banks. All other national banks are country banks.

Central reserve banks must keep in their vaults in cash 25 per cent of their liabilities. Liabilities, as we have seen, appear principally in the shape of "deposits." If the central reserve bank has only a half million in cash in its vaults and has loaned over two millions, it can not loan any more, or pay any dividends until it gets more cash. Cash for reserve purposes means gold, gold certificates, silver, silver certificates, and United States notes (greenbacks). National-bank notes are not available for reserves in national banks.

Reserve banks must keep 25 per cent of their liabilities in the form of cash reserves, but 12½ per cent may be kept on deposit with central reserve banks.

A country bank must keep a reserve of 15 per cent, two-fifths of which must be in its own vaults, while three-fifths may be deposited with reserve banks or central reserve banks.

LOANS ARE LIMITED BY RESERVES.

It is thus seen that the amount of loans a bank may make is limited by the amount of cash reserve it can command, and the total loans of all national banks are limited by the total cash reserve existing in all their vaults.

There are many more State banks than national banks, but their total resources are approximately the same as the national banks. Some States impose reserve limits similar to the Federal provisions, and, as a matter of prudent banking, all commercial banks approximate the Federal conditions. Experience teaches the need of caution. Moreover, if a bank's statement shows a weak reserve compared to national banks, it will forfeit the confidence of depositors and lose business. State banks have large amounts of reserves on deposit with national banks. They are usually permitted to count national bank notes as part of their reserves.

It follows from the system of counting deposits with reserve and central reserve banks as a part of the reserve that there is a reduplication of reserves based on the same actual cash.

LITTLE CASH ACTUALLY ON HAND.

The country bank, for example, may have liabilities of \$100,000. It must keep 6 per cent, or \$6,000, in its own safe. The rest of its reserve, 9 per cent, or \$9,000, may be deposited with a reserve bank. Of this \$9,000 the reserve bank must hold 25 per cent in reserve, 12½ per cent, or \$1,125, in its own safe, while the other 12½ per cent may be deposited in a central reserve bank. Of this \$1,125 the central reserve bank may loan 75 per cent, keeping only 25 per cent, or \$281.25, in cash in its own vault.

It thus appears that the actual amount of cash on hand in the various banks as a reserve for the \$100,000 liabilities of the country bank is the sum of \$6,000 (in its own safe), \$1,125 (with the reserve bank), and \$281.25 (with the central reserve bank). This totals \$7,406.25, or 7½ per cent of the \$100,000.

This amount is small, but in ordinary times it is sufficient. Ordinarily, if an unusual amount of cash is required by any solvent bank, it will have no trouble in securing extra cash from some other bank, usually some regular banking connection in the same or a neighboring city.

RUNS ON BANKS.

Occasionally a bank loses the confidence of its depositors. These are the "real" depositors as a rule. There has been a defalcation, or a heavy loss through the failure of one or more borrowers. The depositors thereupon demand their money, all at once, and there is a run on the bank.

No bank keeps money enough on hand to pay all its depositors at once. If it did, it could not earn dividends. When a run begins, if it is insolvent, it ought to go into liquidation at once, and let its depositors share ratably in its assets. But if it is solvent, it appeals to other banks for help in the shape of cash. These banks (usually in the same community) examine its books and securities, and if they are satisfied it is solvent, they supply it with cash, taking its notes and securities as collateral for their advances. When the depositors find that they can get their money, they generally do not want it, and the run soon stops. Millions in cash are sometimes paid out in this way before a run ceases.

RUNS ARE NIGHTMARES TO BANKERS.

The fear of a run is the nightmare of the banker. He knows that he has not cash enough on hand to pay his depositors in cash if they demand their money all at once. He knows that every other bank is in the same condition. He knows that there are bank deposits in the country to the amount of seventeen billion dollars, while the total amount of currency in circulation is less than three and one-half billions.

EFFORTS TO COMMAND CASH.

Bankers understand these things altogether too well. As soon as there are signs of a business depression they begin to reduce loans (and therefore deposits) and to reach out for cash. Feeling the pressure of others for cash, they increase their efforts. There are about 25,000 banks in the country, and when they begin to store cash for the impending emergency, they hasten its approach. Country banks demand their reserves of the reserve banks; reserve banks demand their reserves of the central reserve banks.

There is no law forbidding a reserve bank, or a central reserve bank, to pay to its depositors the sums deposited with it. It may pay off depositors (including depositing banks) even out of its reserves, but when it becomes evident to the banks in the large cities that they can not satisfy the demand for cash, they prefer to stop cash payments in order to give all depositors an even chance, rather than pay the importunate at the risk of robbing the more forbearing.

PANIC OF 1907.

The panic of 1907 was brought about in this way. There had been a period of pronounced and feverish speculation, and when some of the unsound projects began to fail, certain banks lost money. It was evident to the far-sighted that trouble was impending, and prudent bankers prepared for the crash by calling loans, refusing credit, and absorbing cash. These precautions made it more and more difficult to secure credit, and other failures followed. A bad situation was thus intensified. Every bank in the country prepared for the crash, and currency went to a premium, or, more accurately, bank credits were depreciated, because they could not be drawn in cash. In October, 1907, the New York banks notified their correspondents that they would pay out no more cash. Cash payments thereupon practically ceased throughout the country. Industries could not get cash for their pay rolls, nor credit for their necessary business. A severe depression ensued.

PANIC AGGRAVATED BY LACK OF CURRENCY.

It should be remembered that the business depression which followed the panic of 1907 was not caused by lack of currency. It seems inevitable that business should run its course through successive stages of prosperity, speculation, inflation, panic, depression, liquidation, and then slow recovery back to prosperity. But the suspension of cash payments in 1907 greatly intensified the shock to credit and confidence, and caused many failures which would otherwise have been avoided. Such suspension weakens our credit abroad. It is altogether humiliating, disastrous, and unnecessary.

astrous, and unnecessary.

Our national banking system consists of about 7,500 banks, independent of each other and in times of crisis bidding against each other for cash. They are active competitors, as a rule, and the community gets the benefit of competition among them, but they are so independent that they are of little mutual help in times of crisis, for their resources are scattered in 7,500 different places.

CASH RESERVES ARE SCATTERED.

It is as if the water supply of a great city were divided among the different houses, a few gallons in each place. In case of a conflagration at any one point the small supply of water locally available would be useless, and the whole city might be destroyed.

It is one purpose of the pending bill to gather the scattered reserves into large central reservoirs (Federal reserve banks), so that they may be rushed to the point of danger and applied to the flames before they gather headway. The Federal reserve board will perform the function of fire commissioners for this purpose, acting through Federal reserve agents.

It might as well be expected of the fire commissioners in a large city that they should actually handle the scaling ladder and point the hose nozzle as that the reserve banks themselves should furnish credit to individual borrowers or that the Government itself should go to put out these fires. The two functions are entirely distinct, and our bill does not undertake to care for individual depositors or to have the Government enter the banking business in this manner.

CONCENTRATION AND MOBILIZATION OF RESERVES.

This process of handling reserves may be described as the concentration and subsequent mobilization or liquefaction of reserves, so that they may flow freely, like water, to the point of danger, instead of remaining immobile, rigid, and frozen. It may be said that under the existing law the chill of apprehension freezes our scattered reserves and renders them useless.

The provisions of the Glass-Owen bill are intended to gather these reserves into 8 or 10 great reserve banks, so that they may be available for real and efficient service whenever and wherever financial troubles may arise. These great Federal reservoirs are piped together, so that money may be shifted from one to the other if the level sinks to the point of danger or inefficiency in any one.

ELASTIC CURRENCY.

But the Glass-Owen bill does not stop here. It aims to make more cash available in times of stress than can now be obtained. Opinions differ as to the adequacy of the currency volume now in circulation. Some experts say there is none too much. Others say that there is more than is needed by two or three hundred millions in the spring and early summer. But all agree that there is too little in the fall and winter, when crops are to be moved. All agree that our currency is inelastic, rigid, and inflexible, when it should be elastic and capable of expansion and contraction with the needs of commerce.

PRESENT CURRENCY NOT ELASTIC.

We have in the United States in circulation about six hundred and thirty millions in gold; about one thousand millions in

gold certificates; about seventy-five million silver dollars; about five hundred millions of silver certificates; about one hundred and fifty millions of subsidiary coin; about three hundred and forty millions of United States notes, or greenbacks; and about seven hundred and twenty millions of national-bank notes, a total of nearly three and a half billions. This makes a circula-tion of about \$35 for each person in the United States, nearly double the per capita circulation in 1896. To be strictly accurate, the per capita circulation in 1896 was \$22.

The gold coin, gold certificates, and subsidiary coins increase stendily with little regard to the conditions of commerce. The silver dollars, silver certificates, and United States notes do not increase at all. The national-bank notes increase slowly. They are based on Government bonds as security, and they are profitable (and therefore availed of) in proportion to the price the banks pay for the bonds. But they can never exceed the

capital of the issuing banks.

It is apparent that our present currency is hopelessly rigid, so that there can be no substantial increase in times of emergency. It is the recognition of this fact which leads banks, at the first sign of trouble, to hoard cash for their individual needs, thereby intesifying the evils of the situation. Cash disappears into the bank vaults until counters are bare and tills are empty.

Currency is scarce every fall when cash is needed to move ne crops. When panic conditions approach, currency disap-Some safe and practicable way should be devised for obtaining cash on good security when urgent need arises. Currency should expand in response to the demands and exigencies of business. It is equally important that it should contract when it is no longer needed. A serviceable currency should be neither scarce nor redundant.

CURRENCY, CAPITAL, AND CREDIT.

A careful distinction should be made between currency, capi-

tal, and credit.

Capital, as we all know, is a stock of accumulated wealth. Some one has worked and produced it and has then saved it

Fixed capital is in the form of buildings, machinery, railroads, steamboats, water powers and the like, where it is practically immobile. It forms the plant for industry.

Circulating capital is free for application at any place where it is most needed. It consists mainly of materials of various kinds, such as wool, cotton, dyes, ore and logs for mills and factories; of supplies of various kinds, such as iron, copper, lumber, and lime for construction purposes; and, most important of all, of wheat, beef, corn, oats, hay, and the like for the sub-sistence of man and beast engaged in the various industries.

# BUSINESS LIMITED BY AVAILABLE CAPITAL.

It is clear that the amount of business which may be prosecuted at any one time is strictly limited by the amount of raw material, supplies, and subsistence available for industrial use. and it follows that the amount of new loans that may properly be made for legitimate business is limited by the amount of these commodities available for such use. Until the supply of raw material and subsistence is unlimited, the supply of loans on good collateral must be limited. Prof. Taussig, of Harvard University, a native of Missouri, I believe, makes this relation of capital and howevering years relation in the resource. of capital and borrowing very plain in his recent work on Principles of Economics, chapter 5.

# CURRENCY RENDERS CAPITAL AVAILABLE.

Now, currency, as we have seen, is the medium of exchange which facilitates the transfer of materials and subsistence from one person to another. If currency is plentiful and may be easily borrowed, promoters obtain it and put it into new enter-The easier it is to obtain currency, the easier it is for certain captains of industry to obtain material and subsistence for their particular enterprises. Too great ease of borrowing leads to overdevelopment in certain industries, failure of profits, contraction of credits, and financial disaster. Money invested in the plant of the new industry is fixed so that it can not be withdrawn; and not producing a profit, it must remain idle and cause a dead loss.

Credit is trust given or received. A man desiring credit at a bank makes a contract to pay what he borrows at some future time. If he contracts to pay on demand, his loan is "on call." If he contracts to pay at a certain time, his loan is "on time." The credit extended to him is the trust or confidence of the bank that he will keep his promise. The bank's credit to the borrower will be large or small in proportion to its confidence that he will keep his promise.

We have seen that the amount of credit extended to borrowers bears no strict relation to the amount of money actually deposited with the bank by its patrons. But the amount loaned bears a definite fixed relation to the amount of cash in the bank's reserves. Inasmuch as the amount of business undertakings depends on the amount of loans business men may obtain, and the amount of loans depends on the amount of reserve money in the banks, the connection between the amount of industry in a nation and the amount of reserve money in the banks is readily traced. If there is too much cash for the amount of material and subsistence available, business will be overstimulated; if cash is too hard to obtain, business will be starved.

CREDIT PERFORMS FUNCTIONS OF CURRENCY.

Credit extended in the form of fictitious deposits against which checks may be drawn performs all the functions of currency. In normal times it is actually a most useful addition to currency, constituting the largest part of current funds. As long as confidence exists in the business world, bank credits and bank checks answer every requirement. But when confidence is chilled, cash becomes the only currency acceptable to creditors. It is at such times we need cash of undoubted security, backed by the Government stamp.

It is a chief purpose of the Glass-Owen bill, therefore, to supply for the legitimate needs of business, and to tide over periods of emergency, a safe and elastic currency, not safe and elastic loans. Let us first consider the safety of the currency

proposed.

SPECIE AND NOTES.

Currency is, broadly speaking, of two kinds, specie and notes. Specie is coin, or hard money; it circulates at approximately its market value. It has intrinsic worth, and is valuable for use in the arts.

Notes are promises to pay specie on demand. They have no value except as promises. They are instruments of credit, and have no intrinsic value. They are valuable in proportion to the

soundness of the institution which emits them.

Coining hard money takes time, and the amount of bullion available for a sudden increase in the currency is comparatively. small. Moreover, it is not easy to retire specie when contraction is desired. We are obliged, therefore, to rely on notes for our flexible currency.

Everyone knows that paper currency will not serve its purpose unless it is received throughout the country at its face value with complete confidence. Unless it passes freely from hand to hand, it is not good currency. Its soundness must be

above suspicion.

ELASTIC CURRENCY MUST BE GOVERNMENT PAPER.

We find it desirable, therefore, to have our elastic currency consist solely of United States Government notes, payable at the Treasury of the United States in gold. Such notes will be received everywhere with absolute confidence. Moreover, it is sound Democratic doctrine that the Government should issue all the currency of the Nation.

BANKS MUST FURNISH THE GOLD RESERVE.

But it has not seemed wise to burden the Government with the details of a bank of issue or with the responsibility of furnishing the gold for redeeming the reserve notes. National banks are the fiscal agents of the Government, and currency reform will increase the safety and profit of their business. A plan must be adopted, therefore, which will shift these burdens from the Government to the banks.

#### FEDERAL RESERVE BANKS.

The Glass-Owen plan purposes to organize Federal reserve banks, not less than 8 nor more than 12, fairly distributed in financial centers throughout the country. Every national bank is required to contribute to the reserve bank of its district 3 per cent of its capital and surplus, which will give the reserve banks an aggregate capital of fifty-three millions at the outset, A like sum of 3 per cent may be called at any time it is required.

The banks which contribute the capital choose six of the nine directors of each reserve bank. The Federal reserve board, representing the Government, chooses the other three directors. FEDERAL RESERVE BOARD.

The Federal reserve board consists of the Secretary of the Treasury and six other members appointed by the President for terms of six years each. The board has in each reserve district a Federal reserve agent to represent it and the Government in its dealings with the reserve bank.

CAPITAL AND DEPOSITS.

Banks subscribing to the capital of the reserve banks are called member banks. They hold stock to the amount of their cash subscriptions, on which they draw 6 per cent dividends. Earnings above 6 per cent go to the Government. They are required to transfer their reserves gradually to the reserve banks until all their reserves are so transferred at the end of two years, except about one-third of each class, which they are The Government will also required to keep in their vaults. deposit its funds in the reserve banks. The Government funds will approximate two hundred millions and the reserves four hundred millions, so the reserve banks will have actual deposits of about six hundred millions in addition to their capital.

Reserve banks may loan only to member banks and on good security. They may rediscount for member banks promissory notes, based on genuine commercial paper, which are payable in 90 days. It is not necessary that the paper should be on 90 days' time originally. If it has been drawn for six months, and half that period has expired, it is available for rediscount.

Loans and rediscounts for member banks will ordinarily be made from the funds deposited as reserves and by the Government, but if funds are getting low any reserve bank may apply to the reserve agent for the district for reserve notes. It will offer for collateral security for such notes commercial paper due in 90 days or less. It will also provide and set aside for redemption purposes 33\frac{1}{3} per cent of gold in its own vaults or with the United States Treasury.

#### FEDERAL RESERVE NOTES.

The Federal reserve board will pass upon the application for reserve notes and, if it approves the application, the reserve agent will deliver to the reserve bank United States reserve notes to the face of the commercial paper put up with him as collateral.

The transaction will then stand as follows:

A member bank has obtained currency from its reserve bank by rediscounting commercial paper. There is a fair adjustment of the interest on this paper. If it bears 6 per cent interest the member bank may receive 2 per cent, or 4, and the

reserve bank 4 per cent, or 2, as the case may be.

The reserve bank has replenished its funds by putting up with the reserve agent, say, \$100,000 in amount of commercial paper, and has received \$100,000 in United States reserve notes. These reserve notes are loaned to it by the Government, and it may hold them, loan them, or invest them. In this way the currency is expanded, but no faster than the needs of business require, as shown by the amount of commercial paper offered for rediscount.

# EXPANSION AND CONTRACTION.

The commercial paper put up with the reserve agent as collateral for the reserve notes will become due from time to time, and the payers will transmit the funds through the member banks and the reserve bank in gold, reserve notes, or lawful money to the reserve agent. He will take the cash, surrender the particular piece of collateral, and lock the proceeds up for future transactions.

The expansion of the currency takes place when the reserve notes are delivered to the reserve bank by the reserve agent. The contraction occurs when the reserve bank pays to the reserve agent the amount of the maturing paper, and he locks the cash so received in his vault. The next time the reserve bank wishes to obtain funds it will receive a part or all of the accommodation from the currency in the reserve agent's safe.

With the approval of the Federal reserve board, the reserve

agent may permit the reserve bank to increase its collateral and receive more currency or to substitute other paper for that which has matured. The volume of currency is thus controlled by the reserve board, and undue inflation or contraction is avoided.

#### REDEMPTION.

If a reserve note is presented to a reserve bank, it must be redeemed in gold or lawful money (greenbacks). If it is redeemed by the bank, it goes into its till to be used again.

If a note is redeemed at the United States Treasury, it is redeemed from a stock of gold kept in the Treasury by the

reserve bank. It is then sent to the reserve bank to go into its till and used as before.

Ordinarily these reserve notes may not be used as reserve money—that is, as reserves for deposits; but the reserve board may permit their use by member banks to a limited extent if such use appears necessary.

As a rule, however, reserve notes, not being available for reserves, will be turned in when collateral is taken from the hands of the reserve agent. The tendency will thus be to retire the reserve notes and keep gold and greenbacks in circulaSECURITY BEHIND RESERVE NOTES.

A reserve note will have back of it, as security for the Government's obligation to pay it to bearer:

First. Promissory notes maturing in 90 days, based on actual commercial transactions and the credit of the maker.

Second. The credit of the payee or indorser. Third. The indorsement of the member bank. Fourth. The double liability of the stockholders of the member bank.

Fifth. Thirty-three and one-third per cent of gold reserve. Sixth. A first lien on the assets of the Federal reserve bank. Seventh. The stock of the indorsing member bank in the reserve bank

Eighth. The reserve balance of the indorsing member bank in the reserve bank.

Ninth. The double liability of all the member banks of the reserve bank.

Tenth. The double liability of the stockholders of all the member banks of the reserve bank.

Eleventh. The surplus of the reserve bank.

Twelfth. The earning power of the reserve bank.

SAFETY OF NOTES UNIMPEACHABLE.

It is inconceivable that any notes so safeguarded should not be secure. They are so amply guaranteed that the first requisite of a paper currency, to wit, safety, is fully provided for. No one disputes this.

#### FEDERAL RESERVE BOARD COMMANDS CONFIDENCE.

The Federal reserve board will have general supervision and control over the entire system. It will direct the policy of the reserve banks. Its members will be able men, attracted by the honor and dignity of the position as much as by the liberal salary provided. They will have great responsibilities. Their work will be carried on with full publicity. They will have no financial interest or connection with any bank.

Unless we are to lose all faith in human nature, unless we are to confess that our Government is a failure and its citizens are unfit for the administration of its affairs, we must put full faith in such a board as this.

To it we confide such discretion as must lie outside the field of fixed and automatic regulation. To it we confide the duty of controlling the volume of reserve notes in circulation at any time, the discount rate of reserve banks, the suspension of reserve requirements if need be, the permissive use of reserve notes as reserves against deposits, the compulsory discount of paper by one reserve bank for another, the suspension or removal of directors of reserve banks. To this board we may safely intrust the duty of seeing that the new paper currency is sufficiently elastic.

## EXPANSION LIMITED BY GOLD SUPPLY.

But the expansion of the new currency is limited not only by the amount of 90-day commercial paper offered for rediscount, and by the judgment of the reserve board; it is also limited by the amount of gold available for reserve in the proportion of

1 of gold to 3 of reserve notes. We may conclude, therefore, that the reserve notes fulfill every function demanded of a safe and elastic currency, and the main purposes of the pending measure are insured.

# EARNINGS OF RESERVE BANKS.

I have said that the earnings of the reserve banks above 6 per cent dividends to the stockholders go to the Government. But before the Government participates in the earnings, a surplus of 40 per cent must be accumulated and maintained, and a portion must then be set apart for an insurance fund for depositors.

There are other admirable features which time forbids me to describe in detail. The success of the system is assured by a provision that if sufficient stock is not taken by the banks, public subscriptions may be invited, and finally the Government shall take any portion left unsubscribed.

State banks and trust companies may become member banks upon compliance with reasonable regulations.

Bank reserves are substantially reduced, leaving more money free for commercial purposes.

There is a Federal advisory council, selected by the reserve banks to advise and confer with the Federal reserve board, thus keeping the board in touch with practical bankers.

Provision is also made for branch banks at home and abroad and the facilitation of foreign exchange.

#### COMMITTEE DIFFERENCES NOT VITAL.

Considering the vast field of banking and the wide divergence of expert views, it is remarkable that the two wings of the Banking and Currency Committee have found so little upon which they can honestly differ. While the verbal changes in the Glass bill as it passed the House are many, and while some important changes have been made in vital features, the original plan has been preserved in all its symmetry and strength, a lasting monument to the learning, research, and genius of the men who framed the measure. To them I wish to pay my sincere tribute. I wish to add, further, that these vital features of the original Glass-Owen bill are preserved in both the amended bills which are presented by the two parts of the com-

OWNERSHIP OF STOCK AND RESERVE-BANK CONTROL.

The differences between the two wings of the committee are not great in most instances. Only two seem to me of particular importance, and they are closely related. I refer to the ownership of the stock and the control of the reserve banks. The Owen substitute compels the national banks to subscribe the stock of the reserve banks and leaves the control of the boards of directors with the member banks. The Hitchcock bill provides for a heterogeneous ownership of stock and the appointment of a majority of directors by the Federal reserve board. EXPERIENCE WITH OTHER PUBLIC UTILITIES.

We may learn a lesson in the management of these great public utility banks from the experience of other public utilities. Experience shows that private corporations are conducted with more keenness and industry than Government departments. Go into any Government office in Washington, and you will find a listless, indifferent attitude that is entirely lacking in a bank or shop or factory.

The best combination is private ownership, with private in-

centive and strong governmental control.

COOPERATION OF NATIONAL BANKS.

If our new banking system is to be a success, we must compel the national banks to take a pecuniary interest in the enterprise. The location of their hearts and their treasures will be

close enough to support the scriptural reference.

We must enlist their cooperation; we must avail ourselves of their knowledge, experience and discretion in the responsibility of borrowers, the soundness of enterprises and the strength of investments. The private character of banking for profit should dominate our new system as far as the management of the reserve banks. No one but active bankers can do such work to the best advantage.

BANKING INITIATIVE AND PUBLIC CONTROL.

Upon the directorates of the reserve banks the banking interests should first come in touch with the controlling forces of the Government. Here is an interlocking and dovetailing that The bankers should still control the matter of discounts and other details of the actual banking business and all these details should be subject to the general oversight and policy of the Government board.

But the Federal reserve board should represent the Govern-They should control broad questions of policy concerning which individual interests might tend to favoritism and abuse. No one would now advocate a representative of the railroads on the Interstate Commerce Commission. No one would advocate a Government representative on the directorate of a railroad corporation. To suggest that a majority of a railroad board should be appointed by the Government would be absurd.

SECURITY OF GOVERNMENT FUNDS.

If people in general are permitted to take all the stock, there will be no responsible ownership upon which an efficient double liability may be based. Since the Government deposits are to be intrusted to the reserve banks, this responsibility should be compelled. The money of the Government has been guarded with twofold security up to this time, a policy which should

not be lightly abandoned.

The argument for a "bank of the people" sounds most attractive, but every national bank is that already. Any five people with \$25,000 to invest may start a national bank.

PENDING BILL COVERS ESSENTIAL DETAILS.

The time may come when we may wish to incorporate a great Federal bank, with stock owned by people in general, dealing directly with the people, and competing with our present banks. But at present we are not addressing ourselves to that problem. We are attempting to provide institutions in which existing banks may place their reserves with safety, and yet have the use of them to a reasonable extent, institutions at which commercial paper may be discounted for cash in times of emergency, institutions which shall serve to unite the banks and the Government in a common cause, institutions whose details shall be managed by the banks, whose stock shall be owned by the banks, in which the banks and the Government shall unite their reserves in a common fund for the

good of all, and over which the Federal Government shall exercise a judicious and wholesome control. Such institutions as these, such control as this, will cure the principal defects in our present banking and currency system. Our plan will concentrate and mobilize bank reserves, insure us a safe and elastic currency, afford means of rediscounting commercial paper, establish a more effective supervision of banking, encourage enterprise, and alleviate the distresses which follow business disaster. To attempt more than this in a single measure would be

the part of boundless conceit and self-sufficiency.

Mr. CUMMINS. Mr. President, I have listened with a great deal of interest to the address that has just been concluded. Its descriptive part has been admirable, but I am not able to concur in some of the conclusions announced by the Senator from New Hampshire toward the close of his observations.

I think there are some things the Government can do better than any private corporation. I believe a municipality should own and operate its waterworks. I infer, however, from the statement just made, that my friend from New Hampshire believes that a private corporation should own the waterworks of a city and that it should be efficiently regulated by the Government.

Mr. HOLLIS. Mr. President— The PRESIDING OFFICER (Mr. Lea in the chair). Does the Senator from Iowa yield to the Senator from New Hampshire?

Mr. CUMMINS. I yield. Mr. HOLLIS. I wish to agree with the Senator from Iowa wherever I can. Fortunately, there are many points on which we can agree.

I believe thoroughly in the public ownership of waterworks where the mechanical detail is small and about all there is to be done is to construct the plant, let the water run, and collect the water tax. I also believe that in some parts of the country electric-lighting plants, though more complicated, can be run to advantage by the cities, and in some instances I know that street railways may be run to advantage. When, however, it comes to a complicated business like banking, where judgment has to be passed upon commercial paper and the solvency of borrowers, and where keenness is such a large part of the business, and where a man must be alert at all times, I disagree with the Senator from Iowa. That is a pure question of judgment and opinion and not of principle.

Mr. CUMMINS. I am very glad to know that the Senator from New Hampshire is not dissatisfied with the tendency of the times, which is toward a larger municipal ownership. I do not know just where the line should be drawn between private ownership and public ownership; but I know that there are a great many instances of activity which we can well give to the public, rather than to the private corporation.

Personally, in the case of municipalities, I believe in the public ownership of waterworks, and of gas works, and of electric-

light works, and of street railways as well. We now have before us a bill fathered by the Democratic majority—and I compliment my Democratic friends upon it-for the building of a railroad in Alaska. I am in favor of building a railroad in Alaska, and I am in favor of having it built by the Government of the United States.

Mr. HOLLIS. Mr. President—
The PRESIDING OFFICER. Does the Senator from Iowa further yield to the Senator from New Hampshire?

Mr. CUMMINS. I do.

Mr. HOLLIS. If the Senator will pardon one more suggestion. I agree thoroughly with what the Senator has last said. I believe the Government should build the railroad in Alaska; but the chief distinction between the two sorts of enterprises is this: The water plant, the electric-light plant, the street railroad, the telephone, the telegraph, the steam railroad are all natural monopolies where we can not have effective competition; where there can be but one or else a very expensive reduplication. In that respect that sort of an enterprise differs tremendously from a banking proposition, where banks must be in competition in order to satisfy the needs of the community at fair rates. When you get to the function of issuing the currency there again you reach the monopoly field, where the Government must be the monopoly, and the only one. That is the distinction.

Mr. CUMMINS. I can understand that there may be an honest difference of opinion with regard to the propriety of Government control, absolute control, of the Federal reserve bank, but I am not able to perceive the distinction which is suggested by the Senator from New Hampshire. It is not intended that there should be any competition. It is not intended that the Federal reserve bank shall compete with the national banks or

with the State banks. The function the Federal reserve bank is to discharge is one that is indissolubly attached to monopoly. It is a monopoly. The redistribution of the reserves of the country is to be dictated by the highest motive for the public welfare, the general good, and not to advance the profit of any man or

any local body of men.

Therefore, it seems to me that the considerations which have now been so well stated by the Senator from New Hampshire, which sustain the public ownership of these utilities, in which all the people of the community affected are vitally interested, apply with increasing force to the functions of Federal reserve banks. If they are not to take the work that has hitherto been done by the banking interests of the country and not well done or not done for the benefit of all the people; if they are not to take that work and do it with an eye single to the welfare of all the people, then they ought not to be organized at all. That is the only defense for the imposition upon our existing system of this great series of corporations, with their attending expanse and complication. I, however, did not intend to enter that particular phase of the matter, but I could not resist the tempta-tion to draw the parallel between the Federal reserve banks and the public utilities which the Senator from New Hampshire so well says ought to be owned and operated by all the people.

When I suspended my address before the recess I was attempting to show the injustice of compelling the national banks to take one-sixth of their capital and surplus and invest in the capital stock of a Federal reserve tank. I desire, however, to be understood clearly with regard to that proposition. I am not asserting its injustice as against the banks, but I am asserting its injustice against the people of the communities which are

served by the banks as they now exist.

I was about to call special attention to the language of the Owen substitute with respect to this matter, and I intend to read it. I want those who are here to bear this language in their minds, for I shall hope later on to analyze that language with some particularity in dealing with the legal aspect of the subject. I quote:

When a Federal reserve bank shall have been organized, every national banking association within that district shall be required and every eligible bank may be permitted to subscribe to the capital stock thereof in a sum equal to 6 per cent of the paid-up capital stock and surplus of such bank, one-sixth of the subscription to be payable on call of the organization committee or of the Federal reserve board, one-sixth within three months and one-sixth within six months thereafter, and the remainder of the subscription, or any part thereof, shall be subject to call when deemed necessary by the Federal reserve board, said payments to be in gold or gold certificates.

Now, mark, after omitting two paragraphs:

Should any national banking association in the United States or trust company engaged in commercial banking in the District of Columbia now organized fail within one year after the passage of this act to become a member bank under the provisions hereinbefore stated—

And I may pause to say that under the provision in order to become a member bank the subscription to the capital stock must take place-

or fail to comply with any of the provisions of this act applicable thereto, all of the rights, privileges, and franchises of such association granted to it under the national-bank act or under the provisions of this act shall—

Now, mark, because this is peculiarly applicable to an observation made a night or two ago by the senior Senator from Mississippi [Mr. WILLIAMS]-

within the discretion of the Federal reserve board, be thereby forfeited.

I emphasize it because I want every lawyer here to remember that upon a failure or refusal of a national bank to subscribe to the capital stock of the Federal reserve bank its charter or franchises are not ipso facto forfeited, but the Government of the United States, through the Federal reserve board, may exercise the option to either declare a forfeiture, to be enforced in the courts, of course, or permit the banking association to continue.

Any noncompliance with or violation of this act shall, however, be determined and adjudged by any court of the United States of competent jurisdiction in a suit brought for that purpose in the District or Territory in which such bank is located, under direction of the Federal reserve board, by the Comptroller of the Currency in his own name before the association shall be declared dissolved. In cases of such noncompliance or violation, other than the failure to become a member bank under the provisions of this act, every director who participated in or assented to the same shall be held liable in his personal or individual capacity for all damages which said bank, its shareholders, or any other person shall have sustained in consequence of such violation.

Remember that I am not now inquiring with respect to our constitutional right to exact a part of the capital of national banks for the benefit of reserve banks. I defer that a few moments until I consider the justice of the requirement, the in-herent wisdom of the requirement. I am asking, in other words, whether it is a fair and just thing to do. I am not protesting for the national banks themselves as organizations so much as I am protesting in behalf of the communities which depend upon the national banks.

If in the transfer there was involved nothing more than the difference between the 6 per cent dividend which this bill allows and the dividend which national-bank capital ordinarily pays, I would not feel inclined to raise my voice against it. speaking for the multitude of men whose enterprises are sustained in part by loans from this capital.

If I may be permitted a local reference, it seems to me nothing less than monstrous for the Government of the United States to forcibly take 6 per cent of the national banking capital of Iowa and remove it to Chicago, there to be dealt with accord-

ing to the pleasure of a Federal reserve bank.

Here may I be allowed to say just what that would do for y State? The State of Iowa is not an opulent Commonwealth my State? in the ordinary sense of that word. Its people are the most prosperous, I believe, in the world. There is no want, no hunger, within its borders. We have a happy and fairly contented population. But, nevertheless, the banking capital we have is as necessary to us as the immensely larger banking capital of New York is to that metropolis.

There are in Iowa 341 national banks. Indeed, we have in that State 1,700 banks, National and State. There are more banks in the State of Iowa absolutely than there are in any other State in the Union, even though our population and the volume of our business and the amount of our wealth are vastly less than in some of the States. But we have so adjusted our affairs that there are in our State 1,700 banks which support its

I confine myself now to the national banks. As I said, there are 341 of them. They have a paid-up capital of \$23,195,000; they have a surplus of \$9,517,000; and they have undivided profits, which are in the nature of surplus and would, I fancy, be reckoned as surplus, of \$4,129,650; or, in all, capital and surplus, \$36,842,097. Six per cent of that is \$2,210,525. That is the amount under this bill, and the Hitchcock bill too, unless under the provisions of the latter measure the banks are able to dispose of the stock among the people that must be contributed to the reserve bank. This is the sum which the measure now before us, and which is to pass this body, unless amended in the way I have suggested, will take from Iowa of its banking capital and transfer it to Chicago. It is, as it seems to me, not only a severe

but an unnecessary blow to inflict upon our business.

Mr. POMERENE. Mr. President—

Mr. CUMMINS. Tell me why it is desired to lift bodily more than \$2,000,000 from our community and take it to Chicago, or to St. Louis, or wherever the reserve bank may be situated, in order to be distributed according to the pleasure of the directors of that bank?

I yield to the Senator from Ohio.

Mr. POMERENE. Does the Senator from Iowa understand that this money which he speaks of as bank capital is a part of the stock or surplus of the banks?

Mr. CUMMINS. I beg pardon; I am not able to hear the Senator.

Mr. POMERENE. I ask whether the Senator from Iowa is of the opinion that the contributions to the Federal reserve bank, to which he refers, is a part of the capital and surplus of the Iowa banks? I beg to say that this money which is contributed to the regional banks, whether as stock or surplus,

is, of course, paid out of deposits of the bank.

Mr. CUMMINS. I am not now speaking of reserves. I am

speaking of capital.

Mr. POMERENE. Very well, then—
Mr. CUMMINS. The amount that I have indicated here is Mr. CUMMINS. The amount that I have indicated here is the amount of capital and surplus, and it is that capital or a portion of it which the bill proposes to take from our people, from our enterprises, and transfer it to the reserve bank, which is to be situated either in Chicago or St. Louis.

Mr. POMERENE. But the point to which I wish to call the Senator's attention is that the stock which is subscribed for by the member bank is paid for by the bank not out of its capital, not out of its surplus, but out of the deposits in the

bank.

Mr. CUMMINS. That is a mere-I will not call it a subterfuge, because the Senator from Ohio did not so intend it; he intended it to be perfectly sincere, but it is not substantial. course, the bankers in Iowa have loaned out this capital. Every penny of it is already at work in our State. When this bill passes they must call in that proportion of their loans and convert them into money, and use the money for the purpose of buying the stock of the Federal reserve bank.

Mr. POMERENE. Mr. President, if I may be permitted to

interrupt the Senator-

Mr. CUMMINS. Certainly; I would be glad to yield to the

Mr. POMERENE. I wish to call attention particularly to this fact: The Senator complains of the taking of this amount of the people's money from his State and placing it in the regional reserve bank in the payment of the stock which is subscribed. Now, the deposits in those banks are the people's deposits, and the money must come out of the State of Iowa whether it is subscribed for by the banks or subscribed for directly by the people. In any event, it is paid for by the people of the State of Iowa.

Mr. CUMMINS. Mr. President, I am not prepared to admit what the Senator from Ohio has just said. Of course, if the people of Iowa were to subscribe in their individual capacity for the \$2,000,000 and more of the stock of the Federal reserve banks, they must pay for it, but those subscriptions would be paid from funds accumulated by the people of lesser commercial activity and wealth, and this aggregate would not

be drawn from the banking capital of our State.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. CUMMINS. I yield. Mr. POMERENE. If the money that is used to pay for this stock is taken out of the bank, certainly it is going to reduce

their deposits by that much.

Mr. CUMMINS. That does not follow, Mr. President.

Mr. POMERENE. Is the Senator from Iowa able to give us any information as to the portion which would be taken out of the banks and the portion which might be taken out of the

pockets of the people, or from hiding places?

Mr. CUMMINS. The Senator from Ohio has been studying this question for months, and I ask him whether he can do

Mr. POMERENE. Mr. President, I can not give such information; I do not think it is available.

Mr. CUMMINS. If it is not available, why did the Senator

from Ohio ask me to give it?

Mr. POMERENE. It was not available so far as I was concerned, but I recognized the greater diligence of the Senator

from Iowa and his superior knowledge of the subject.

Mr. CUMMINS. I acknowledge the compliment, but I am very frank to confess that where the Senator from Ohio has reaped I would be very slow to glean. However, I renew my statement; and I want it not to be forgotten that the banking capital in the State of Iowa is now loaned out, and the banks, in order to respond to the obligation here created, must recall that amount of their loans in order to make the payment so required. But I proceed.

If banking capital bore any resemblance to bank reserves

Mr. SHERMAN. Mr. President-

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Illinois?

Mr. SHERMAN. I will not interrupt the Senator if it is not

agreeable to him.

Mr. CUMMINS. I am very glad to yield to the Senator from

Illinois.

Mr. SHERMAN. Before the Senator leaves the last subject I wish to ask him a question. A large part of the money taken for capital stock will be transferred, presumably, to the regional bank organized to serve that part of the Mississippi Valley. Would there be any prospect of the people or the banks of Iowa recovering anything like the sum they would contribute, so that it would be available to come back and fill the gulf that might be created by the withdrawal?

Mr. CUMMINS.

I do not know.
Of course, that is conjectural. Mr. SHERMAN.

Mr. CUMMINS. Well, the operation of the Federal reserve bank is somewhat of a mystery to me. How quickly, if at all, this capital would be returned or to whom it would be returned I do not know. I intend to show presently, if I do not overlook it, that the only possible purpose—and I challenge my Democratic friends to point out any other purpose—for exacting from the national banks a portion of their banking capital is that the Federal reserve bank may take it from one bank and loan it to another. There is no other reason for taking a part of the

capital of one institution.

Mr. SHERMAN. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa yield further to the Senator from Illinois?

Mr. CUMMINS. I do.

Mr. SHERMAN. If I may follow that question with a further inquiry, this \$2,000,000 that is taken from Iowa at present is accessible to the people of Iowa in the several communities

served by the bank, but if taken to Chicago it diminishes your chances by that much, since it thereby becomes subject to a larger area of distribution. When, however, the further power is given of loaning money under order of the board situated here at Washington to any bank in the United States, what does the

Senator think is the prospect of getting it back into Iowa?

Mr. CUMMINS. I have not attempted to estimate those remote possibilities. They are beyond my mathematical capacity.

As I was proceeding to say, if banking capital bore any resemblance to bank reserves there might be some reason for the transfer, and I hope the Senator from Ohio [Mr. POMERENE] will indulge me especially with his attention on this point, for it marks the difference between reserves and capital; but they are so radically different that the very argument which proves the wisdom of concentrating reserves establishes the rank injusthe wisdom of concentrating reserves establishes the rains injus-tice of a compulsory consolidation of banking capital. The re-serve in the vaults of a bank is idle money, and the purpose of the present law in allowing a part of it to be deposited else-where, and the purpose of the proposed law in requiring a water, and the purpose of the proposed law in requiring a part of it to be deposited in the Federal reserve bank, is to make it useful; that is, to make it work. It is not so with banking capital. The capital and surplus of every national bank in the United States is loaned every minute of the year, and every penny of it is doing everything that money can do to stimulate and maintain the business of the country. It is not claimed that the national banks have not loaned it safely and wisely.

I pause to see whether that statement is challenged. claimed that the reserves of the banks are not used in the way to bring the greatest advantage to the people or to bring the greatest support to the business enterprises of the land and, therefore, it is sought to consolidate them or a part of them-I am not now speaking of the propriety of such consolidation-it is proposed to concentrate them in order that money which is otherwise idle or which is devoted to some use that does not in the highest degree serve the public welfare may be invested in a community and under conditions that will most effectually and most efficiently serve the purposes of money; but tell me now, if you can, whether it is claimed that any part of the banking capital of the United States is not used as efficiently as it should be used; tell me whether the banking capital of my State is not doing all that capital can do. It is invested in our factories or loaned to those who manage our factories; it is invested in our stores or loaned to those who own and conduct these establishments. Every penny of it is invested to support our industrial and agricultural fabric, and I confess that I become a little indignant as I view the proposal to enter our Commonwealth with the strong arm of the Federal Government and forcibly take more than \$2,000,000 of the capital that we have thus employed, and are thus employing, possibly to shatter and destroy or to weaken the people of my State in order that a Federal reserve bank 300 miles away or 500 miles away may in its good time conclude to loan that money to some bank in Mississippi or in Arkansas, in Ohio or in Minnesota. If there be a man here who can defend a proposal of that sort, he has yet to come to his feet in defense of the measure.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. CUMMINS. I yield.

Mr. POMERENE. Mr. President, the Senator from Iowa is very indulgent this evening, and I do not propose to take his time now to fully state my position on the proposition which he has laid down; but I want to suggest this in passing: The reserve banks are for the benefit, primarily, of the bankers. The public are benefited only secondarily through the banks. The entire amount of the capital stock of the proposed regional reserve banks, together with the proposed reserves, will be very materially less than the total reserves which are now required under the present law; so that, if we look at it purely from the standpoint of dollars and cents, the banks will be benefited by this system over and above what they are benefited by the present system. To go further, the reserves of the country banks are now 15 per cent. They are reduced in the proposed bill to 12 per cent. The reserves of the reserve city banks under the present law are 25 per cent. They are reduced to 15 per cent. The reserves of the central reserve banks, which are now 25 per cent, are reduced to 18 per cent.

Let me also suggest this thought: These banks owe their very existence to the Government. When these banks were organized it was with one of the accompanying conditions that they should keep separate and apart a certain amount as reserves.

They are not complaining of that fact now.

Mr. CUMMINS. Nor am I discussing it.

Mr. POMERENE. I recognize the fact that the Senator attempts to distinguish between the capital and the reserves of the banks.

Does not the Senator recognize a difference? Mr. CUMMINS. Mr. POMERENE. I recognize the fact that a dollar is a dollar, whether it is capital or reserve.

Mr. CUMMINS. Or whether it belongs to you or to me; that

is about the distinction.

Mr. POMERENE. No; I think that the distinction, if there be a distinction, is one without a difference. The capital of which the Senator speaks is all invested under the present system. The capital which will be turned over to the regional reserve banks can also be invested when the occasion requires; and, though we have the two separate accounts, a capital account and a reserve account, it is one and the same thing in the end.

Mr. CUMMINS. I do not so understand, Mr. President. Of course, just at this moment, I have no desire to prolong the discussion of that issue as to whether there is any difference between banking capital and a reserve, but I have thought there was a very great difference. There is a very marked distinction between the relation of our people to the banking capital and the relation of our people to an idle reserve in the

vaults of the banks.

The Senator from Ohio has just said-and he said very truly—that this bill is primarily for the benefit of the banks. I know it, and therefore I protest. We ought not to legislate primarily for the benefit of the banks. I am not unwilling that the banks shall be benefited, but I hope that a measure will pass that is primarily for the benefit of the people of the United States and all the people of the United States. In so far as the interests of the people and of the banks are identical, then whatever we do in behalf of one will be done for the other; but it seems to me that we must think first and longest and last of its effect upon the people of the country. Our people are dependent upon this capital; our banks are not dependent upon it.

I suppose that they care little whether they get 6 per cent from the Federal reserve banks or whether they get a trifle more in the course of business to which they have been accustomed. They care little; but the men who are carrying on our affairs, who have been in the habit of relying upon the credit which they have established at these banks in order to sustain the various kinds of business in which they are engaged, are the men whom you are crippling, if not destroying, by withdrawing a portion of the banking capital. I have yet to hear a word in defense of that proposal. If you can show me that the money in the hands of the Federal reserve bank can be put to a better use, can be made to do more efficient work for the business of the country, then there would be presented a consideration upon which we ought to reflect; but I have heard no such suggestion.

Mr. O'GORMAN. Mr. President-

The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from New York?

Mr. CUMMINS. I do. Mr. O'GORMAN. I understand the Senator from Iowa to complain that under the provisions of the pending bill upward of two millions of money will be taken out of the State of Iowa, and to that extent-

Mr. CUMMINS. Oh, I know the Senator intends to state it accurately. There will be very much more than that taken, but there will be taken \$2,200,000 of the banking capital.

Mr. O'GORMAN. Correct; and to that extent, as the Sena-tor stated, the business enterprises of the State will be affected.

I think if the Senator makes a calculation based upon the total deposits in the banks in Iowa, he will find that the amount of deposits that may be used for purposes of loans has been so increased that the two millions which the Senator says will be taken out from the capital and deposited in the regional bank will be more than compensated for by the reduction in the reserves.

At the present time, as has been suggested by the Senator from Iowa, the so-called country banks, all the banks outside of the reserve cities and the central reserve cities, are required to segregate 15 per cent of their deposits. With that exception, the capital of a local bank and 85 per cent of its deposits may be employed to promote and extend trade and commerce, but not more than that. Fifteen per cent, as I have stated, must be set apart and segregated, excepting the portion of it which, under existing law, may be sent to a reserve city. Now, the pending bill reduces that percentage from 15 to 12 per cent. So, in other words, instead of the bankers of Iowa and other States being confined to the use of 85 per cent of the deposits for the purpose of making loans and discount- That is the objection I have to the proposal of this bill.

ing notes and paper, they may now use 88 per cent. I venture to assert that the additional 3 per cent will aggregate an amount in excess of the two millions which, according to the Senator from Iowa, will be the contribution of Iowa to the capital of the regional bank in whose territory that State may be located. I simply wanted to know whether the Senator had given his attention to that phase of the proposed legislation.

Mr. CUMMINS. I have, Mr. President; and if the trade is of such great advantage to the people of our State, unquestionably, under the amendment I have proposed, the banks would be eager to subscribe for the capital stock. All I am asking is that this property shall not be taken from our people, who are now using it, against their will. But the Senator from New York has not

stated quite all the facts with regard to the reserves

Under the present law it is quite true that country banks-and nearly all the banks in my State are country banks-are required to keep a reserve of 15 per cent. They are required to keep 6 per cent in their own vaults, and they send 9 per cent elsewhere to be loaned at interest. Under the present proposal the banks are required to keep 7 per cent in their own vaults, 1 per cent more than they are required to keep there under the present law, and they will be denied the right of using that 1 per cent of their demand liabilities. They are required to send 5 per cent to the Federal bank, upon which they are to receive no interest whatever.

I am not denying, and I do not want to be understood as denying, that there is an opportunity for great advantage to the banks upon some occasions from this bill. I am not opposing the consolidation of reserves, or a portion of the reserves. I have favored that because it is necessary to consolidate them in order that their money may do its most effective work. As I said a moment ago, however, the very reason for consolidating the reserves, in order that our money may be constantly employed in enterprise, is a conclusive reason against compelling the banks to surrender any portion of their capital which is already doing all that a circulating medium or money can do.

Mr. POMERENE. Mr. President—
The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Ohio?

Mr. CUMMINS. I yield to the Senator from Ohio. Mr. POMERENE. The Senator from Iowa has just stated that under the present bill there would be 7 per cent in the bank's vaults, and 5 per cent in the reserve bank.

Mr. CUMMINS. Either 7 per cent in the vaults of the bank or in the Federal reserve bank.

Mr. POMERENE. It may be in the one place or in the

Mr. CUMMINS. I am speaking now of the country banks. Mr. POMERENE. Yes; I am speaking of them also. I wish to call the Senator's attention to the fact that at the present time 9 per cent of the country bank's reserves must be in a reserve bank, upon which it gets 2 per cent interest. per cent is released entirely, and that can be loaned at the prevailing rates within the State. In addition to that, whether there be 5 per cent of the 12 per cent in the reserve bank's vaults, or 6, or 7, or more, the country bank, under this system, will have the right to present its paper for rediscount at this bank and get from the bank 65 per cent of the reserves which it has deposited, in addition to the capital which it may have invested. This sum of money can be loaned out, I take it, perhaps, at 1 or 2 or possibly 3 per cent in excess of what the discount rate would be.

It seems to me that when we are considering the advantages or disadvantages of the one system or the other, we should bear

those facts in mind.

Mr. CUMMINS. I do not forget those facts, although the Senator from Ohio probably has not stated all of them with regard to the phase of the matter he has just suggested. The banks secure many advantages in the deposit of their reserves the 9 per cent which they may now deposit—in reserve cities or central reserve cities in addition to the 2 per cent interest which they may also receive.

I will not, however, be drawn into a discussion of the benefits of consolidating the reserves. I am in favor of consolidating I believe there are great advantages growing the reserves. out of it. But because you can take in a Federal reserve bank the reserves of our banks in Iowa, because you can take our money which has accumulated in the reserve fund and use it profitably and to better advantage than we can, therefore you you must take also the banking capital from our State which you can not use at all. That is, you can not use it comparably in effect with the way in which we are using it.

Mr. HITCHCOCK. Mr. President—
The PRESIDING OFFICER. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I do.

Mr. HITCHCOCK. I wish to call the attention of the Senator from Iowa to an important distinction between taking \$2,000,000 of the banking capital of Iowa by force and taking the same amount of money voluntarily from small investors.

If the \$2,000,000 is taken by force from the banking interests of Iowa, it is taken out of a field where it is at the present of 16wa, it is taken out of a field where it is at the process time earning 10, 12, or possibly 15 per cent by active work in the banking world. Iowa loses that. If, however, the stock is thrown open to popular subscription and the people of Iowa voluntarily subscribe \$2,000,000 to the capital stock of the new system, earning 5 per cent dividends, they do it because their money at the present time is not netting them 5 per cent. So while in each case Iowa would make the same contribution to the capital of the system, in one case, where it does it involuntarily and by compulsion, it is taken out of active capital where it is efficiently employed; and in the other case, where it is done voluntarily by subscription of the people, it comes from small funds where it is now earning less than 5 per cent, or it would not be subscribed. would not be subscribed.

In conclusion, if the Senator from Iowa will permit me, I should like to draw his attention to one further fact. The Senator from Ohio seems to take the position that only in the Owen bill is provision made for those benefits which come to the banks by reason of a release of their reserves. All those benefits can be attained without levying forcibly upon the capital of those banks, and they are provided for in the draft of the bill which I had the honor to report on behalf of one-half

the committee

Mr. CUMMINS. I am very much obliged to the Senator from Nebraska for stating the additional reason against taking the capital from the banks. It is not necessary. You can not help anybody by doing it. There is not a man in America who will be aided in the slightest degree by this forcible taking of the banking capital from various States. It seems to me to be an arbitrary exercise of power, for unless you can give some better reason than you have yet given for invading our State and denuding it of its banking capital, I can not believe that the people of the country will sustain the proposal in that regard.

I say this in a friendly spirit, because in the bill brought forward by the Senator from Ohio there is very much that I think What I have said is will be helpful to the people of the country. not said in any spirit of hostility to the general plan which has been adopted, namely, the plan for the concentration of reserves and the plan for the issuance of additional paper money. Although I prefer the bill brought forward by the Senator from Nebraska-I think it is better, I think it does less injustice, and I think it is more beneficial to the people than the one that bears the name of the Senator from Oklahoma-yet I want to be able when the time comes to give my vote for the bill known as the Owen substitute.

Mr. SHERMAN. Mr. President, may I ask the Senator from Iowa a question?

Mr. CUMMINS. Certainly.

Mr. SHERMAN. Excluding the reserve cities in the State of Iowa of Cedar Rapids, Des Moines, Dubuque, and Sioux City, the remainder of the banks would constitute the country

Mr. CUMMINS. Certainly. Mr. SHERMAN. From a report of the Comptroller of the Currency dated November 20, 1913, I find that the 6 per cent subscription required from the country banks alone-I have segregated them in such a way as to give them—would be \$1,587,600 in round numbers. The paragraph of the bill in question requires the payment of this involuntary subscription of \$1,587,000 from the Iowa country banks to be made in gold coin or gold certificates. In the opinion of the Senator from Iowa, what would that probably do for these country banks in the way of impounding gold certificates or gold coin as soon as they see the emergency arising, and thereby creating some disturbance in the parity of our different forms of coin and currency at present?

Mr. CUMMINS. The question of the Senator from Illinois is so clear that it suggests its own answer, and I am very much obliged to him for putting that phase of it before the Senate.

The proposal of the bill, proceeding along the line of my argument, in this respect is utterly without excuse or justification, and I hope the lawyers of the Senate will bear that in mind when I come to discuss the legal phases of the matter, because very much of the ultimate outcome of this legislation will depend upon whether you are doing a fair thing in extracting this

capital from the various banks and compelling it to leave the places in which it is now in service in order to be deposited with the Federal reserve bank.

It is a flagrant piracy, in my judgment, for the General Government to seize upon this capital and deprive those whose property it is, and who are using it lawfully and efficiently, of its

ownership and control.

When the bill in this respect is analyzed it will be seen that the only result of the operation is to take the capital of national banks and give it to the reserve bank in order that the latter may loan to other national or member banks. I should like to know whether that proposition is denied. When you come to defend an assault against the provision which takes 6 per cent of the capital and surplus of the national banks you will be asked to say why you did it. You can not say that you did it in order that it might be loaned out. It is already loaned out.

Mr. POMERENE. Mr. President-

Mr. CUMMINS. I will yield in just a moment. It is not idle money, as the reserve is. You will be compelled to say that you took it in order that you might loan it to some other bank than the one which contributed it. If it is not to be employed in that way, it can not be employed at all. I now yield to the Senator from Ohio.

Mr. POMERENE. If I understood the Senator correctly, he makes the charge that we are taking 6 per cent of the capital and surplus of the banks. Did I understand him correctly?

Mr. CUMMINS. The Senator from Ohio did understand me

Mr. POMERENE. Then permit me to say that we take no part whatever of the capital and surplus. We provide that they shall subscribe for an amount of stock which shall be equal to 6 per cent of the capital and surplus.

Mr. CUMMINS. No; but—

Mr. POMERENE. And that is not the bank's money; it is

paid out of the people's deposits.

Mr. CUMMINS. It is not paid out of the people's deposits. It can not be paid out of the people's deposits. The banks have no right to invest their depositors' money in stock in the Federal reserve bank. It is paid out and must be paid out of the capital of the bank.

I hope that the Senator from Ohio will not be so technical with regard to the matter. He knows perfectly well that the bank must respond to its depositors. It must pay them upon demand every dollar that they may deposit. The funds are trust funds in the highest sense of the word. It is to my mind a contradiction in terms, it is hardly candid, to suggest that the payment for the capital stock of the Federal reserve bank which becomes a part of the capital of the national bank is to be paid for out of the money of the depositors.

Mr. POMERENE. Mr. President—
The VICE PRESIDENT. Does the Senator from Iowa yield

further to the Senator from Obio?

Mr. CUMMINS. I yield.

Mr. POMERENE. I will not proceed if the Senator has any objection

Mr. CUMMINS. I have none at all. I want to make my apology to the Senator now. I never resist interruptions. That is not my habit. But I beg Senators to remember when they come to think of the time I am consuming to remember that a very large part of it has been taken, and well taken, by other Senators. I am glad to yield to the Senator from Ohio.

Mr. POMERENE. The Senator has been very gracious. simply wanted to remark that, of course, we do not now have any authority to take 6 per cent from the deposits or capital of these banks. We only expect to get that by virtue of this legislation.

Now, the Senator suggests the impropriety of taking the

depositors' money to pay for this stock. Let me suggest—
Mr. CUMMINS. Oh, it is manifestly improper. It is just as improper to take the depositors' money to pay for the stock in these Federal reserve banks as it would be to take the depositors' money and build a bank structure with it.

Mr. POMERENE. Mr. President, I very much regret that I

can not agree with the Senator on that proposition.

Mr. CUMMINS. Let me ask the Senator from Ohio a question. Suppose a depositor wanted his money, how would the national bank get it out of the stock of the Federal reserve bank?

Mr. POMERENE. If the company went into liquidation-

Mr. CUMMINS. Suppose it did not go into liquidation? Mr. POMERENE. If it is to continue as a going concern, there certainly will be plenty of opportunities for every de-positor to get his money. Let me make this suggestion. Every dollar of the depositors' money which does not remain in cash in the vaults of the bank or as reserve is invested in one way or another, either in discounting paper, in mortgage securities, in bond securities, or something akin to that. Here there would be a given amount invested in the stock of this bank, which under our plan earns 6 per cent cumulative dividend.

Mr. CUMMINS. May I—
Mr. POMERENE. Pardon me just a moment. Under the plan of the Senator from Nebraska it would earn 5 per cent. The Senator from Nebraska referred to the fact that the bankers in Iowa earn 10, 12, perhaps 15 per cent. that if the Senator will refer to the comptroller's report he will find that the national banks of the country earn only on an average 270 per cent net on the entire deposits.

Mr. CUMMINS. Of course. The Senator from Ohio is constantly talking about deposits and reserves. I am not talking

about either.

Mr. CRAWFORD. Mr. President-

Mr. CUMMINS. I will yield in just a moment. I should like to know whether in composing the bill which we are now considering the stock of the Federal reserve bank can be deposited with the bank itself as a part of its reserve.

Mr. POMERENE. The stock is not deposited as a part of the

If it is, it is not so good; and if the national bank itself is at perfect liberty to take the money of depositors and use it for the purchase of capital stock, why does not the Federal reserve bank accept it as a part of the reserve?

Mr. POMERENE. There is no provision under this bill whereby it can be done, and for a very wise reason, as it occurs to me. It is the purpose of the bill to keep these reserves mobile, and if you are to deposit stocks or bonds or long-time mortgages, you destroy the very purpose for which your reserve bank is created.

Mr. CUMMINS. Why does not the Senator from Ohio admit that the only reason why this bill requires the national banks to subscribe to the capital stock of a Federal reserve bank is to give to the national banks the control and the management

of the Federal reserve banks?

Mr. POMERENE. Mr. President, the Senator has, of course, read this bill very carefully, as he always does measures which are up for consideration. This stock has nothing whatsoever to do with the control of the banks.

Mr. CUMMINS. I am amazed to hear the Senator from Ohio state that, when every member bank has a vote to elect six

directors in the Federal reserve bank.

Mr. POMERENE. The banks as a unit have the vote, but not in proportion to the stock they own.

Mr. CUMMINS. Precisely; but it has the vote and it has

the capital there-

Mr. POMERENE. There is no doubt of that.
Mr. CUMMINS. Because it has taken the stock. I yield to

the Senator from South Dakota.

Mr. CRAWFORD. As to where this contribution of the banks is to come from, I simply wish to say that I have asked that question of a dozen or more country banks in my State, and, as I remember, it was asked repeatedly of the representatives of country banks who appeared before our committee. None of them made a direct answer that it would be taken from their stock and surplus, but all did say that it would be obtained by reducing their loans. I wish to call attention to that fact, said that it would be taken by a reduction of their loans, which certainly means that while under this bill it is taken by coercion from the bank it is then taken by the bank, through coercion,

from the borrower.

Mr. CUMMINS. The statement of the Senator from South Dakota is manifestly true. There is no other place from which

to take it.

Mr. BRISTOW. Mr. President-

Mr. CRAWFORD. If I may have just one word in this connection, I wish to emphasize this point which, it seems to me, is so material: Under the subscription for which the Senator contends the contribution is voluntary, and under this, clear to its final analysis, the contribution is coerced.

Mr. CUMMINS. Precisely.

Mr. CRAWFORD. The American people certainly draw a wide distinction between money taken from them with their consent and money taken from them without their consent,

Mr. CUMMINS. It is all the difference between free govern-

ment and a tyranny. ... ment and a tyranny. ... Mr. BRISTOW. Will the Senator yield to me for just a

Mr. CUMMINS. I yield to the Senator from Kansas. Mr. BRISTOW. I should like to submit a simple illustration which I think will bring out the point which the Senator has so elaborately and clearly presented already.

I have just made a calculation. The capital and surplus and undivided profits of the national banks at Wichita, Kans., aggregate \$11,710,000, in round numbers.

Now, they will be required to subscribe for \$70,260 of stock in a Federal reserve bank. It is conceded by everyone, I think, who has made any study of the question, except the Senator from Ohio [Mr. POMERENE], that that money comes from their capital and surplus. The Senator from Ohio is the only one I have ever heard intimate that it did not have to come from the surplus and capital or the undivided profits of these banks. That money is being loaned now, as the Senator from Iowa said, every cent of it, to the people in Wichita, I should say \$11,710,000. Six per cent of that is \$70,200. That \$70,260 will be taken from the people who now are using it in Wichita-from the merchants, the business men, and the farmers-and sent to St. Louis, where it can not be loaned to an individual at all. The individual will not have the use of that money and can not have it. He can not get it because it will be loaned to a bank somewhere.

Mr. CUMMINS. Following that illustration a little further, if it be said the Federal reserve bank in St. Louis will send it right back by way of discounting paper to the bank in Wichita, where it may be again loaned out to these same people who have it now, tell me what defense there is for that circumlocution in using money that is already fully and completely at work, and at work in just the place in which it ought to work?

Mr. OWEN. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Oklahoma?

Mr. CUMMINS. I do.

Mr. OWEN. The observation of the Senator from Iowa that this money in Wichita is now at work under the reserve system now in vogue happens to be without foundation. Those reserves

can not be used now under the present law.

Mr. CUMMINS. Mr. President, the Senator from Oklahoma, I think, has just honored me with his presence. I am not discussing reserves. I agree with the proposition that the reserves should be consolidated in order to be put to work. I am disputing the wisdom or the justice of consolidating bank capital that is already at work in the communities in which it has been invested. I am not objecting to taking a portion of the reserves from the banks of my State and concentrating them in a Federal reserve bank. I am protesting against taking \$2,200,000 of the capital and surplus of banks already loaned out, already doing all that money can do, and transferring that sum to Chicago or to St. Louis in order to be loaned by a Federal reserve bank to some other national institution or some other member bank. The Senator from Oklahoma and myself have no controversy with regard to the reserves. I agree that they are idle in many places and ought not to be idle. I agree that they ought to be put to work. I agree that they ought to be moved at times by a single will.

Mr. OWEN. Then the Senator, I understand, concedes the propriety as to reserves, but denies the wisdom of placing this capital stock in the Federal reserve banks because it is abstracted from the banks which now are using that capital. Is

that stated correctly?

Mr. CUMMINS. I agree to the general proposition for a concentration of reserves. I think it is wise ...nd salutary and the Senator has correctly stated that; but I object to the coercion of 6 per cent of the banking capital and surplus of my State, which is now outstanding in loans, every penny of it.

Mr. OWEN. Does the Senator agree with the Senator from

Mr. Owella. Does the Schator agree with the Schator from Nevada [Mr. Newlands] that no capital is necessary?

Mr. CUMMINS. I do not want to be drawn into a controversy with the Schator from Nevada. I would hesitate to affirm that proposition, but I want to answer further, I want to be entirely candid, I am in favor of voluntary capital instead of involuntary capital.

Mr. OWEN. With reference to the observation made by the Senator from Iowa that this fund used for capital stock would be withdrawn from the banks under the proposal of the measure now before the Senate, offered by the section of the committee with which I was associated, I want to call his attention to this particular feature: Whether capital be abstracted from individual citizens by a voluntary subscription or by compulsory requirement from these member banks, it would in either contingency be taken out of the deposits of the citizens in the 25,000 banks of this country.
Mr. CUMMINS. Mr. President, I do not agree with that

statement, but I may say to the Senator from Oklahoma that it has already been discussed here this evening at such great length-I mean discussed in response to certain statements I have made in the course of my argument-that I do not feel at liberty to repeat what I have already said in that regard and

what has been said by the Senator from Nebraska [Mr. HITCHcock] and what has been said by other Senators when that particular phase of the subject was under discussion.

Mr. LIPPITT. Mr. President, will the Senator from Iowa yield to me for a moment to ask the Senator from Oklahoma a question in regard to a statement he has just made?

The VICE PRESIDENT. Does the Senator from Iowa yield

to the Senator from Rhode Island?

Mr. CUMMINS. I yield to the Senator from Rhode Island to

Mr. LIPPITT. I should like to ask the Senator from Oklahoma [Mr. Owen], who says that in any case a voluntary subscription to the stock of the reserve bank must necessarily come out of the banks of Iowa, what would happen in case a citizen of Iowa who at present has perhaps an investment in the stock of the Union Pacific Railroad should choose to sell that stock and to reinvest his money in the capital of the reserve bank? Certainly in such a case as that it would have no effect at all upon the banking capital or the bank deposits of the State of Iowa, but it would come from an entirely different source, would it not?

Mr. OWEN. It would in either contingency. If the Union Pacific stock were sold, it would be paid for in nine hundred and ninety-nine cases out of a thousand by a check on some bank, and that would come out of the resources of that bank.

Mr. LIPPITT. It might come out of the resources of some State that had a surplus of resources. The Senator from Iowa is talking of his State as one that has rather a lack of banking capital and of banking deposits, but there are other States in the Union where there is notably a surplus of money so used. Most of the States on the Atlantic seaboard have a surplus of banking capital and a surplus of bank resources of all kinds. In such a case as that the money would not necessarily come out of the bank resources of the State of Iowa, but it might come from many other sources. If, however, under the Senator's bill that bank in Iowa is obliged to take out a certain amount of its capital, of course that necessarily reduces the bank's resources to a certain extent.

The proposal submitted by the members of the committee associated with myself would distribute that stock pro rata according to capital and surplus uniformly and harmoniously throughout the Nation, without taking the funds from one particular section and placing them in another sec-Therefore it would be more harmonious and just. More than that, in so far as the capital stock of Iowa is concerned, if it did put \$2,000,000 in the Federal reserve bank, it could immediately receive back every dollar of that at a low rate of interest and use the same fund without any let or hindrance.

Mr. LIPPITT. I am not asking that question at all. I simply wanted to enter a denial of the Senator's statement that if the subscription was popular it would necessarily come out of the resources of the Iowa banks.

Mr. OWEN. The observation was not made with regard to that feature.

Mr. CUMMINS. I have gone all over that feature of the subject in the absence of the Senator from Oklahoma, and it would be an offense, I think, against the Senate to attempt to review it.

Mr. OWEN. I do not wish to interrupt the Senator.

Mr. CUMMINS. However, I beg the attention of the Senator from Oklahoma now to what I regard as a very grave matter, and it ought to fill him with a sense of responsibility as we proceed with this legislation. If it be said that the reserve bank discounts the paper of a national bank to an amount equal to the capital taken, I reply that, then, the proceeding is worse than useless; it is absurd. It is absurd, for the reason that the bank from which it is taken already has its full capital loaned to business in its community. Why, then, interfere with the conditions as they are?

Moreover-and this is the subject to which I invite the reflection of the Senator from Oklahoma, who is responsible for this bill, and I want him to note that I am not speaking in any hos-tile spirit, for I would rather have his bill than the existing law if the objections from a legal standpoint which I shall now

make can be fairly met.

It is repugnant to our deepest sense of justice for a Government to take the property of one man and give it to another even if we had no Constitution. The proposal would violate our highest conception of the justice which must be done among men if organized society is to be peaceful and permanent.

All these considerations in one form or another have already been laid before the Senate with an amplitude of learning, full-ness of illustration, and cogency of argument that I can not hope to equal, and I submit that phase of the subject without further comment and turn to an inquiry which has up to this

time received but incidental attention. I question the constitutionality of that part of the Owen substitute requiring the national banks to subscribe and pay for the capital stock of the Federal reserve banks. I have not been industrious in the effort to find constitutional obstacles in the way of this legislation nor am I a narrow or illiberal interpreter of our organic law. The doubt in my mind is a persistent one, and I can not dismiss it until, at least, I have laid it before my fellow Senators, most of whom are trained in the profession of the law, and all of whom are students in that domain of learning.

I frankly confess my hope that during the progress of the debate the conclusion toward which I am so firmly tending may appear to be unsound, for I have no hesitation in saying that have honestly sought for reasons that would overcome it. Notwithstanding, however, my desire to believe that this bill is within our lawful authority, I have been impelled more and more to the opinion that in the respect I have mentioned, and in other respects as well, it is in violation of the Constitution

and contrary to natural right.

When our Constitution was submitted to the Colonies for ratification the instant cry was that there had been omitted a series of principles which the English race had found to be essential to the protection of life, liberty, and property, and it is well known that its ratification depended upon the assurance that those principles should be embodied in the Constitution at the earliest possible moment. They were so embodied, and among the amendments proposed by the First Congress, in September, 1789, there was none upon which the people were more intent than that article which became the fifth amendment. I beg to quote it:

No person shall be held to answer for a capital or otherwise infamous crime unless on a presentment or indictment of a grand jury, except in cases arising in the land or naval forces or in the militia, when in actual service, in time of war or public danger; nor shall any person be subject for the same offense to be twice put in jeopardy of life or limb; nor shall be compelled in any criminal case to be a witness against himself; nor shall be deprived of life, liberty, or property without due process of law; nor shall private property be taken for public use without just compensation.

I ask your grave and deliberate reflection upon the questions, Does this bill deprive the national banking associations of their property without due process of law; and, Does it take private property for public use without just compensation?

Mr. SHAFORTH. Will the Senator yield to me right there

for a moment?

Mr. CUMMINS. I will, but not to argue the matter, because I want to present my argument, and at the end of it I will be glad to yield for any question with respect to it, for I am

Mr. SHAFROTH. Our theory is that this whole system is necessary to the safety of the national banks themselves— Mr. CUMMINS. Yes.

Mr. SHAFROTH. And that under the national banking system we have evidently the right to prescribe what will make We have the right to require an increase of their reserves if we want to do so, and the banks must comply with the requirement. It is not a taking of private property when it is done for the very purpose of making the institutions

Mr. CUMMINS. I understand perfectly that view of it. I have been attempting to show here for an hour or more, without any response upon the other side, that there is no necessity for taking the banking capital from the national banks; that such an exaction can not serve any useful purpose; that the money is as effectually and efficiently employed for the welfare of all the people as the money can possibly be employed by the Federal reserve banks. But will the Senator from Colorado withhold his question until I have submitted some observations that will enable him at least to know my standpoint? Mr. SHAFROTH. Very well.

AS TO THE RETIREMENT THAT NATIONAL BANKING ASSOCIATIONS SHALL SUBSCRIBE AND PAY FOR CAPITAL STOCK IN THE FEDERAL RESERVE

Mr. CUMMINS. It is important that we have clearly in mind from the very beginning of the discussion just what the bill before us requires of the national banks respecting subscriptions to and payment for the capital stock of the new corporations known as Federal reserve banks. I have already quoted that part of the bill which attempts to impose the objectionable obligation, but in order that its terms may not be forgotten I quote again the essential portions:

When the Federal reserve bank shall have been organized every national banking association within that district shall be required and every eligible bank may be permitted to subscribe to the capital stock thereof in a sum equal to 6 per cent of the paid-up capital stock and surplus of such bank.

Then again :

Should any national banking association in the United States or trust company engaged in commercial banking in the District of Columbia now organized fall within one year after the passage of this act to become a member bank under the provisions hereinbefore stated, or fail to comply with any of the provisions of this act applicable thereto, all the rights, privileges, and franchises of such association granted to it under the national bank act, or under the provisions of this act, shall—

Now, mark the words that have been inserted by the committee of the Senate, which, as I remember, do not appear in the House bill

within the discretion of the Federal reserve board, be thereby forfeited.

While it may not be, legally speaking, material to the question I am discussing it may be helpful to state that the stock which the national banks are required to take bears a maximum divi-dend of 6 per cent if earned, and that it can be neither sold nor pledged by the banks which are to own it.

AS TO THE LEGAL CHARACTER OF NATIONAL BANKING ASSOCIATIONS AND OF FEDERAL RESERVE BANKS.

National banks are public corporations in that they are created by Congress and are instruments for the accomplishment of a national or public purpose. They are private corporations in the sense that their stock is owned and their affairs managed and controlled by private individuals, and they are conducted for private profit. It is unnecessary to refer to the deducted for private profit. It is unnecessary to refer to the decisions of the Supreme Court upon this subject, because there will be no controversy about it. They occupy the same relation to the Government as railway corporations, and, indeed, all common-carrier corporations, water companies, electric-light companies, and such public-utility instrumentalities. They do not constitute a department of the Government. The property of a national bank is private property subject to public regulation, but protected by the provisions of the Constitution relating to property. It has at times been doubted whether in all the acts under which they exist Congress has reserved the right to alter, amend, or repeal, but I do not intend to rest my conclusion upon any such inquiry. I shall pursue it upon the hypothesis that Congress has reserved this right fully and completely, and that we may now exercise all the authority over the national banks that the acknowledged power of a government over such a business, and the most comprehensive reservation as to alteration, amendment, and repeal can confer upon us. After these admissions are made, however, it still remains true, and it is improbable that there will be controversy about it, that the property of a national bank is private property in the sense of the Constitution, and that the bank can not be deprived of it without due process of law, and that it can not be taken for public use without just compensation. Its property is of the same character as that of all other corporations engaged in a business over which the public can exercise the right of regulation, and it is shielded by the same constitutional immunities which protect the property of public-utility corporations from legislative attack.

The Federal reserve banks which are to be organized under the terms of the Owen substitute, in legal aspect are substantially like the national banks. They will perform some public functions, and therefore they will be subject not only to the regulations which are imposed in the law creating them but such other regulations as Congress may from time to time pre-scribe, but the property of these new corporations will be pri-

vate property.

I want that to sink into the minds of the lawyers who are here, so that it will not be forgotten as I proceed. The property of these new corporations, these Federal reserve banks, will be private property. If the bill becomes a law their affairs will be controlled and managed by private interests. They will be controlled and managed by private interests. private corporations whose property will be affected by a public

THE LEGAL RELATION WHICH IS TO BE CREATED BETWEEN THESE CORPORATIONS.

Having now secured a clear view of the terms of the bill and of the character of the corporations involved in the system to be created, it will be helpful to put in words, so that they can stand out before our eyes, unincumbered by unnecessary legislative phraseology, just what it is proposed to do. Remember that I am not now speaking of reserves, but am confining myself for this occasion to capital.

Each national bank is required to take a portion of its private property, namely, money in its vaults, and exchange it for another kind of property, namely, shares of capital stock issued by another corporation. If it refuses to make the change—that is, refuses to part with its property for a consideration which Con-gress has fixed, or, in other words, refuses to make the trade—it then becomes a violator of the law and the ordinary well-known consequences of a refusal to obey the law will ensue. Assuming for a moment that the law is valid, what are these ensuing consequences?

May I digress for a moment in order to refer to an observation made the other day by the senior Senator from Mississippi in reply to an expression of doubt on my part as to the constitutionality of the provision? In his agreeable way he announced that, of course, this suggestion of invalidity was absurd, and proceeded to say to the Senate that the obvious and conclusive answer to the suggestion was that the national banks were not required to part with their property; that they were simply given an opportunity to part with it, an opportunity which if not embraced meant no more than that the banks could no longer be parts of the national system of banks. If I may be allowed to substitute my cruder and less elegant phraseology for his easy flowing sentences, he declares in substance that if the banks do not want to comply with the requirement that they should take a part of their capital and invest it in the business of another corporation that they could quit, wind up their affairs, and surrender their corporate franchise; that this process could not be construed to be a taking of property without due process of law, because in the event of their refusal they would cease to be banks, and their property would be dis-tributed among their creditors and stockholders according to the customary plan. If it were true that the only consequence following a failure to obey the law on the part of the banks is to be immediate dissolution, the position taken by the Senator from Mississippi is not only untenable in principle but unsupported by any authority known to the judicial world. This assertion I will demonstrate, as I proceed, beyond any doubt whatsoever, but I frankly say that the mere demonstration of the rank error of the Senator from Mississippi will not in and of itself establish the unconstitutionality of the provision I am considering. It is worth while, however, to inquire whether it is true that the Owen substitute imposes upon the national banks nothing but the two alternatives, namely, either to give up their capital or be dissolved for a refusal to conform with the law. I repeat, then, What are the consequences which may

follow the disobedience of this particular provision?

I assert that if the Owen substitute becomes an act of Congress, and if the part of it which I am discussing is valid, that upon the refusal of a national bank to take a part of its capital and invest it in the stock of the Federal reserve bank, the Government of the United States has two remedies, either of which it may invoke: First, it may bring a suit in mandamus against the offending bank to compel it to take its proportionate part of the stock of the reserve bank and to pay for it. Second, it may exercise the sovereign right of forfeiture of the corporate franchise and in a proper judicial proceeding secure a decree of dissolution. That the Government has this option is perfectly clear from language which I have already quoted, but which I

again bring to the attention of the Senate:

Should any national banking association in the United States or trust company engaged in commercial banking in the District of Columbia now organized fail within one year after the passage of this act to become a member bank under the provisions hereinbefore stated, or fail to comply with any of the provisions of this act applicable thereto, all of the rights, privileges, and franchises of such association granted to it under the national-bank act or under the provisions of this act shall, within the discretion of the Federal reserve board, be thereby forfeited.

Suppose the Federal reserve board, acting for the Government, as a part of the Government, determines not to forfeit the charter of the offending or refusing national bank, what then? anybody question that in a proper suit, brought by the Federal reserve bank or by the Government, the recalcitrant national bank can be compelled by the judgment of a court to take the stock and to pay for it as required by the law

I do not believe there is a lawyer in this Chamber who will question the soundness of the proposition I have just announced. Therefore, it is no answer to the inquiry I am pursuing or the question I propounded a night or more ago to say that if the national bank does not desire to take the stock, but would prefer dissolution, therefore and thereby it may escape the obligation.

I am not inquiring under what circumstances a national bank. by the action of its stockholders or directors, can voluntarily dissolve, but I shall have occasion at some time, if it is ever doubted, to show that a national bank can not dissolve at its own pleasure, any more than a railway company can dissolve at its own will.

Suppose to-night the stockholders or directors of the Pennsylvania Railroad were to meet and determine that that company should cease to operate its system and that the property of the corporation should be dismembered and destroyed or converted into whatsoever form the stockholders thought best for their own interest. Is there a lawyer here who will suggest that the Government, which created the Pennsylvania Railroad Co., could not take the property which hitherto has been used in the public service and continue that use?

It is not for a public-utility corporation to resign its duties whenever it sees fit to do so. It has assumed certain obligations to the public which it must perform.

I shall not, however, continue this part of the discussion, because I doubt whether the correctness of my proposition will be

The national reserve board is, of course, for the purpose of determining the forfeiture, the Government of the United States. It need not, unless it so desires, proceed to forfeiture, and it may, if it so wills, proceed to enforce the command of the stat-It has been so often held by the Supreme Court of the United States that a writ of mandamus may issue to compel the performance on the part of a corporation of its duty under the law of its incorporation that I assume there will be no controversy about it. There has been much dispute concerning the right of the private relator to invoke the writ, but comparatively little respecting its use for the purpose of requiring a quasipublic corporation to do those things which are lawfully commanded by the statute which created it. I do not look upon the double remedy as very material to the point I am making, but inasmuch as it seems to have been the opinion of some Senators-I must believe an opinion reached without examination or reflection—that the only thing that can possibly happen to the banks which refuse to give up their property will be dissolution, it may be of value to bear in mind the suggestions I have just

As I have already once said, I do not question the authority of Congress to alter, amend, or repeal the law under which national banks are organized. I do not doubt that Congress at any moment can repeal the entire act and all of its amendments, and that thereupon national banks as corporate organizations

would cease to exist.

On that question, however, while it may not be material to the discussion, I beg to say that I do question the authority of Congress to repeal the so-called charter of any particular bank. It can repeal the law. It has reserved the right to do so. It can amend the law. It has reserved the right to do so. It can not, however, destroy by legislative act the corporate franchise of any particular national bank. To do so would not be an exercise of the reserved power to repeal the law, and, moreover,

it would be a usurpation of judicial power.

It is unnecessary to dwell upon this phase of the subject, because there is no attempt to repeal the law. It is not claimed that we are about to repeal the law. On the other hand, we are about to amend the law, and the only question is whether an amendment which commands the national banks which have amendment which commands the national banks which have been organized under the law to take a part of their capital which has been acquired by virtue of the law and give it to the Federal reserve banks in exchange for the capital stock of the latter banks is such an amendment as can be validly made in cases wherein the right to amend is expressly reserved and the corporation itself is carrying on a business the character of which affects its property with a public use.

I am not so dogmatic upon the subject as some of my fellow Senators. I do not so that it is impossible for the Senators.

Senators. I do not say that it is impossible for the Supreme Court to hold this provision to be constitutional, but I do say that when it is adopted it will subject the business of this character to the uncertainty which always inheres in any legislation which the courts may review and overturn if found to be unreasonable, unjust, and inconsistent with the view and scope of the original act of incorporation. If we pass it, we will consign the commercial and financial world to the same doubtful region that we would enter if we were to attempt to fix the freight rates upon the railways by an act of Congress. The power to amend, whether it arises from a reservation or from the character of the business in which the corporation is engaged, is not absolute. It must be exercised in subordination to the provisions of the Constitution which declare that Congress shall not deprive any person of his property without due process of law, and that it shall not take private property for

process of law, and that it shall not take private property for public use without just compensation.

I regret that in developing the thought I had in mind so much time has been consumed. I am deeply anxious that the act we are about to pass shall bring stability and strength to our financial system and not introduce unrest, confusion, and finally chaos into the most vital parts of our industrial and commercial life, and, although it may be wearisome, I intend now to review with such brevity as is possible some of the judicial authorities which illuminate the subject I have so im-

perfectly outlined.

Mr. OWEN. Mr. President, I thought perhaps we might arrive at a unanimous agreement to take a vote to-morrow night. If there is no objection on the other side, I would ask that we may vote on the bill to-morrow night.
Mr. BRISTOW. Vote on this bill?

Mr. OWEN. Yes; to-morrow night.
Mr. BRISTOW. I will say to the Senator that it will be impossible to vote on this bill to-morrow night, and he knows it.

Mr. OWEN. I know it now, from the Senator from Kansas. Mr. CUMMINS. I have not said that a vote may not be

Mr. Committee. I have not said that a vote hay not be taken to morrow night.

Mr. BRISTOW. But the Senator from Kansas did.

Mr. CUMMINS. I know that; but I did not want the impression to go out that I would continue my address until to-morrow.

Mr. OWEN. Is there any objection to the vote being taken on Monday?

Mr. BRISTOW. There is. Mr. OWEN. On Tuesday? Mr. BRISTOW. There is. Mr. OWEN. On Wednesday? Mr. BRISTOW. There is.

Mr. OWEN. On Thursday? Mr. BRISTOW. There is. Mr. OWEN. I shall not pursue the inquiry.

Mr. POMERENE. Mr. President, I desire to give notice that to-morrow, at the conclusion of the remarks of the Senator from New York [Mr. Root], I shall address the Senate on the pending currency bill.
The VICE PRESIDENT. The hour of 11 o'clock having ar-

rived, the Senate stands adjourned until 10 a. m. to-morrow.

The Senate thereupon (at 11 o'clock p. m.) adjourned until to-morrow, Saturday, December 13, 1913, at 10 o'clock a. m.

# HOUSE OF REPRESENTATIVES.

# FRIDAY, December 12, 1913.

The House met at 12 o'clock noon. The Chaplain, Rev. Henry N. Couden, D. D., offered the fol-

lowing prayer:

God of the ages, Father of all souls, we rejoice with exceeding great joy that we are permitted to live in this intelligent, broad-minded, warm-hearted age of progress; when patriotism is larger than any party, larger than all parties in peace as in war; when religion towers above creeds and dogmas and truth makes for authority, not authority for truth; when the thought fatherhood, brotherhood is spreading its wings over all the earth; when the question, Am I my brother's keeper? is answered in a thousand charitable and philanthropic movements to ameliorate the suffering of mankind, right the wrongs, abolish sin, and establish righteousness; when character is placed above the price of rubies and love is reckoned the greatest thing on earth. May we thus continue in the onward march of progress until Thy kingdom shall come and Thy will be done on earth as it is in heaven. Amen.

The Journal of the proceedings of yesterday was read and ap-

proved.

# PAN AMERICAN INTERNATIONAL CONGRESS.

Mr. ROGERS. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD with reference to a resolution I introduced earlier in the week on the Pan American Interna-

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the Record on a resolution introduced by him on the Pan American Congress. Is there objection? [After a pause.] The Chair hears none.

## RESIGNATION FROM COMMITTEES.

The SPEAKER laid before the House the following communication:

The Clerk read as follows:

Hon. CHAMP CLARK, Speaker House of Representatives:

I hereby tender my resignation as member of the Committees on Labor and the Merchant Marine and Fisheries. FINLY H. GRAY.

## MESSAGE FROM THE SENATE.

A message from the Senate, by Mr. Tulley, one of its clerks, announced that the Senate had passed without amendment bill of the following title:

H. R. 10081. An act to make the tenure of the office of the major general commandant of the Marine Corps for a term of four years.

The message also announced that the President of the United States had approved and signed bill of the following title: On December 6, 1913:

S. 2318. An act authorizing the appointment of envoys extraordinary and ministers plenipotentiary to each Paraguay and Uruguay.

## HEALTH DEPARTMENT, DISTRICT OF COLUMBIA.

Mr. CARY. Mr. Speaker, I rise to a question of personal privilege. On December 8 I introduced a resolution (H. Res. 334) to investigate the health department of the District of Columbia. The health officer saw fit to give out a statement to the press of this city which is misleading, and therefore I ask permission to insert the resolution in the RECORD with my answer to his statement.

The SPEAKER. The gentleman from Wisconsin asks unanimous consent to extend his remarks in the RECORD.

Mr. MANN. Reserving the right to object, I would like to ask the gentleman if this includes the statement of the health commissioner?

Mr. CARY. It does

Mr. BARNHART. Mr. Speaker, reserving the right to object, we have not been able to hear what the statement consists of.

The SPEAKER. The gentleman from Wisconsin introduced a resolution to investigate the health department of the District of Columbia. He states that Dr. Woodward gave out a statement to the newspapers which the gentleman from Wisconsin does not like and which he says is misleading. He says that he has made answer to this communication and wants to print the resolution, with Dr. Woodward's newspaper article and his miswer, in the Congressional Record.

Mr. BARNHART. I object.

Mr. CARY. Mr. Speaker, I thought that this was a question of privilege

The SPEAKER. But the gentleman from Wisconsin has not

stated any question of privilege.

Mr. CARY, That is what I got up for.

The SPEAKER. But the gentleman sat down before he stated any question of privilege. If the gentleman from Wisconsin has a question of privilege he will state it.

Mr. CARY. I introduced a resolution on the 8th of De-

Mr. MANN. Mr. Speaker, I ask the gentleman from Indiana to withdraw his objection, as this is a matter relating to a

Member of the House.

Mr. FITZGERALD. Mr. Speaker, I do not think the gentleman should print the reply that he considers offensive. The House in a short time will be in Committee of the Whole House on the state of the Union, and the gentleman can get the floor and make his statement and put the other things in. There may be some statements that he wishes to make that some Member on the floor may think it proper to call attention to. In a short time the gentleman from Wisconsin will have an opportunity to take the floor in his own right, and then he can put in the Record what he wishes.

The SPEAKER. If the gentleman from Wisconsin has a question of privilege, he will state the facts on which he bases it.

Mr. CARY. The facts upon which I base it are that the commissioner claims that what I stated in the resolution is not true, and that he himself makes a statement which is also misleading. I thought it would be only proper for Members to read it in the RECORD to-morrow.

The SPEAKER. Will the gentleman from Wisconsin read the part of the document that he claims gives him the right to

the floor under the question of privilege?

Mr. CARY. Mr. Speaker, on the suggestion of the gentleman from New York [Mr. FITZGERALD] I will wait until I can get the floor later in the day.

## ELECTION TO COMMITTEES.

Mr. UNDERWOOD. Mr. Speaker, I desire to move the election of the gentlemen of the House to standing committees of the House that are named in the list that I send to the Clerk's desk.

The SPEAKER. The Clerk will report the list,

The Clerk read as follows:

The Clerk read as follows:

Jacob A. Cantor, twentieth district, New York, to the Committee on the Public Lands and the Committee on Election of President, Vice President, and Representatives in Congress.

Charles P. Coady, third district, Maryland, to the Committee on the District of Columbia.

George W. Loft, thirteenth district, New York, to the Committee on Accounts and the Committee on the Merchant Marine and Fisheries.

M. Neely, first district, West Virginia, to the Committee on the Public Lands and the Committee on Election of President, Vice President, and Representatives in Congress.

Frank Park, second district, Georgia, to the Committee on Accounts and the Committee on Public Buildings and Grounds.

Henry M. Goldfoole, twelfth district, New York, to the Committee on Hules.

Finly H. Gray, sixth district, Indiana, to the Committee on Naval Affairs.

The SPEAKER. The gentleman from Alabama [Mr. Underwood] moves the election to these various committees named. The question was taken, and the motion was agreed to.

#### ORDER OF BUSINESS.

Mr. UNDERWOOD. Mr. Speaker, I think that the day will probably be taken up with the Private Calendar. The gentleman from Georgia [Mr. Hughes] got an order to take up the vocational resolution (S. J. Res. 5) to-day after the completion of the Private Calendar, which I think will run quite late. I would like to suggest to him, if it is agreeable to him, that that ought to be changed to Monday, after the Unanimous Consent Calendar is disposed of. Now, I wish to say this: I do not know of any suspensions and unanimous consents that would take its place.

The SPEAKER. The Chair will state to the gentleman from Alabama that he has one application for suspension of the rules.

Mr. UNDERWOOD. Then I withdraw the request.

Mr. MANN. If the gentleman will make it in order on Monday subject to any motion to suspend the rules.

Mr. UNDERWOOD. Then, Mr. Speaker, I suggest to the gentleman that, subject to the Unanimous Consent Calendar and motions to suspend the rules, that it shall be in order.

Mr. HUGHES of Georgia. Mr. Speaker, I will be very glad

to take that course.

The SPEAKER. The gentleman from Georgia [Mr. Hughes] asks unanimous consent that the order made yesterday touching the vocational education bill be changed so as to make it come in next Monday after the Unanimous Consent Calendar and suspension of the rules are disposed of. Is there objection? [After a pause.] The Chair hears none.

#### ADJOURNMENT UNTIL MONDAY NEXT.

Mr. UNDERWOOD. Now, Mr. Speaker, I desire to ask unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next.

The SPEAKER. The gentleman from Alabama asks unanimous consent that when the House adjourns to-day it adjourn to meet on Monday next. Is there objection? [After a pause.] The Chair hears none, and it is so ordered.

#### BILLS ON THE PRIVATE CALENDAR.

Mr. SHERWOOD. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House for the consideration of bills on the Private Calendar, and pending that I ask unanimous consent that general debate on the bill H. R. 10138 be limited to 30 minutes.

The SPEAKER. The gentleman from Ohio [Mr. Sherwood] moves that the House resolve itself into the Committee of the Whole House to consider bills on the Private Calendar, and pending that he asks that general debate on the omnibus pension bill be restricted to 30 minutes.

Mr. MANN. How is it to be divided?

The SPEAKER. Half by the gentleman from Ohio [Mr. Sherwood] and half by the ranking Republican on the com-

mittee. Is there objection?

Mr. AUSTIN. Mr. Speaker, reserving the right to object, I would like to ask the chairman of the committee if we can not have a little more time for general discussion?

Mr. SHERWOOD. How much more time does the gentleman desire?

Mr. AUSTIN. We want at least 30 minutes on this side. Mr. SHERWOOD. I only asked for that amount of time in

order to facilitate the business of the House.

Mr. AUSTIN. There is practically nothing else for the

House to consider to-day except this pension bill.

Mr. SHERWOOD. How much time does the gentleman want? Mr. AUSTIN. I want about 15 minutes-make it an hour. Mr. SHERWOOD. I will amend my request and make it

30 minutes on a side.

The SPEAKER. The gentleman from Ohio amends his request for unanimous consent by making it 30 minutes on a side, one half to be controlled by himself and the other half by the gentleman from Pennsylvania [Mr. Langham]. Is there objection? [After a pause.] The Chair hears none. The question is on the motion of the gentleman to go into the Committee of the Whole House for the consideration of bills on the Private Calendar.

The question was taken and the motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House for the consideration of bills on the Private Calendar, with Mr. ADAMSON in the chair.

The CHAIRMAN. The House is in Committee of the Whole House for the purpose of considering bills on the Private Calendar. The Clerk will report the first bill.

The Clerk read as follows:

A bill (H. R. 10138) granting pensions and increase of pensions to certain soldiers and sallors of the Civil War and certain widows and dependent children of soldiers and sallors of said war.

Mr. SHERWOOD. Mr. Chairman, I ask unanimous consent

that the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent that the first reading of the bill be dispensed with. Is there objection? [After a pause.] The Chair hears none, and

it is so ordered.

Mr. SHERWOOD. Mr. Chairman, this bill contains 157 names. I have here a detailed statement of the present pension of every claimant and the increase of the same. The last bill that was reported to this House was on the 14th of February, 1913. Ten months have elapsed since we have had a private pension bill. The aggregate increase of this bill, all told, is about \$1,869 per month. The total increase for the entire year is \$22,354. The bill which was reported one year ago carried 664 names, if I remember, and an aggregate of over \$80,000, so that this bill carries about one-third of the cost of the bill of last year. There is in the unexpended balance appropriated for pensions last year \$5.348.215. The private pension bills since 1905, commencing with the Fifty-ninth Congress, from 1905 to 1907, carried 6,030 private pensions. From 1907 to 1909 the aggregate was 6,600 pensions. In the Sixty-first Congress, from 1909 to 1911, the aggregate of private pensions was 9,649. In the Sixty-second Congress, from 1911 to 1913, the aggregate of private pensions was 6,350. The total number of private pension bills introduced in the Sixty-second Congress—the last one—was 15,240. The number of bills passed in this House out of the 15,240 was 3,090.

Now, I want to call the attention of this House and every individual Member of it to the debate that took place on this floor on the 10th of May, 1912, when it was stated by the opponents of this bill and carried by the Associated Press and by the United Press and proclaimed by every leading journal in New York, Boston, Philadelphia, Baltimore, and Washington that this bill would carry \$75,000,000. I have here the documents to press beyond all contradiction, the forms and washington that the press beyond all contradictions that the process of the contradictions that the press of the contradictions that the contradictions that the contradictions that the contradictions the contradiction that the contradictions the contradictions that the contradictions the contradictions that the contradiction ments to prove beyond all contradiction that that was a \$54,000,000 lie, the biggest lie that was ever told in this great Capitol. I have here in my possession the report of the Commissioner of Pensions for 1913 and the report of the Commissioner of Pensions for 1912, and if there is any gentleman on this floor who doubts these figures I call his attention to these reports.

The whole amount of money appropriated for the soldiers of the Civil War in 1912 was \$99,021,390. The whole amount of money paid out for the current year ending on the 1st of July, 1913, with all these cases under what is called the Sherwood pension bill settled, except 7,000 disputed cases, was an aggregate of \$119.872,973. What is the increase as shown by the official report? The increase is \$20,851,583. And on the 10th of May, 1912, as the Congressional Record will show, I The increase is \$20,851,583. And on the 10th stated on the floor of this House, and I call it to the attention of every individual Member who was present on that occasion, that this bill would not carry in the aggregate over \$21,000,000. And here are the official figures, namely, \$20,851,583.

Mr. STAFFORD. The gentleman has given the number of pensioners under private bills by respective years for the last eight years. Can he give the annual rate of expenditure to

private persioners by private acts for those respective years?

Mr. SHERWOOD. I will do that later. I do not want to occupy too much time, because I want to give away some of it.

here are two official reports, and there is no escape from that conclusion. Here I have a scrapbook which contains the comments of the leading newspapers and magazines endeavoring to convince the country that I had introduced a bill and passed it through the House carrying \$75,000,000. attention to a public hearing I had before the Pension Committee of the Senate on this question. I said on that occasion, in the presence of the officials of the Pension Office who made the outrageous statement that the bill would carry \$75,000,000, as follows:

The estimate of \$75,000,000 as the cost of this bill furnished by the Commissioner of Pensions is based on a table of estimates that have no value or reliability whatever. On page 18 of the report of the Commissioner of Pensions for June, 1911, is a table that is absolutely absurd. It is so absurd that while I have always been rated as a considerate and prudent man, I hardly have the patience to comment on it in good humor.

Here is what a leading magazine, the Review of Reviews for June, 1912, a month after the bill passed, said, and we have a right to expect that the magazines of the country will not print any reckless statements. Here is what it said, and they refer to President Taft here. I quote:

He has been preaching economy and working for it, and yet he consents to sign away \$75,000,000 a year in needless gratuities. No one has a clearer understanding than he of the principle at stake—

And so forth. And here is what McClure's Magazine said: Bill No. 1, championed by Gen. ISAAC R. SHERWOOD, of Ohio, a veteran of 45 battles of the Civi War, has raised the Republican offer, according to an expert, of thirty million a year to a total amount of

seventy-five million. Overwhelmingly the House, Republicans and Democrats, voted the seventy-five million pension increase for the Civil War veterans

That \$54,000,000 lie has traveled from Cape Cod to San Francisco Bay, and from Put-in-Bay, in Lake Erie, to Gulfport, on the great Gulf, for over a year, and this is the first opportunity I have had to contradict it and to show by the official record of the Pension Office that the bill has carried less than \$21,000,000, verifying within about \$185,000 the estimate that the Committee on Pensions made at the time the bill was

Mr. GOULDEN. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield? Mr. GOULDEN. Will my friend from Ohio permit a statement right here?

Mr. SHERWOOD. Certainly.

Mr. GOULDEN. As one deeply interested in this matter and as one who has kept in touch with it all the time, I desire to extend to the gentleman my hearty congratulations on the very able and intelligent manner in which he, as the chairman of the Committee on Invalid Pensions, has discharged his duty and on the very able estimate which he made of this matter more than a year ago. [Applause.]
Mr. SHERWOOD. Mr. Chairman, I thank the gentleman for

his compliment, but I am not entitled to all that credit. We spent days and nights—my distinguished friend on my right, the gentleman from Missouri [Mr. Russell], and my distinguished friend from Indiana [Mr. Adair]—in making these figures as to the cost of the bill, and I want to say to this House that no matter how much I am interested in any bill, I will not deliberately deceive this House as to the cost of any bill I may support to the extent of a single dollar.

I want to call attention to the fact that although gentlemen have said here that we are running wild on pensions, the estimates for the coming year will probably be \$16,000,000 less than the expenditures of the present year.

Now, take this bill and consider why it is that we now need

private pension bills. I have stated on the floor of this House time and time again that I was in favor of a service pension, and not of an age pension; that I would make the pension roll a roll of honor. But when the bill went over to the other end of the Capitol there was a champion there of age pensions, and finally the committee sustained me in my position for four months—to get the best possible pension bill and the most equitable adjustment possible.

What is the trouble with this present law? Under this law a soldier who is 69 years old, who served two years, perhaps in the Atlanta campaign—the most trying, the most severe, and the bloodiest campaign of all history, of 110 days—that soldier under the law to-day will get only \$17 a month, whereas a man who enlisted in 1864, who is now 75 years old, will under this

law draw \$21 per month.

President Lincoln called out a million men in 1864. call was for 200,000, another was for 300,000, and another was for 500,000; and out of that number about 883,000 were enlisted in the Army. How many of them served at the front? It is hard to tell. And yet one of these men, who never went to the front, who is now 75 years old, will draw \$21 per month, or \$4 per month more than the soldier of two years' service.

I have heretofore referred to this on the floor, and I said further that if you would pass my service pension bill you would do away practically with all of these private bills. What is the case here? Who are these men who are pensioned in this bill? These are the boys who went into the Army at the age of 15, 16, and 17. These are the old boys now who are in the worst crippled condition of any living soldiers to-day. I went These are the old boys now who are in the into the Army at the age of 26, when I was fully matured.

If I had gone into the Army when I was 16 and had passed through what I was compelled to pass through in that four years' war, I would have been in the cemetery 10 years ago, because those young boys who went into the Army had not the physical endurance of mature men. They had not the maturity of manhood to enable them to endure the terrible trials and privations and horrors of an army life at the front. It is to equalize the difference in the pensions that this bill was pre-

pared, and it does largely remedy that inequality.

I do not care to further occupy the time of the House, but this committee propose to do all in its power to take care of To show that the general law which was all meritorious cases. recently passed by Congress is taking care of a large number of desperate cases, it is only necessary to say that while we had over 15,000 private bills introduced last year we have this year less than 4,000, and out of that 4,000 one Member has introduced 700. Every one of these cases, before it goes to our committee, is passed upon by an expert, a lawyer who has been in the Pension Office for 15 years, and a very capable man. is familiar with all the pension laws, and he makes an official report to our committee. We have five subcommittees, and every bill, after it has been referred and passed upon by the pension examiner, is passed upon by a subcommittee, and that subcommittee reports the bill to the full committee, so that every case is carefully scrutinized, and no soldier is pensioned in this bill except for service, for merit, or destitution, and the highest limit is \$50 a month.

Now, this committee proposes-at least I propose, and I think I have the full sympathy of every member of this committeeto pension every deserving case. As these old soldiers are passing away at the rate of 36,000 a year, and soon they will all be gone, we propose, so far as possible, to render their last days

on earth comfortable and pleasant. [Applause.]

I reserve the balance of my time.

Mr. RUSSELL. How much time has the gentleman left? The CHAIRMAN. Ten minutes. Mr. LANGHAM. I yield 10 minutes to the gentleman from Tennessee [Mr. Austin].

Mr. AUSTIN. Mr. Chairman, I hardly think it necessary for the chairman of this committee [Mr. Sherwood] to defend himself against charges made in any muckraking magazine or publication. [Applause.] What he did in the House of Representatives as the head of the Committee on Invalid Pensions met with the approval of the great majority of the American people who love the flag and who thoroughly and fully appreciate the sacrifices and services made by the defenders of the Union. Gen. Sherwood will live in the grateful memory of every true American soldier, and I wish for him many years of prosperity and happiness. [Applause.] And though I am a Republican, I trust that his constituents will send him to this House as long as he may live or as long as he may wish to come. [Applause.]

Mr. Chairman, this bill of 27 pages covers a pension for a soldier's widow who is 94 years old and a pension for a Pennsylvania soldier who has reached the age of 90. There are any number of instances where the soldiers are more than 80

years of age.

Then there is a splendid departure in this bill, in that it recognizes the justice of pensioning the widows of Federal soldiers who married since 1890. On that particular point I wish to say a few words.

Twenty-three years ago Congress passed a bill providing that from that time on any women who married a Union soldier would not be entitled upon his death to receive a pension. I think a more disreputable and discreditable piece of legislation was never enacted into law. In that connection I wish to read from the National Tribune of this city an excellent editorial published in a recent issue which covers the case fully:

## INJUSTICE TO WIDOWS.

INJUSTICE TO WIDOWS.

Why should the widow who married her husband June 26, 1890, receive different treatment from the United States Government than one who married her husband June 28, 1890? Both have done their duty by their husbands lovingly, faithfully, laboriously, tenderly, and sorrowfully. They have been happy, joyous wives during their husbands physical prime; they have taken care of their children by their former wives, given them all of a mother's care in the way of an education, home discipline, precept and example, reared them to manhood and womanhood, seen them launched with their husbands and wives upon the sea of matrimony, counseled and aided them in every way, and cared for their children when they arrived. As the strength of their husbands declined they have supplemented it with their own, watched over them and nursed them when sickness came, worn themselves out in whatever relief they could administer, and at last watched with the same heart-welling tears of sorrow when they heard the clods rattle upon their coffins. Why should one of these women, both to-day old and infirm, be put upon the pension roll and the other excluded from it?

This discrimination in marriages is not only unworthy of the great Government of the United States on the ground of justice, but it is positively immoral, as it places the Government in the position of officially decreeing that there can be more than one kind of a marriage. This is taking a steep back to barbarism. A marriage is a marriage. It is the most sacred thing in the world, and there can be to one form of it. We do not want any semblance of it introduced into the laws of our country any more than we want the left-handed marriages which are common among the European nobility. To do so is to trifle with and belittle the sacred institution. It is a worse evil than the easy divorce, because it makes an entrance to the idea that one marriage can not convey all the rights and duties that another can. It is something that the Government has never done before i

I hope that this Invalid Pensions Committee, which has done so much in the line of justice and patriotism for the survivors of the Civil War, will, before this Congress adjourns, report a bill which will do justice to the widows of Union soldiers who have married since 1800.

This committee ought also to report a bill in favor of monthly payment of pensions, as proposed in the measure introduced in this House by the Representative from Ohio [Mr. ANSBERRY], and also the bill by myself-legislation which has been commended by the present Commissioner of Pensions.

Then, while we are on the subject of pension legislation, we ought to reenact the bill that we sent to the Senate last winter, which provides pensions for the widows of Spanish-American soldiers, whether the soldier died from an injury or disease incurred in the line of duty. It has been 15 years since the close of the Spanish-American War, and that is the only piece of pension legislation the Spanish-American veterans have appealed to Congress to enact into law. I hope that we may repeat our action in that matter, and send to the Senate at the earliest possible date a pension bill for the relief of the widows of Spanish-American soldiers. [Applause.]

Mr. SHERWOOD. Mr. Chairman, I yield 5 minutes to the gentleman from Missouri [Mr. Russell].

Mr. RUSSELL. Mr. Chairman, I am very glad'that the gentleman from Ohio, Gen. Sherwood, has corrected an impression in this House that was made by misrepresentations here two years ago when his bill was under consideration. sistently stated then by the opponents of the bill that the bill would carry \$75,000,000 in excess of the pensions paid under the law as it then existed. I know men on this side of the House, and probably there were men on the other side, who stated that they would vote for a bill that would carry \$40,-000,000 increase, but that they could not afford to vote for a bill that would carry \$75,000,000 increase.

As stated by the gentleman from Ohio, he and other members of the committee, after diligent investigation of the facts, stated to the House that in their opinion it would not carry as much as \$30,000,000 additional. The gentleman from Ohio, Gen. Sherwood, stated that in his opinion it would be about \$21,000,000. The fact is established to-day beyond any question that it did not carry as much as \$21,000.000 additional.

Mr. BYRNS of Tennessee. Will the gentleman yield?

Mr. RUSSELL. Certainly. Mr. BYRNS of Tennessee. I want to ask the gentleman, for information purely, whether or not the Commissioner of the Bureau of Pensions has completed his adjudication of all the applications?

Mr. RUSSELL. There are, as I understand, about 6,000 applications that have been filed under the Sherwood bill that

have not been adjudicated.

Mr. BYRNS of Tennessee. Are those included in your state-

ment?

Mr. RUSSELL. I have not included those that have not been adjudicated, but the gentleman from Ohio says that he has investigated that, and that those 6,000 applications have all been rejected.

Mr. SHERWOOD. Those are cases filed after they received pensions under the general provisions of the bill. They filed claims under the disability clause, which provides that a soldier wounded in the service or disabled in the service, and who can trace that back to the war, can get \$30 regardless of the length of service, and those claims have been rejected, so that it is practically settled, and this aggregate also includes the private pension claims passed besides. There is no escape from it.

Mr. RUSSELL. Mr. Chairman, I thank my friend from Ohio, who has stated it more clearly than my information would enable me to do. Another thing, during the last Congress Members on this floor will remember that it was sometimes urged by men, in good faith, that we were becoming very extravagant and running away in liberality in pension legislation. facts are that the Sixty-first Congress passed 9,649 special bills. The Sixty-second Congress, the last one, passed 6,350 special bills, or 3,299 less than had been passed by the preceding Congress, so that the Sixty-second Congress was not extravagant. We have only tried to do that which we believed was justice to the old soldiers and to their widows who could not obtain what they were justly entitled to under the general law.

Mr. CALLAWAY. Will the gentleman yield? Mr. RUSSELL. I will.

Mr. CALLAWAY. When the Sherwood pension bill was before the House you were arguing that it would do away with the necessity of private pension bills. Now you are arguing that 6,000 private pension bills, during the same Congress that you passed the Sherwood bill, was economy as compared with the Republican Congress that passed 9,000 private bills. I think that if you really want to show economy in this matter you should show the actual increase in pension expenditure in the Sixtysecond Congress over the expenditure in the Sixty-first Congress. My judgment is, if you take the two and compare them, you will find that the Republicans were the real economists compared with us on the pension proposition.

Mr. RUSSELL. In answer to what my friend from Texas says, I will call attention to this fact, and here are the official items of expenditures of the Government in pensions: In 1912 we expended for pensions \$155,000,000. We expended last year \$176,000,000, about \$21,000,000 in excess of the previous year, I admit, but it was not \$75,000,000, as my friend from Texas stated that it would be.

The CHAIRMAN. The time of the gentleman from Missouri

has expired.

Mr. LANGHAM. I will yield the gentleman five minutes

more.

Mr. BYRNS of Tennessee. The gentleman from Missouri does not take into consideration the fact that many of the old soldiers have died, and that if this bill had not been passed the pensions paid by the Government would have been much

Mr. RUSSELL. The gentleman from Tennessee is absolutely correct about that. Pensions would have been reduced, as believe from the investigations I have made, about \$5,000,000 if there had been no other general legislation enacted. But when we made the statement on the floor that it would carry \$20,000,000 or \$21,000,000 more money, that fact was considered in the estimate and in the statement that we made. When these gentlemen said that it would cost \$75,000,000 more I understand they also considered that fact in their estimate.

Mr. SWITZER. Will the gentleman yield?

Mr. RUSSELL. Yes. Mr. SWITZER. I want to ask the gentleman what is the purpose of the committee as to eliminating the requirement in the act of 1890 that the widow must have married the soldier prior to June 27, 1890—whether they intend to eliminate it entirely or bring it down to 1910?

Mr. RUSSELL. Mr. Chairman, I can not answer for the committee. There are bills of that sort pending before the committee, and we will take them up in due course of business and use our best judgment in acting upon them. In answer to what my friend from Texas said, we admit there has been an increase by reason of the Sherwood bill, but it is a fact that increase has been less than \$21,000,000, as shown by the records, and the estimates made for the next year will show that it is only \$11,000,000 more than was expended in 1912, before that bill was passed. I want to say that these increases that have been made by our committee is not the cause of the increase of the expenditures of the Government, but it was the general bill called the Sherwood bill, that was passed by Congress two years ago. Now, I want to say that I believe that the special bills which are reported to this House by this committee and passed by the House are the fairest, the most just, and the most necessary to the people of this country of any pension bills that can be passed, because they are reported, considered, and passed purely upon the merits of each individual case. I want to read you the headlines and a few lines of the text of an article in the St. Louis Globe Democrat that I saw a few days ago. It reads

VETERAN'S BODY MAY BE INTERRED IN POTTER'S FIELD OR SENT TO MEDI-CAL SCHOOL—DIED, PENSION PENDING—BROTHER AND SISTER-IN-LAW OF HENRY THOMAS UNABLE TO PAY FOR FUNERAL.

The body of Henry Thomas, 73, a veteran of the Civil War, who fought two years under the Union flag and "never missed a roli call," will be buried in the potter's field or sent to a medical school for dissection unless \$35, the cost of burial, is raised.

This article states that this old soldier entered the service in the Civil War under an assumed name at 16 years of age: He did not want his parents to know he had gone to the war, and, therefore, entered under an assumed name, and because of that there has been a delay in granting the pension. This article states that he never missed a roll call in two years of service to his country, and yet it says that he must be buried in the potter's field and his body turned over to the medical students for dissection unless his friends raise money for his burial. It is a disgrace to this Nation for one who fought two years for the preservation of this Republic to be buried in the potter's field or his body sent to the medical students for dis-section. I am in favor of these special bills in all proper cases. We only report bills to the House where the proof shows they are just and necessary. The Sherwood bill probably goes far enough where a man is able to work and to take care of himself, but when you find a soldier who is blind, as many of them are, or bedridden, as many are, or so helpless as to need a nurse, he must have an increase or he must go to the poorhouse.

The CHAIRMAN. The time of the gentleman has again

expired.

Can I get two minutes more? Mr. RUSSELL.

Mr. SHERWOOD. I yield two minutes more to the gentle-

Mr. RUSSELL. Now, Mr. Chairman, this committee, presided over by this old distinguished veteran from the State of Ohio, does not want to be extravagant. It was not extravagant in the last Congress, and it does not propose to be extravagant in this Congress. We promise you there will be no excesses so far

as our committee is concerned, but we do want to do justice and simply justice to the old soldiers who fought to preserve our country and for their widows and their orphans who are help-I believe that this House will hereafter, finding that we have been misrepresented in the estimates that were made upon the probable cost of the Sherwood bill and the misrepresentations which were freely made about special bills that we re-ported to this House, will certainly have more confidence in the opinion, the conservatism, and the desire of the committee to do simply justice to the deserving and helpless old soldiers, their widows and orphans. [Applause.]

Mr. SHERWOOD. Mr. Chairman, how much time have I

The CHAIRMAN. The gentleman from Ohio has three minutes remaining.

Mr. LANGHAM. Mr. Chairman, I yield 10 minutes to the

gentleman from Wisconsin [Mr. CARY].

Mr. CARY. Mr. Chairman, I wish to send to the Clerk's desk y answer to Dr. Woodward, the health officer of the District of Columbia, in regard to a resolution which I introduced on the 8th of the month, and ask to have the Clerk read the same. The CHAIRMAN. The Clerk will read the article in the time

of the gentleman from Wisconsin.

The Clerk read as follows:

The health officer of the District of Columbia having given to the public press a statement in reply to a resolution offered by me on the floor of the House of Representatives which is calculated to deceive the public, as well as to reflect upon me as a Representative in Congress, I deem it proper, in justice to myself and for the benefit of the public, to call attention to the following facts:

The resolution offered by me on the 8th day of December, 1913, calling for an investigation of the health department of the District, was as follows:

House resolution 334.

House resolution 334.

Whereas the health officer of the District of Columbia is not now, nor has he ever been, excepting for a period of a few months after his graduation, a practicing physician, which was necessarily limited in its scope; and

Whereas it is of primary importance that a health officer should be equipped with a wide and varied experience in the practice of medicine, in order to acquire such judgment as is necessary in order to perform the duties of this office; and

Whereas the Congress has repeatedly refused the request of the Commissioners of the District of Columbia to place the employees of that District under civil-service regulations, yet, notwithstanding, it appears that the health officer of said District has, without warrant or authority of law, established a civil-service procedure of his own designing with certain discriminatory restrictions and provisions unknown to the general civil-service law, and has, without warrant and authority of law and without appropriation therefor, made use of the gratuitous services of the United States Civil Service Commission in conflict with prohibitions of existing law; and

and

"Whereas charges of favoritism have been made in open court against the responsible head of the health department which should be duly investigated; and

"Whereas charges and countercharges have recently been made by officials of the health department reflecting upon the management of the same; and

"Whereas the so-called civil-service rules established by the present health officer are without warrant of law and their operation does not consistently reach all the positions of the said department, the more important positions being filled upon recommendation of said health officer, which nullifies the spirit of the said so-called civil-service procedure in the District of Columbia: Therefore be ft

"Resulted That the House of Representatives authorize and direct

"Resolved, That the House of Representatives authorize and direct the District Committee of the House, by subcommittee or otherwise, to investigate the health department of the District of Columbia and report its findings."

The health officer, Dr. W. C. Woodward, is credited by the press with having made the following statements touching this resolution, among

The health officer, Dr. W. C. Woodward, is credited by the press with having made the following statements touching this resolution, among others:

"That he was graduated from the Georgetown University Medical School in 1889, and was appointed physician to the poor three years later: that in 1892, he was appointed superintendent and resident physician at Emergency Hospital and the following year become corner; that he was appointed health officer in 1894, at which time he received the recommendations of local medical associations and many prominent physicians; that he was reappointed in 1897 and in 1900; that on the second appointment the three-year limit for the existence of the appointment was removed by Commissioner Henry B. F. MacFarland, and he now holds office under indefinite tenure subject to removal by the commissioners."

This statement is misleading in that it conveys the idea that the health officer, at the time of his appointment as physician to the poor in 1892, had been a practicing physician from the time of his graduation in 1889. That such was not the fact is shown by the following:

Boyd's Directory of the City of Washington for the year 1880 records William Creighten Woodward as a clerk in the city post office; according to the same directory for the year 1890, the same Mr. Woodward was still a clerk in the city post office; the same directory, for the year 1891, gives merely the name of the present health officer, crediting him with no profession or occupation.

The records of the city post office disclose the following:

That on January 26, 1886, Mr. W. C. Woodward was appointed clerk; that on July 1, 1880, he was appointed finance clerk, and that on July 1, 1891, according to the records, Mr. W. C. Woodward resigned his position in the post office.

In 1892, according to the city directory for that year, the present health officer was an assistant physician at the Central Dispensary, and was a physician, having an office at 77 H Street NW., his office hours being 10 a. m., 1 to 2 and 5 to

According to the City Directory for 1893, Dr. W. C. Woodward was at the central dispensary in some unstated capacity. The same directory shows that at that time George B. Heinecke, M. D., was resident physician of the central dispensary. The City Directory for 1894 records William C. Woodward as coroner for the District and as being connected in some way with Emergency Hospital. According to this directory, Dr. Walter L. Pyle was the resident physician of Emergency Hospital at that time.

The foregoing will enable the thinking public to pass judgment upon the accuracy of the statement given out by the health officer as well as its official impropriety.

The resolution offered by me in the House does not call for an investigation of the health department in the press, but calls for an investigation of the health department in the press, but calls for an investigation by the Committee of the District of Columbia of the House, and when such an investigation is made the real truth of the statements embodied in the resolution will be fully ascertained, as well as of other matters in regard to which my resolution is silent.

matters in regard to which my resolution is silent.

Mr. CARY. Mr. Chairman, in conclusion I will say that I have nothing further to say at this time, and that if I have any time left I will yield it back to the gentleman from Pennsylvania [Mr. LANGHAM].

The CHAIRMAN. The gentleman has three minutes remaining, which he yields back to the gentleman from Pennsylvania.

Mr. LANGHAM. Mr. Chairman, I have no further requests for time on this side.

The CHAIRMAN. The gentleman from Pennsylvania has 11 minutes remaining.

Mr. LANGHAM. I have no further requests.

Will the gentleman from Pennsylvania Mr. RUSSELL. [Mr. Langham] yield three minutes to the gentleman from Missouri [Mr. Hamlin]?

Mr. LANGHAM. I will.

The CHAIRMAN. The gentleman from Missouri [Mr. HAM-LIN] is recognized for six minutes, three minutes from each side

Mr. HAMLIN. Mr. Chairman, I do not think I shall use much time, but I desire to say something in reference to one matter affecting the reporting of these special bills. First, I want to compliment the Committee on Invalid Pensions on the work they have been doing. I felt all the time that they were not entitled to all the criticism that has been heaped upon them from some sources, because I know they have been very courageous and fair and just in their disposition of these matters. I can appreciate somewhat a criticism that has come to the committee, and especially to the distinguished chairman of the committee, from some sources. I recall that I was a victim in relation to the Sherwood bill of a certain publication, an extract of which was read this morning by the gentleman from Tennessee [Mr. Austin]. I recall a week before election two years ago, the National Tribune, which circulates among the old soldiers, made the announcement, without any condition in it at all, that I voted against the Sherwood bill, leaving no opportunity for me to dispute that absolutely false statement. But that was not what I got up to say. I wanted to ask some information from the committee as to their policy.

I do not believe they can be criticized for being too liberal. If they have erred at all, it is in the other direction. I received this morning a notice from the examiner of the committee, asking some additional evidence in a claim which I have pending, and I went to talk to him about this matter. I am not criticizing now, and I want that understood, because I have no feeling of that kind; but I want to understand, if I can, the policy of I had a statement from the examiner this morning in relation to a bill I had before that committee to pension a widow. There was wanted and required an affidavit from a physician, showing her physical condition and showing

that she was helpless

I do not understand it is the policy of the committee or the policy of Congress to require, in order to pension the widow of a soldier, an affidavit showing that she is not only penniless but that she is sick and physically unable to earn a livelihood over the washtub, by plowing, or scrubbing the floor, or anything My understanding is that the fact that she is the widow of a man who went out in the defense of his country and that she suffered with him during that terrible conflict entitles her to the modicum of \$12 a month, whether she is sick and unable to support herself by her own physical efforts or not.

Mr. ADAIR. Will the gentleman yield?

Mr. HAMLIN. I will.

Mr. ADAIR. I might say to the gentleman that such a widow as he describes, having been the wife of a soldier at the time he went out to render service to his country, does not have to prove anything of that kind. She is now entitled to a pension under the law, whether she is disabled or not.

Mr. MANN. And without having a private bill introduced.
Mr. ADAIR. And without having a private bill introduced. She has simply to prove that she is the widow of a soldier of the Civil War and was his wife at the time of the service.

Mr. HAMLIN. That is true; but in this particular case, I may say, to be entirely fair, she remarried after her husband had died, and afterwards she was divorced from her second husband. Now, then, the requirement is-and that is what surprised me—the requirement is that the testimony of a physician is necessary, showing claimant's physical condition and whether helpless. Second, they want a copy of the decree of divorce from the second husband. This latter requirement, of course, they deserve and ought to have, and, of course, must have complied with if they pass upon this bill.

Mr. SHERWOOD. I think I can explain that to the gentle-

The CHAIRMAN. Does the gentleman yield?

Mr. HAMLIN. Yes.

Mr. SHERWOOD. The rule of the Interior Department has been-and it has been the rule, I understand, for about 15 -that where a widow remarries, as in this case, and the second husband dies, before she can go on the roll again she must prove that her first husband died of disease or wounds contracted in the service. That is a rule of the department.

Mr. HAMLIN. That is true; that is the law; and of course she can not get a pension through the bureau under the gen-I understand that the purpose of this committee is to meet meritorious cases that can not be met where you have to hew to the line, as they must do over in the Bureau of Pensions, and decide cases by the strict letter of the law. Here there is no question about the merits of this case. They want, and properly want, us to show that she has been legally separated from her second husband. But they go further, and want also evidence of her physical condition—evidence to show that she is absolutely helpless. That I do not believe ought to be required of the widow of an old soldier.

Mr. RUSSELL. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield?

Mr. HAMLIN. I do. Mr. RUSSELL. As I understand the facts, this notice that the widow has received was apparently signed, I believe, by the chairman of the committee. That is true; but that notice was in fact sent out by the examiner detailed by the Pension Bureau to examine these bills and make a report upon them. This committee has never passed upon that bill, and I suggest to the gentleman from Missouri [Mr. HAMLIN] that that is simply a report from an examiner detailed by the Pension Bureau to pass upon it. I know that the gentleman is not criticizing the committee, and I do not want him to do so until after he has presented his case to the committee.

Mr. MANN. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Missouri yield to the gentleman from Illinois?

Mr. HAMLIN. If I have the time, I will; but there are one

or two other things more I want to say.

Mr. MANN. I want to ask, Does not the gentleman think it is quite proper evidence to lay before the committee in the consideration of the bill, whatever their attitude may be, showing whether the woman is helpless or not?

Mr. HAMLIN. I do not think it is a requirement of the law,

and it ought not to be a requirement.

Mr. MANN. It ought to be proper evidence. Mr. HAMLIN. I happen to know this lady, and I do not believe she is helpless physically, and I do not think she could meet that requirement. I do not think that is a proper requirement, yet I believe she ought to have her claim allowed. She ought not to be told that she, at 70 years of age, must go out and work to earn her living.

Mr. MANN. If the gentleman will permit, there is no requirement about it. The committee asked for information, al-

though it is not necessary.

Mr. HAMLIN. They say it is necessary. Mr. MANN. They simply ask that she furnish information as to whether she is helpless or not.

Mr. HAMLIN. I do not believe that it is necessary

Mr. MANN. If I were on the committee I would want to know whether she was helpless or not.

Mr. HAMLIN. I do not believe it is necessary to know whether she is helpless or not.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from Missouri yield? Mr. HAMLIN. I will yield when I have finished this state-ent. There is just a little statement that I want to make.

The CHAIRMAN. The time of the gentleman from Missouri has expired.

Mr. LANGHAM. Mr. Chairman, I yield three minutes more to the gentleman.

The CHAIRMAN. The gentleman from Missouri [Mr. HAM-LIN] is recognized for three minutes.

Mr. HAMLIN. I thank the gentleman from Pennsylvania [Mr. LANGHAM] very much for his kindness. Of course, I had no knowledge of the fact that this case has not yet been passed upon by the committee, but I will say-because it is no secretthat I really made this statement this morning with the consent and really on the suggestion of this examiner who has been referred to.

Mr. RUSSELL. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman yield?

Mr. HAMLIN. In just a minute. The examiner tells me that this is the requirement made of him by the committee, and he thought we ought to have some kind of an understanding as to whether this is to be the rule in these cases or whether it is not to be the rule. I made the remark to him, "I think I will bring it before the committee of the House," and he said, 'I hope you will, and I hope you will get an expression of opinion on the matter, one way or the other."

Mr. RUSSELL. That is what I wanted to say. The gentle-

man says he was not before the committee?

Mr. HAMLIN. I was not.
Mr. ADAIR. But I wish to say to the gentleman that that
information is valuable and necessary in order to determine the amount we would give in a case of that kind.

Mr. HAMLIN. There is before the committee now in this case an abundance of evidence showing the financial condition of this lady, and showing that she has absolutely no income on earth excepting the interest on \$1,000.

Mr. ADAIR. But the gentleman would not think a widow who is absolutely helpless and confined to her bed and requires a nurse really needs no more help than one who is not in that condition, and the committee desired that information in regard to the condition of the woman in order to act intelligently.

Mr. HAMLIN. Then you do not give more than \$12 a month

in these cases?

Mr. ADAIR. Oh, yes; we do. Sometimes we give \$20. We ought to have this information so as to determine whether the

rate should be \$12 a month or \$20 a month.

Then I am glad I have brought the matter up for another reason, if that is the view the committee takes I understand that the committee now will not report favorably a bill for an old soldier unless the evidence shows that he is helpless and dependent, unable to perform manual labor; but surely that rule will not be applied to the widows of old soldiers. This is my complaint. But the examiner seemed to understand that that same rule applied to both the soldiers and the widows. That is the part I am complaining about. I do not believe that ought to be required of the widow of a soldier. If she proves that she is his widow, then she ought to be entitled to a pension. Of course, if the committee now takes the view suggested by the gentleman from Indiana [Mr. Adair], all right, and we will be very glad to furnish all the evidence that the committee may wish in relation to that matter, but I do not concede that the committee has a right to make it a condition precedent in order for a widow of a soldier to get a pension to show that she is helpless and unable to perform manual labor.

Mr. LANGHAM. Mr. Chairman, if there are no further re-

quests for time, I ask the Clerk to read the bill for amendment.

The CHAIRMAN. The Clerk will read the bill.

The Clerk read as follows:

Be it enacted, etc., That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws—

The name of Ephriam Clark, late of Company B, Forty-fourth Regiment Missouri Volunteer Infantry, and pay him a pension at the rate of \$40 per month in lieu of that he is now receiving.

Mr. DIES. Mr. Chairman, I did not take part in the general discussion of this bill, but in view of what has been said I feel that those of us who are opposed to what is known as private pension bills may properly drop a suggestion of the reason for our opposition.

The CHAIRMAN. Has the gentleman a motion to submit?

Mr. DIES. I move to strike out the last word. The CHAIRMAN. The gentleman from Texas is recognized for five minutes.

In the first place, Mr. Chairman, I have not Mr. DIES. the slightest objection, but, on the contrary, I heartily favor liberal pensions to Federal soldiers, recognizing the fact that they preserved the Union.

I opposed the Sherwood pension bill because, in my judgment, it was an excessive bill. It was more than the old soldiers themselves asked for in their deliberations upon the question. It was more than the gentieman from New York [Mr. PAYNE], the Republican leader, said they were entitled to. It was more than Mr. Dalzell, of Pennsylvania, then the chairman of the Rules

Committee, said they had asked for or were entitled to. It was in excess of the bill introduced by the former chairman of the Pension Committee, Mr. Sulloway, a Republican.

It was said when this colossal aggregation and addition to the expenditures of the Government was written upon the statute books, the matter of private pension bills, so aggravating to every man of conscience, so revolting to every sense of justice and decency, would not longer be paraded in weekly and monthly processions before this House.

There is no justification under the sun for a private pension There is every justification for a liberal general law, under the terms of which every soldier may come and bring his case with equal justice and occive the bounty of the Govern-

Take the first item in this bill, the one just read. It is for Mr. Ephriam Clark, aged 90 years. He served as a private in Company B, Forty-fourth Regiment Missouri Volunteer Infantry. Instead of a private pension that increases his monthly payment from \$24 to \$40, applying solely to him, why do you not bring in a general bill that gives to every Federal soldier situated as Mr. Clark is situated the sum of \$40 a month, which you propose to give him?

Mr. RUCKER. Will the gentleman yield?

Mr. DIES. Certainly. Mr. RUCKER. Suppose Mr. Clark was a very wealthy man,

would you still favor giving him \$40 a month?

Mr. DIES. My friend does not understand me. down a general rule under which every man may get his pension or increase of pension, applicable alike to all. Then, if Mr. Clark is a poor man, say that every man 90 years old who is sick and helpless and poor in this world's goods shall have \$40 a month, but do not give it to Mr. Clark because he has a spokesman on the floor of this House and deny it to Mr. Jones, who is poor and 90 years old, but who does not happen to have the ear of a Congressman to get for him a private pension. It is because of that rank injustice in the matter of some private pensions that some little toleration was given to the tremendous increases proposed in the Sherwood pension bill. There is not a man under the sun who can justify a private bill applicable to soldiers of the Civil War to increase their pensions one by one.

If you propose to increase the pension of a man who has only one leg, then let your statute read that every man who has a leg off shall have his pension increased. If your proposition is to give an increase to an old soldier who is sick and helpless and who needs the services of an attendant, then give it to every soldier who is sick and helpless who needs an attendant. It is a species of congressional graft and favoritism and an injustice to the old soldiers themselves and a stench in the nostrils of good legislation. When the Sherwood pension bill was under consideration its advocates pledged themselves to this House that this legislative stench should not exist after our pension appropriations were increased from \$150,000,000 to about \$185,000,000 per year. All I ask—
The CHAIRMAN. The time of the gentleman has expired.

Mr. ADAIR and Mr. RUCKER rose.

The CHAIRMAN. The Chair will recognize the gentleman from Missouri [Mr. RUCKER], who rose first.

Mr. RUCKER. The gentleman from Indiana [Mr. ADAIR] is a member of the committee, and he wishes to reply to the gentleman from Texas [Mr. Dies]. I want to speak on another

The CHAIRMAN. The gentleman from Indiana [Mr. ADAIR]

is recognized for five minutes.

Mr. ADAIR. Mr. Chairman, I do not have any desire at this time to take up the time of the committee. I did not ask any time under general debate, but after the remarks of my friend from Texas [Mr. Dies] I feel that I can not sit idly by and let them go unchallenged. When the Sherwood bill was before the House, Gen. Sherwood did me the honor to place me in charge of the bill on the floor of the House. I challenge the gentleman from Texas, or any other gentleman on the floor, to find in the Congressional Record any statement from myself. from Gen. Sherwood, from Judge Russell, or, so far as I know, from any member of the committee, in which one of us ever stated that if the Sherwood pension bill became a law there would be no more private pension bills.

Mr. DIES. Will the gentleman yield?

Mr. ADAIR. Yes.
Mr. DIES. Did not some representative of the committee say that this would largely take the place of private pension bills?

Mr. ADAIR. Yes; they said that; and it has largely taken the place of private pension bills. A less number have been passed by this House since the Sherwood bill became a law than had been passed in any session of Congress for a number of

years. The Sherwood pension bill, while it did go a long way toward doing justice to the soldiers who saved the Union, yet there are many deserving cases it does not reach. It is the purpose of this committee to consider legislation where it is actually needed to bring relief to those who helped save the Union. The bill we have been considering to-day has been carefully scrutinized by the committee, and I dare say that in each instance the relief afforded by this bill is well deserved.

It has been stated here, too, that the Sherwood pension bill increased the expenditure for pensions nearly \$21,000,000, and that all of that increase has been attributed here this morning to the Sherwood pension bill. But, my friends, do not forget this fact, that our pension expenditures are being increased each year by reason of the large number of retired Army officers, and you are charging that to the Sherwood bill. So that the increase of pension expenditures of \$21,000,000, or nearly that amount, can not all be charged to the Sherwood pension bill, but a large part of it should be charged to the retired list of the United States Army and pensions granted to soldiers of the Spanish War.

It was said that the Sherwood bill would cost \$75,000,000. Having charge of that bill on the floor of the House, I assured the Members that it would not cost to exceed \$28,000,000 or \$30,000,000. I wanted to be fair, and I wanted to be reasonable, and I wanted to make a statement on this floor that could be relied upon, and I made it even greater than I thought it would cost, and the report of the Commissioner of Pensions fully vindicates me.

I went back to my constituents, and was confronted with the statement in some newspapers

Mr. CALLAWAY. Will the gentleman yield?

Mr. ADAIR. I decline to yield at present. The newspapers there stated that I had voted for a bill that would cost the country \$75,000,000 additional in pensions. I went out in my district on the stump in more than 100 instances and announced to the people of my district that this pension bill would cost nothing near half that amount, and that even if it would cost \$75,000,000 I would have voted for it anyway. [Applause.]

I want to call your attention to the fact that the people of this country are not opposed to liberal pension legislation. You will pardon this personal reference when I say that my vote on that bill met with such universal approval that the people of the district I represent on the floor increased my majority from 6,000 to more than 10,000. [Applause.]

The CHAIRMAN. The debate on the pending amendment is

exhausted, and the pro forma amendment is withdrawn.

Mr. MOSS of West Virginia. Mr. Chairman, I move to strike
out the last two words. Mr. Chairman, I did not know when I came into the Hall this afternoon that there were any gentlemen left in this House on the other side of the Chamber who would deliberately say in this House that any bill recommended by a committee of this House was pure graft, was an outrage, and was an insult, or words to that effect. I have the honor to be a member of this committee which recommended this bill, and while I did not go over each of these items here, I do feel

sure that this committee gave this bill proper consideration.

If you will look back, Mr. Chairman, in the Congressional RECORD of the past you will find many speeches similar to the one that has just been made by the gentleman from Texas [Mr. Dies]. You will find that attitude of hostility to the payment to these old men who are now fast dying off each year of, not what the gentleman calls a bounty, but what is their just due. I can easily see that a man who views pensions as a bounty, as a gift, as a mere present, will have a hostile attitude toward the old soldier. The point is made by the gentleman in his speech that he opposes private pension bills. I do not know what his record is in the past in reference to pensions, but I would venture to say that a man that is so hostile to private pension bills as he has shown in the past is hostile to any kind of a pension bill.

Mr. Chairman, the Democratic Party has been claiming for the last few years that it is friendly to the old soldier, and it made its campaign in the last campaign largely upon the support of the bill which we now have governing general pensions.

It has been an experience which I shall never forget, to attempt to persuade the present Democratic Commissioner of Pensions that the law governing pensions means what it says and is not to be subjected to a narrow and technical meaning. Any Member of this House who presents to the Commissioner of Pensions to-day a matter involving the pension of an old soldier must show him that the t's are crossed and the i's are dotted. He says that this bill which provides for a pension to an old soldier who is disabled requires that you show not merely that the man is wounded, that he is unable to discharge ordi-

prostrated, and one of the best claims that has ever been presented to the department was turned down when it was shown that the old soldier could not do manual labor without pain. I was told there in that office that if he could do manual labor with pain, then he must do it, and that he is not entitled to

that pension.

Mr. Chairman, I want to say that every pension that has ever been granted or recommended by a committee of this House, composed as this House is of men able and conscientious, is deserving of the favorable action of this House. I do not believe it is a graft. I believe we are discharging a debt that we owe just as truly and just as honestly as this Government owes any other debt, and I hope that the pretensions of gentlemen on the other side will be met with favorable action by them. I know that there are some men on the other side of the House who sincerely believe in rewarding those who helped to save this Union. I know those particular men are as conscientious as the men on this side who are advocating pensions, but, Mr. Chairman, I know also that, as shown by the gentleman from Texas [Mr. Callaway], there is a prejudice against giving to these old men what is their due. You can say that we may these old men what is their due. spend millions of dollars

The CHAIRMAN. The time of the gentleman from West

Virginia has expired.

Mr. RUCKER. Mr. Chairman, no gentleman here, if he could have been in my district for two or three weeks during the latter part of last July, would doubt my attitude toward the old soldiers. Neither would be doubt that I voted for the Sherwood pension bill. That was one of the issues that I had to meet. I applaud every movement, every step, in the direction of liberal and generous pensions to every old soldier and the widow and the dependent children of every old soldier in this country. Pending the passage of the Sherwood pension bill, I voted for two or three amendments. I voted for one which would withdraw pensions from those soldiers who are maintained at Government expense in hospitals or in soldiers' homes. That motion was lost. I voted in the affirmative on a motion to limit the payment of money carried in that bill to soldiers whose net income did not exceed, I believe, \$600—\$1,000 I am told. That motion was lost, too.

Mr. RUSSELL. Mr. Chairman, will the gentleman yield?

Mr. RUCKER. Certainly.

Mr. RUSSELL. I just want to set the gentleman correct on that. These motions were not lost. They were carried. The Sherwood bill as brought to this House by the committee did not pay pensions to those people.

Mr. RUCKER. Then I have merely erred in stating the

proposition.

Mr. RUSSELL. They were amendments offered in this House and were carried.

Mr. RUCKER. In any event, what I want to say is that I voted against paying pensions to any man who is maintained in a soldiers' home at public expense.

Mr. RUSSELL. So did I.

Mr. RUCKER. And I voted not to pay pensions to any man who had an income of \$1,000 a year. On both of these motions my votes were lost. If I had to do it over again, I would vote against the Sherwood pension bill because those motions were lost. Boldly professing as much devotion to the old soldier, his widow, and dependents as any man either side of this aisle, I shall vote against any appropriation bill which proposes to tax the American people to pay pensions to millionaires or to people already protected and cared for by the Government in soldiers' homes, or to pension any man who has not looked on that flag for 25 years-who lives in foreign lands. It is an outrage, in my judgment, to pay pensions to such people.

If the committee is made of the stern stuff of which its great chairman is made, and he with his committee will come here with a proposition to limit the payment of pensions to those who do not live in affluence and wealth and bar from its provisions those who are amply and generously provided for at public expense, and exclude from the benefits of pension bills all those who live permanently in foreign lands and who never see that flag except as a mere reminiscence, and have no knowledge or concern of or in it, and will secure the passage of such a bill, then I shall vote to increase the pension of every soldier in our land whose physical and financial condition suggests the necessity of further assistance from the Government he fought to perpetuate. I would let it be understood that this great Government, for which he fought, will protect those men in extremity and in want, and put the soldiers, the widows, and the dependent children of soldiers on Easy Street, if worthy. But I am not in favor of taxing the already overburdened people of the United States to pay pensions to milnary business, but that he is so completely disabled that he is I lionaires, as we have been doing. There is another thing to

which I am bitterly opposed. I am opposed to going up here to the departments of this Government and paying pensions to old soldiers, as for total physical disability, who are employed there at remunerative salaries. Men who are able to earn salaries ranging from \$1,500 to \$2,500 per year out of funds drawn from the taxpayers of our country should not be pensioned for total or even partial disability. If men are totally disabled, and therefore entitled to a pension, they are not able to earn the high salary which is being paid them, hence either the salary or the pension should cease. We have got to meet this question squarely, and we might as well understand it now. It is an outrage to continue to pay both salary and pension.

I would save that money to pay the soldier or widow of the soldier or to the dependent who ought to have recognition at the hands of their Government. I have said this much in a general way, and I want to say a few things now in a more particular way. I want to applaud this great Committee on Invalid Pensions, who are, in the language of Shakespeare, orable men who will with reason" answer all of us in time, but the trouble is the committee is all too slow sometimes. Another trouble about it is, Mr. Chairman, and I am not complain-

ing of the committee-

The CHAIRMAN. The time of the gentleman has expired. Mr. RUCKER. Mr. Chairman, I ask unanimous consent that I may have five minutes more.

The CHAIRMAN. The gentleman from Missouri asks unanimous consent to proceed for five minutes longer. Is there objec-

tion? [After a pause.] The Chair hears none.

Mr. RUCKER. The committee does like all the rest of us, I expect. I make this admission in order not to wound the feelings of any member of the Committee on Invalid Pensions when I suggest that the committee delegates too much power and authority to some clerk. Why, what goes in these bills? What is in this bill here to-day? Why, it is that which the committee clerk or examiner directs the committee to put in it. Who said put it in? Why, the clerk; and I call attention to the fact, and the gentleman from Missouri [Mr. Russell] knows the fact quite as well as I do, that more than one year ago this committee, after careful consideration, reported a bill here to pension a dependent son of an old soldier. The bill passed the House and went to the Senate and there received due and proper consideration and passed the Senate. It went to the President and received the President's approval, but, after all that, when pay day came the Commissioner of Pensions or the Secretary of the Interior advised me that because the committee clerk in the House of Representatives had made a mistake in a name the pension granted by Congress could not be paid. Now, let me That bill was not to pension a man able to earn \$2,000 in some department office here in Washington. It was not for a millionaire. It was not for a man of affluence and wealth; but it was for a poor unfortunate cripple, a man who in his early youth had to have both legs amputated below the knee. and to-day, with the aid of crutches, he is hobbling through the world on wooden feet made by himself, waiting for this great Government, for which his father gave his life, to pay him the pitiful sum of \$12 a month. Congress passed the bill, it met with Executive approval, but by reason of an error of the clerk in a name, simply because of the fact that the clerk wrote the son's name where he ought to have written the father's name, the father's name being David Young and the son's name being William, this poor cripple has been denied the bounty Congress attempted to give him for now more than one whole year. The only remedy was to again introduce a bill for the relief of this worthy man. The extra session came and word was passed along the line that no pension bills would be considered until this session begun. I so advised my constituent, but assured him that an item for his relief would be carried in the first pension bill that passed Congress at this session. I went to the office of the examiner for the Committee on Invalid Pensions at the suggestion of my friend and colleague from Missouri [Mr.

I presented the matter to the examiner. I showed him the report of the committee, of which he is now the examiner, approving the bill, and showed him the omnibus pension bill contained provision for relief of this man, called his attention to the fact that the Senate passed the bill and the President approved it, and asked him to put it in the bill which was reported day before yesterday, now under consideration, and I was given to understand it would be, but I find it is not there. I called up the office a few minutes ago and the examiner informed me that the omnibus bill was probably made up before I called on him with my bill. The committee only met last Monday, long after I called on the examiner, to order the omnibus bill reported. He should have presented this matter to the committee at that time, but failed and neglected to do so. I am

worried about this, because I tell you, gentlemen, in all sericusness, it means something to this poor man, who merits and needs this little pittance of \$12 a month.

Mr. KINKEAD of New Jersey. Why not try to amend the

Mr. RUCKER. He has already waited for more than one year on account of a mistake made in that very office for the money which both branches of Congress and the President say he should have, but now I am told on account of the holidays coming in and the anticipation of a possible recess we may have that possibly during next January I might get this bill reported, and then I might get it passed and get it again to the President in February or March.

Mr. RUSSELL. Will the gentleman yield half a minute?

Mr. RUSSELL. Will the gentleman yield hair a minute?
Mr. RUSSELL. I think I ought to state, in justice to the
examiner, who probably made this mistake, that he is a new man in that position.

Mr. RUCKER. The mistake was made by the old examiner:

not the one you now have.

Mr. RUSSELL. I mean the mistake of not getting it into this bill.

Mr. RUCKER. There is no chance for even a new man, who can arrange the 400 items in the bill, to make a mistake after his attention has been called to a matter as important as

Mr. RUSSELL. There are only 157 items.

Mr. RUCKER. Well, 157 items. I am getting tired of the practice of having to carry your hat under your arm when you go to these darned clerks, and I am not going to do it. [Applause.] I am going to stand here as an American citizen and demand my rights. That clerk ought to have put the item in this bill, or at least give a plausible and courteous reason for his failure to do so.

The CHAIRMAN. The time of the gentleman from Missourl

has again expired.

Mr. WOODRUFF. Mr. Chairman, I ask unanimous consent that the gentleman be allowed to continue for five minutes,

Mr. MANN. Mr. Chairman, reserving the right to object, the gentleman from Missouri [Mr RUCKER] just stated that he proposes to demand his rights. If the rest of us should demand our rights, we would insist that the gentleman confine himself in the five-minute debate to the subject under discussion. I shall no object to the extension, but I think we ought to pass the bill without having general debate under the five-minute rule hereafter.

The CHAIRMAN. The gentleman from Michigan [Mr. Woodbuff] asks unanimous consent that the time of the gentleman from Missouri be extended for five minutes. Is there objection? [After a pause.] The Chair hears none; and the gentleman from Missouri is recognized for five minutes.

Mr. RUCKER. Mr. Chairman, while I recognize the logic of what the gentleman from Illinois [Mr. Mann] has said, I might say to him and all the rest of the Members of the House that there is no iron-clad rule that could logically or justly be enforced against me, because I consume as little of the time of the House as most Members. But I have had this matter on my stomach, or somewhere else in my anatomy, and

I wanted to get rid of it. [Laughter.] I have thrown it off.
While on my feet, I want to ask the gentlemen here in charge of the bill, if, under the peculiar circumstances, realizing the peculiar hardships and the peculiar sufferings that longer delay would impose upon the crippled and penniless man, they will let me offer an amendment here on the floor?

Mr. RUSSELL. I would not object to the item going in if that was the only item, but there are a number of men who want to do the same thing.

Mr. RUCKER. Mr. Chairman, again asserting my rights here as a Member, I am going to offer the amendment at some place in the bill. I am going to take the judgment of the Members of Congress. I recognize the limitations which surround the members of the committee, but I insist there are not many cases like this. This bill passed both branches of Congress two years ago, and it ought to pass now. I will send this bill to the Clerk and have it read, and will offer it as an amendment. I want to say to the committee that this crippled boy's mother is living and is drawing a pension and, under the rules regulating pensions, this pension must be allowed to her for the use and benefit of the crippled son as long as she lives, and when she dies his name then goes on the pension roll. If he should die, of course, the pension allowed his mother for his use would immediately cease.

Mr. SHARP. Will the gentleman yield?

Mr. RUCKER. Certainly.

Mr. SHARP, How long has this boy been crippled?

Mr. RUCKER. Oh, some 20 or 25 years. Mr. SHARP. When was he crippled? Mr. RUCKER. The trouble which resulted in the amputations arose when he was about 13 years old. He was under treatment of physicians and surgeons for a long time, and the amputations did not actually take place until the May following his sixteenth birthday—in December previous, I think it was. Mr. SHARP. Has he one leg off, or both?

Mr. RUCKER. Both legs.

Mr. GRAHAM of Illinois. Has there been any question

raised as to the merits of the claim, or did it fail because of accident?

Mr. RUCKER. It would have been in force to-day, and the boy would have been drawing a pension for more than a year, it had not been for the accident of inserting his name in the place where his father's name should have appeared.

The CHAIRMAN. The Clerk will report the amendment.

The Clerk read as follows:

At the end of line 9, page 1, insert the following:

"That the Secretary of the Interior be, and he is hereby, authorized and directed to place on the pension roll, subject to the provisions and limitations of the pension laws, the name of Emsey O. Young, widow of David Young, late of Company D. Second Regiment Iowa Volunteer Cavalry, and pay her a pension at the rate of \$24 per month in lieu of that she is now receiving: Provided, That in the event of the death of William M. Young, helpless and dependent child of said Emsey O. Young, the additional pension herein granted shall cease and determine: And provided further, That in the event of the death of Emsey O. Young the name of the said William M. Young shall be placed on the pension roll, subject to the provisions and limitations of the pension laws, at the rate of \$12 per month from and after the date of death of said Emsey O. Young."

Mr. RUSSELL. Mr. Chairman, I am not going to oppose this amendment, although it is in violation of the fixed understanding of our committee. But this is a peculiar case, an especially just case. The facts were perfectly stated by my colleague from Missouri [Mr. Rucker]. This House and the Senate passed this bill in the last Congress. Only by reason of a slight mistake in the name was it finally defeated, and only

for that reason I am not going to oppose this amendment now. But I want it understood that I think it would be a bad practice in these omnibus pension bills to open them up to amendments hereafter, and the committee will not permit it with their consent, because the committee can better pass upon the facts in these cases than can the House. But the committee has passed upon this particular case, and the House and the Senate have both passed upon it. I shall not object.

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri [Mr. Rucker].

The amendment was agreed to.
The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Jacob Sellers, late of Company G, One hundred and sixteenth Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of \$50 per month in lieu of that he is now receiving.

Mr. RUSSELL. Mr. Chairman, I move to strike out, on page 7, four lines-line 7 to line 10, inclusive-for the reason that Jacob Sellers is now dead.

The CHAIRMAN. The Clerk will report the amendment offered by the gentleman from Missouri [Mr. Russell].

The Clerk read as follows:

On page 7, lines 7, 8, 9, and 10, strike out the following language: "The name of Jacob Sellers, late of Company G, One hundred and sixteenth Regiment Pennsylvania Volunteer Infantry, and pay him a pension at the rate of \$50 per month in lieu of that he is now receiving."

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Sarah P. Tranmer, widow of William B. Tranmer, late ordinary seaman, U. S. ships *Great Western* and *Benton*, United States Navy, and Company C, One hundred and twelfth Regiment Illinois Volunteer Infantry, and pay her a pension at the rate of \$12 per month.

Mr. DIES. Mr. Chairman, I wish to make a speech as soon as the Clerk gets to some place where he can pause for a moment. [Laughter.]

The CHAIRMAN. The gentleman is now recognized.

Mr. DIES. I move, Mr. Chairman, to strike out the last word.

The CHAIRMAN. The gentleman from Texas [Mr. Dies] moves to strike out the last word. The gentleman is recognized for five minutes

Mr. DIES. Mr. Chairman, I am not at all disturbed about what my young friend from West Virginia [Mr. Moss] said as to my antagonism to the Federal soldier. If I have served

five years in this House without it becoming known that I am aware the war is over, then I have served those five years in vain.

I have not the slightest prejudice in the matter. I am too good a friend to the Federal soldier and too good a friend to my country to allow politicians to prostitute the pension roll of this Government into a campaign fund and sit idly by forever and feel an unspoken sentiment of resentment against the plunderers of the Federal Treasury.

The gentleman is right when he says that the Democratic Party has done more recently for the Federal soldiers than the Republican Party has done. [Applause on the Democratic

Mr. MOSS of West Virginia. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman yield?

Mr. DIES. I decline to yield.

Mr. MOSS of West Virginia. I did not say that. I beg the gentleman's pardon.

Mr. DIES. It is true, whether the gentleman said it or not. [Applause.] It has been a shameful bid between the political parties for the old-soldier vote for many decades past.

What makes my friend wriggle and twist is that the Democratic Party has outbidden the Republican Party and got the vote. [Applause on the Democratic side.] What you want to do now is to outbid us and get it back again; and what I want to do, as an American Congressman, representing the people of my district and the Nation, is to stop this prostituting of the pension roll for campaign purposes by Democrats and Republi-

cans alike. [Applause.]

There is one part of my brief five-minute address that my friend neglected to answer. The chairman of the committee has also neglected to answer it, and gentlemen will continue to neglect to answer it. It is this, in a word: The same state of facts that gives John Jones a right to have his pension increased ought also to increase automatically the pension of William Brown. If you say a man has got a right arm off and for that reason ought to have more money from the Federal Government, by what process of reasoning do you conclude that another man, who has not the ear of a Congressman, but who has his right arm off, should not have an increase of his pension?

Mr. KINKEAD of New Jersey. Mr. Chairman, will the gentleman yield right there?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from New Jersey?

Mr. DIES. I will, briefly.

Mr. KINKEAD of New Jersey. I am sure that my good friend from Texas

Mr. DIES. I yield, Mr. Chairman, only for a question-Mr. KINKEAD of New Jersey (continuing). Can imagine a case where John Jones has a few dollars more than William Brown.

Mr. DIES. All right, then. If William Jones has his right arm off, and is worth \$400, and ought to have an increase of pension, then let every man who was a soldier under the Government, who has his right arm off, and who is worth \$400, have an increase of pension. All I ask is that you write a law which will let every Federal soldier walk up to the bar of justice and get his increase, if he falls within the meaning and the words of the law. I do say that no man on the floor of this House, from the chairman of the committee [Mr. Sherwood] to the gentleman from Illinois [Mr. Mann], can justify a law that says John Jones, because he is 90 years old, helpless, sick, and afflicted, shall have an increase from \$24 to \$40 a month, and that William Brown, who is not in the bill, but who is equally aged and equally helpless, shall be left out in the cold.

Mr. Chairman, this talk that the gentleman makes between

the firing lines about Democrats and Republicans on the pension bill has no terrors for me. All men who seek to use the Treasury of the United States for their own political uses look just exactly alike to me, whether they call themselves Democrats or

Republicans.

The point I want to make is this: How much longer, ye gods of justice, are these old soldiers to be used and these pension laws to be used by Republicans and Democrats to further their political interests?

I sympathize with the statement of my friend from Indiana [Mr. Adam], who says that his majority was only 6,000 until he managed the Sherwood pension bill, and that now it is 10,000. That is an increase of 4,000 majority, but an increase of \$21,000,000 of the burdens of the people who pay the taxes of

the country. [Applause.]

The CHAIRMAN. The time of the gentleman has expired.

Mr. MANN. Mr. Chairman, if I may proceed for a moment out of order in opposition to the motion offered by the gentle-

The CHAIRMAN. The Chair thinks the gentleman is in

Mr. MANN. I am in order to reply to it, but I do not expect to confine myself to the subject of the amendment, and that would be out of order if anybody should raise the question.

This bill is 27 pages long and has about 6 items to the page. When this bill is out of the way there will come before the House the omnibus war-claims bill, which contains 93 pages of items, with about 15 items to a page. Both bills are special legisla-tion. The distinguished gentleman from Texas [Mr. Dies] strains at the gnat, but readily swallows the camel. He is excited over the passage of a special pension bill of 27 pages, with 6 items to a page, but I have never heard him express any abhorrence over the passage of a special war-claims bill of 93 pages, with 15 items to the page, both of them being personal legislation.

In both cases it would be desirable, if it were possible, to do justice by general legislation. I do not believe it is possible up to date to do justice in either case by general legislation, and there is no item in this bill now pending but has had a private bill introduced for it, and there is no item in the war-claims bill but has had at some time a private bill or a private resolution introduced in its behalf. The gentleman from Texas [Mr. Dies], whom we always love to hear, is not in favor of passing the private pension bill, where most of the persons involved live in the North, but I take it he is in favor-at least he has never expressed any opposition to the passage of the war-claims bill, with a great many times the number of items, where most of the persons involved live in the South.

Mr. DIES. Will the gentleman yield?
Mr. MANN, Certainly.
Mr. DIES. I may enlighten my friend from Illinois to the extent of saying to him that he has not heard me pleading for

the passage of the war-claims bill.

Mr. MANN. No; but I have heard the gentleman speak against the passage of the special pension bill, and have seen him in his seat and never heard him express that holy abhorrence of private special legislation when the war-claims bill was up. [Applause on the Republican side.]

Mr. DIES. If the gentleman will reflect for a moment— The CHAIRMAN. Does the gentleman yield?

Mr. MANN. Certainly.
Mr. DIES. If the gentleman would reflect for a moment, he would know that if I were actuated by sectional antipathy to the North in my opposition to this private pension bill I certainly would be more actuated against the war-claims bill, because the Federal soldier was in arms against us; but the man who has a war claim must prove that he was a traitor to his section before you will permit his claim to come before the [Applause on the Democratic side.]

Mr. MANN. I notice that that sentiment is applauded by certain gentlemen who have been most vociferous in this House in favor of the payment of their claims. Whatever those gentlemen may have been during the war they are now Democrats, supporting the gentlemen on the floor of the House from that

section of the country, and hence receive their support.

I think both bills are justified. While I do not believe private bills ought to be passed where general legislation is practicable, I believe that private special legislation is justified in both cases, and I only call attention to the abhorrence which the gentleman expresses concerning bills where the benefits do not go to his district and his acquiescence where the benefits do go

Mr. DIES. Will the gentleman yield?
Mr. MANN. I yield to the gentleman.
Mr. DIES. I have not got anything in the claims bill or in the arbitration bill, but I want to ask the gentleman this question: Does not he think it would be better to pay the southern people for the property that was taken in violation of the laws and the Constitution of the United States before you get too liberal with pensions under such legislation as the Sherwood

Mr. MANN. I am perfectly willing to pay for property that we took in violation of the Constitution of the United States if such violation existed. I do not think so. The violation of the Constitution of the United States was when the war was brought about in the effort to dissever the Union. [Applause.] I do not think we have yet become too liberal about the pensions or yet too liberal about the payment of war claims.

Mr. SHARP. Mr. Chairman, I move to strike out the last

two words.

The CHAIRMAN. The gentleman from Texas withdraws his

motion to strike out the last word.

Mr. SHARP. Mr. Chairman, notwithstanding the eloquence of the gentleman from Texas [Mr. Dies], there seems to be a great deal of sophistry contained in his remarks. Certainly they would not bear the scrutiny of any kind of reasoning. I believe, as he is a very able lawyer, he will recognize the fact that one part of our jurisprudence, and a very important part, consists of what we term its equity side. One of the first definitions I had to learn in legal phraseology was the definition of equity as "the correction of that wherein the law, on account of its universality, is deficient." Now, manifestly the object of private pension bills is to afford just relief, which the general law would be impossible to give, as the gentleman from Illinois [Mr. Mann] has well said.

Mr. CALLAWAY, Will the gentleman yield?
Mr. SHARP, I will yield to the gentleman.
Mr. CALLAWAY. In reference to the equity proposition, I see, on the fourth page, you propose to pay a pension to Mrs. Emma Gilbert, and the reason given is that she did not marry the soldier six months earlier than she did marry him. the law she has no right to this pension because she lacks six months of marrying him prior to the time provided for the widows pensions under the law.

Now, then, is there any equity in that? You say equity takes the place where the law is deficient. Is there any equity in giving her a pension when she lacks six months and in not allowing it to every other widow of every other soldier who

married six months later?

Mr. SHARP. There may or may not be in that particular case, but you can not make a general law that will anticipate or cover the special equities existing in every case. There may be special reasons for this case. I can not yield any further for I have only a limited time. I want to tell in brief what has been my experience since the Sherwood bill was enacted. can say without any reservation that since this law, known as the Sherwood law, went into effect I have had very many less applications for the introduction of private bills than I had before that time, and I am led to believe from my own experience that that is the common experience of all the Members on this floor. I have had more than one old soldler say to me back in my home district that the law was generous and fair to them, that they had no complaint to offer, and I think, in its general provisions, it is meeting with the approbation of the soldiers throughout the country, though there may be still some needed changes that ought to be made.

I believe that we will have the roll of special bills very much smaller in volume as the years go by, because it was the purpose of this bill to include every defender of his country in benefit of its provisions. If there still remain inequalities in its application I am ready to vote to correct them in favor of these

fast departing heroes.

Now I must say in conclusion a few words about an inference created by the remarks of the gentleman from Texas, which I think is highly unjust toward the soldiers of this country by intimating that they are improperly influenced by the attitude of Congressmen, whether on this side of the aisle or that. A like innuendo lies against the membership of this body. The same argument could be laid up against Congressmen voting in favor of a particular river or harbor improvement in his locality, or building a public building in his home city. all have to take cognizance of the local demands of our constituents, but I can not believe that there are any soldiers in my district that could be unduly influenced by the action of any particular Representative in this Congress in voting just to pension these aged veterans. It is natural that they would probably not consent to support a man who was utterly hostile to that kind of legislation, but I am pleased to believe that we have but few Members, certainly none of my colleagues from the State of Ohio, who occupy that position.

Let me say in conclusion that as long as I am a Member of

Congress from my district I shall continue to vote, as I have in the past, for all those private pension bills which have passed the scrutiny of this committee. Its personnel is a guaranty of prudent and honest consideration of the claims it is called

upon to decide.

Mr. TOWNER. Mr. Chairman, I move to strike out the last three words

The CHAIRMAN. Is the gentleman a member of the committee ?

Mr. TOWNER. I am not.

Mr. HELVERING rose.
The CHAIRMAN. Is the gentleman a member of the committee?

Mr. HELVERING. I am. Mr. Chairman, I want to make a statement and refer to the case of Mrs. Gilbert that the gentleman referred to, the fourth case in the bill. He states that the reason this committee has given her a pension is because she could not come under the general law, being married six months after that law took effect. That is not the case at all. The committee granted her a special pension because she married a soldier and had lived with him for 20 years, and because during nearly all of that time he was an invalid and she nursed him, and in so nursing him she became broken in health, and after his death she is unable to perform any kind of labor whatsoever or to support herself. That is the reason that actuated the committee in granting this pension, and not, as the gentleman from Texas [Mr. Callaway] would assume, because she did not marry the soldier at an early enough date. And, as is called to my attention by one of the members of the committee, this soldier, who was the husband of Mrs. Gilbert, had served not only during the war but for more than 20 years in the Army of the United States.

Mr. CALLAWAY. Mr. Chairman, will the gentleman yield?
Mr. HELVERING. Yes.
Mr. CALLAWAY. This soldier served a little while during

the war, and after the war was over he joined the Army again. His term expired and he rejoined. That term expired and he re-Again he rejoined after his term expired, and the reason for that evidently was not because he was a patriot trying to defend his country but for the same reason that the bulk of the men go into the Army to-day, because it is the easiest way they have of making an assured living. that up for 20 years. That is the service that he rendered his country, and the statement later is that he never received any injury in the service from which he died. He died like other men, from paralysis or some other ailment. This woman lived with him throughout all that time, and because she lived with him throughout all that time-

Mr. HELVERING. That is not the case at all.
Mr. CALLAWAY. And is now helpless, she ought to have a pension. I submit that every woman who lives with a soldier for 20 years and is now helpless ought to have a pension if this woman is entitled to one, and this woman ought not to be

singled out for special favors.

Mr. HELVERING. Mr. Chairman, I am surprised that the gentleman would make the remarks he did-that this man had gone into the Army for the purpose of supporting himself. When the call was made for troops during the Civil War the soldier, who had only one idea in view-and that was, his patriotic duty-came out and put himself in the front of battle, and then continued in the service of the Government after those battles were fought.

Mr. CALLAWAY, Mr. Chairman, will the gentleman yield

further?

Mr. HELVERING. Certainly.
Mr. CALLAWAY. There was no special call for people to defend the country in 1870 or in 1875 or in 1880, was there?
Those are the dates he reenlisted.

Mr. HELVERING. I was referring to the remarks of the gentleman, that he was not prompted by any patriotic purpose

in joining the Army originally.

Mr. CALLAWAY. I said when he later joined the Army he evidently served in the Regular Army for the purpose of making

a livelihood, and it was the easiest way of making it.

Mr. HELVERING. But to-day you go upon the streets of the cities of this country and you will see the call for soldiers in the Army of the United States, and does the gentleman say that that call is not supported by the good American citizens, and does the gentleman say that the man who answers that call is not patriotic?

Mr. CALLAWAY. I say he goes into the service because, in his judgment-that is, the bulk of them-he can make a living more easily there than he can in any other place. That is the reason he goes into the Army. There is no reason for a man to go into the Army at this time for the purpose of defending his country. Who on earth is making an attack upon us now?

We are at peace with the world.

Mr. HELVERING. I want to say, Mr. Chairman, if human life and human health and human constitution could be regulated by mathematical accuracy, then there would be no need of this special legislation; but that is not the case, and it can not be the case, and, therefore, it is necessary that this special legislation be enacted to meet these special conditions and cases. [Applause.]

Mr. TOWNER. Mr. Chairman, I move to strike out the last two words. I think there is no Member of the House who has given any consideration to the question of legislation for pensions who does not recognize the difficulties that are inherent | these matters are taken up upon their merits of justice, but I

in such legislation. There is and there can be no general law that will reach all cases. There can be no general law passed but that from some standpoint may not be justly criticized. We try as best we can here in the House to remedy those deficiencies by these special bills. I presume that there are no special bills ever introduced that are not subject to some sort of criticism. That is inherent in all this class of legislation, but, Mr. Chairman, I certainly resent the imputation on this House that it is done from a selfish and ulterior motive. There never has been, in my judgment, a general law passed by the American Congress that was not actuated by the highest patriotic motives, and not because of selfish interest. There has been no bill passed that, in my judgment, has not been thus supported.

In these cases we take the judgment of the committees that have given them careful consideration. There is no man here upon the floor who has had experience with this committee or with those that have preceded it who does not believe that the members of these committees have given the most careful and honest consideration to the bills that have been brought before them. Some of them, in the judgment of gentlemen here, have been recommended unjustly and without support. Others have been refused that, in the judgment of those who advocated them, ought to have been granted. I presume that in some instances these criticisms are just, but a large body of the membership of this House believe that the committee have acted honestly, patriotically, conscientiously, and intelligently in determining what cases ought to be reported, and so they have had justly the support of nearly all the Members of the House. Mr. Chairman, I believe that when the history of these years shall have been made up, when the history of legislation regarding pensions to Union soldiers shall be attached to that of the great Civil War, it will be held to be an honor to the American Congress and an honor and credit to American citizenship that has supported throughout so honorably and so patriotically this legislation. And I believe that for these reasons that not one single dollar has ever been expended in the past that did not bring with it as a reward greater patriotism on the part of the people of this country, who have known when these acts were passed that it was an expression of the country of its obligations to those who were willing to risk their lives in the service of their country, and an encouragement to the generations in the future to come forward and serve their country, knowing that if they die in such service or linger in suffering years afterwards because of such service that they would not be forgotten by a sympathetic and

patriotic citizenship. [Applause.]

Mr. CRAMTON. Mr. Chairman, as a member of the committee, if I may speak, I ask for recognition. I shall not desire to occupy five minutes, but I do want to call the attention of the gentleman from Texas [Mr. Dies] and his colleagues who have sympathized with him apparently to the fact that inasmuch as his chief criticism to the item in question is based upon the fact that he thinks a general law extending the period six months or a year more would be desirable rather than to take care of this worthy case as we come to it in a special bill, I want to suggest to him that if he really is sincere in his objection on that ground, that he will have opportunity perhaps during this session to record his vote in favor of a general law that will take care of all such cases. But I anticipate from what I understand about the gentlemar's prior record in connection with general bills that when a general bill comes up it will be too "general" to suit him. Furthermore, the gentleman has suggested and his criticism seems to arise from the fact that he in his district apparently finds that it is difficult for anyone to get the ear of a Congressman unless he has political influence. I do not know as to that; the gentleman can best say for himself; but I can say this, that in the district that I endeavor to represent that if there be in that district any widow of a soldier who faithfully served his country and that widow has now come to the years of 70 or 80 or 90 and is bedridden and in necessity and she presents a case of justice that has not been properly cared for under the general law, that widow, without a vote and without influence, can get the ear of her Congressman as well as the biggest politician in that

Mr. CALLAWAY. Will the gentleman yield?

Mr. CRALTON. I decline to yield; the gentleman has had a lot of time and he can get more. Mr. Chairman, what I have said as to that district which I have the honor to represent I believe may well be said of every other district represented in this House, probably even the district of the gentleman from Texas. Now, not only is it true as to individual Members that have more confidence, Mr. Chairman, in my short experience upon the Committee on Invalid Pensions, in the worth of the motives that actuate the majority of that committee than does their associate in the Democratic majority, and I believe that if they are not hindered by some gentlemen in the Democratic majority, if they are permitted to follow their course of justice and righteousness, that the old soldiers and their widows can

expect a fair hearing before the committee.

I observe in that committee as cases in which a question exists are presented they are considered, not on the ground of what Congressman is back of them or what political indorsements they have, but simply as to what are the necessities of the case, what was the military service of the soldier, and what are the fair equities. And I submit that any Member of the House, having any case that is fair and honest, will get a fair hearing from that committee, providing that these gentlemen the Democratic side, who apparently are against general bills when they are before us and against private bills when they are before us, do not hinder them too much. [Ap-

Mr. GARRETT of Tennessee. Mr. Chairman, the distinguished gentleman from Illinois, the leader of the minority, in the course of his remarks a few moments ago instituted a comthe course of his remarks a few moments ago instituted a comparison between war claims and pensions. I do not think the comparison was very happy, and I am sure, whether happy or unhappy, it was not sufficiently extended. I do not propose to discuss the merits of this special pension legislation. Whatever those merits or demerits may be, Mr. Chairman, it has become a fixed system and a fixed policy, and it became such long, long years ago, and I apprehend, sir, it will continue until the end.

But, Mr. Chairman, I think it not improper, inasmuch as it has been suggested by the distinguished gentleman from Illinois.

has been suggested by the distinguished gentleman from Illinois [Mr. Mann] that the House should for a moment compare the action of the Congress with reference to special pension bills and its action with reference to war claims. I have been a Member of the Congress for four terms and am now in my fifth. There has scarcely been a month during a regular session of any of the Congresses held in which, upon every other Friday, there was not brought into the House and passed with practically little opposition these special pension bills. It is true that at times during the last Congress there was instituted a filibuster, but it is equally true that the Democratic Committee on Rules, after that matter had been continued for a few hours, ended it by bringing in a drastic rule which brought the House to a vote upon the question. But, Mr. Chairman, for eight long years there has not been a single claim known as a war claim against the Government of the United States paid, notwithstanding the fact that those claims had been submitted to a court instituted by this Congress, under laws which the Congress itself laid down, and had been found favorable under those laws. [Applause.] I believe, Mr. Chairman, that every time a war-claims bill has come into this House we have had hair-trigger action. Through many Congresses during the first period of my service here, war-claims day was dispensed with almost through the entire session by the interposition of other business. Those claims have never been in favor in this House. They have never received fair consideration here. There is no comparison to be instituted in the matter of fairness between the treatment of private pension claims and the treatment of war claims, although pension matters have been passed upon by committees, and war claims matters have been passed upon by courts in solemn and serious judgments.

Mr. Chairman, I have thought it well and proper that those of us who have been fair in regard to this pension matter, whatever the predilections of our sections may be, who have recognized the existence of things as they are, and have dealt fairly and justly and honestly with those who are interested in this proposition, should be entitled here, and now call attention to the fact that we in turn are entitled to fair treatment in regard to these claims that have been passed upon by the court and that we are entitled to have them paid. [Applause.]

Mr. MANN. Mr. Chairman, the gentleman from Tennessee [Mr. Garrett], who is generally fairly accurate, made three statements, namely, one, that there had been no war claims paid in eight years; one, that war claims had not received fair treatment from the House; and one, that war claims were judgments of the Court of Claims. Neither one of those statements is correct.

Mr. GARRETT of Tennessee. The gentleman will pardon I did not say that they were judgments of the Court of Claims.

Mr. MANN. I beg the gentleman's pardon, but that is what he did say. However, I am perfectly willing for the gentleman to change his remarks.

Mr. GARRETT of Tennessee. Of course, I am well aware of the fact that they are not judgments of the Court of Claims.

Mr. MANN. I am well aware of the fact that they were rep-

resented as judgments of the Court of Claims.

Mr. GARRETT of Tennessee. If the gentleman will permit,
I said they represented the judgment of the Court of Claims. did not use the expression in a technical sense.

Mr. MANN. The gentleman used the expression in both senses. They do not represent the judgment of the Court of The Court of Claims only finds certain facts and expresses, until the recent law, no opinion in reference to the

validity of a claim or the propriety of paying it.

The gentleman has already acknowledged that the judgment business is out of date. There is no judgment. Now, as to the other two propositions, the gentleman stated that no war claims had been paid in eight years. That is not so. The gentleman is mistaken. There have been war claims paid in the last eight years. Claims that were passed through this House and through

the Senate and became laws have been paid.

There has been no omnibus war-claims bill that became a law in the past five years. That is what the gentleman intended to say. But when the gentleman in connection with that says that the House has dealt with war claims unfairly, the gentleman has done a great injustice to the House. An omnibus war-claims bill has been passed in every Congress during that time early in the first regular session of that Congress. Whatever may be said by the gentleman about its not becoming a law, his statement that the House had dealt unfairly with those claims is without foundation, and the gentleman ought to say that to the House. The House passed the bill by unanimous consent practically in each of these Congresses, and if we should quit talking in that way now, out of order, and get through this pension bill, we could pass the omnibus war claims now pending this afternoon. [Applause.] Why do not we do that? Most of the talk delaying the bill has come from that side of the House. [Applause.]

The CHAIRMAN. The Clerk will read,

The Clerk read as follows:

The name of Sarah L. Gillis, widow of William Iving Gillis, late of Company B. Sixth Regiment Kentucky Volunteer Cavalry, and pay her a pension at the rate of \$24 per month in lieu of that she is now a pension receiving.

Mr. CALLAWAY. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Texas [Mr. Callaway] moves to strike out the last word, and is recognized for five minutes.

Mr. CALLAWAY. Mr. Chairman, I want to make a few observations on the remarks of the gentleman from Iowa [Mr. Towner, who says in a most patriotic appeal that certainly no man in this House will think for one minute that any of these pension bills that are brought in here upon this private calen-

dar has a thing on earth to do with politics. I remember a little colloquy that took place in this House when we were discussing one of these private pension bills in the last Congress, between the gentleman from Missouri [Mr. RUSSELL], who had the bill in charge, as he almost always has in the case of these private pension bills, and the gentleman from Kentucky [Mr. Thomas], in which Mr. Thomas said, "I want to know why it is that I have only 10 of these private pension bills to my credit and the members of the committee have about 30?" Mr. Russell in reply to that said, "I want to assure the gentleman that if he will just possess himself in

even-handed justice to every Congressman in the House." Every Congressman in the House, Mr. Towner; every Repretake that list of private pension bills that were passed in the last Congress, and in the Congress before, and in the Congress before that, he will find that with a wonderful evenness they are distributed to the different Members of Congress.

patience, before this Congress adjourns this committee will do

Now, I want to quote a little conversation that I had here when the Sherwood pension bill was up, because the Members of the House are everlastingly working off this patriotic talk about these pension bills when the Members of the House really know that they are put through for the purpose of purchasing votes.

A MEMBER. Oh; that is not so.

Mr. CALLAWAY. I heard some one grunt. [Laughter.] I want to repeat a conversation of an old man who was for the pension bill; a wise old Congressman who had been in this House for 17 or 18 years, and a new man who was making a patriotic talk that sounded very much like the speech made by the gentleman from Iowa [Mr. Towner].

There were just we three, and I was cussing the Sherwood pension bill. This old Congressman said to the new man,

"Young man, you are new in Congress. You are doing a thing there that you ought not to do; that is, lying to yourself." He said, "I learned long ago that a man can not afford to do that. It destroys his clearness of thought. It warps his judgment. It will affect you so that you can not think straight. There is no use in lying to me and CALLAWAY," he says. "You know we are not going to vote in your district, and you can not help this thing by making patriotic appeals to us." And he said, "I want to advise you against lying to yourself. I have done a great deal of lying in my time; I have always done my lying to the other fellow; I have not lied to myself in order to keep my

thinking apparatus working right, and I want to advise you not to lie to yourself." [Laughter.]

"Now," he says, "I am going to vote for the Sherwood bill, just as you are, and for the same reason." And he says, "Another bill is coming in here—this militia-pay bill—and when it comes I am going to vote for that, and you will, too. I am going to vote for this Sherwood pension bill, because I am an old man and do not want to quit Congress, and these old fellows are pretty well organized in my district, and I do not think I can be elected without their vote, and I do not know how to get it without buying it, and I am a poor man and not able to purchase it with my own money, and this is an opportunity to take money out of the Federal Treasury and buy it, and I am going to do it. And that is the reason why you are going to vote for it. And when the militia-pay bill comes up I am going to vote for that, and you are, too, because the militia-pay bill boys are pretty well organized in our districts and we have got to have them; and when any other organization in my district gets strong enough and I have got to have the votes, and the opportunity comes to take money out of the Federal Treasury and buy that vote, I am going to do it, and you are going to do that same thing, because you are built that way." I said, "How long is this purchasing business going to keep up?" He said, "It is going to keep up until Rube wakes up." I said, "Who is Rube?" He said, "He is the fellow back at home that pays the taxes and has not got his hand in the Federal Treasury." I said, "What is the per cent of Rubes compared to the other fellows in this country?" He said, "Oh, about 90 per cent Rubes." I said, "Haven't you got more confidence in the 90 per cent who are Rubes than you have in these interested fellows?" He said, "No; these interested fellows know exactly what they want, and they are organized and are ten times as active in politics as Rube is; and when one man is ten times as active in politics as nine others that one man carries the election; and those fellows that know exactly what they want in this country, who have got their eye on the indicator and are workcountry, who have got their eye on the indicator and are working at it in politics, have run the Government of this country for 50 years, and I have got to obey their mandate till Rube wakes up. I am praying that Rube will wake up, but I am not willing to risk my political life trying to wake him up."

The CHAIRMAN. The time of the gentleman has expired.

Mr. CALLAWAY. Mr. Chairman, I ask unanimous consent

to continue for five minutes.

Mr. MANN. Reserving the right to object, I will not object if the gentleman will state who this Congressman was with whom he had this conversation. I think it is due to the House that he should state, [Applause.] I shall object to any pur-ported narration if the gentleman is afraid to state the name of the man with whom he had the conversation.

The CHAIRMAN. Does the gentleman from Illinois object? Mr. MANN. Unless he is willing to state who it is, I object. The CHAIRMAN. The gentleman from Illinois objects.

Mr. WILLIS. Mr. Chairman, I had no intention of participating in any way in this debate; but it seems to me that the statements which the gentleman from Texas [Mr. Callaway] has made ought not to be allowed to go unchallenged in this House and before the country.

I understood the gentleman from Texas [Mr. Callaway] to say that these private pension bills such as the one now before us are passed for the purpose of buying votes. I simply want to register my earnest protest against that unfair and unwarranted misrepresentation. [Applause.] I want to say to the gentleman, for whom I have the highest personal regard, that he is looking at this question through darkened spectacles. He is forgetful of the fact that these bills are passed to reach special worthy cases that can not be reached under the general law. For example, there are two items in this bill that apply to persons who live in the district which I am trying to represent. The gentleman says that those items were put in the

deserving orphans of two patriotic old soldiers who fought beneath the flag-one of them for four years and two months.

On page 13 of the committee's report the following statement is made concerning one of these cases:

Medical testimony filed in this action shows that she is suffering with tuberculosis of hip joint; that she is unable to walk without the aid of a crutch, and is wholly incapacitated for labor; that she is without any means of support, except that she owns an undivided one-third of 28 acres of land; which is supplemented with other testimony showing that the applicant injured her hip when 2 years of age, causing joint disease, and has always since made use of a crutch and sometimes two; that her one-third interest in the 28 acres of land is not sufficient to support her, and that the entire 28 acres of land is valued at \$2,310. It is recommended she be granted a pension of \$12 per month.

The committee say as to the other case:

Medical testimony filed in this action shows she has been in a help-less and dependent condition since 4 years of age; that she suffers complete paralysis of lower extremities; which is supplemented by other testimony showing she has been a cripple from childhood and is unable to work, but makes use of a wheeled chair; that she has no property nor income from any source, and that there is no one legally bound to her support

It is recommended she be granted a pension of \$12 per month.

And I want to say that I resent vigorously any suggestion that those items were placed in that bill for the purpose of

buying anybody's vote.

These bills are passed by this Congress in order to do simple and even-handed justice. I have not had a very lengthy experience here, but I have paid some attention to the pension legislation in this House. I have watched pretty closely the work of the Committee on Invalid Pensions in the last Congress. I know that a bill can not get through that committee without being subjected to the most careful scrutiny. In the first place, the Member who introduces a bill is, in a sense, put upon his honor in recommending the case to the committee. In the second place, before a bill can receive consideration at the hands of the committee the necessary evidence must be filed, and then that evidence is subjected to the most careful scrutiny at the hands of a special examiner detailed by the Pension Bureau, and then after that is done the matter is taken up, carefully considered, and passed upon by the full committee; and if any gentleman thinks that all he needs to do if he wants to get a pension bill passed is to go to that gallant old soldier, the gentleman from Ohio, Gen. Sherwood, or to some other member of the committee, and say, "Here, put in an item for a pension for this man or that man," he is entirely mistaken.

He will find that this committee is made up of earnest, honest, capable, and patriotic men, who attend to the public business with scrutinizing care. They are animated by the desire to protect the public interest and at the same time to provide for those exceptional cases not coming under the technical pro-visions of any of the existing pension laws. The work of that able and conscientious committee is carried on on the square; they play no favorites and utterly disregard political considerations; they are undertaking to do and, in my judgment, they are doing a patriotic service to this country, and I think it ill becomes any gentleman on the other side of this Chamber to impugn the integrity of the House and to malign those who have borne the burden of the battle, their widows and orphans, by making a statement here that these bills are passed for a mercenary purpose, for the purpose of buying votes. I want to say that, as far as any bill is concerned that has come under my notice, it never had that purpose, and I do not believe that any Member of the House would introduce a bill for any such pur-I have made this statement, Mr. Chairman, because I think these unfounded charges that have been made here ought not to be allowed to go before the country unassailed and unchallenged. [Applause.]

Mr. DIES ros

The CHAIRMAN. For what purpose does the gentleman

Mr. DIES. To strike out the requisite number of words.

The CHAIRMAN. How many words?

Mr. DIES. Three. [Laughter.]

The CHAIRMAN. The gentleman will proceed.

Mr. DIES. Mr. Chairman, I think I can quiet the turbulent state of mind of the gentleman from Ohio [Mr. Willis]. I think I can calm him for a moment. I agree with him that Gen. Sherwood is a most respectable Member of this House and possibly the most distinguished Federal soldier now living, as I agree with the gentleman from Illinois [Mr. Mann] that the Democratic Party is giving more money to the soldiers than

bill for the purpose of buying votes. I deny that charge absolutely. I want to say to him, and to anybody else who entertains that view of this pension legislation, that those two items apply to two helpless, crippled girls, the needy, suffering, and Sherwood's speech, which I think clarifies the situation thore

oughly. He said in answer to a question by the gentleman from Illinois [Mr. MANN]:

Mr. Sherwood. You can get anyone to vote for any pension bill you want to in any legislature in the North, because the members do not dare to vote against it.

Now, paraphrasing that as I do, the gentleman from Ohio might have said, as I say, that you can get anyone to vote for any pension bill you want in the Congress of the Nation who is from the North, Democrat or Republican, because they dare not vote against it.

Then, I think, I can enlighten my friend from Texas, Mr. CALLAWAY, about the sentiment of some of our Republican

friends.

I had occasion, Mr. Chairman, to make a speech on the Sherwood pension bill. I was sorry the Democratic Party was put to it, but I knew the Republican Party had used the pension fund for more than a quarter of a century as a campaign exploitation fund, and I sympathized with the exigencies that placed our party in the position that it had to follow in the wake of Republican mismanagement of this sacred fund.

I wish the roll of the Federal soldiers who preserved this great Republic as a heritage to us and our children yet to come might be the roll of honor, standing out in the light of eternal glory, rather than to be dragged down by politicians as an

exigency in political campaigns.

My friend the gentleman from New York, Mr. PAYNE, when the Sherwood bill came up, used very strong language against the bill. He said that the Sherwood pension bill was thoroughly unjustifiable. My friend Mr. PAYNE, the leader of the Republican Party, said that we were giving the old soldiers more money than they asked for themselves. My friend Mr. PAYNE, the leader of the Republican Party, said that the old soldiers had met at Atlantic City and laid down their demands and that we were giving them more than they asked for. Now, Mr. PAYNE, the gentleman from New York, has had a long experience here; he is a very wise and a very good man, in my es-I read this as coming from the gentleman from New York, Mr. PAYNE, the distinguished majority leader at that because he comes from New York. They can not say that he comes from Texas and is imbued with prejudice against the Federal soldier. He comes from a country full of all the marks of glory of the Union Army in its victorious march in

The CHAIRMAN. The time of the gentleman from Texas

Mr. DIES. Mr. Chairman, I ask unanimous consent to proceed for five minutes.

The CHAIRMAN (Mr. TRIBBLE). The gentleman from Texas asks unanimous consent that he may proceed for five minutes. Is there objection?

There was no objection.

Mr. DIES. Mr. Chairman, this is what Mr. PAYNE said:

Mr. DIES. Mr. Chairman, this is what Mr. PAYNE said:

Mr. Speaker, I have voted for every pension bill that came before the House for the last 26 years, and I voted for them cheerfully, from a sense of gratitude, which no man can measure, which the country feels toward those who saved the country in the sixties, but I do not propose to vote for this bill to-day. I do not see any excuse for bringing in a bill here with rates of pensions making such an inroad upon the revenues of the Government.

The estimate is for forty-five and one-half millions of dollars. We have never had an estimate yet that was not exceeded by a good many millions of dollars. That is an estimate which brings the total annual pensions to about \$200,000,000. The gentleman in charge of the bill speaks of the distressing cases that have come before his committee. I take it that they have relieved those distressing cases, but if they are not able to reach them all, I point out to them that, by enacting into general law the rules which they enforce when bills are brought before that committee, giving the administration of it to the Pension Bureau, they would relieve nearly all of those cases calling for a larger pension. It is a great increase over what is asked by the veterans themselves, who in their meeting at Atlantic City asked for a rate of pension much below this, that would not cost half the annual increase that this pension bill will cost if passed.

I can not justify myself in the discharge of my duty, under my oath of office, in voting for a bill that makes such a draft as this upon the Treasury at this time.

Mr. Chairman, every time a southern man arises here in

Mr. Chairman, every time a southern man arises here in obedience to the conscientious discharge of his duty to protest against the raids on the Public Treasury some gentleman says, "Oh, you do not like the old Federal soldier; you live down South in the vanquished land; and you are opposed to giving him justice."

The words I have quoted are the words of SERENO E. PAYNE. Is he prejudiced against the old soldier? His address was to this side of the Chamber as well as to that. Is the time never to come. Mr. Chairman, when a man born after the last battle of the Civil War; is the time never to come when a man, be-cause he lives in the South, is to raise his voice in protest against these measures because he happens to live south of the Mason and Dixon line?

I refer to it now with no prospect that the bill or any part of the bill can be defeated. I agree with Gen. SHERWOOD that any pension bill in any legislature of the North will pass because the members dare not vote against it, and I add to that that any pension bill for the relief of the Federal soldiers introduced into this Congress will be passed, because a majority of Members dare not vote against it. But I only wish to recall to my colleagues on this side of the Chamber the words of wisdom and warning of the leader of the Republican Party, and that is in effect that you are using this fund too extensively. and you ought to stop these raids on the Public Treasury. And let me say, Mr. Chairman, in the beginning of this second session of the Sixty-third Congress, with a good-roads committee knocking at the doors of Congress for hundreds of millions of dollars, with millions demanded for the Mississippi, with a proposition to postalize the telephone lines of the country, and with every ism from every part of this land, the Democratic Party, unless it takes heed and counsel of itself, will not be in a position to compete with the Republican Party for this pension vote much longer.

Mr. MANN. That is a certainty.
Mr. DIES. Mr. Chairman, my friend from Illinois [Mr. Mann], who knows nearly everything, says that it is a certainty. I do not know, myself, and I am glad that I do not know as much as my friend from Illinois—

Mr. MANN. But the gentleman just said it, and I followed

his lead.

Mr. DIES. His mind is like a great storehouse, in which is lodged everything from a toothpick to a self-binding mower. He knows all about the rules of this House and he knows all about every man's private bill and what his views are on war claims and pensions. I congratulate myself that I do not possess the great fund of information which he has at his disposal, because I do not want to convert my mind into a public junk

Mr. MANN. Oh, the gentleman shows that every time he talks.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. PAYNE. Mr. Chairman, the gentleman from Texas [Mr. CALLAWAY] who spoke a few moments ago talked about purchasing votes by an appropriation out of the Public Treasury of the United States. As soon as he could get the floor his colleague [Mr. Dies] followed him to show that there was at least one man in Congress who stood up against pension bills, and did not, at least at that time, have an idea of purchasing votes by the payment of money out of the Public Treasury, and he was not the only man in that Congress.

Mr. Chairman, my experience has been that the Members of this House are not only patriotic but that they are honest and just, and, while not boasting of the fact, I have always acknowledged everywhere that I voted both against the Sherwood pension bill and the Sulloway pension bill. I contended that they went too far, that they were too great a strain upon the Treasury, that they were not demanded by the old soldiers themselves until long after the bills had been introduced. I followed that through until we got the McCumber bill, which seems to have answered adequately the purposes of the framers of both the Sherwood and the Sulloway bills, and has been much less a drain on the Treasury than either of those bills would have been.

My practice all through my course here, whenever men or women wanted a special pension act, has been to examine it as carefully as I would the evidence in the case I was about to prepare for trial to see whether they were entitled to it. If thought they were, I introduced the bill; and if I did not think they were, I turned them down. I did not ask the committee to do it, and I did it fearlessly. Why should any man fear anything of that kind? I have found these men who fought under the flag always just. There was some talk in my district last fall about my voting against the bills and speaking against them, but I went upon the stump and proclaimed everywhere that I voted against those bills and told why. I did not have any occasion to slander anyone else who was honestly for them, and I did not have any occasion to tell those who were listening to me that men were trying to purchase votes and pay for them out of the Federal Treasury.

I do not believe any such nonsense as that. I think the gentleman who made that charge ought to bring it against the individual, and I think Congress ought to investigate it, and if they can find a single case where a Member of Congress has voted for any bill in order to pay his political debts, or to get votes by it and to get votes paid for out of the Federal Treasury, that man ought to be dealt with by the House of Representa-

[Applause.] I think it should be no argument against these pensions that are examined with such patience and such care by these committees and brought into the Congress there is anything wrong in a bill that has been overlooked by the committee or by the Member who has introduced it, come in here and give the proof. Do not indulge in empty general declamation on the subject, but bring in the proof and the House will turn down the pension bill. Do not stand out and slander the Congress of the United States by such a general charge that men are trying to buy votes and pay for them out of the Treasury of the United States. [Applause.] I am in favor of dealing out even and exact justice to every man, whether he is a pensioner or whether he is a claimant. [Applause.] Now, I voted against some of the claims bills that came into the I remember one that was backed by a great denomination, a great church, that came into this House. I did not believe it was a just claim. I fought it year after year, but finally it was passed, and after it was passed it turned out a scandal was connected with it. Their agent had taken a large part of it, and it was intimated that one or more gentlemen in Congress were interested in it, but it turned out the tale was entirely false, and that the agent had pocketed the money himself.

The CHAIRMAN. The time of the gentleman has expired. The Clerk read as follows:

The name of Emeline Baldwin, widow of Jacob V. Baldwin, late of Company K, Ninth Regiment Iowa Volunteer Cavalry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

Mr. CALLAWAY. Mr. Chairman, I move to strike out the last word. The gentleman from Michigan [Mr. CRAMTON] made the statement awhile ago that he would vote to pension the widow of any soldier in his district who was getting old or poor or unable to earn a livelihood. He did not make any statement that he would vote a pension to any woman in his district who was old and poor and unable to earn a livelihood.

Mr. CRAMTON. Will the gentleman yield? Mr. CALLAWAY. Yes. Mr. CRAMTON. I did not make the statement which the gentleman has just attributed to me.

Mr. CALLAWAY. Well, the gentleman can make his own

statement, and I will work on that.

Mr. CRAMTON. I said, if there was any widow of a soldier in my district who was 70 or 80 or 90 years of age, helpless and bedridden, that she could get my ear as a Representative of that district just as quickly as could the biggest politician in that district. [Applause.]

Mr. CALLAWAY. This committee, following the same feeling, seems to favor the widows especially of soldiers over the widows of those who were not soldiers. Mr. Chairman, I have never yet been able to bring myself to an understanding of the workings of a man's mind who thinks women ought to be re-

warded for having lived for a number of years with a soldier.

Mr. CRAMTON. Mr. Chairman, will the gentleman yield? I think it will be absolutely hopeless to start in to make an impression on that kind of a mind.

Mr. CALLAWAY. Mr. Chairman, it has always occurred to me that there is no grander spirit in this country or ever has been than the survivors of the Civil War on both sides. If there is nothing that a woman can bring in to this Government to further her claim other than the fact that she lived with a survivor of the Civil War for a number of years, it occurs to me that her claim ought to be repudiated, for it is certainly no claim for sympathy on the part of the people of the United States, and ought to be no claim on this Government for remuneration. But they bring them in here continuously as though it were such a burden to a woman to have lived with a survivor of the Civil War for a number of years that for the balance of her life she ought to have a pension for caring for him. If women ought to be pensioned because they have undertaken the burden of living with survivors of the Civil War. surrounded with all the halos they are surrounded with, backed up by all the sentiment they are backed up with, what ought to be the sympathy of this country for the women of this country who have lived with the men who have not been surrounded with all the admiration and halos that surround survivors of the Civil War?

I can not understand why a woman ought to be pensioned simply because she lived with a soldier. I have always regarded it as an honor for the survivors of the Civil War who have been the right kind of soldiers in that great conflict, whether they were on one side or the other, and I have never regarded it as a peculiar burden to a woman who had taken on one of the survivors of the Civil War and had undertaken to live with him for a number of years, or that that was a reason

for bringing in here these private pensions. And here we are increasing the pension to one who is not entitled to it under the law, and the reason that is given is that she lived with a survivor of the war for as much as 20 years. That looks like an appeal to a prejudice.

I want to make one further reference to another matter that is always brought up against any man from the South when he raises his voice against these iniquities. No man from the South can discuss these measures on their merits; as soon as he rises in his place some gentleman on the other side of the aisle gets his Ebenezer up and says it is because he came from the South. And they defend their cause not by meeting his arguments, but by saying that he makes them because he comes from that section of the country which lost in that great conflict, and one opposed to the soldier.

The CHAIRMAN. The time of the gentleman has expired. Mr. CRAMTON. Mr. Chairman, just a moment. I have no hope of making an impression on the state of mind that the gentleman from Texas [Mr. Callaway] enjoys, but I think his statement ought not to stand alone in the RECORD. I think he ought to be reminded of the fact that the men who served in the war were, many of them, young men, even as he and I, and younger than we are, and while in these days, when he and I perhaps have had an opportunity of securing an education or of establishing ourselves in business, acquiring a competence that might be used for the support of the widows we might leave, those boys spent the four years of their young manhood in war, and, instead of building up for the future, they were tearing down their future and the future of the widows that they would leave. Instead of being pensioned to recompense them for the privilege they enjoyed of living for years with these old veterans, it is rather a compensation to them for the things that they lacked while they did live with them, by reason of the service those men had rendered their country, and the things they must lack after those men have died, unless a grateful country will do what it can to make it up for them.

The gentleman criticizes one particular claim, where a man served 2 years in the Army during the war and afterwards was willing to serve 15 years, or thereabouts, in the Regular Army; and he would hold up against him that free-will service in our Regular Army, when from the compensation he drew he manifestly could make no provision for the future of his family; and that then, when he married after he had left the service and he left his widow after a number of years, the fact that he served 15 years in the Regular Army must be held to offset the 2 years he served in the Civil War. I can not comprehend the ill logic

with an old soldier.

of that kind of pretended logic.

Mr. MOSS of West Virginia, Mr. GREEN of Iowa, Mr. QUIN, and Mr. RAGSDALE rose. The CHAIRMAN. The

The gentleman from West Virginia [Mr. Moss] is recognized.

Mr. MOSS of West Virginia. Mr. Chairman, my heart really goes out in sympathy to a man who has no broader comprehension of the question of pensions to old soldiers and their widows than the gentleman from Texas [Mr. Callaway]. I am very glad, indeed, that we have had this debate this afternoon, in order that we may find out clearly and explicitly why the Democratic Party, or rather a small portion of it, favored pensions for old soldiers during the last campaign. One of the gentlemen from Texas admits it was simply a bid for votes, and the other gentleman from Texas now states that he does not see any reason why a widow should have a pension because she had lived

Mr. Chairman, I want to correct on the records of this House the impression that the Democratic Party was responsible for the passage of the Sherwood bill as amended or was responsible for any benefit that came to the old soldier by that bill. And when I say that, Mr. Chairman, I say it as a man not imbued with sectional prejudice, as the gentleman from Texas [Mr. Cal-LAWAY] seems to be. I live on the border line in the great State of West Virginia, where we have northerners and southerners dwelling together in peace and harmony, and there is no man in this House that admires the sterling qualities of the southern character any more than I do.

But I want to say, Mr. Chairman, that although it was noised around during the last campaign that the Democratic Party had suddenly changed its mind and changed its coat, after having for years and years in the past opposed pension legislation, while the Republican Party favored it, and had become the friend of the old soldier, the record which I have here shows that that was a pretense.

Mr. ADAIR. Mr. Chairman, will the gentleman yield? The CHAIRMAN. Does the gentleman from West Virginia yield to the gentleman from Indiana?

Mr. MOSS of West Virginia. In just a few minutes. I want to read that record and show that the party that really was responsible for that great measure was the Republican Party, the party that has always been the real friend of the old soldier and is the real friend of the old soldier to-day, and not the party which the gentleman on the other side [Mr. Dres] says merely bids for political support. On the conference report, Mr. Chairman, on the pension bill when it came back from the Senate we find that there were 228 Democrats and 162 Republicans in the House, and we find that on that vote the bill passed and that there were 57 votes cast against it.

The Record shows that almost every single one of those adverse votes were cast by a Democrat. The Record shows that had it not been for the solid support of the Republicans in the House when that bill was passed it would have been defeated. And I beg to correct the distinguished gentleman from New York [Mr. PAYNE], because the record shows that upon that

conference report and on the bill also he voted-Mr. PAYNE. I voted in the House against the Sulloway bill and against the Sherwood bill. The Sherwood bill came back from the Senate in such a shape that its author would hardly have recognized it in consequence of the amendments put on it in the Senate by Mr. McCumber. I voted for the adoption of the conference report, which was substantially the McCumber substitute for the original bill.

Mr. MOSS of West Virginia. I am speaking only of the record vote.

I made a speech against the other bill.

Mr. MOSS of West Virginia. I do not wish to reflect upon the gentleman, but I do wish to say that the RECORD shows that votes were cast against that bill by the Democrats and the bill would have been defeated if it had not been for the support given to it by the Republicans of this House.

Mr. ADAIR. Now, Mr. Chairman, will the gentleman yield? Mr. MOSS of West Virginia. Yes,

ADAIR. I desire to call the gentleman's attention to the fact that the Sherwood bill, as shown by the RECORD, would have passed this House if every Republican in the House had remained quiet and had not voted at all. The Democrats gave it enough votes in this House to pass that bill without the aid of a single Republican in the House, and the Record shows it.

Mr. MOSS of West Virginia. The gentleman may be talking about the bill when it was passed originally in the House

without a record vote.

Mr. ADAIR. I am talking about the record vote on the Sherwood bill, when it finally passed this House; and the gentleman will find, if he examines the RECORD, that if not a single Republican had voted it would have been passed.

Mr. MOSS of West Virginia. The gentleman is mistaken. Mr. ADAIR. I am not mistaken. I speak from the Record.

The CHAIRMAN. The time of the gentleman from West Virginia has expired.

Mr. MOSS of West Virginia. Mr. Chairman, I would like to

have five minutes more.

Mr. FOSTER. Mr. Chairman, reserving the right to object, I think we have had extensions enough. I shall not object to this extension, but I will object to future requests.

The CHAIRMAN. The gentleman from West Virginia [Mr. Moss] asks unanimous consent for five minutes more. Is there objection?

Mr. RAGSDALE, Mr. Chairman, I object, as there seem to be objections on that side to extensions.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Emeline Baldwin, widow of Jacob V. Baldwin, late of Company K, Ninth Regiment Iowa Volunteer Cavalry, and pay her a pension at the rate of \$20 per month in lieu of that she is now re-

Mr. FOWLER. Mr. Chairman, I desire to speak on this paragraph, and move to strike out the last three words.

Mr. RUSSELL. Mr. Chairman, I ask unanimous consent that

debate on this paragraph and amendments thereto be closed in five minutes.

Mr. DIES. What paragraph?

Mr. RUSSELL. The paragraph beginning with line 21 on

The CHAIRMAN. The paragraph under consideration is at the bottom of page 11, covering lines 21, 22, 23, and 24. paragraph at the bottom of page 11, the last four lines, has not been considered.

Mr. DIES. Mr. Chairman, reserving the right to object, I would like to ask my friend from Missouri [Mr. Russell] in charge of the bill if he does not think that the several items in the bill, even when merged in one bill, ought not to receive consideration at the hands of the House?

Mr. RUSSELL. I think so; but we have debated now for three hours. The committee is not disposed to choke off any-body, but we would like to pass the bill as promptly as we can.

The CHAIRMAN. Is there objection to the request of the gentleman from Missouri [Mr. Russell] that the debate on the paragraph named be closed in five minutes?

Mr. DIES. Mr. Chairman, I object. The CHAIRMAN. Objection is made.

Mr. FOWLER. Mr. Chairman, I move to strike out the last

Mr. FOSTER. Mr. Chairman, I hope my colleague will not indulge longer than this single five minutes, because I think we ought to confine ourselves to these items.

The CHAIRMAN. The gentleman has not started yet.

Mr. FOSTER. I wanted to make that statement.

Mr. LENROOT. Mr. Chairman, I would like to ask as to the state of the amendments, whether any further amendment is in order.

The CHAIRMAN. Several amendments have been considered and withdrawn.

Mr. LENROOT. I desire to ask if they have been withdrawn?

The CHAIRMAN. The gentleman from Illinois [Mr. Fowler] offers another amendment, to strike out the last three words.

Mr. LENROOT. There are so many items in this bill that ample opportunity can be had for debate. I think we would make better progress by confining all debate to the items as we go along

The CHAIRMAN. The gentleman from Illinois [Mr. Fowler]

is recognized for five minutes.

Mr. FOWLER. Mr. Chairman, I had not intended to say anything on this bill, and do not desire to delay its passage. I have supported every bill which has come before this House during my short tenure here for the relief of the soldiers of this country. I have done that because of the and not for any other purpose whatever. I have done that because of the fairness of these bills

Mr. Chairman, when that great war fell with its heavy hand upon this country it was Caucasian against Caucasian, diamond cut diamond, and never has there been a greater display of bravery and courage, fortitude and suffering, than was shown on the battle fields of the Civil War. The camp fires of the North and the camp fires of the South greeted each other with shot and shell, and brave men by the thousands gave up their lives that mankind might be free.

Mr. Chairman, 50 years after that war has closed, when the survivors thereof are on the shady side of time, tottering on their canes and waiting for the last roll call here below, it is an insult to their patriotism to accuse them of prostituting their franchise for commercial purposes, and whatever is an insult

to them is an insult to this Republic.

Had the South been victorious, the southern soldier would have been pensioned, just as the northern soldier is now pensioned, but it would not have lessened the respect of the world for the manly courage of the northern soldier; neither does the pension roll for the Union soldiers detract from the brilliant record of the splendid manhood which was so bravely displayed by the southern soldier during that bloody conflict.

Mr. Chairman, I do not believe there is a soldier in this country who would stoop to sell his vote. His courage on the battlefield stamped him as a man of better stuff; and now to charge him at this stage of his life with being a tool in the hands of designing politicians is to discredit that courage, that bravery, and that service which he rendered our country.

Mr. Chairman, I would not have indulged in any wise whatever in the discussion of this bill or any part of it had it not been for this serious reflection made upon the honor and integrity of the defenders of the honor of this country. [Applause.]

Mr. QUIN. Mr. Chairman-The CHAIRMAN. Does the gentleman from Mississippi wish to oppose the amendment?

I move to strike out the last word.

The CHAIRMAN. There is already one amendment pending. Mr. LENROOT. I make the point of order that the amendment of the gentleman from Illinois [Mr. Fowler] is still pending, and that another amendment is not in order.

Mr. QUIN. Then I rise to oppose the amendment.

The CHAIRMAN. The gentleman is recognized in opposition to the amendment.

Mr. QUIN. Mr. Chairman, I have been sitting here listening to these charges of graft and getting into the Public Treasury, and I want to say that I come from a country that is not hostile to any people of any other section of the United States; but while my father was a lieutenant in the Confederate Army, I want to say I do not believe, if there was a law to pension him, any member of his family would want to reach down into the Treasury and take money out of it unless he was disabled in war, unless he came within every article of the scope of the

But it strikes me that all of this list, and all the great host that are now marching under the Sherwood bill, are dipping too deep down into the earnings of the people of this country, sir. It is time to call a halt. Here you have it right now. The people who are in the employ of the Government under what we call the civil service are asking for pensions. They will have bills before this House asking you to give them pensions, simply because they have had Government jobs guar-

anteed them all their lives. I say that the people of the country have to pay for these things. The fellow who tolls and sweats is the man who pays all these pensions. It is not an easy thing. It is time for the representatives of the people to study where this money is coming from. I want to say, gentlemen, that it is not the man who rides in his automobile and draws \$7,500 a year who is paying this enormous pension roll. Here we come to a man who is getting enough to live out of the Treasury of the people, and we are asked to raise his pension to \$36 per month. Twelve times \$36 are \$432. Figure it out for all the men who served

in the Union Army and think how much that would be out of the earnings of the people of this country.

I take it if you are going to keep increasing the pensions of this country, we had just as well strap a soldier on the back of every man who works for a living, and put one on the back of every man who goes behind his plow, and every poor fellow who goes into the workshop and takes up his plane and his hammer. That is what this bill means. That is what these increased pensions mean. We must know that with all the great demands upon Congress we must ask the question, Where will the revenue come from to pay them when pay day comes?

We know that this Congress has passed a tariff bill that

makes our revenues a certain stipulated amount. We know what the Military Committee has before it. We know what the Naval Committee has before it. Where is all the money coming from? I say, gentlemen, we had better get down to a business We had better study the revenues of this Government before you make these great raids upon the Treasury of this country, before you give away the money of the people, not to pay men for fighting the battles of this country, but for every Tom, Dick, and Harry who comes up and says, "I smelled gunpowder during the Civil War." We have it so now that no man who goes out into the service of his country goes from a spirit of patriotism so much as he does to look for a pension. military officers get pensions and look for them. You will soon want to pension your Congressmen and Senators.

The CHAIRMAN. The time of the gentleman has expired.

Mr. SHERWOOD. I ask unanimous consent that debate

on this paragraph be now closed.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent that debate on this paragraph be now closed. Is there objection?

There was no objection. The Clerk read as follows:

. The name of Electa B. Merrill, widow of Benjamin F. Merrill, late of Company A, Fourteenth Regiment Connecticut Volunteer Infantry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

Mr. DIES. Mr. Chairman, I have in my hand House bill 10138, but I do not seem to be following the Clerk. He seems to be getting along a good deal faster than I am. I want to know what the Clerk is reading from.

The Clerk has just finished reading the The CHAIRMAN. first paragraph on page 15.

Mr. DIES. I should like to ask is the Clerk reading the bill or abbreviating the bill?

The CHAIRMAN. I think where there is no objection raised the Clerk calls the name and gives the amount. If the gentleman from Texas wants to make any motion, the Chair will hear from him.

Mr. DIES. Mr. Chairman, I do not want to object to the provision, nor do I object to the suggestion that we want to hurry along and give our friends the money as soon as possible. I want to make one or two observations, and I move to strike

out the last word of the paragraph so hastily read.

I have no expectation on earth of being able to defeat the passage of this bill. I understand perfectly well that gentlemen are going to vote for it in sufficient numbers to insure its speedy passage. The whole controversy here is a question between the Democrats and the Republicans as to who are trying to do the most for the old soldier and who have done the most and who will do the most for them before the next election arrives. [Laughter.]

My vision is not clouded as to the ultimate fate of this bill and similar bills introduced here, nor as to the motives behind it and as to what the bill will do secondarily for the country.

Mr. SELDOMRIDGE. Will the gentleman yield?

Mr. DIES. Yes.

Mr. SELDOMRIDGE. Let me ask the gentleman if there is not some competition among some gentlemen as to who can say

the most against the bill?

Mr. DIES. Oh, no; I am the friend of the old soldier who preserved the Republic. But, gentlemen of the committee, he did not save it in time of war for the purpose of eating it up in the time of peace. [Laughter.] My contention is that when the men who followed the fate of Joe Hooker, who followed Ulysses S. Grant, who followed Gen. Meade to battle, were not men fighting for the leaves and Schene are great were not men fighting for the loaves and fishes, as some of their pseudo friends now contend.

I once heard a story which does not apply to the old Federal soldier, but does apply to the conception of some of his pseudo friends. A gentleman approaching a stream saw two darkies fishing on its bank, and just before his arrival the younger one fell into the stream. The old negro jumped in after him very promptly, and after having risked his life he pulled the young darkey out by the nape of the neck.

Then the gentleman approached and said to the negro, "That was the most heroic deed I ever saw in my life; you have risked your life to save the life of that little negro. He is your son?" He said, "No, sir; he ain't my son." The gentleman said, "A member of your family?" "No, sir; no, sir," said the old man, "no, boss, that nigger ain't any kin at all."
"Then," said the gentleman, "why did you risk your life to
save him?" "Why, boss," said the old darkey, "that nigger
had all the bait in his pocket." [Laughter.]

I think that those gentlemen who are talking about more
pensions and posing as the friend of the Federal soldier think
that he has get the bait in his pocket."

that he has got the bait in his pocket, and they are saving him in order to get the bait out at the next general election.

Mr. Chairman, every time a southern man gets up here and protests against a pension bill of any description it is hurled back at him that he is unfriendly to the men who preserved the Union. For myself, I deny it. I am glad that human slavery has been abolished from the face of the earth. I have a picture of Abraham Lincoln in my home, with pride and without political fear. I am glad that the Southern States in their efforts to secede were prevented from accomplishing their purpose and that the Union remains indissoluble in its parts. With all these sentiments of patriotism for my flag and my country, I refuse to be silenced by men who want to wave the bloody shirt and pull the funds from the Treasury in order to insure their political safety. I simply demand that good faith be kept with this Government in relation to these private pension bills, and that it shall cease to become a part of the legislative program.

Mr. SHERWOOD. Mr. Chairman, I ask unanimous consent

that debate on this section be now closed.

The CHAIRMAN. The gentleman from Ohio asks unanimous consent that debate on this section be closed. Is there objection?

There was no objection. The Clerk read as follows:

The name of Melvina Pennington, widow of Henry C. Pennington, late of Company A, Forty-ninth Regiment Missouri Volunteer Infantry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

Mr. Chairman, a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. DIES. I would like to ask the chairman of the committee to inform me on what page of the report of the committee this case of Melvina Pennington is considered?

SEVERAL MEMBERS. On page 42.

Mr. DIES. Mr. Chairman, I want to make this observation, and I move to strike out the last word. In proceeding with the pension bills I understand that gentlemen are unduly impatient and a slight interruption meets with a good deal of disfavor, but I want to renew my suggestion. It is proposed to increase the pension of Melvina Pennington, widow of Henry C. Pennington, late of Company A, Forty-ninth Regiment Missouri Volunteer Infantry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

The report upon this bill is as follows:

Melvina Pennington, aged 75 years, is the widow of Henry C. Pennington, who served as a private in Company A, Forty-ninth Regiment Missouri Infantry, from August 8, 1864, to August 2, 1865 (one year). Soldier was pensioned under the act of June 27, 1890, at \$10 per month for rheumatism, right inguinal hernia, disease of rectum, and senile debility. He was subsequently pensioned at \$12 per month under the act of February 6, 1907, for age, 67 years.

Applicant married soldier June 14, 1858, and lived with him until his death, March 28, 1907. Applicant's post-office address is Truxton, Mo.

The observation I wish to make is not upon the case of Mrs. Pennington, the widow of the soldier, but to make this observa-tion and to solicit a response to this, either from the chairman of the committee or the thoroughly informed gentleman from Illinois [Mr. Mann], who addressed the House a moment ago. Why should Melvina Pennington's pension be increased and Melissa Brown's pension not be increased? Melvina Pennington is 75 years old. Surely gentlemen can some day be taunted into a response to a civil question. The war is over. We are all under the folds of the flag. I may not be as willing to fight for this flag as some of my friends on the other side, but I at least love it as dearly as they do, and I ask them this question: If Melvina Pennington, who married a soldier of the Federal Army, who served a year, she being 75 years old, is entitled to an increase of pension, why is not Melissa Brown who married another Federal soldier, who served one year, and who is also 75 years of age, also entitled to an increase of pension? I will tell you what is going to happen. This is not right, Mr. Chairman. In the face of God Almighty and the American people, I declare that this thing is not right, this using of the Federal pension roll for political purposes, save it be a law that shall apply to every man and every woman alike when they reach a certain age or when you fall within a certain state of facts that you shall then get a pension. But you are going to leave this thing to Congressmen to select certain men and women in their districts, to whom shall be opened up the Federal Treasury, when it is shut to other men and women in their districts, until the American people some of these day

Mr. MOSS of West Virginia. Mr. Chairman, will the gentle-

man yield?

The CHAIRMAN. Does the gentleman yield?

Mr. DIES. With pleasure. Mr. MOSS of West Virginia. Then, as I understand it, the gentleman states that if by weight of the Democratic Party this bill is passed, it will be merely for political purposes?

Mr. DIES. Mr. Chairman, I decline to yield further. benighted friend is talking politics, while I am talking decency and honesty

Mr. MOSS of West Virginia. I am replying to the gentle-

man. If this is passed, it will be by virtue of politics? Mr. DIES. The gentleman will reply in his own time, and when he does, I ask him to reply to this. The gentleman has a few items in this bill, I discover. I do not know the names of those cases, but I will ask him this question: If you have John Jones down for an increase because he is 90 years old, why do you not give it to all of the old soldiers in your district in West

Virginia? Mr. MOSS of West Virginia. Does the gentleman wish an answer to that?

Mr. DIES. What better right has one man in the gentle-man's district in West Virginia to an increase than another? Mr. MOSS of West Virginia. Will the gentleman yield?

Mr. DIES. I do not.

Mr. MOSS of West Virginia. Then the gentleman ought not to ask me any questions.

The CHAIRMAN. The gentleman declines to yield.

Mr. DIES. The gentleman has picked out about three in his district and he has given them an increase of from \$10 to \$15 a month, either because they are old or indigent or because they are suffering from disease. What answer can the gentle-man make to the old soldiers of his district who are not em-braced in the bill except to pat them on the back and tell them to be quiet, that he will have them in the bill next time. Mr. Chairman, it is a farce, and it ought not to be, that a man can put another man's name upon this bill for an increase of pension without putting every name similarly situated upon the

Mr. MOSS of West Virginia rose.

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from West Virginia?

Mr. DIES. With pleasure, for a question.

Mr. MOSS of West Virginia. When the gentleman states

that I have picked out three men from my congressional district

Mr. DIES. Oh, but I did not state that.

Mr. MOSS of West Virginia. Then the gentleman did not

Mr. DIES. No. How many has the gentleman in the bill? Mr. MOSS of West Virginia. Then the gentleman wishes to contradict his statement?

Mr. DIES. No; I wish to ask the gentleman how many he has in the bill? Has the gentleman none in the bill?

Mr. MOSS of West Virginia. None whatever.

Mr. DIES. Then I refuse to yield further to the gentle-

Mr. MOSS of West Virginia. Then the gentleman ought not

to guess at it.

Mr. DIES. Because it is not a case in point. I wanted a case in point. I do say that Members of Congress who have items in the bill have other Federal soldiers in their districts who are equally deserving to the ones that are in the bill.

The CHAIRMAN. The time of the gentleman from Texas

has expired and the Clerk will read.

The Clerk read as follows:

The name of Rachel L. Foster, former widow of Henry C. Webster, late of Company F, Seventeenth Regiment Iowa Volunteer Infantry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

Mr. DIES. Mr. Chairman, I would like to move to strike out the last word of the paragraph just read. Mr. Chairman, when bills are introduced in the Congress they are referred to appropriate committees. The committees examine the bills, make a report to the House for its enlightenment with a recommendation. It will be enlightening, indeed, if Members of the House had either the time or the inclination, neither of which they have, to examine the several bills now being passed by the great Congress of 94,000,000 of American people. Reports are at hand, briefly, upon this bill, but they are being passed with a lightning-like rapidity that bespeaks the impatience of the advocates of the bill with those who seek to make some objection. Mr. Chairman, for one, if I had it to do over again, I would vote against the Sherwood pension bill, but if I had the original initiative, I would vote to pension the Federal soldiers who preserved the Union. I believe, sir, that they are the last remnants of the grandest Army of this country. believe, sir, that those who followed Wellington and Napoleon are not greater than those who followed Grant and Hooker and Meade. I believe nowhere in the world can be pointed out anywhere greater soldiers than those who pitted themselves against Joseph E. Johnson and Robert E. Lee and the other valiant sons of the South, because if they had not been the very best soldiers in the world, it would have taken more than three of them to lick one of us, and therefore I know they were the greatest soldiers that this country produced, with the possible exception of those magnificent men who were pitted against us, and I am still of the opinion, Mr. Chairman, that those magnificent soldiers, eclipsing in bravery and gallantry the soldiers of modern Europe, did not intend to inflict this pension legislation upon the American people. Why, it is a monstrous thing. We are paying \$185,000,000 a year practically on account of a war that has been closed for almost threequarters of a century. When the war had been over 10 years, we were paying about \$30,000,000, or something like that. When the war was over about 20 years we were paying about \$40,000,000. When the war was over about 40 years, we were paying about \$50,000,000, and now, when the war is over about 60 years, we are paying \$185,000,000, and gentlemen are running over one another to see who can defend a pension bill, because they know-

Mr. RUSSELL. Will the gentleman yield for a question?
Mr. DIES. With pleasure.
Mr. RUSSELL. The gentleman would like to be correct in his statement?

Mr. DIES. When it appears in the Congressional Record; Mr. Dies. When it appears in the Condiscional I am only giving it approximately.

Mr. RUSSELL. The amount expended last \$176,000,000; that is \$9,000,000 less than \$185,000,000.

Mr. DIES. That is no very large amount, it is true, \$176,000,000 a year. That is almost equal to the entire income of the Empire of Japan. Do you know we have paid in this country more in pensions growing out of the Civil War than France was required to pay to Germany at the expiration of the France-Prussian War, and yet you say you treat us awfully kindly to let us live at all. You have collected from the South in taxes to pay pensions to northern soldiers who whipped us more than Germany ever required Napoleon and France to pay at the expiration of the Franco-Prussian War.

The CHAIRMAN. The time of the gentleman has expired.

The Clerk read as follows:

The name of Addie M. Munroe, widow of John H. Munroe, late assistant adjutant and lieutenant, Company B, Eleventh Regiment Iowa Volunteer Infantry, and pay her a pension at the rate of \$24 per month in lieu of that she is now receiving.

Mr. TRIBBLE. Mr. Chairman, I move to strike out the last word. The war claims bill has been injected in this fight to-

day, and as there are quite a number of Members here at the present time I want to read this decision and place same in the Congressional Record in order that the membership may see it. I serve notice on the committee I propose to offer the amendment to the claims bill and insist on payment of this claim. This is a decision of the Court of Claims, and I read from section 2.

II. During the war for the suppression of the rebellion the military forces of the United States, by proper authority, for the use of the Army, took from the claimant, in the county of Bryan, State of Georgia, property of the kind and character above described, which was then and there reasonably worth the sum of \$5,015\$, the same being the claimant's one-fifth interest therein. No payment appears to have been made therefor.

III. The claim was never presented to any officer or department of the Government prior to its presentation to Congress and reference to this court as aforesaid.

Now, Mr. Chairman, this is a decision rendered by the Court of Claims. The question of loyalty is not in it. I have struggled to get it passed upon with favor by the Committee on War Claims. I stood here on the floor of this House and fought with all my power, and I had considerable backing by the Members of the House. The gentleman from Illinois [Mr. Mann] was one of them, and I will say to this House to-day that he is fairer usually than he gets credit for being. [Applause.]

Now, Mr. Chairman, the claim in this case was of a woman who owned a farm in Georgia. During the entire War of the Rebellion she did not live on the farm. She lived in New York: she married a northern man, and he lived in New York, and her home was there during that time, and if the question of loyalty was involved in the case at all, the presumption would be in her favor. This case was referred to the Court of Claims under the Tucker Act. I read from the provisions of the Court of Claims under the Tucker Act:

The Tucker Act reserves to the Houses of Congress only the right to refer claims, but dispenses with the jurisdictional condition of loyalty. Rule 27 of this court is applicable only to cases where loyalty is conditional, and does not extend to cases referred under the Tucker Act.

Now, Mr. Chairman, while we are passing these claims here to-day for these old soldiers, here is a part of the force that won the battles. They could not have lived in the South without provisions; they could not have lived without the corn and the wheat and the rice and the potatoes, and they took these provisions from this woman. They took them from her farm, and the Court of Claims has decided that she is entitled to reimbursement. And yet this just claim is not in this war claims bill, and I desire that the membership of this House investigate it and come here and support me when I undertake to add this to the claims bill by way of amendment.

Mr. RAGSDALE. Mr. Chairman, I would like to ask the unanimous consent of the committee to consider the claim, H. R. 2339, which is referred to on page 15 of the report—the claim of Deborah R. Isherwood.

Now, Mr. Chairman, this is the first time on the floor of the House that I have made any allusions of any character to pensions. It was not discussed in my campaign down home, because nearly every fair-minded man there realizes it is right and just that this country should pay a fair pension to the people who fought on the northern side, without regard to the merits or conditions. We do not debate it down there, because we look upon the matter as settled, and we are all in favor of doing what is right. But I want to ask, Mr. Chairman, how far we are going? Here is a claim that has been refused, first, on the ground that the soldier's fatal illness was not due to military service. That was in 1896. Her claim was refused in 1908 on the ground that she remarried after the soldier's death and prior to filing her claim. Now here is a claim that has been refused on two grounds. There is not in this record a single recommendation from this committee that it should pass. There is not in this report a single reason given other than that she is of excellent family and supports herself by sewing. And that is the one reason why this Congress is being called upon at this time to grant this pension. Her husband served three months, according to this statement, in the war. There is not an allegation in here that he received a scratch or suffered from any illness in any camp because of any service he rendered. Further than that, she has deliberately gone, in the face of the record, in the face of the law, and remarried. And after her pension has been repeatedly refused, then, forsooth, we are to come in here and grant her a pension on the ground that she is of excellent family.

Mr. Chairman, I move that this be stricken out.

The CHAIRMAN. The gentleman from South Carolina [Mr. RAGSDALE] offers an amendment, which the Clerk will report.

The Clerk read as follows:

Page 6 of the bill, lines 10 to 13, inclusive, strike out the following

Page 6 of the bh, has been already to the bh, has been language:

"The name of Deborah R. Isherwood, widow of Joseph F. Isherwood, late of Company C, Thirty-seventh Regiment New Jersey Volunteer Infantry, and pay her a pension at the rate of \$12 per month."

The CHAIRMAN. The question is on agreeing to the amend-

Mr. RUSSELL and Mr. AUSTIN rose.

The CHAIRMAN. The gentleman from Missouri [Mr. Russell] is recognized.

Mr. RUSSELL. I understood my friend to say that the committee did not recommend the passage of this bill. I will read this language:

Having been a soldier's wife while he was in the Army, now a widow, old, helpless, and destitute, it is proper, following numerous precedents, to allow her a pension of \$12 per month.

I consider that a recommendation.

Now, I want to say that this bill was introduced by Mr. PEPPER, of Iowa, who is at home seriously sick, and only for that reason I would not ask to be heard at all. He is not here and is not able to speak for himself. I know this is a worthy case, and I hope it will not be stricken out.

The CHAIRMAN. The question is on agreeing to the amendment of the gentleman from South Carolina [Mr. RAGSDALE].

The question was taken, and the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Eliza E. Tuttle, widow of Edwin B. Tuttle, late of Company I, Eighth Regiment Illinois Volunteer Infantry, and pay her a pension at the rate of \$20 per month in lieu of that she is now receiving.

Mr. RUSSELL. Mr. Chairman, I desire to offer a committee amendment to that paragraph to correct a clerical error. It is on page 22, beginning with line 20. I offer the following amendment to that paragraph.

The CHAIRMAN. The gentleman from Missouri [Mr. Rus-SELL] offers a committee amendment, which the Clerk will

The Clerk read as follows:

The Clerk read as follows:

Amend page 22 by striking out lines 20, 21, 22, and 23 and inserting in lieu thereof the following: "The name of Eliza E. Tuttle, widow of Edmund B. Tuttle, late of Company C, Elighth Regiment Illinois Volunteer Infantry, and pay her a pension at the rate of \$24 per month in lieu of that she is now receiving: Provided, That in the event of the death of George R. Tuttle, helpless and dependent son of Edmund B. Tuttle, the additional pension herein granted shall cease and determine: And provided further, That in the event of the death of Eliza E. Tuttle the name of said George R. Tuttle shall be placed on the pension roll, subject to the provisions and limitations of the pension laws, at the rate of \$12 per month from and after the date of the death of said Eliza E. Tuttle."

The CHAIRMAN. The question is on agreeing to the amendment offered by the gentleman from Missouri [Mr. Russell].

The amendment was agreed to.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Jeremiah Van Riper, late of Twenty-eighth Independent Battery. New York Volunteer Light Artillery, and pay him a pension at the rate of \$50 per month in lieu of that he is now receiving.

Mr. WILLIS. Mr. Chairman, I move to strike out the last I desire to call the attention of the gentleman from Missouri [Mr. Russell] to what seems to be a clerical error, either in the report or in the bill. On page 25, line 3, the name reads "Jeremiah Van Riper" and over in the report the name is given as "Jeremiah Van Ripen." I want to be sure there is no mistake in the bill. Is that the correct name in the bill, "Van Riper"?

Mr. RUSSELL. I am unable to say.
Mr. WILLIS. It is "Van Ripen" in the report and "Van
Riper" in the bill. In the report, on page 63, it is "Jeremiah Van Ripen." It is evidently one or the other, but the dis-crepancy might lead to confusion.

Mr. RUSSELL. I really do not know which is the correct

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

The name of Ardell D. Grigsby, helpless and dependent child of Philip Grigsby, late of Company C, Seventh Regiment Ohio Volunteer Infantry, and pay him a pension at the rate of \$12 per month.

Mr. DIES. Mr. Chairman, I move to strike out the last word.

The CHAIRMAN. The gentleman from Texas [Mr. Diss] moves to strike out the last word, and is recognized for five

Mr. DIES. Mr. Chairman, I do not know how much in the shape of appropriation from the Federal Treasury is involved in this bill. I would like to ask the gentleman in charge of the bill how much is involved?

Mr. RUSSELL. Gen. Sherwood has had the figures made accurately, and he says it is about \$20,000-between \$20,000 and \$21,000.

Is that per month or per year? Mr. DIES.

Mr. RUSSELL. That is per year. The amount of money carried by this entire bill is \$47,844, the major portion of which is already being paid. The increase is between \$20,000 and

Mr. DIES. Per year? Mr. RUSSELL. Per year. Mr. DIES. May I ask the chairman of the committee how often we shall consider private pension bills?

Mr. SHERWOOD. Presumably twice a month, on the second and fourth Fridays.

Mr. DIES. Mr. Chairman, I thank the gentleman for giv-

ing me precisely the information I want.

I want to say that I have no hope of being able to throw anything into this pension machinery that will stop its opera-

Mr. SHERWOOD. I will say to the gentleman that the total increase in this bill is \$22,354.

Mr. DIES. A mere trifle compared to what has been appro-

priated heretofore, of course.

I only want to make this last observation, that nothing I can say and nothing my friend [Mr. PAYNE] was able to say in the Sixty-second Congress will be able or has been able to stop the machinery that is grinding out pensions under this private-pension iniquity. Whatever could be said about the Sherwood bill, as a general proposition—and there was much that could be said about it—it was a bad bill. It was an exorbitant bill. It gave the old soldiers more than they themselves asked for. It was a veritable repetition of the Rape of Lucrece. We absolutely pushed something upon the old soldiers, and made them take it, that they did not ask for. We gave them more money than they petitioned for.

But I do want to make this observation. I wish I might make it in some way that the old soldiers, or some of them, could hear it. I believe there are four or five hundred of them left. I believe we have got thirty or forty or maybe a hundred of them in this bill, feeding it out to them, not because they are 90 years old but because they are in the bill; not because an arm is off but because they are in the bill; not because they need the money but because they are in the bill; not because they served valiantly the cause of their country but because they have been able, through their Congressman, to get into the

bill. Mr. MOSS of West Virginia. Will the gentleman yield? The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from West Virginia?

Mr. DIES. With pleasure.

Mr. MOSS of West Virginia. I understood the gentleman to say awhile ago that he was a friend of the old soldier. Is that correct?

Mr. DIES. Oh, I am a friend of every good old soldier. suppose they are not all saints; not any more among the old soldiers than among the old civilians; but I am a friend of every man who fought for the cause of his country as an honest, loyal soldier.

Mr. MOSS of West Virginia. Does not the gentleman think it is a God's blessing that the old soldiers have not many

more friends like him?

Mr. DIES. Oh, he had better have friends like me, that stand up for his honor and his rights, than to have a lot of mushy politicians, who seek to use the money taxed from the hearts and souls of the people to buy themselves into office. I had rather write the name of every soldier who preserved my country on a roll of honor than to drag it down into the slime of politics and leave to posterity the sinister impression that their fathers fought to preserve the Union in order that they might eat it up after they had preserved it.

Mr. Chairman, that I am a friend of the old soldier. My father followed the fortunes of Gen. Forrest for four years. He came out of the war with respect for his adversaries; and I stand before this Congress a young man of the South who honors and respects the northern soldier when I have not got much respect for the northern politician or the southern politician who taxes the people in order that he may give the money

to another man or set of men to keep himself in office.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MONDELL. Mr. Chairman, I have listened with a good deal of interest to the discussion this afternoon on the subject

of pensions.

The CHAIRMAN. Does the gentleman wish to oppose the amendment?

Mr. MONDELL. I oppose the amendment of the gentleman

from Texas [Mr. Dies].

The CHAIRMAN. The gentleman is recognized for five

minutes.

Mr. MONDELL. I was very much surprised at some of the suggestions made by the gentleman from Texas [Mr. Callaway], who spoke some time ago, impugning the motives of Members in the introduction and passage of pension bills. Evidently it did not occur to the gentleman that it would be just as unfair for those of us who favor liberal pensions to impute unworthy motives to him and to others who oppose them as it is for him to question the motives of those who believe in liberally pensioning the soldiers of the Civil War.

Mr. CALLAWAY, Mr. Chairman— Mr. MONDELL. I do not believe the gentleman from

Mr. CALLAWAY, Mr. Chairman— Mr. MONDELL. Just a moment. The CHAIRMAN. Does the gentleman yield?

Mr. MONDELL. Not just now.
The CHAIRMAN. The gentleman declines to yield.
Mr. MONDELL. I do not believe the gentleman meant just exactly what he said. I do not think the gentleman from Texas believes in his heart that men introduce pension bills and vote for pension bills because they want to buy the support of pensioners. This pension bill contains two items pensioning widows of Union soldiers in my State, old ladies without any income and in very poor health, women who, except for these increases, might have to depend on charity. I am sure the gentleman from Texas, who is a kind-hearted man, does not object to that kind of a pension, and I feel confident that after the gentleman thinks about it he will regret that he, even in quoting the words of another, impugned or seemed to impugn the motives of those who favor such pensions. Now I will yield to the gentleman from Texas [Mr. Callaway].

Mr. Callaway. I remember that when the river and har-

bor bill was up and we were making a fight against that, claiming that it was a pork-barrel bill, the gentleman from Wyoming, who thinks that the House would never yield to a political pressure, assaulted the river and harbor bill, and said that it was a bill worked out to grease the bearings of the machinery in the respective districts. Does the gentleman think that the House would yield to the influence of a pork barrel on the river and harbor bill and would not be influenced by a pork-

barrel bill for the pension distribution?

Mr. MONDELL. The gentleman from Texas did not listen very closely to what I said in connection with the river and harbor bill. It is evident that the gentleman from Texas does not very clearly understand my attitude in regard to such public questions. I did not in connection with that bill, and never have throughout my whole service, impugned any man's motives in supporting a bill. I did question the propriety of spending Federal money in the vain attempt to try to make navigable a river that could more cheaply be macadamized, but I did not question the motives of the men who favored it. If I believed that a river in my district could by the expenditure of a reasonable amount of Federal money be made of very great use to the people for the purpose of transportation, I should be inclined to favor such an expenditure. At the same time I should not feel that a criticism of that expenditure on the ground that it was not wise was an unfair criticism at all. I was not impugning the motives of my friends in the Southwest who attempted to secure an appropriation for the Gasconade, for instance, in whose beautiful swimming holes I used to swim as a boy. I questioned their judgment; I doubted if they realized how utterly impossible was the accomplishment of their desire to aid navigation to any important extent through

the expenditure of Federal money.

Mr. CALLAWAY. Is the gentleman from Wyoming so very charitable that he thinks that anybody in this House will agree with him that it was simply an error of judgment in trying to make navigable the splendid little brooklet that he swam in the holes of when he was boy, and thinks that the motives were all right but only the judgment was bad in that kind of an effort distributed about the whole country in the respective congressional districts? I understood the gentleman, not as a sarcasm even, not questioning the judgment of men that would try to make navigable a stream that had better be macadamized-I understood it was an effort to grease the political bearings in the respective districts in which they were attempting to put the money in the streams, and I discussed it briefly. I under-stood the gentleman to say that the river and harbor bill was an effort on the part of men to swap out their respective interests and raid the Federal Treasury.

The CHAIRMAN. The time of the two gentlemen has ex-[Laughter.] pired.

Mr. MONDELL. Mr. Chairman, inasmuch as the gentleman from Texas has taken up a large portion of my time, I ask unanimous consent to proceed for five minutes more.

The CHAIRMAN. The gentleman from Wyoming asks unanimous consent that his time be extended for five minutes. there objection?

There was no objection.

Mr. MONDELL. Mr. Chairman, I do not care to pursue the line of argument suggested by the statement of the gentleman from Texas further than to say that I do not believe men are dishonest or actuated by unworthy motives because they seek to promote the interests of their constituents. I take it that is what we are sent here to do-to look after the people we repre-We are human, and therefore we listen to and are persuaded by the arguments of our people and by our own judgment in favor of these things, which we believe will be helpful to our communities, and it is entirely proper that we should take that view.

Now, Mr. Chairman, I rose for a somewhat different purpose than the argument I have pursued. In a brief interval of the interesting discussion of the subject of pensions I repaired to my room to answer some correspondence. By a curious coincidence I happened on a letter on the subject of pensions. Without at this time expressing any opinion in regard to the proposition contained in the letter, I desire to have it read in my time.

The CHAIRMAN. The Clerk will read, without objection.

The Clerk read as follows:

UNITED CONFEDERATE VETERANS, HEADQUARTERS NORTH GEORGIA BRIGADE, Atlanta, Ga., December 1, 1913.

CONFEDERATE PENSIONS.

Headquarters Noeth Grough Brigade,
Atlanta, Ga., December 1, 1913.

CONFEDERATE PENSIONS.

In replying to an article read in New Orleans on November 12, 1913, to the United Daughters of the Confederacy by Mrs. White, their commander, urging and insisting upon their cooperation in doing all they could to prevent or persuade the Confederate veterans against asking a pension from the United States—she did not want the Confederate veterans to humiliate themselves to that extent—Mrs. White said that a majority of them would not accept a pension from the United States.

Now, I as a Confederate veteran know of my own knowledge that the good lady has been misinformed. for I believe 90 out of each 100 will gladly accept a pension, and that the one hundredth one would be disgusted with himself for refusing to take it.

As to the humiliation, we fall to see where it comes in, merely asking for what rightfully belongs to us. We had our humiliation in the years 1861 to 1865, when it came to fighting our own slaves. Georgia had in the Civil War 3,485 of her slaves to fight then, and there is where the Confederates were humiliated; and we don't feel like it is any disgrace or humiliation to ask for our own.

At the close of the War between the States, or soon thereafter, Congress enacted the pension law, thereby giving to the Federal veterans what now amounts to \$180,300,000 per annum, and the South has been contributing annually for almost 50 years unnurmuringly. And, again, the Southern States had turned loose or set free by reason of the war about 6,000,000 negroes, and they (the southern people) have been taxed for nearly 50 years to educate them (the negroes).

Soon after the war there was collected from the Southern States a specific tax that amounted to about \$65,000,000. The Supreme Court of the United States decided this was illegal, and that the United States had no legal right to it, and therefore it has been in the United States for the confederate veterans and to the widows of Confederate veterans, the principal

J. H. SHELNUTT.

Adjutant General and Chief of Staff.

North Georgia Brigade, Confederate Veterans,
Second Floor, Thrower Building, Atlanta, Ga.

Mr. DIES. Mr. Chairman, I move to strike out the last word. Mr. Chairman, my friend from Wyoming [Mr. MONDELL] is always surprised or amazed, and he is now both amazed and surprised because the Confederate soldier would like to receive some recognition out of this fund.

Mr. MONDELL rose.

Mr. DIES. In just a moment I will yield to the gentleman. Mr. MONDELL. I have expressed no amazement or surprise. Mr. DIES. Then the gentleman is not surprised; and not being surprised and not being amazed-

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from Wyoming?

Mr. DIES. I decline to yield; in a moment I will be glad to do so. The gentleman is not amazed and not surprised that a Confederate soldier asks for a pension. If it had occurred 15 or 20 years after the war, when the pension roll was fifty or sixty million dollars I would be amazed and surprised, because then it was supposed that the pension roll of the country was a roll of honor and the payment of money for services performed, and no Confederate soldier would ever have felt that he was entitled to go on the roll, because he knew that he had performed no service for the United States of America, having given his services to the Confederate States of America; but in recent years, to take the language of Gen. Adams, who himself was a Federal soldier, it has ceased to be a roll of honor, it has ceased to be a return to the old soldier of his just reward for honor and service, and has grown to be a political campaign fund for the party in power to control the votes of the old soldiers themselves. If so, how can my friend from Wyoming [Mr. MONDELL], so often amazed and amused and surprised-how can he now be amazed that Confederate soldiers want to get in on this slush fund, a fund that is no longer to reward those who gave their lives to their country, but to keep in office those who are voting supplies under the pension bill? Why should not the old Confederate soldiers come in under it? Why should not the old shoemakers and the old blacksmiths and the old livery-stable men and the old farmers and the old restaurant men come in under it? Why should not any old person or any young person or any man with a vote in this country get in on it, if it is to be, as Gen. Adams, himself a Federal soldier, says it is, a political slush fund to get votes in this country? For myself, Mr. Chairman, I am not in favor of Confederate pensions out of the Federal Treasury. No more am I in favor of pensioning the employees of the Federal Government who are asking pensions at the hands of this Congress. I am in favor of giving every Federal soldier a just pension under a general law, and then I am in favor of hanging to the yard arm of a telegraph pole every Congressman who tries to violate the general law and reach his hand into the Federal Treasury for a special bill for a selfish cause, for a selfish interest.

The CHAIRMAN. The Clerk will read.

The Clerk concluded the reading of the bill.

Mr. SHERWOOD. Mr. Chairman, I move that the committee do now rise and report the bill, with amendments, with a favorable recommendation.

The motion was agreed to.

Accordingly the committee rose; and the Speaker having resumed the chair, Mr. Adamson, Chairman of the Committee of the Whole House on the state of the Union, reported that that committee had had under consideration the bill H. R. 10138, an omnibus pension bill, and had directed him to report the same back to the House, with amendments, with the recommendation that the amendments be agreed to and that the bill as amended do pass.

The SPEAKER. Is a separate vote demanded on any amend-[After a pause.] If not, the Chair will put them in The question is on agreeing to the amendments. ment? gross.

The amendments were agreed to.

Mr. SHERWOOD. Mr. Speaker, I move the previous question on the bill and amendments to final passage.

The previous question was ordered.

The SPEAKER. The question is on the engrossment and third reading of the bill as amended.

The bill was ordered to be engrossed and read a third time,

and was read the third time.

The SPEAKER. The question is on the passage of the bill. The question was taken; and on a division (demanded by Mr. CALLAWAY] there were-ayes 92, noes 9.

Mr. CALLAWAY. Mr. Speaker, I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 239, nays 24, answered "present" 13, not voting 158, as follows:

Mr. HARDWICK with Mr. TREADWAY.

Mr. HAY with Mr. VOLSTEAD. Mr. HOWARD with Mr. WALTERS.

Mr. Faison with Mr. Burke of Pennsylvania.

For the session:

Mr. Scully with Mr. Browning.

Mr. BROWNING. Mr. Speaker, I voted "aye." I have a general pair with my colleague, Mr. Scully, and I wish to with-draw my vote and be recorded "present."

The name of Mr. Browning was called, and he answered

The result of the vote was announced as above recorded.

## LEAVE OF ABSENCE.

By unanimous consent, leave of absence was granted as follows:

To Mr. VAUGHAN, from December 13 to and including January 3, on account of important business, both public and private. To Mr. Borchers, indefinitely, on account of sickness.

## THE LATE DAVID DU B. GAILLARD.

Mr. ADAMSON. Mr. Speaker, I ask unanimous consent for

the present consideration of House joint resolution 165.

The SPEAKER That is on the Private Calendar, and the Clerk will report the title.

The Clerk read as follows:

House joint resolution (H. J. Res. 165) for recognition of the serv-fees of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard.

The SPEAKER. Is there objection?
Mr. McCOY. Mr. Speaker, reserving the right to object, I desire to make a parliamentary inquiry. Is not the Private Calendar called?

The SPEAKER. Yes.

Mr. McCOY. Well, I have a bill-

The SPEAKER. Any gentleman can move, if he chooses, to go back into the Committee of the Whole House for consideration of the Private Calendar.

Mr. ADAMSON. Mr. Speaker, if my request is objected to, I

will make that motion.

Mr. McCOY. I do not object.

The SPEAKER. The Chair, judging from the usual habits of men, did not suppose at this time of the day anybody would want to do it.

Mr. MANN. Mr. Speaker, reserving the right to object, I tried to get the gentleman from Georgia to make the proper motion, which so far he declines to do. He and everyone else knows this is not the proper way to consider private bills in the House. Much as I dislike to do so in reference to this particular resolution, I decidedly object to this procedure and I am surprised at the gentleman.

The SPEAKER. The gentleman from Illinois objects, and

that is the end of it.

Mr. ADAMSON. Then, Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House for the consideration of bills on the Private Calendar.

The SPEAKER. The gentleman from Georgia moves that the House resolve itself into the Committee of the Whole House for the consideration of bills on the Private Calendar.

The question was taken, and the Speaker announced the noes seemed to have it.

Mr. ADAMSON. Mr. Speaker, I ask for a division. The House divided.

Mr. ADAMSON. Mr. Speaker, before the result is announced it has been suggested to me I did not say resolutions also. hope that it is understood that I desire to include both bills

and resolutions on the Private Calendar.

The SPEAKER. The Chair supposes the Chairman of the Committee of the Whole House will hold it includes all, but the Chair does not know what he would hold. On this vote the ayes are 94 and the noes are 5, and accordingly the House resolves itself into the Committee of the Whole House, and the gentleman from Alabama [Mr. Underwood] will take the chair.

The CHAIRMAN. The House has resolved itself into the Committee of the Whole House for the consideration of bills

on the Private Calendar.

Mr. ADAMSON. Mr. Chairman, I would like to call up House joint resolution 165.

Mr. MANN. The gentleman will have to ask unanimous consent.

Mr. ADAMSON. I ask unanimous consent.

Mr. MANN. Now, let us see. There is the war claims bill, which probably would have preference. It is evident that would not be passed to-night, and my understanding is that it is likely to be passed on Monday, under the suspension of the rules. I ask unanimous consent that the calendar numbers 6, 7, and 8 be considered in committee.

Mr. ADAMSON. I will state, Mr. Chairman, that my desire in making the suggestion I have made was based on the assumption stated by the gentleman from Illinois-that we would not want to remain here much longer to-night; and this joint reso-

lution would not take much time.

Mr. MANN. There are three; and I think they will not take over 10 minutes

Mr. ADAMSON. I modify my request, leaving out the war claims bill, and ask unanimous consent that the other three be

taken up in their order.

The CHAIRMAN. The request of the gentleman from Georgia [Mr. Adamson] is to pass for the present the war claims bill and to take up the other bills on the calendar. Is there objection? [After a pause.] The Chair hears none. The Clerk will report the next bill after the war claims bill.

## H. C. HODGES AND OTHERS.

The first business on the Private Calendar was the bill (H. R. 888) for the relief of H. C. Hodges, H. A. Powell, John Smith, and Joseph Ridley.

Mr. McCOY. Mr. Chairman, I ask unanimous consent that

the first reading of the bill be dispensed with.

The CHAIRMAN. The gentleman from New Jersey [Mr. McCoy] asks unanimous consent that the first reading of the bill be dispensed with. Is there objection?

There was no objection.

The CHAIRMAN. The Clerk will read the bill under the five-minute rule.

The Clerk read the bill for amendment, as follows:

A bill (H. R. 888) for the relief of H. C. Hodges, H. A. Powell, John Smith, and Joseph Ridley.

Smith, and Joseph Ridley.

Be it enacted, etc., That the United States of America hereby forever relinquish, release, remise, and quitelaim all right, title, and interest in and to the southwest quarter section 5 and the southwest quarter northwest quarter section 5, township 1, range 27, in Houston County (formerly Henry County). Ala., now held severally, in separate parcels and by independent titles, by H. C. Hodges, H. A. Powell, John Smith, and Joseph Ridley, under claim or color of title derived, directly in the case of said H. C. Hodges, and indirectly in the case of said H. C. Hodges, and indirectly in the cases of the said H. A. Powell, John Smith, and Joseph Ridley, from one F. H. Hodges, deceased, said lands having been the property of the said F. H. Hodges, deceased, and having been, on May 14, 1894, bought in by the United States under a fieri facias issued May 7, 1894, from the United States Circuit Court for the Middle District of Alabama for the sale of the said lands to satisfy a judgment rendered by said court on December 7, 1892, and made final on December 11, 1893, under scire facias issued on December 7, 1892, for \$300 principal and \$16.25 costs against one H. W. Harrell, principal, and the said F. H. Hodges, deceased, as surety,

upon forfeited recognizance or bail bond: Provided, That the costs incurred by the United States in securing the judgment and incident to the sale of the said lands, being in the aggregate \$53.40, be paid by the said H. C. Hodges, H. A. Powell, John Smith, and Joseph Ridley, or their heirs or assigns.

Mr. McCOY. Mr. Chairman, before speaking of the bill I wish to call attention to a mistake made in the report. It refers to the bill as being H. R. 20692. That was the number of the bill as it was introduced in the Sixty-second Congress. The report

is intended to be on this bill, H. R. 888.

The facts in regard to the matter are that one Harrell in 1891 was indicted for illicit distilling in the State of Alabama, and on his arrest he gave bond for his appearance, on which one Hodges became his surety. When the case was called for trial, the accused did not appear and the bond was forfeited, and judgment for the penalty of the bond and for costs was entered against the prisoner and against Hodges. Subsequently the indicted man was arrested, did appear for trial, pleaded guilty, and was sentenced. The judgment, nevertheless, stood. Hodges, the owner of the property against which the judgment was a lien, took certain steps which he believed finally resulted in a settlement with the Government, by which the amount due the Government for costs was paid, and that the Government thereupon relinquished all the interest which it had in the land under the judgment. A check was sent to Washington, according to an affidavit submitted to the committee by Hodges, with the idea of accomplishing that purpose, but for some reason or other, which we can not ascertain in any way, the check apparently was not received here in Washington, and Hodges lived and died under the supposition that the whole matter had been settled, and that the judgment had been wiped off the books. Acting on that supposition, he did sell various parts of this land. In fact, he parted with his entire title to it, and it is now in the hands of purchasers for value.

Now, this was not a judgment against the land for any claim of the United States for money due and received, or what not, but was purely a forfeited bail bond in a criminal case. The only expense the Government has been to has been the expense in the sale of the land and in the arrest of the criminal, and it is proposed in this bill that this redemption shall not be per-

mitted until the amount shall have been paid.

The bill was considered by the Committee on the Judiciary in the Sixty-second Congress and was reported favorably, but for some reason or other it did not pass. It has again been considered by the committee and a favorable report made, and the committee believe that it should pass.

Mr. MANN. Mr. Chairman, will the gentleman yield? Mr. McCOY. Certainly.

Mr. MANN. Does the gentleman say that the bill did not pass in the last Congress?

Mr. McCOY. It did not become a law.
Mr. MANN. The gentleman may be correct. I was under the impression that it had been passed. Is this the same bill?

Mr. McCOY. This is the same identical bill that was considered in the House before.

Mr. Chairman, I move that the bill be laid aside with recommendation to the House that it be passed.

The CHAIRMAN. The gentleman from New Jersey [Mr. McCov] moves that the bill be laid aside with a favorable recommendation to the House. The question is on agreeing to that motion.

The motion was agreed to.

## THE LATE DAVID DU B. GAILLARD.

The CHAIRMAN. The Clerk will report the next bill.

The next business on the Private Calendar was the resolution (H. J. Res. 165) for recognition of the services of the late David Du B. Gaillard, lleutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard.

The CHAIRMAN. The Clerk will report the resolution. The Clerk read as follows:

Resolved, etc., That the President is hereby authorized to pay, out of moneys appropriated for the salaries of the members of the Isthmian Canal Commission, to Katherine Gaillard, widow of David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, late an Isthmian Canal commissioner, an amount equal to the annual salary, as a member of the isthmian Canal Commission, of the said David Du B. Gaillard, who died on December 5, 1913, from disease resulting from his long and arduous service in the construction of the Panama Canal.

With a committee amendment, as follows:

Page 1, line 8, strike out the word "annual," where it occurs after the word "the," and after the word "salary," insert the words "for one year," so that the line will read, "an amount equal to his salary for one year," etc.

Mr. THOMAS. Mr. Chairman-

Mr. ADAMSON. Mr. Chairman, I request that the Clerk read the report. It is short.

The CHAIRMAN. The gentleman from Georgia [Mr. Adamson] has the floor, and he asks that the Clerk read the report. For what purpose does the gentleman from Kentucky [Mr. THOMAS | rise ?

Mr. THOMAS. I wanted to know how much that amounts to. Mr. ADAMSON. A year's salary is \$14,000 down there. Mr. THOMAS. What property did he have?
Mr. ADAMSON. My information is that he had none. They

My information is that he had none. They have exhausted their substance in sickness. His widow was

sick a great deal, and he was sick a long time.

Mr. THOMAS. I have been trying to get a Mexican War veteran pensioned at \$12 a month, and have not yet succeeded. Mr. ADAMSON. Mr. Chairman, I hope the Clerk will read

the report.

Mr. THOMAS. I want to hear the gentleman's explanation

about it.

Mr. ADAMSON. I suggest that the gentleman listen to the

report. The CHAIRMAN. The gentleman from Georgia [Mr. ADAMson] asks unanimous consent that the Clerk read the report.

Is there objection? [After a pause.] The Chair hears none. The Clerk will read the report. (H. Rept. 122.)

The Clerk read as follows:

Mr. ADAMSON, from the Committee on Interstate and Foreign Commerce, submitted the following report [to accompany H. J. Res. 165]:

The Committee on Interstate and Foreign Commerce, to whom was referred House joint resolution 165, for recognition of the services of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard, having considered the same, report thereon with amendment, and as so amended recommend that it pass.

Amend the joint resolution as follows:

Page 1, line 8, strike out the word "annual."

Page 1, line 8, after the word "salary," insert the words "for one year."

Page 1, line 8, strike out the word "annual."

Page 1, line 8, after the word "salary," insert the words "for one year."

The purpose of this joint resolution is to pay to the widow of the late commissioner, Lieut. Col. Gaillard, the amount of a full year's salary, not only with a view to providing for her comfort, but also to recognizing the eminent services rendered to the age and to his country by her late lamented and distinguished husband.

There is no exact precedent for this, nor even a very near analogy. There are precedents in the cases of officers of the Army and employees of the Government, but there has never been a Panama Canal before this one, although there have been Panama Canal companies; nor has there ever before been a successful commission or other authority to construct such a canal. Therefore no such commissioner ever before died in the hour of attainment of glorious success in the construction of such a notable work to make a precedent for such a provision in behalf of his widow and in recognition of his own honor.

In contrast with the stupendous enterprise on which Lieut. Col. Gaillard and his associates and their illustrious chief, Col. Goethals, have achieved such unexampled success kindred enterprises in other countries and other ages sink into insignificance. Darius, with his conquering army, completing the old Suez Canal, begun and abandoned by the old Egyptian King, to be again abandoned and relegated to sand dunes and disuse for ages, presents but a poor comparison. The ostentatious performance of Xerxes in constructing the canal across the Peninsula of Athos, with the money and men of all nations, was a mere matter of sport induiged to but little purpose or profit beside the stupendous achievements at Panama. The canals at Kiel and Corinth do not approach our Panama construction in magnitude, engineering skill, or universal importance of mankind.

The later revival of the Suez Canal was but a renewal of the work of monarchs in antiquity, and though backed by the power and financ

death of Lieut. Col. Gailiard places him beyond the possibility of hearing our plaudits, enjoying the incense of our honors to him, or profiting by our rewards.

Any civilized nation would be proud to boast of such achievements as will stand to the everlasting honor of the builders of the Panama Canal. Those surviving will, without question, reap the rewards of their toil in the lasting gratitude of a proud people and such other rewards as may be adjudged fitting to their rank and performance. But as Lieut. Col. Gaillard is dead, his ear deaf to our plaudits, his brain no longer conceiving and executing great designs, his heart throbhing no more in unison with that once mighty intellect, we can do nothing more for him in person, but the life partner, the solace of his sorrows and depressions, the inspiration for his buoyancy, courage, and mighty achievements, his bereaved widow, still lives to mourn his loss. We mourn with her. We honor her and we honor him in honoring her. She gave the best years of her life and impaired her health in the Tropics cooperating with her husband in consecrating his skill and energy to consummate an enterprise which has been the dream and will be the wonder of the world, and at last saw her husband immolated a willing sacrifice to the honor and glory of his country.

A grateful people will cheerfully manifest appreciation of her and of him by making for her the provision carried in this joint resolution, expressly stating that it is in recognition of the services of her husband as a member of the commission which constructed the Panama Canal.

The resolution provides that the amount of a year's salary shall be paid to her out of the money appropriated for the salaries of the commissioners. In the act making appropriations for sundry civil expenses of the Government, approved June 23, 1913, ample funds were appropriated, in paragraph 3 of the section dealing with the Panama Canal, for the pay of the members of the commission and certain other officers and employees. Your committee w

unnecessary and improbable that a successor to Lieut. Col. Gaillard be appointed, and the usual discretion and economy which have characterized American management of the work on the Isthmus leave that fund in splendid condition to permit payment therefrom of the sum provided in this resolution.

Mr. ADAMSON. Mr. Chairman, I have no disposition to consume the time of the committee myself. I am ready for a vote. There is an amendment there.

The CHAIRMAN. The Clerk will report the committee amendment.

The Clerk read as follows:

Page 1, line 8, strike out the word "annual" where it occurs after the word "the," and after the word "salary" insert the words "for one year," so that the line will read, "an amount equal to his salary for one year," and so forth.

The CHAIRMAN. The question is on agreeing to the amend-

The amendment was agreed to.

Mr. ADAMSON. I move that the resolution as amended be laid aside for favorable report to the House.

The CHAIRMAN. The question is on agreeing to the motion to lay the resolution aside with a favorable report.

The motion was agreed to.
The CHAIRMAN. The Clerk will report the next bill.

GEORGE W. WOLF.

The next business on the Private Calendar was the bill (H. R. 3638) providing for the issuance of patent to George W. Wolf. The CHAIRMAN. The Clerk will report the bill. The Clerk read as follows:

Be it enacted, etc., That patent be issued to George W. Wolf for the west half of the northwest quarter section 7, township 39 north, range 68 west, and the east half of the northeast quarter section 12, township 39 north, range 80 west of the sixth principal meridian, Douglas (Wyo.) land district, which tract was included in homestead entry Douglas 02699 made by Joe Joubert, a foreign-born citizen who has filed his declaration of intention to become a citizen of the United States, but who has never been naturalized and who can not be located at the present time.

With committee amendments, as follows:

Amend, page 1, line 3, by striking out the words "George W. Wolf" and inserting in lieu thereof the words "Joe Joubert."

Amend, page 1, line 10, by striking out the word "Joe" and inserting in lieu thereof the word "said."

Amend, page 1, line 10, by inserting a period in place of the comma after the word "Joubert" and striking out the remainder of line 10 after said period, and all of line 11 and lines 1 and 2, on page 2.

Amend, page 1, line 10, by inserting a period in place of the comma after the word "Joubert" and striking out the remainder of line 10 after said period, and all of line 11 and lines 1 and 2, on page 2.

Mr. MONDELL. Mr. Chairman, the report made by the gentleman from Arizona [Mr. HAYDEN] states the facts in regard to the bill more concisely than I can. I ask that the portion of

the report marked, now in the hands of the Clerk, be read.

The CHAIRMAN. The gentleman from Wyoming [Mr. Mon-DELL] asks unanimous consent that the report be read. Is there objection? [After a pause.] The Chair hears none, and the Clerk will read the report. (H. Rept. 123.)

The Clerk read as follows:

The Clerk read as follows:

Joe Joubert, who had declared his intention to become a citizen of the United States, made homestead entry of the tract described in the bill and at the end of five years made sufficient and satisfactory proof of residence, cultivation, and improvements, pursuant to which final certificate issued. Some time thereafter Joubert sold his Interest in the land to George W. Wolf, a transaction which the Secretary states was in entire good faith. Later it was discovered in the Land Office that Joubert had not become a fully naturalized citizen and therefore patent was not issued, but the entry heid for cancellation, opportunity, however, being given to Mr. Wolf to locate Joubert, if possible, with a view of having this situation remedied.

Upon making inquiries it was learned that Joubert had gone to Callfornia for his bealth and was last heard of at a hospital at Bakersfield and can not be located. He was quite an old man, and it is doubtful if he still lives. The department recognizes the equities in the case and recommends the issuance of a patent, but suggests that it be issued in the name of the entryman Joubert rather than in the name of the present owner, and the bill has been amended as recommended by the department.

Mr. MONDELLs. Mr. Chairman, I move that the bill be laid

Mr. MONDELL. Mr. Chairman, I move that the bill be laid aside, to be reported to the House with the recommendation that it pass as amended.

The CHAIRMAN. The Chair understands that there are committee amendments. Does the gentleman desire the committee amendments reported?

Mr. MONDELL. I do. The CHAIRMAN. The Clerk will report the first amendment. The Clerk read as follows:

Page 1, line 3, strike out the words "George W. Wolf" and insert the words "Joe Joubert."

The amendment was agreed to.
The CHAIRMAN. The Clerk will report the next committee amendment.

The Clerk read as follows:

Page 1, line 10, strike out the word "Joe" and insert the words "said," and in lines 10 and 11, on page 1, and lines 1 and 2, on page 2, strike out the words "a foreign-born citizen who has filed his declaration or intention to become a citizen of the United States, but who has never been naturalized and who can not be located at the present time."

The amendment was agreed to.

The bill as amended was ordered to be laid aside, to be reported to the House with a favorable recommendation.

Mr. THOMAS. Mr. Chairman, I wish to call up and put upon its passage House bill 9822, to establish a national park at the Mammoth Cave. I ask unanimous consent that it be called up and passed.

The CHAIRMAN. The Chair will state to the gentleman from Kentucky that the bill is not on the Private Calendar, and the House resolved itself into the Committee of the Whole House for the purpose of considering bills on the Private Calendar.

Mr. THOMAS. I guess, if I can get unanimous consent to put it on the calendar, it will be on the calendar. The CHAIRMAN. The Chair will put the gentleman's re-

Mr. MANN. Mr. Chairman, the Chair will readily recognize that the Chair can not submit a request to consider a bill that is not on the Private Calendar, because the House resolved itself into the Committee of the Whole for the consideration of bills on the Private Calendar.

The CHAIRMAN. The Chair thinks the point of order made by the gentleman from Illinois is well taken, and the Chair sustains it.

Mr. ADAMSON. Mr. Chairman, I believe we have finished the program agreed upon, and I therefore move that the committee rise and report to the House the bills and the joint resolution, with the amendments adopted in committee, with the recommendation that the amendments be agreed to and that the bills and the joint resolution do pass.

The motion was agreed to.

The committee accordingly rose; and the Speaker having resumed the chair, Mr. Underwood, Chairman of the Committee of the Whole House, reported that that committee had had under consideration House bill 888 and recommended that it do pass; that the committee had had under consideration House bill 3638 and recommended that the bill pass as amended; that the House had had under consideration House joint resolution 165 and recommended that the joint resolution pass as amended.

Mr. ADAMSON. Mr. Speaker, I ask unanimous consent that the previous question be considered as ordered on these measures and amendments to the final passage.

The SPEAKER. The gentleman from Georgia asks unanimous consent that the previous question be considered on these measures and amendments to the final passage. Is there objection?

There was no objection.

The SPEAKER. The Clerk will report the first bill the passage of which is recommended by the Committee of the Whole.

H. C. HODGES AND OTHERS.

The first bill reported from the Committee of the Whole was the bill (H. R. 888) for the relief of H. C. Hodges, H. A. Powell, John Smith, and Joseph Ridley.

The bill was ordered to be engrossed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. McCov, a motion to reconsider the last vote

was laid on the table.

## THE LATE DAVID DU B. GAILLARD.

The next business reported from the Committee of the Whole was the joint resolution (H. J. Res. 165) for recognition of the services of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard.

The SPEAKER. Is a separate vote demanded on any amend-

Mr. ADAMSON. No; they are simply verbal.

The SPEAKER. If not, the Chair will put them in gross.

The amendments were agreed to.

The joint resolution as amended was ordered to be engressed and read a third time, and was accordingly read the third time and passed.

On motion of Mr. Adamson, a motion to reconsider the last vote was laid on the table.

GEORGE W. WOLF.

The next bill favorably reported from the Committee of the Whole was the bill (H. R. 3638) providing for the issuance of a patent to George W. Wolf.

The SPEAKER. The question is on the amendments.

The amendments were agreed to.

The bill as amended was ordered to be engrossed and read a third time, was read the third time, and passed.

The title was amended, in accordance with the text of the bill, by inserting the name of Joe Joubert in place of that of George W. Wolf.

On motion of Mr. HAYDEN, a motion to reconsider the vote whereby the bill was passed was laid on the table.

#### MAMMOTH CAVE NATIONAL PARK.

Mr. THOMAS. Mr. Speaker, I ask unanimous consent to consider in Committee of the Whole a bill (H. R. 9822) to make the Mammoth Cave a national park. It does not carry any appropriation, but it provides for an appropriation when a lot of people die, which may be five or six years hence.

Mr. MANN. Mr. Speaker, the gentleman's bill will soon be

reached on the call of committees.

Mr. THOMAS. It has been here two or three years, and

they have not reached it yet. [Laughter.]

Mr. MANN. That is because it has not been reported favorably by any committee. Has it been reported favorably now? Mr. THOMAS. It has not been reported at all. [Laughter.] Mr. MANN. Well, Mr. Speaker, I have been at the Mam-

moth Cave, and I should like to see it made a park, but I shall have to object to this.

Mr. THOMAS. Do I understand that the gentleman from Illinois objects to this?

The SPEAKER. He does.

Mr. MANN. If the gentleman will get it reported, I will help him pass it.

#### THE GARY SCHOOL SYSTEM.

Mr. CROSSER. Mr. Speaker, I ask unanimous consent for a change of reference from the Rules Committee to the Committee on the District of Columbia for the House resolution for investigating the Gary school system.

Mr. GARRETT of Tennessee. Who

What does the resolution relate to?

Mr. CROSSER. It is asking for a committee to investigate the school system of Gary, Ind., with the idea of establishing it in the District if we so decide. I have asked the acting chairman of the Rules Committee, and he said he had no objection.

Mr. GARRETT of Tennessee. If it is for the purpose of cre-

ating a committee or for the purpose of authorizing any committee of the House to act beyond the present rules of the House, the jurisdiction of it properly belongs to the Committee on Rules, and I shall have to object.

Mr. CROSSER. I realize that, but I asked the acting chair-

man, and he had no objection.

Mr. GARRETT of Tennessee. I shall have to object.

# ADJOURNMENT.

Mr. UNDERWOOD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 45 minutes p. m.) the House, under its previous order, adjourned until Monday, December 15, 1913, at 12 o'clock noon.

## EXECUTIVE COMMUNICATIONS.

Under clause 2 of Rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1. A letter from the assistant clerk of the Court of Claims, transmitting a certified copy of the findings of fact and conclusions filed in the case of Eli Pettijohn v. The United States (H. Doc. No. 468); to the Committee on Claims and ordered to be printed.

2. A letter from the Secretary of Agriculture, transmitting a statement showing in detail the travel from Washington to points outside of the District of Columbia performed by officers and employees (other than special agents, inspectors, and employees who in the discharge of their regular duties are required to constantly travel) of the Department of Agriculture during the fiscal year 1913 (H. Doc. No. 469); to the Committee on Expenditures in the Department of Agriculture and ordered to be printed.

## REPORTS OF COMMITTEES ON PUBLIC PILLS AND RESOLUTIONS.

Under clause 2 of Rule XIII,

Mr. HAY, from the Committee on Military Affairs, to which was referred the bill (H. R. 5304) to increase the efficiency of the aviation service of the Army, and for other purposes, reported the same with amendment, accompanied by a report (No. 132), which said bill and report were referred to the Committee of the Whole House on the state of the Union.

# CHANGE OF REFERENCE.

Under clause 2 of Rule XXII, the Committee on Pensions was discharged from the consideration of the bill (H. R. 10375) granting a pension to Melissa M. Drake, and the same was referred to the Committee on Invalid Pensions.

## PUBLIC BILLS, RESOLUTIONS, AND MEMORIALS.

Under clause 3 of Rule XXII, bills, resolutions, and memorials were introduced and severally referred as follows:

By Mr. HUMPHREY of Washington: A bill (H. R. 10392) making an appropriation for the construction of a dry dock at the Puget Sound Navy Yard; to the Committee on Naval Affairs.

By Mr. ADAIR: A bill (H. R. 10393) to establish agricultural-extension departments in connection with agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto; to the Committee on Agriculture.

By Mr. FERRIS: A bill (H. R. 10394) forfeiting certain rights of way heretofore granted across Indian lands in Oklahoma for noncompliance with the terms of their grant; to the Committee on Indian Affairs,

By Mr. REILLY of Connecticut: A bill (H. R. 10395) to amend section 4414 of the Revised Statutes of the United States relating to the appointment of local and assistant inspectors of steam vessels; to the Committee on Interstate and Foreign Commerce.

By Mr. EDWARDS: A bill (H. R. 10396) for refunding the

cotton tax; to the Committee on War Claims

By Mr. O'HAIR: A bill (H. R. 10397) to determine the cause and cure of hog cholera throughout the United States by scientific experiments, and to provide for the diffusion of all scientific knowledge gained as a result of such experiments, and making an appropriation therefor; to the Committee on Agriculture.

By Mr. GREENE of Massachusetts: A bill (H. R. 10398) making provision for the further improvement of Pollock Rip Channel, Nantucket Sound, Mass.; to the Committee on Rivers

By Mr. PALMER: A bill (H. R. 10399) for the purchase of a site and the erection thereon of a public building at Lehigh-

ton, Pa.; to the Committee on Public Buildings and Grounds. By Mr. O'SHAUNESSY: A bill (H. R. 10400) to repair, remodel, and modernize the public building at Providence, R. I., known as the old post-office building; to the Committee on Public Buildings and Grounds.

By Mr. KAHN: A bill (H. R. 10401) to transfer the control and jurisdiction of the Pacific Branch of the United States military prison, located on Alcatraz Island, Bay of San Francisco, Cal., from the War Department to the Department of Labor; to the Committee on Military Affairs.

By Mr. HOLLAND: A bill (H. R. 10402) to provide for an examination and survey of Pagan River, Va., with a view to increasing the depth of said river to 12 feet and the widening of the channel to 100 feet; to the Committee on Rivers and Harbors.

By Mr. DONOHOE: A bill (H. R. 10403) providing for the adjustment and payment of the accounts of letter carriers aris-

ing under the eight-hour law; to the Committee on Claims. By Mr. WOODRUFF: A bill (H. R. 10404) for the establishment of a bureau of postal highways and the extension of Federal aid in the construction and maintenance of good roads in the several States and Territories and the civil subdivisions

thereof; to the Committee on Roads.

By Mr. MERRITT: A bill (H. R. 10405) to promote the erecby Mr. MERKITT: A bill (H. K. 10405) to promote the erec-tion of a memorial in conjunction with the celebration of the centenary of the Battle of Plattsburg during the year 1914 in commemoration of the one hundredth anniversary of Mac-donough's victory in the naval battle fought in the War of 1812—the last naval engagement between English-speaking peoples; to the Committee on Appropriations.

By Mr. NEELEY of Kansas: A bill (H. R. 10406) in relation to the fees and mileage of United States marshals; to the Com-

mittee on the Judiciary.

By Mr. PARK: A bill (H. R. 10486) making an appropriation for the improvement of Flint River, Ga.; to the Committee on Rivers and Harbors.

By Mr. FORDNEY: Resolution (H. Res. 346) to procure portraits of Speaker Champ Clark and former Speaker Joseph G. Cannon; to the Committee on Accounts.

By Mr. KINKEAD of New Jersey: Joint resolution (H. J. Res. 169) to adopt a national flower for the United States of America; to the Committee on the Library.

# PRIVATE BILLS AND RESOLUTIONS.

Under clause 1 of Rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. ADAIR: A bill (H. R. 10407) granting an increase of pension to James B. Evans; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10408) granting an increase of pension to Thomas F. Dotson; to the Committee on Invalid Pensions.

By Mr. ALLEN: A bill (H. R. 10409) granting a pension to Charles Keifel; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10410) granting an increase of pension to Cecilia Cochran; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10411) granting an increase of pension to Martin Pinney; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10412) granting an increase of pension to Caroline Apfel; to the Committee on Invalid Pensions.

By Mr. ANDERSON: A bill (H. R. 10413) granting an increase of pension to Ann M. Austin; to the Committee on Invalid Pensions.

By Mr. ANTHONY: A bill (H. R. 10414) granting a pension to Ada J. Bevell; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10415) granting an increase of pension to John M. Miller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10416) for the relief of Mrs. James W.

Morgan; to the Committee on Claims.

By Mr. BARTHOLDT: A bill (H. R. 10417) for the relief of Gertrude Becherer; to the Committee on Claims.

Also, a bill (H. R. 10418) for the relief of Mrs. M. J. Smith,

Harvey W. Smith, and Mrs. J. H. Root; to the Committee on War Claims.

By Mr. BRITTEN: A bill (H. R. 10419) granting an increase of pension to Mary E. Meehan; to the Committee on Invalid

By Mr. BROWNING: A bill (H. R. 10420) granting an increase of pension to George Smith; to the Committee on Invalid

By Mr. CAMPBELL: A bill (H. R. 10421) granting an increase of pension to Isaac N. Sharp; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10422) granting an increase of pension to Daniel Hankins; to the Committee on Invalid Pensions.

By Mr. CANTRILL: A bill (H. R. 10423) granting a pension to William L. Laws; to the Committee on Pensions.

By Mr. CARY: A bill (H. R. 10424) to substitute the name of Henry W. Albee for the name of Henry W. Olbee on the records in the War Department; to the Committee on Military Affairs.

Also, a bill (H. R. 10425) for the relief of the heirs of Stephen Casey, deceased; to the Committee on Claims.

By Mr. CASEY: A bill (H. R. 10426) granting a pension to Rebecca Eldridge; to the Committee on Pensions.

Also, a bill (H. R. 10427) granting a pension to Catherine T. Keating; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10428) granting a pension to Augusta M. Robins; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10429) granting a pension to Charles J. German; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10430) granting a pension to Julia Groff; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10431) granting a pension to Isabelle Dodson; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10432) granting an increase of pension to Peter Banks; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10433) granting a pension to William Purvis; to the Committee on Pensions.

By Mr. CLAYPOOL: A bill (H. R. 10434) granting an increase of pension to William B. Haynes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10435) granting an increase of pension to Elizabeth Brown; to the Committee on Invalid Pensions. By Mr. CONNOLLY of Iowa: A bill (H. R. 10436) granting a

pension to Susie B. Kellogg; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10437) authorizing and directing the payment of the claim of Edwin C. Foster; to the Committee on War Claims

By Mr. COPLEY: A bill (H. R. 10438) granting a pension to Julia and Katherine Sherwood; to the Committee on Pensions. Also, a bill (H. R. 10439) granting an increase of pension to

Grove E. Jarvis; to the Committee on Invalid Pensions. By Mr. DALE: A bill (H. R. 10440) granting an increase of pension to Adolph Weil; to the Committee on Pensions.

By Mr. DANFORTH: A bill (H. R. 10441) granting an increase of pension to Jason L. Pettit; to the Committee on

Invalid Pensions. By Mr. EDWARDS: A bill (H. R. 10442) for the relief of

F. G. Hodges; to the Committee on War Claims.
Also, a bill (H. R. 10443) for the relief of the heirs of As-

bury Hodges, deceased; to the Committee on War Claims.

Also, a bill (H. R. 10444) granting a pension to M. B. Cavanaugh; to the Committee on Pensions.

Also, a bill (H. R. 10445) granting a pension to Catherine Werner; to the Committee on Pensions.

Also, a bill (H. R. 10446) granting a pension to Griffin E. Beach; to the Committee on Pensions.

Also, a bill (H. R. 10447) granting an increase of pension to James C. Wildes; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10448) granting an increase of pension to Sallie H. Murphy; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10449) granting an increase of pension to George Bath; to the Committee on Pensions.

By Mr. ESCH: A bill (H. R. 10450) granting an increase of sension to Leander Chapman; to the Committee on Invalid

By Mr. FIELDS: A bill (H. R. 10451) granting a pension to David Fultz; to the Committee on Pensions.

Also, a bill (H. R. 10452) granting an increase of pension to Louis Lehman; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10453) granting a pension to Richard Martin; to the Committee on Invalid Pensions.

By Mr. FOSTER: A bill (H. R. 10454) granting a pension to

Simeon E. Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10455) granting a pension to Mary
O'Brien; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10456) granting an increase of pension to J. H. Jones; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10457) to remove the charge of desertion from the record of W. B. Chamness; to the Committee on Mili-

tary Affairs.

By Mr. FRENCH: A bill (H. R. 10458) granting relief to Robert J. Shields; to the Committee on Claims.

By Mr. GREEN of Iowa: A bill (H. R. 10459) granting an in-

crease of pension to George R. Frazier; to the Committee on Invalid Pensions.

By Mr. HOLLAND: A bill (H. R. 10460) for the relief of Mary Cornick; to the Committee on Claims.

Also, a bill (H. R. 10461) for the relief of Ida Banks; to the Committee on Claims.

By Mr. HULL: A bill (H. R. 10462) granting a pension to Jane Smith; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10463) granting a pension to Rhoda J.

Hufhines; to the Committee on Invalid Pensions. Also, a bill (H. R. 10464) granting a pension to Margie E.

Cardwell; to the Committee on Invalid Pensions. Also, a bill (H. R. 10465) granting an increase of pension to

Martha J. McDuffy; to the Committee on Invalid Pensions. Also, a bill (H. R. 10466) for the relief of George A. Vandever; to the Committee on Military Affairs.

Also, a bill (H. R. 10467) for the relief of M. J. Julian; to the Committee on Claims.

Also, a bill (H. R. 10468) for the relief of the legal representatives of A. D. Boulton; to the Committee on War Claims.

Also, a bill (H. R. 10469) for the relief of heirs of Robert

Wix, deceased; to the Committee on War Claims.

Also, a bill (H. R. 10470) for the relief of J. J. Price; to the Committee on War Claims.

Also, a bill (H. R. 10471) for the relief of Ramsey Dough-

erty; to the Committee on Military Affairs.

Also, a bill (H. R. 10472) for the relief of the estate of

Thomas Stacker; to the Committee on War Claims.

By Mr. HUMPHREYS of Mississippi: A bill (H. R. 10473) for the relief of heirs of Duncan C. McLeod, deceased; to the Committee on War Claims.

By Mr. IGOE: A bill (H. R. 10474) for the relief of the estate of John Barry, deceased; to the Committee on War Claims.

Also, a bill (H. R. 10475) for the relief of Eugene A. Freund and Alfred F. Roemmich; to the Committee on Claims.

By Mr. KAHN: A bill (H. R. 10476) granting a pension to

William Infield; to the Committee on Invalid Pensions.

By Mr. KEATING: A bill (H. R. 10477) granting an increase of pension to John W. Fuller; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10478) granting an honorable discharge to

Duncan McCoy; to the Committee on Military Affairs. By Mr. KIESS of Pennsylvania: A bill (H. R. 10479) granting a pension to Martin V. Stanton; to the Committee on Invalid Pensions.

By Mr. KINKEAD of New Jersey: A bill (H. R. 10480) granting a pension to Violet Burd Grubb; to the Committee on Invalid Pensions.

By Mr. KREIDER: A bill (H. R. 10481) granting an increase of pension to Emma S. Kipp; to the Committee on Invalid Pensions.

By Mr. LANGLEY: A bill (H. R. 10482) granting an increase of pension to Lucinda Layne; to the Committee on Invalid Pensions.

By Mr. NEELEY of Kansas: A bill (H. R. 10483) granting pension to Samantha Taylor; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10484) granting a pension to Mary Jane Henry; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10485) granting an increase of pension to Lisander Teater; to the Committee on Invalid Pensions.

By Mr. PATTON of Pennsylvania: A bill (H. R. 10487) granting an increase of pension to William Coulter; to the Committee on Invalid Pensions.

By Mr. REILLY of Connecticut: A bill (H. R. 10488) granting an increase of pension to Catherine Molloy; to the Committee on Invalid Pensions.

By Mr. ROUSE: A bill (H. R. 10480) granting an increase of pension to Michael Oberle; to the Committee on Invalid Pensions.

By Mr. RUCKER: A bill (H. R. 10490) granting an increase of pension to John Harl; to the Committee on Invalid Pensions. Also, a bill (H. R. 10491) granting an increase of pension to Hannah E. Seamans; to the Committee on Invalid Pensions.

Also, a bill (H. R. 10492) granting an increase of pension to Charles Chaney; to the Committee on Invalid Pensions.

By Mr. RUSSELL: A bill (H. R. 10493) granting a pension to Maria A. Owens; to the Committee on Invalid Pensions. Also, a bill (H. R. 10494) granting an increase of pension to

Daniel McLaughlin; to the Committee on Invalid Pensions. By Mr. SAUNDERS: A bill (H. R. 10495) granting a pension

to John L. Taylor; to the Committee on Pensions. By Mr. SELDOMRIDGE; A bill (H. R. 10496) granting a pension to Ella Nickerson; to the Committee on Pensions.

By Mr. SELLS: A bill (H. R. 10497) granting an increase of

pension to William Alexander; to the Committee on Invalid Pensions.

By Mr. SLAYDEN: A bill (H. R. 10498) for the relief of Julius E. Mugge; to the Committee on Claims.

By Mr. J. M. C. SMITH: A bill (H. R. 10499) for the relief of Cyrus Carpenter; to the Committee on Military Affairs.

By Mr. TAYLOR of Arkansas: A bill (H. R. 10500) granting an increase of pension to George W. Allen; to the Committee on Invalid Pensions.

tee on Invalid Pensions.

Also, a bill (H. R. 10501) granting a pension to Thomas S. Garen; to the Committee on Invalid Pensions.

By Mr. TRIBBLE: A bill (H. R. 10502) for the relief of Rosa M. Wyatt; to the Committee on War Claims.

By Mr. UNDERWOOD: A bill (H. R. 10503) granting a pension to Mrs. Chester B. Collins; to the Committee on Pen-

By Mr. VARE: A bill (H. R. 10504) for the relief of Richard J. Smith; to the Committee on Claims.

## PETITIONS, ETC.

Under clause 1 of Rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

By the SPEAKER (by request): Petition of masters and officers of the ships of the Old Dominion Steamship Co., protesting against the passage of the seamen's bill in its present form; to the Committee on the Merchant Marine and Fisheries.

Also (by request), petitions of the officers in the employ of the New England Steamship Co. and officers employed in the service of the Ocean Steamship Co. of Savannah, and Baltimore Chamber of Commerce, of Baltimore, Md., protesting against the passage of the seamen's bill in its present form; to the Committee on the Merchant Marine and Fisheries.

Also (by request), petition of the Aero Club of America, of New York, N. Y., favoring the passage of bill (H. R. 3393) to authorize the transmission of mail by aeroplane; to the Committee on the Post Office and Post Roads.

By Mr. BARNHART: Petition of merchants of the thirteenth congressional district of Indiana, favoring the passage of legislation compelling concerns selling goods direct to the consumer by mail to contribute their portion of the fund; for the development of the local community, county, and State; to the Committee on Ways and Means.

By Mr. BARTHOLDT: Petition of the Harlem Place Church, St. Louis, Mo., and the Congregational Church of Old Orchard, Mo., favoring an amendment to the Constitution of the United States to prohibit the sale and manufacture of liquor; to the Committee on the Judiciary.

Also, petition of the Twentieth Century Club of Detroit. Mich., and the Association of Credit Men of Kansas City, Mo., favoring the passage of the Newlands-Bartholdt bill, to prevent floods on the Mississippi River; to the Committee on Rivers and Harbors

Also, petition of R. Dohmer, of St. Louis, Mo., favoring the passage of bill (H. R. 1672) to pension Indian-war veterans; to the Committee on Pensions.

By Mr. BURKE of Wisconsin: Papers to accompany bill (H. R. 880) to remove the charge of desertion now against

John L. Kelley; to the Committee on Military Affairs.

Also, papers to accompany bill (H. R. 3440) to remove the charge of desertion now against Peter Gumm; to the Committee

on Military Affairs.

Also, memorial of the Shipmasters' Association of the Great Lakes, protesting against certain provisions of the seamen's bill as they apply to the Great Lakes steamers; to the Committee

on the Merchant Marine and Fisheries.

By Mr. DALE: Petition of E. C. Stearns & Co., of Syracuse, N. Y., favoring the passage of the bill for 1-cent letter postage;

to the Committee on the Post Office and Post Roads.

By Mr. DANFORTH: Petition of the Rochester Credit Men's Association, of Rochester, N. Y., relative to legislation in the matter of flood prevention and control; to the Committee on Rivers and Harbors.

By Mr. DYER: Petition of the Benoist Aircraft Co., of St. Louis, Mo., favoring the passage of bill (H. R. 3393) relative to carrying of mail by aeroplane; to the Committee on the Post

Office and Post Roads.

Also, memorial of the Kansas City Association of Credit Men and the Twentieth Century Club, of Detroit, Mich., favoring legislation for flood control of the Mississippi Valley; to the Committee on Rivers and Harbors,

Also, petitions of sundry business people of St. Louis, Mo., protesting against the passage of the seamen's bill in its present form; to the Committee on the Merchant Marine and

Also, petition of the Twentieth Century Club, of Detroit, Mich., protesting against the use of the Hetch Hetchy Valley for a water supply for San Francisco, Cal.; to the Committee on the Public Lands.

Also, petition of Building Trades' Council of St. Louis, Mo., and vicinity, favoring an investigation by Congress of the rates charged by the Keokuk Light & Power Co.; to the Committee on the Judiciary.

Also, petition of Journeymen Plasterers' International Association, and Operative Plasterers and Lathers' Association, Local Union No. 96, favoring the passage of a bill to regulate plastering in the District of Columbia; to the Committee on the District of Columbia.

By Mr. HAMLIN: Papers to accompany bill (H. R. 9379) to pension Minnie S. Rector; to the Committee on Invalid Pen-

By Mr. HOBSON: Petition of F. S. Magruder and 250 others, of New Jersey, asking a hearing on the antiliquor amendment to the Constitution; to the Committee on the Judiciary.

By Mr. KEATING: Petition of citizens of Denver, Colo., favoring the passage of a bill granting pensions to the members of the United States Military Telegraph Corps for services rendered in the Civil War; to the Committee on Invalid Pensions.

By Mr. MacDONALD: Petition of the Detroit Hotel Associa-tion, favoring amendment of Senate bill 136 in the portion applicable to the traffic on the Great Lakes; to the Committee on the Merchant Marine and Fisheries.

Also, petition of the Trade and Labor Council of Houghton, Mich., and the Miners' Union, Ishpeming, Mich., favoring the passage of House resolution 313 for a Federal investigation of the strikes in the copper country; to the Committee on Labor.

By Mr. McCOY: Petition of the Board of Trade of Newark,

N. J., favoring the passage of the Humphreys bill for prevention of floods on the Mississippi River; to the Committee on Rivers and Harbors.

By Mr. PALMER: Petition of the Erie Chamber of Commerce, of Erie, Pa., protesting against the passage of the seamen's bill in its present form; to the Committee on the Merchant Marine and Fisheries.

By Mr. SCULLY: Petitions of citizens of the third congres sional district of the State of New Jersey, protesting against the passage of the seamen's bill in its present form; to the Committee on the Merchant Marine and Fisheries.

Also, petitions of citizens of Long Branch and the Highlands, N. J., protesting against the passsage of the seamen's bill in its present form; to the Committee on Merchant Marine and Fisheries.

Also, petition of the Board of Trade of Newark, N. J., favoring the passage of a bill to prevent floods on the Mississippi River; to the Committee on Rivers and Harbors.

By Mr. SELDOMRIDGE: Petitions of sundry business firms of Denver, Littleton, and Pueblo, Colo., favoring the passage of the Bartlett bill for 1-cent letter postage; to the Committee on the Post Office and Post Roads.

By Mr. TUTTLE: Petition of board of commissioners of Long Branch, N. J., protesting against the passage of Senate bill 136, to increase the equipment and crews on all boats; to the Committee on the Merchant Marine and Fisheries.

Also, petition of Elizabeth (N. J.) Board of Trade, favoring the passage of legislation for the construction of the New Jersey ship canal; to the Committee on Rivers and Harbors.

Also, petition of the Woman's Christian Temperance Union of Morris County, N. J., favoring the passage of the Kenyon redlight bill; to the Committee on the District of Columbia.

Also, petition of the New Jersey Society. Daughters of the Revolution, favoring the passage of legislation for the publication of the records of the American Revolution; to the Committee on the Library.

Also, petition of Board of Trade of Passaic, N. J., favoring the appointment of a commission to report a plan for national aid vocational education; to the Committee on Agriculture.
Also, petition of the Wednesday Morning Club, of Crawford,

N. J., protesting against the legislation granting San Francisco the use of the waters of the Hetch Hetchy Valley; to the Committee on the Public Lands.

By Mr. VARE: Petition of citizens of Philadelphia, Pa., favoring the passage of legislation to pension telegraph operators who served during the Civil War; to the Committee on Invalid Pen-

By Mr. WOODRUFF: Petition of Bay City (Mich.) Trades Council, protesting against threatened deportation of citizens of the upper peninsula of Michigan in connection with the strikes in the copper mines; to the Committee on Labor.

## SENATE.

# SATURDAY, December 13, 1913.

The Senate met at 10 o'clock a.m.
Prayer by the Chaplain, Rev. Forrest J. Prettyman, D. D.
Mr. SMOOT. Mr. President, I suggest the absence of a quorum.

The VICE PRESIDENT. The Secretary will call the roll. The Secretary called the roll, and the following Senators answered to their names:

Smith, S. C.

Smoot Sterling

Stone Swanson Thomas Thompson

Thornton Townsend Vardaman

Walsh

Weeks Works

Bacon Jackson Owen Page Perkins Pomerene Ransdell Reed Robinson Brady Brandegee Bristow James Johnson Jones Jones
Kenyon
Kern

McCumber
Martin, Va.
Martine, N. J.
Wyers Bryan Burleigh Burton Clapp Clark, Wyo. Crawford Cummins Root Root Saulsbury Shafroth Sheppard Sherman Shields Shively Dillingham Gallinger Myers Norris Gronna O'Gorman Overman Hughes Smith, Ga.

Mr. SHEPPARD. I wish to announce the necessary absence of my colleague [Mr. CULBERSON]. He is paired with the Senator from Delaware [Mr. DU PONT]. This announcement may stand for the day.

Mr. WEEKS. I wish to announce that my colleague [Mr. Lodge] is absent on account of illness and to have this statement stand for the day

The VICE PRESIDENT. Sixty-one Senators have swered to the roll call. There is a quorum present. retary will read the Journal of the proceedings of the preced-

The Journal of yesterday's proceedings was read and approved. TRAVEL OF EMPLOYEES OF DEPARTMENT OF AGRICULTURE (H. DOC. NO. 469).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Secretary of Agriculture, transmitting, pursuant to law, a statement showing in detail the travel from Washington to points outside the District of Columbia performed by officers and employees (other than special agents, inspectors, and employees in the discharge of their regular duties which require constant travel) of the Department of Agriculture during the fiscal year 1913. The communication and accompanying paper need not be printed, but will be referred to the Committee on Agriculture and Forestry.

LOUISVILLE & NASHVILLE RAILROAD (S. DOC. NO. 311).

The VICE PRESIDENT. The Chair lays before the Senate a communication from the Interstate Commerce Commission, transmitting, in response to a resolution of August 6, 1913, copies of telegrams recently exchanged between the Interstate Commerce Commission and the general counsel of the Louisville & Nashville Railroad with reference to certain features of the investigation connected with the resolution. The communication and accompanying papers will be printed and will lie on the table for the present, as the Chair does not know to what committee the author of the resolution desires it to be referred.

#### MESSAGE FROM THE HOUSE.

A message from the House of Representatives, by J. C. South, its Chief Clerk, announced that the House had passed the following bills and joint resolution, in which it requested the concurrence of the Senate:

H. R. 888. An act for the relief of H. C. Hodges, H. A. Powell,

John Smith, and Joseph Ridley;

H. R. 3638. An act providing for the issuance of patent to Joe Joubert:

H. R. 10138. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War and certain widows and dependent children of soldiers and sailors of said

H. J. Res. 165. Joint resolution for recognition of the service of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard. ENROLLED JOINT RESOLUTION SIGNED.

The message also announced that the Speaker of the House had signed the enrolled joint resolution (H. J. Res. 164) authorizing the Secretary of the Senate and the Clerk of the House to pay the officers and employees of the Senate and House, including the Capitol police, their respective salaries for the month of December, 1913, on the 20th day of said month, and it was there-

upon signed by the Vice President.

#### PETITIONS AND MEMORIALS.

Mr. ROOT presented a memorial signed by the president of the American Academy of Arts and Sciences, remonstrating against the use of the word "Letters" by a society called the American Academy of Arts and Letters, which was referred to the Committee on the Library.

Mr. WEEKS presented a petition of the congregation of the Grace Methodist Episcopal Church of Springfield, Mass., praying for the passage of the so-called antipolygamy bill, which was re-

ferred to the Committee on the Judiciary.

He also presented a memorial of the New England Shoe Wholesalers' Association, remonstrating against the enactment of any pure shoe or pure goods law, which was referred to the Committee on Manufactures.

Mr. SMITH of Michigan presented resolutions adopted by the Michigan State Grange, Patrons of Husbandry, at its annual meeting at Flint, Mich., favoring the adoption of an amendment to the Constitution granting the right of suffrage to women, which were ordered to lie on the table.

## BANKING AND CURRENCY.

Mr. McLEAN. I have received two brief letters from prominent bankers of Hartford, Conn., which I send to the desk and ask to have read. The first paragraph of the letter from the Connecticut Trust & Safe Deposit Co. is personal, and I ask that it may be omitted in the reading.

The VICE PRESIDENT. The Secretary will read as re-

quested.

The Secretary read the letters, as follows:

Mechanics' Savings Bank,
Hartford, Conn., December 11, 1918.

Hon. GEORGE P. McLean, Washington, D. C.

Washington, D. C.

Dean Senator: I was greatly pleased to read in yesterday's Courant your speech in the Senate Tuesday night on the currency bill. If we must have some change in the currency question—and I do not see the necessity as others—I have not from the time of the first suggestion of regional banks thought well of that system. While I am not wholly wedded to a central bank as time goes on, if we must have a change, I much prefer the latter. I well understand the make-up of Congress, and have sometimes been surprised that the minor interests have been able to check mischievous legislation so long. A settlement of the currency question might—and I believe will—help business, which is in bad shape throughout the entire United States.

Yours, truly,
W. W. Jacobs, Treasurer,

CONNECTICUT TRUST & SAFE DEPOSIT CO.

CONNECTICUT TRUST & SAFE DEPOSIT Co., Hartford, Conn., December 10, 1913.

Hon. George P. McLean,
United States Senate, Washington, D. C.

MY DEAR SENATOR: \* \* The central-bank idea is the only ideal and practical one. It has been tested by all the great nations of financial importance in the world and found to be the true safeguard and remedy and reliance against financial storms, depressions, and

crises. I knew that so thinks Hill (E. J.), who was really a very capable man on financial questions; so did the Connecticut Bankers' Association, when they unanimously approved the Aldrich bill; and so does yours, truly.

I have been intending to thank you for the papers which you have forwarded as to hearings before the Senate committee on this question, and very much indeed for the copies of the currency bills presented by Mr. Owen and Mr. HITCHOCK. As to myself, I believe that the Owen bill or the Glass bill, if passed, will create a financial disturbance. And I doubt if there will not be a stampede of national institutions to take refuge under State charters. Our own commissioners, one of whom, as you know, is a Democrat and a Wilson man, told me that in this small State they had aiready had twenty-odd applications for forms for State charters from national banks, members of whom expressed the intention of surrendering their national charters if either of these bills became a law.

I won't annoy you further, because I know you are busy; but I want to thank you, and in addition say I know I express the thanks of the bankers of Hartford, without exception, for your courageous stand for sound currency and sound banking methods, and I am,

Yours, respectfully,

MEIGS H. WHAPLES.

## BILLS INTRODUCED.

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. ROOT:

A bill (S. 3672) for the cession to the State of New York, in exchange for the lands required for the project approved by Congress March 4, 1913, of certain lands in the bed of the Har-lem Ship Canal, heretofore ceded to the United States, free of cost, and now to be abandoned for the more direct channel; to the Committee on Commerce.

By Mr. SWANSON:

A bill (S. 3673) to appoint Jere Maupin a passed assistant paymaster on the retired list of the Navy; to the Committee on Naval Affairs.

By Mr. WALSH:

A bill (S. 3674) validating certain homestead entries (with accompanying papers); to the Committee on Public Lands.

A bill (S. 3675) for the relief of Benjamin Musselman (with

accompanying papers); to the Committee on Claims.

By Mr. JACKSON:

A bill (S. 3676) granting an increase of pension to Junius Thomas Turner; to the Committee on Pensions.

By Mr. WORKS:

A bill (S. 3677) granting to Allan C. Rush the right of way and other privileges for the construction of a suspension bridge across the waters of San Francisco Bay, Cal.; to the Committee on Commerce.

By Mr. CUMMINS: A bill (8. 3678) granting a pension to Elizabeth Wright (with accompanying papers); to the Committee on Pensions.

By Mr. SIMMONS:

A bill (S. 3679) granting a pension to Mollie E. Strickland; to the Committee on Pensions.

By Mr. KENYON:

A bill (S. 3680) granting an increase of pension to Henry J. Groves; to the Committee on Pensions.

By Mr. BURLEIGH:

A bill (S. 3681) granting a pension to Sibae S. Andrews; to the Committee on Pensions.

By Mr. WEEKS:
A bill (S. 3682) to authorize the purchase of certain lands in the District of Alaska; to the Committee on Territories.

By Mr. McLEAN:

A bill (S. 3683) granting an increase of pension to Mary H. Bacon (with accompanying papers); to the Committee on Pensions

By Mr. BRADLEY:

A bill (S. 3684) granting an increase of pension to George M. E. Barnes (with accompanying papers); to the Committee on Pensions.

By Mr. VARDAMAN:

A bill (S. 3685) for the relief of the heirs of Duncan C. McLeod, deceased; to the Committee on Claims.

By Mr. SMITH of Michigan: A bill (S. 3686) to correct the military record of L. K. Osterhout: to the Committee on Military Affairs.

By Mr. O'GORMAN:

A bill (S. 3687) granting an increase of pension to Weston P. Munroe; to the Committee on Pensions.

By Mr. PAGE:
A bill (S. 3688) granting an increase of pension to Henry T.

Peck (with accompanying papers); to the Committee on Pen-

PARITY OF EXCHANGE BETWEEN GOLD AND SILVER USING COUNTRIES.

Mr. THOMAS. I introduce a joint resolution and ask that it be read at length.

The joint resolution (S. J. Res. 89) for the appointment of an international commission to fix a parity of exchange between gold and silver using countries was read the first time by its title and the second time at length, as follows:

Whereas the purpose of H. R. 7837, now under consideration in the Senate, is to establish a permanent and satisfactory system of banking and currency equal at all times to the demands of the Nation's economic and commercial requirements; and Whereas a system of banking and currency to be thoroughly efficient must be adaptable as well to the needs of foreign and domestic trade;

must be adaptable as well to the needs of foreign and domestic trade; and Whereas the recent growth of our foreign trade justifies the assurance of its rapid and continuous expansion; and Whereas the markets of the world include China, Japan. India, the Straits Settlements, Mexico, and South America, which countries embrace nearly two-thirds of the human race and whose industrial and commercial affairs are transacted upon a silver basis, notwith-standing their nominal adoption of a gold standard; and Whereas changes in the gold price of silver bullion causes constant and sometimes violent fluctuation in exchanges between gold and silver using countries, serious disturbing all current commercial transactions between them; and Whereas every fall in these exchanges operates as a bounty upon exports from silver-using countries, and a burden upon imports to them from gold-using countries, thereby converting trade relations between them into a mere gamble in silver; and Whereas these conditions place the United States and other gold-standard countries at a great disadvantage in competition in agriculture and manufacturing industries, and have for years stimulated the transfer of such industries from gold-using countries to silver-using countries, where the price of wages and raw materials have undergone no change during the past half century; and Whereas the efforts of Great Britain to overcome these evils in India by placing that great dependency upon a "gold-exchange basis" and Caused a constantly increasing drainage of gold from England to India, where it disappears from the channels of trade and exchange; and Whereas in consequence of such failure Great Britain has created a Whereas in consequence of such failure Great Britain has created a

whereas in consequence of such failure Great Britain has created a royal commission, now sitting at Whitehall, to "inquire into the measures taken by the Indian Government to maintain the exchange value of the rupee in pursuance of or supplementary to the recommendations of the Indian currency committee of 1898, and whether the existing practice in these matters is conducive to the interests of India," thus indicating the gravity of trade and currency conditions, caused by the dislocation of exchanges and evidenced by the partial destruction of India's foreign trade and her absorption of gold; and

partial destruction of India's foreign trade and evidenced by the gold; and
Whereas the problems submitted to said royal commission for solution are of common international concern, affecting the trade and menacing the gold reserves of all nations; and
Whereas no national system of banking and currency, however sound, can fully save the people while international trade is subject to constant and violent fluctuations of international exchange: Therefore be it

be it

Resolved, etc., That the President be empowered to suggest to the Governments of Great Britain, Germany, and France the appointment of delegates by them and by the United States to an international conference to consider and recommend to their respective Governments a common plan and method by which a parity or fixity of exchange may be established between them and the silver-using nations of the world.

Resolved further, That when and as soon as any two of said Governments shall favorably respond, the President is hereby authorized to appoint delegates to such conference, not to exceed five in number, and who shall be empowered to represent the United States thereat, and who shall report to the President the result of their deliberations, with such recommendations as they shall deem essential to the accomplishment of the end desired.

Resolved further, That the sum of \$100,000, out of any money not otherwise appropriated, be appropriated to pay the expenses of the delegates so to be appointed by the President to said conference.

Mr. THOMAS. Mr. President, inasmuch as the subject mat-

Mr. THOMAS. Mr. President, inasmuch as the subject matter of the preamble and resolution just read is very intimately related to and connected with the currency bill now before the Senate, I desire to give notice that after the close of the routine business on Tuesday morning I will speak upon the subject covered by the resolution just read.

The VICE PRESIDENT. The joint resolution will lie on the

## OMNIBUS CLAIMS BILL.

Mr. SMOOT submitted an amendment intended to be proposed by him to the omnibus claims bill, which was referred to the Committee on Claims and ordered to be printed.

Mr. BRADLEY submitted an amendment intended to be proposed by him to the omnibus claims bill, which was referred to the Committee on Claims and ordered to be printed.

## AGRICULTURAL EXTENSION WORK.

Mr. JACKSON submitted an amendment intended to be proposed by him to the bill (S. 3091) to provide for cooperative agricultural extension work between the agricultural colleges in the several States receiving the benefits of an act of Congress approved July 2, 1862, and of acts supplementary thereto, and the United States Department of Agriculture, which was ordered to lie on the table and be printed.

## HOUSE BILLS REFERRED.

The following bills were severally read twice by their titles and referred to the Committee on Public Lands:
H. R. 888. An act for the relief of H. C. Hodges, H. A. Powell,

John Smith, and Joseph Ridley; and
H. R. 3638. An act providing for the issuance of patent to Joe Joubert.

H. R. 10138. An act granting pensions and increase of pensions to certain soldiers and sailors of the Civil War, and certain widows and dependent children of soldiers and sailors of said war, was read twice by its title and referred to the Committee on Pensions

H. J. Res. 165. Joint resolution for recognition of the service of the late David Du B. Gaillard, lieutenant colonel, Corps of Engineers, United States Army, as a member of the Isthmian Canal Commission, and for the relief of Mrs. Katherine Davis Gaillard, was read twice by its title and referred to the Committee on Interoceanic Canals.

#### BANKING AND CURRENCY.

The VICE PRESIDENT. Morning business is closed.

Mr. SHAFROTH. I move that the banking bill be taken up for consideration

The VICE PRESIDENT. Is there objection? The Chair

hears none.

The Senate, as in Committee of the Whole, resumed the consideration of the bill (H. R. 7837) to provide for the establishment of Federal reserve banks, for furnishing an elastic currency, affording means of rediscounting commercial paper, and to establish a more effective supervision of banking in the United States, and for other purposes.

Mr. CUMMINS. Mr. President—

Mr. WEEKS. Will the Senator from Iowa yield to me

for a notice?

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Massachusetts?

Mr. CUMMINS. I yield.
Mr. WEEKS. Mr. President, presuming that evening sessions are to be continued indefinitely, I wish to announce that next Tuesday evening, after the convening of the Senate, I shall address the Senate in opposition to the guaranteeing of bank deposits.

Mr. CUMMINS. Mr. President, when the Senate adjourned last evening I had finished an analysis of this bill, so far as its requirement of the investment of a certain portion of the capital of the national banks in the Federal reserve banks is concerned. I had shown that it constituted a mandate upon these banks to take a part of their property, being private property, and invest it in the stock of the reserve banks which is, as will be admitted, private property. I was about to turn to certain decisions of the Supreme Court of the United States in order to see what application has been made of the principle which I invoke, but before I do that I desire to submit certain illustrations, certain instances, which I think will serve to give us clearer idea of what is proposed in this bill.

Not very long ago we became very much interested in readjusting the finances, which had become somewhat disordered, of our sister Republics of Honduras and Nicaragua, and there seemed to be some difficulty in providing a market for their bonds or in helping those countries to find a market for their bonds. Suppose that Congress were to declare that the national banks of the United States should take a portion of their capital and invest it in the bonds of Honduras or of Nicaragua or in the bonds that may be issued by the revolutionists in Mexico or by the established government in Mexico, if there be one. I have heard it said the banks would not suffer, because they could either so invest their money or surrender their charters. I should like to know whether it is believed that the Congress of the United States could require the capital of our national banks to be invested in securities such as I have described; yet our power over the national banks is just the same with respect to investments of that character as to investment in a Federal reserve bank.

I am not saying that necessarily a law of that sort would be tested by the same considerations that a law of the kind now before us would meet when submitted to a judicial tribunal.

I am only saying that the answer that the banks can either quit or make the investment required by the statute is not a good answer to the suggestion I have made. I do not believe there is a lawyer here, or a layman either, who would insist that it is within our power to compel our national banks to take

the bonds of any such government as I have named.

Moreover, suppose that, instead of requiring the investment in the Federal reserve banks, we were to say that a certain proportion of the capital of the banks should be invested in the public utility corporations of the communities in which the banks are located, in street railways bonds, water company bonds, electric-light bonds, or in private enterprises in the local-ity of their banks, in order, as it might be alleged, to preserve the prosperity and the stability of business in the United States, after all, it being simply a requirement that the private property of one corporation be exchanged for the private property of an-

other corporation, both being public in one sense and both being private in another; or suppose that in the District of Columbia we had two street railway corporations. I think no one will question that our power over street railway corporations in the District is as comprehensive, as fundamental, as our power over national banks. We have a power over them not only because we created them, but because they are engaged in a business that subjects them and their property to public regulation and We have the power of amendment, of alteration, and of repeal. Suppose one of these street railway companies were on the point of bankruptcy and that it were necessary, in order that the public might be served as it has been served heretofore, that this weak and failing corporation be strengthened, do you believe that Congress has the constitutional power to say that one of the street railway companies shall take a million dollars of its capital and invest it in the stock of the weaker street railway company; and if not, why not? Why can not Congress compel one of these public utility corporations to take its capital and invest it in the enterprise of its sister street railway company? Do you think that it would be a sufficient answer if the railway company whose property was sought thus to be taken would say, "We do not intend to do this; we will not do it; therefore, dissolution must follow"? I can not conceive that such a legal principle can be maintained in the Senate of the United States

Further, I will assume that no one will question that the power of a sovereignty over a railway corporation which it has created is less than the power of the United States over the national banks. The power is of the same sort; it emanates from the same source; it is exercised for the same reason. Suppose that the State of Pennsylvania had incorporated both the Pennsylvania Railroad Co. and the Baltimore & Ohio Railroad Co., do you believe that if the Legislature of Pennsylvania felt that it would promote the public welfare it could say that the Pennsylvania Railroad Co. shall take one-tenth, one-twentieth, one-half, or any other proportion of its capital and invest it in the stock of the Baltimore & Ohio Railroad Co? If not, why If it can be done in one instance, why can it not be done in the other? Or, to take another illustration: New Jersey has incorporated many great corporations. Among them she has incorporated the United States Steel Corporation, and she has incorporated other companies engaged in the same business. She has reserved with respect to each of these companies the right to alter, amend, or repeal, precisely as we have reserved that right in the national banking act. Suppose that New Jersey felt that the United States Steel Corporation ought to lend some aid to the other corporations of that kind which had also been authorized within the State; suppose it should say that the great steel combination should take \$5,000,000 or \$10,000,000 of its capital and invest that in the capital stock of the Lackawanna or some other steel corporation which had been organized within that State. Is there a lawyer here who will say that the power of New Jersey over these two corporations is less than the power of Congress over the national banks? I fancy no one will assert a proposition of that kind. I instance these things only to show how futile it is for Congress to attempt to take the property of one corporation and transfer it to

I can conceive, of course, a public necessity so great, so imperative, that in the exercise of what is denominated as the police power the property of any person, the property of any corporation, can be taken and so used that the public interest will be promoted; but the Federal Government has no general police power. It has, however, a qualified and limited police power which pertains to the grants that have actually made in the Constitution, and you, my fellow Senators, will have to meet this question if you pass the bill as it is now. be compelled to take the judgment of the Supreme Court of the United States upon this question, Is this amendment to the national banking laws such an amendment as is necessary, as is reasonable, as is requisite to carry out the purposes for which the national banks were organized?

Mr. NORRIS. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I do.

Mr. NORRIS. I realize, of course, the weight of the Senator's argument, but it has occurred to me that the illustrations he has given are not exactly in point. It is at least the theory of this bill, or these bills, I presume, that in requiring the banks to perform certain functions in regard to putting up the capital for the organization of these reserve banks they are being required to do something that will make more effective the banking system in which each one of the banks has a vital interest. The illustrations the Senator has given of requiring one corporation

to put up its money in another corporation, or buy stock in another, it seems to me do not have that particular item of connection with the original corporation.

Mr. CUMMINS. I think the Senator from Nebraska is mistaken in this respect: The power we exercise, if it can be validly exercised, is to promote the public welfare. That is the only way in which we get the right to take part of the capital of a national bank and give it to another institution. It is because it will serve the public good. It might serve the public good to require the exchange of capital in the cases I have suggested quite as much as to require that one bank should give

part of its property to another.

I am using these illustrations, however, for one purpose, and one only. I have heard it said. not only in the Senate Chamber but elsewhere, that this provision is valid, because if the national banks affected do not desire to surrender a part of their capital under the terms of this law they can cease to do business. In that respect the illustrations are exactly parallel, because in each of the other instances I have mentioned the corporations, if they are at liberty to surrender their public obligations, could cease to do business rather than to comply with the mandate of the statute.

Mr. NORRIS. I think that is true; but I believe there can be no doubt that our power of regulation of corporations as to which we have a constitutional right to legislate must necessarily be limited to a regulation that would not be destructive of the property of a corporation or take its property without due process of law, even though we should conceive that it would be for the public good to do it. Mr. CUMMINS. Undoubtedly. Mr. NORRIS. I do not believe that fact is sufficient to per-

mit us to take the property.

Mr. CUMMINS. Undoubtedly.
Mr. NORRIS. I simply wanted to call the attention of the Senator to the fact that the theory here is that this is a regulation that in the end will redound to the benefit of the corporawe say; but we can not say that conclusively.

Mr. NORRIS. I agree with that. Of course we could say

that we believe it would have that result.

Mr. CUMMINS. I am appealing to my Democratic friends not to plunge the financial world of the United States into the confusion and uncertainty that would ensue if the validity of this statute should be called in question, and it remained for a judicial tribunal to say whether it was for the public welfare and necessary for the protection of the banks that a part of their capital should be taken and invested in the stock of another corporation.

I do not say it is certain that the Supreme Court will ultimately decide that this provision is unconstitutional. I say we are putting ourselves in exactly the same attitude as though we were dealing with a railway company and were passing a legislative schedule of freight rates. We can no more do the

one than the other free from judicial review.

Suppose we were to pass a law for a railway company in our jurisdiction declaring that it should carry its freight for 1 cent per hundred pounds. We have the power to pass the law, and if it is a fair regulation of the business it will stand; but if it is unfair and unnecessary and unjust, and if it takes the property of the railway company without just compensation, it takes it without due process of law, and the regulation will fail. I am appealing to my Democratic friends so that they will not confront the business of this country with the hazard and peril presented by the provision under discussion, when it is so easy to accomplish the same purpose without the danger involved in this particular bill.

Mr. BORAH rose.

Mr. CUMMINS. I yield to the Senator from Idaho. Mr. BORAH. Mr. President, without taking issue with the

Senator upon the propositions he has been making, I desire to submit a proposition to him, in order that I may have his views

Suppose we had practically no banking system at this time. Suppose we stood in the place where we did in 1862 and 1863, and were organizing a national banking system. Suppose no charters had been granted, no law providing for bank charters had been passed, would it not be within the power of Congress to say that the charters should have in them a provision with reference to the utilization of funds in the way in which it is sought to utilize them in this bill?

As an original grant, we would have the right to put that provision into the charter, and the individuals could accept the charter or not, as they saw fit. Now, then, if we could do that as an original proposition, have we not the right, under the

reservation of the right to amend and repeal, to say that we will inaugurate this system by requiring them to do this, leaving it optional with them to decline to act under their charters or to accept the terms the Government imposes upon them, for the reason that the Government may grant charters upon such terms as the Government sees fit?

Mr. CUMMINS. Undoubtedly.

Mr. BORAH. And individuals may avail themselves of the corporate rights and become a corporation or not, just as they see fit?

Mr. CUMMINS. Undoubtedly the Senator from Idaho announces a correct principle.

Mr. NELSON. Mr. President, will the Senator yield to me? Mr. CUMMINS. Allow me first to answer the suggestion of

the Senator from Idaho, then I will yield.

Unquestionably, when the law authorizing the organization of national banks was originally passed it could have been provided that their capital should be invested in anything. It could have been provided that it should be invested in lands in Alaska, in coal mines, in gold mines, or in any other security which the Government might have thought it wise to require, These banks, however, have been organized. These people have contributed their capital. It is already in existence. It is already the property of the national banks. It does not follow because that could have been done originally that it can be

If we were authorizing the organization of a railroad company we could say, "You must carry freight for a farthing a pound, and you must carry passengers for half a cent a mile," and if the railway corporation organized and accepted those terms it would be compelled to do so. After the railway corporation has been organized without such a requirement, however, after its capital has been invested, after it has entered upon its business, then we can not say, although it is a legislative act, that the railway freight rate shall be a farthing a pound or the passenger rate shall be half a cent a mile without subjecting ourselves to judicial review, and upon that judicial review the question will be, Is the legislative act a fair and a reasonable one? Does it take property that has been acquired by the railway company and use it without just compensation? Just so with the national banks.

Mr. THOMAS. Mr. President—
The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Colorado?

Mr. CUMMINS. I must yield now to the Senator from Minnesota, who was on his feet a moment ago.

Mr. NELSON. Mr. President, it seems to me the real question is this: While undoubtedly it is true that in the first instance, in creating these national-bank associations, the Government could impose these conditions, because it would be optional then whether persons would take out a charter under such a law or not, here is a case where a national bank has taken out a charter for 20 years or has renewed it for 20 years, under existing law. That charter has run, let us say, for 10 years, and has 10 years more of life. In such a case, can you say to such a corporation, duly incorporated under existing law, without any such condition in the law: "You must cease to live. We will cut you off for the next 10 years unless you go into this new system and subscribe"?

Is not that taking the property of the bank without its consent? Is it not depriving it of a constitutional right without

due process of law?

I submit that question to the Senator.

Mr. CUMMINS. That is just what I am trying to establish. Mr. THOMAS. Mr. President—

Mr. CUMMINS. I yield to the Senator from Colorado.
Mr. THOMAS. I am very much interested in the Senator's argument, because, like all arguments he makes upon these questions of constitutional construction, what he says is worthy of profound consideration. I assume the Senator is familiar with the decision of the Supreme Court in what are known as the Bank-Guaranty cases?

Mr. CUMMINS. I have the case before me.

Mr. THOMAS. I should be very glad to hear the Senator's

views as to that phase of this discussion.

For example, my recollection of those decisions is that it is within the general police or supervisory powers of a State to require State banks to contribute out of their deposits or their property a certain percentage to a common fund for a general guaranty. Now, by parity of reasoning, by analogy of process, why can not the Congress of the United States impose upon national banks the obligation of subscribing out of their resources, upon certain conditions, to a certain fund—for that is practically what it is—which is represented in stock, which in

turn represents a new bank or a new system of banks which it

is the purpose of this bill to create?

Mr. CUMMINS. Mr. President, I shall presently consider the Oklahoma bank guaranty case, but I now remind the Senator from Colorado of this fundamental principle: The Government can take all the property it wants to take by way of taxation. It can destroy all the property it desires to destroy under a police power for the health and morals and safety of the people of the country. It can not take private property in any other way than through the taxing power or through the exercise of the police power for the safety of the morals and health of the people, save through the power of eminent domain; that is, the power to take private property for a public use upon giving just compensation for it. When it exercises the latter author-ity Congress can not determine what the just compensation shall be. That is purely a judicial procedure, and we can only create the procedure by which the just compensation is to be ascertained

Mr. THOMAS. But the Senator would not, I suppose, say that a State requirement that banks shall contribute to a common fund for guaranty purposes would be the taking or the destruction of property. It would be merely the devotion of it to a certain use in connection with the general scheme of bank-

Mr. CUMMINS. If I have time, I shall try to distinguish between the quality and kind of power exercised by the State of Oklahoma and the power we are attempting to exercise here in exchanging the money of the bank for the stock of another corporation; but I am sure the Senator from Colorado will instinctively see the difference between the two kinds of power or authority.

Mr. SHERMAN. Mr. President—
Mr. CUMMINS. I yield to the Senator from Illinois.
Mr. SHERMAN. Before the Senator leaves the point under discussion, I wish to make an inquiry that I think will tend to supplement the already very clear and forceful statement

by which he has fortified his proposition.

I will inquire if, from the point of view from which we must consider it, a bank is not made up of its shareholders in the matter of pecuniary interest or private ownership. The shareholders select the officers. We must not fail to distinguish here between the officers of a bank and the shareholders, who are in reality the owners of the entity known as a corporation, the bank.

A part of the assets of these shareholders is invested in bonds with circulating-note privileges. I wish to ask the Senator if he will not permit me to supplement his statement by a reference to the daily statement of the condition of the United States Treasury at the close of business December 9, 1913, in which it appears that among the bonds held for national banks to secure circulation are \$604,405,200 worth of 2 per cent 1930 United States bonds.

These constitute more than 80 per cent of the total number of bonds now held to secure the whole amount of bank circulation. This number of 2 per cent bonds in reality are owned by and are the assets of the shareholder. I ask the Senator whether the compulsory retirement of a bank, if it falled to enter the system proposed in this bill, would not in effect operate upon the private ownership of these shareholders and to that degree withdraw the circulating-note privilege which they have on this investment of more than 80 per cent of the total number of bonds held?

Mr. CUMMINS. Undoubtedly. That is one of the consequences of extorting the capital from the banks and investing it in the stock of the Federal reserve board instead of permitting it to continue in the 2 per cent bonds which have the circulating privilege

Mr. HITCHCOCK. Mr. President-

The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from Nebraska?

Mr. CUMMINS. I do.

Mr. HITCHCOCK. Did I correctly understand the Senator from Iowa to say that one of the essentials in taking property by order of the Government is necessity? Must necessity exist in order to justify the public appropriation of private property, even with just compensation?

Mr. CUMMINS. Certainly. But I will say that the necessity for taking is determined by the legislative branch of the Government, and can not, I think, be questioned when once exercised, but the ascertainment of the compensation is not legis-

lative.

Mr. HITCHCOCK. Thus, if there is a certain piece of property which must unavoidably be used to accomplish a certain purpose, that particular piece of property can be taken. But now I ask the Senator, is it competent for Congress to pass an act arbitrarily levying upon the capital of these banks when it is open to demonstration and admitted that the capital may be procured from other sources at a lower rate of interest volun-

Mr. CUMMINS. I do not think it is within the power of ongress to do so. If this bill is passed and it ever comes Congress to do so. If this bill is passed and it ever comes under the view of the court the test of this provision will be whether it is fair and reasonable to require the national banks, which have already had their capital fully and efficiently invested, to surrender a part of that capital and give it into the keeping of another corporation, a private corporation, in order that it may be invested by that corporation. That will be the question which the Supreme Court must decide. It will be precisely as though we were to pass an act saying that a railroad company shall carry passengers at a quarter of a cent a mile. If that is reasonable and fair and promotes the public welfare and does not take the property of the railway company without just compensation it is a valid enactment. But if the court held that that is unreasonable and unfair and that it compels the railway company to use their property without receiving just compensation for it, then it will be held that it takes the property of the company without due process of law. That is just what will happen in the event that this bill shall pass. It simply submits the wisdom, the necessity of taking the property of the national banks for the purpose here indicated to the courts of the country, and I am protesting against entering that field of uncertainty and doubt.

Mr. HITCHCOCK. I should like to ask the Senator a further question. Has he examined the Owen draft of this bill to observe that it not only proposes to take arbitrarily and under compulsion \$50,000,000 of the capital and surplus of the national banks, but it provides that an additional \$50,000,000 may be called for at any time when deemed necessary by the Federal board?

Mr. CUMMINS. I understand that that is the provision.

HITCHCOCK. Does the Senator also understand that in addition to that the banks thus compelled to part with their cash capital are made liable for an additional \$100,000,000, for which their credit is supposed to be pledged by this act? I ask the Senator what he thinks as to the difficulty of that situa-

Mr. CUMMINS. All the consequences of taking the capital and investing it in the stock of a Federal reserve bank, together with the necessity or want of necessity for so doing, together with the fairness or unfairness of so doing, the reasonableness or unreasonableness of so doing, will all fall under the judicial eye, and all these considerations will determine the ultimate decision of the court.

Mr. SHAFROTH. Mr. President— Mr. CUMMINS. I yield to the Senator from Colorado.

Mr. SHAFROTH. It seems to me that the illustrations which the Senator has given are not at all in point in relation to this bill. If there is one thing that is conceded universally by every Member of the Senate, it is the necessity for the three fundamentals of this bill—the discount market for drafts, the mobilization of reserves, and the elasticity of the currency. There is not a single man upon the floor of the Senate who has not conceded that

Now, requiring the bank to subscribe for the capital stock of the Federal reserve bank is a step in the matter of safety for the national bank itself. It is just as much so as requiring a national bank to increase its reserves. Suppose Congress should We think these national banks carry too small reserves. Is there any doubt but that the Congress of the United States could require them to keep more reserves? There is no doubt about that. The tribunal from which there is no appeal is the Congress of the United States. It has a right to determine that

Now, as an illustration take the question of country banks. The tables now show that they have been keeping for the past year 21 per cent of their deposits as reserves, either in the banks of reserve cities or in their own vaults. The requirement of the law is only 15 per cent. Suppose Congress should say, We find that a majority of the banks do that and the reserves ought to be increased to 21 per cent, 6 per cent more, upon all their deposits. Could there be any doubt but that the Congress of the United States would have a right to say, For the safety of the system which we have created we will require them to keep increased reserves? As to the amount of those reserves, of course, if perhaps it related to a question of absolute unreasonableness, it might be held in some way to be unconstitutional, but so long as it is within the domain of reason there can be no question of the power of the Government to require an increase of the reserves.

Now, you can readily see this is an insignificant matter compared to requiring 6 per cent more reserves upon the deposits of the banks. One is about ten times as great as the other. the Government has a right to require a safety provision that will cost the banks ten times as much, surely it would have a right in the same manner, for the safety of the bank, as to its own corporation, to require it to contribute 6 per cent of capital and surplus, or 3 per cent, whichever the bill may require, and that is the difference between the Hitchcock bill and the Owen bill. It is the same thing in principle.

It seems to me if the Government has a right to require increased reserves or that they shall go out of the system, surely it can require them to contribute for the same purpose, namely, the safety of their banks to a reserve bank which is created by the Government under the supervision by the board of control appointed by the Government. It seems to me in the same way, in the interest of the preservation of the funds of the people for the purpose of making the banks themselves more safe, we have a right to prescribe this to them and to say if you do not subscribe you must forfeit your charter or take a State charter.

Mr. CUMMINS. I do not doubt the right of the Government to increase the percentage of reserves that may be held in a bank, but the reserves are a margin of safety, and they constitute a proportion of the deposits that are made by the people who bring in their money to the bank. The capital is quite a different thing. The capital is the money contributed by the people who own the bank, and the success of their venture depends upon the way in which the bank is managed.

I can give the Senator an illustration in a moment that will indicate the difference between reserves and capital. Congress were to come to the conclusion that national banks should not receive any interest whatever upon their capital, I ask the Senator from Colorado whether he thinks it is within the power of Congress to say that hereafter no part of the banking capital of the United States shall be loaned at interest or to say that all of it shall be loaned without any interest whatever? If not, why not?

Mr. SHAFROTH. Of course one can conceive an absolutely

ridiculous condition that may raise a question of doubt. But I want to ask with respect to that could not the United States Government in the framing of a national bank system have prescribed that they shall make nothing upon the capital stock?

Mr. CUMMINS. Precisely so.
Mr. SHAFROTH. It could be done?
Mr. CUMMINS. Undoubtedly.
Mr. SHAFROTH. There is no question of it. There is contained in the national-bank act a provision that any part or portion of the act is subject to repeal, to modification, or to

Mr. CUMMINS. Yes, Mr. SHAFROTH. The condition upon which the bank comes in is simply a condition of subscribing to the capital stock of the Federal reserve bank. If it goes out of the system, it loses no money. It can organize a State bank as well as not. Its name is something to them, it is true, and yet at the same time the name by which they get the standing of the bank comes from the very law itself. It seems to me if they have a right to prescribe in the first instance that the law is subject to modification, repeal, or change, they surely could prescribe the conditions which the Senator has stated. Of course, it is an extreme case.

Mr. CUMMINS. Certainly.

Mr. SHAFROTH. It seems to me when you compare the provision of the present bill with the illustration that you have made, namely, as to the United Steel Co. being required to subscribe to the capital stock of another steel company, or to buy its bonds, there can be no similarity, because it is not the same power that is invoked. You are invoking the police power whenever you attempt to deal with a private corporation. national bank is a creature of the United States Congress, and it has reserved the right to modify, change, or repeal the law creating it

Mr. CUMMINS. Is not the United States Steel Corporation creature of the State of New Jersey? And has it not reserved the right to alter and amend or repeal its charter?

Mr. SHAFROTH. Yes; but this is not upon that basis. The steel company is not a quasi public corporation; it is a private corporation, and you would have to change the entire system of your laws.

Now, take the very requirement of the national-bank act, where national banks are required to keep 5 per cent of their circula-tion in lawful money in the vaults of the United States Treasury. That Congress can require. Then if Congress desires to increase it to a much larger amount there is no question but that

it can do it. I do not suppose the Senator contends that it can not. That is the burden that is being imposed upon them. But these banks are the creatures of the Congress; and that being the case, the right to repeal, modify, and change being in the law, it is simply an amendment by general law, and conse-

quently it is proper to make it.

Mr. CUMMINS. Then I assume the Senator from Colorado would say that in view of the fact that the Government of the United States organized the Union Pacific Railway Co. a long time ago and gave it the right in its charter to charge reasonable sums for transportation of freight and passengers, but reserving the right to alter, amend, or repeal its charter, after the road was built it could say to the railroad: "You must carry freight and passengers for nothing, because we would have had the right to impose that condition originally." Does the Senator from Colorado believe that a provision of that kind would have been a constitutional exercise of the power?

Mr. SHAFROTH. I am not prepared to say whether that would be constitutional or not, because there is some question

about it. It is an extreme case.

Mr. CUMMINS. I am glad that the Senator from Colorado

is logical.

Mr. SHAFROTH. I will say that when the Union Pacific Railroad Co. fails to comply with the provision of its charter its land and its railroad are not confiscated by the Government; it can still operate. It can file its charter under State laws, and consequently can operate just the same. If it does not want to operate under the United States charter, it has a perfect right to go to the State and exercise that right. Consequently I doubt very much whether the courts would hold that was confiscatory.

Mr. CUMMINS. When there have been numberless statutes

almost passed by States fixing railway rates, water rates, gas rates over corporations within the jurisdiction of the States, corporations over which they had the same supreme control that we have here in a corporation that we create, how does it happen that the statutes and regulations have from time to

time been declared unconstitutional?

Mr. SHAFROTH. Because they are confiscatory. That is the reason.

Mr. CUMMINS. Do you think it would be confiscatory to say that the Union Pacific Railroad Co. should do business for nothing?

Mr. SHAFROTH. If it did, it would be illegal.

Mr. CUMMINS. I understand the Senator from Colorado says it would not be unconstitutional; that the Union Pacific Railroad could simply quit doing business.

Mr. SHAFROTH. I thought you were referring to carrying

United States troops or something of that kind over their line.

Mr. CUMMINS. I was referring to all its business

Mr. SHAFROTH. Of course that would be confiscatory.
There is no doubt about that.

Mr. CUMMINS. Why is it unconstitutional to confiscate the

property of a corporation that we have created?

Mr. SHAFROTH. Because it is in violation of the provision

of the Constitution.

Mr. CUMMINS. Can not the corporation quit?

Mr. SHAFROTH. Certainly it can. There is no doubt that the courts would be very reluctant to hold that a requirement by the Congress of the United States was absolutely confiscatory; but when you talk about providing 6 and 3 per cent of capital stock of a national bank as confiscatory, that is not within the same line of reasoning.

Mr. CUMMINS. I have not been speaking about the inadequacy of the dividend rate. I am speaking about our powerlessness to take the property of one person and transfer it to

Mr. SHAFROTH. But you admit that to a limited extent that can be done, because you admit that the reserves can be increased.

Mr. CUMMINS. I do not admit that the reserves can be taken from one corporation and compulsorily put in another private corporation. I do admit that under the bill proposed by the Senator from Nebraska a reserve can be taken from a national bank and put in a governmental corporation, exercising a governmental function, purely public. I do not concede that the reserve can be taken from the one, the private corporation, the national bank, and put at the hazard of the business of another private corporation.

Mr. SHAFROTH. But it is not a private corporation. There are three Federal directors upon it-

Mr. CUMMINS. I submit it is a private corporation. Mr. SHAFROTH. And, besides that, they have a Federal eserve board that controls every action upon the part of the Federal reserve banks.

Mr. CUMMINS. They have a Federal reserve board. was said, and so well said here yesterday, I think, by the Senator from Ohio [Mr. Burton], that presides over these private corporations-private in the sense of being subject only to control-presides over them in just the same way that the Interstate Commerce Commission presides over railway companies. It will regulate and control them; it will compel them under the law to do this or that; but they are private corporations; and you propose to take not only the banking capital of one private corporation and give it to another, subject to all the hazards of the business of the latter corporation, but you propose to take the reserves of the national banks and subject them to the vicissitudes of a private business. Suppose that the Federal reserve bank fail—and it can fail; it engages in business; I do not think there is great likelihood that it will fail, but it can fail-what, then, becomes of the reserve which the Government has required the national banks to deposit in it? Does the Government guarantee it? Does it assure its final repayment to the bank? No. The Government of the United States has no more power or right, legal or moral, to take the reserve of a national bank and put it into another private corporation, than it would have to put it into the possession of the Senator from Colorado-not one whit.

Mr. SHAFROTH. The difference between us is that the Senator construes this Federal reserve bank as a private corporation, while I contend that it is a public corporation. It is true that the banks will have a majority of the directors upon it: but at the same time there are three directors to be appointed by the Government, subject to review by the Federal reserve board, consisting of nine appointed by the President.

Mr. CUMMINS. It is a public corporation in the sense that we have a right to regulate and control it; it is a private corporation in the sense that it is managed by private interests

and the profits are paid to private property.

Mr. SHAFROTH. It seems to me that when the Senator takes the position that we can not require these reserves to be put into the Federal reserve banks he is departing from all three of these bills. The House bill requires it, the Hitchcock bill requires it, and the Owen bill requires it. That is one of the common points upon which we have all agreed.

Mr. CUMMINS. No.

Mr. SHAFROTH. Is it possible that it is unconstitutional

to require that?

Mr. CUMMINS. I do not think it is unconstitutional in the Hitchcock bill. The Federal reserve bank in the Hitchcock bill is merely a governmental function; it is not a private corporation in any sense whatever. Therein lies the great distinction. Mr. WALSH. Mr. President-

The PRESIDING OFFICER (Mr. Lewis in the chair). the Senator from Iowa yield to the Senator from Montana?

Mr. CUMMINS. I do.

Mr. WALSH. I desire to inquire of the Senator if I was correct in understanding him to say that it is within the power of Congress immediately, to-day, to repeal the national ing act, so that the bank charters will immediately expire?

Mr. CUMMINS. I have no doubt of it.

Mr. WALSH. I understood the Senator to say, further, that, in his judgment, it would be beyond the power of Congress to pass an act putting an option up to the national banks hereafter to loan their money without interest or to cease to act as national banks?

Mr. CUMMINS. I said that I believed it was beyond the power of Congress to prescribe that the capital now invested—the property of the national banks—should be loaned for

nothing.

Mr. WALSH. But are we to understand that the Senator, then, asserts that if they had the option either to loan their money for nothing or to cease to act as national banks that statute would be void?

Mr. CUMMINS. I believe that we have no right to impose

that option upon them.

Mr. WALSH. Exactly. If we did it—and it is as inconceivable that any bank would accept the right to loan its money without interest as it is to conceive that Congress would, in the first place, absolutely repeal the national banking actthe Senator from Iowa would not expect that any bank would

continue as a national bank, would he?

Mr. CUMMINS. I do not know how altruistic some of them might become. I would not care to speculate upon that.

Mr. WALSH. Mr. President—

The PRESIDING OFFICER. Does the Senator from Iowa

continue to yield to the Senator from Montana?

Mr. CUMMINS. I hope the Senator from Montana will excuse me if I insist on going on. I am already trespassing upon the time which ought to be occupied by the Senator from New

York [Mr. Roor], who gave notice of his intention to speak this morning. I am only trying to finish what I began saying

Mr. WALSH. I merely wished to ask the Senator if he now notices any distinction at all in substance and effect between those two acts, one absolutely repealing the national-banking

Mr. CUMMINS. The distinction is so broad and obvious that it must be observable to any person. I admit that Congress can repeal the law, and in that way all national banks must cease to do business.

Mr. WALSH. But it can not do it in any other way. Mr. CUMMINS. I do not at all admit that Congress can pass a law which shall declare that if each national bank does not within three days decapitate its president it must go out of business. I do not agree that such a law as that would be a valid amendment to these charters. It seems to be asserted that Congress can within its constitutional power put upon these banks any condition whatsoever, and if they do not want to comply, they may then retire from business. I have never heard a proposition of that kind before asserted, because, if it is well founded, there is no limit to the regulation which either the United States or a State may impose upon its corporations, giving them the alternative to quit if they do not want to comply with the regulation. There would be no necessity, then, of ever investigating whether a particular regulation was reasonable or unreasonable, because the immediate answer would be, "If you do not care to accept the regulation and comply with it, surrender your charter," a surrender that must always follow the violation of a valid regulation if the sovereignty that created the corporation cares to insist upon the forfeitures.

But, Mr. President, I have said that I would suggest a few cases from the Supreme Court involving the extent of the power of amendment, because that is what we are trying to do; we are simply proposing to amend the national banking act; no more and no less. In the case of Shields v. Ohio (95 U. S. Repts., 319) the Supreme Court had first occasion to pass on the question whether the charter of the corporation involved was subject to alteration, amendment, and repeal. It held that it was, and I have no concern with that. I read only this statement of the law, which has been repeated oftentimes and which seems now to be the well-settled principle of the country. The court said:

The power of alteration and amendment is not without limit-

The Senator from Montana [Mr. WALSH] would seem to imply that it had no limit, the corporation being given the op-portunity to retire from the business in which it was engaged—

The power of alteration and amendment is not without limit. The alterations must be reasonable; they must be made in good faith, and be consistent with the scope and object of the act of incorporaton. Sheer oppression and wrong can not be inflicted under the guise of amendment or alteration. Beyond the sphere of the reserved powers the vested rights of property of corporations in such cases are surrounded by the same sanctions and are as inviolable as in other cases.

I quote that simply to indicate just what will happen if this bill passes in its present form. The courts will be called upon to determine whether it is fair and right to require national banks to surrender a part of their capital that is already fully The courts will be asked to say whether that is fairly within the scope and meaning of the act which created

the national banks. Why invite danger of that sort?

I shudder when I think what may be the financial situation of our country if the national banks should refuse to enter the system about to be created and the Government should seek to forfeit their franchises, if then the courts should hold that they are not compelled to enter and are not compelled to surrender any part of their capital or surplus. You will precipitate a chaos in our commercial, industrial, and financial world the like of which has never before been seen. Why do it when it is not at all essential to the accomplishment of the purpose which the bill has in view?

I refer also to the case of Missouri Pacific Railway Co. v. Nebraska (164 U. S. Reports, 403), which shows, I think, as well as any case can the limit of the right of amendment or alteration or repeal reserved in a charter. I am sorry the Senator from Nebraska is not here. He would appreciate this in view of the question he asked me a few moments ago. The State of Nebraska passed an act which through its commissidners required the Missouri Pacific Railway Co. to allow a certain association of farmers to erect an elevator upon the right of way of the railway company. It was required because it was believed that by the construction and use of the elevator the public welfare would be better promoted. Of course an elevator is a thing incident to the operation of a railway; it is a convenience which must be resorted to in the operation of a railway. Now I should like those who believe that a bill of the kind which we have under consideration is constitutional

to tell me why the State of Nebraska, which has just as supreme power over the Missouri Pacific Railway Co. as we have over the national banks, so far as the property in that State is concerned, could not give to this association of tarmers the right to enter upon the right of way and erect an elevator in order that the business of the community might be better done? The Supreme Court said in that case:

To require the railroad company to grant to the petitioners a location on its right of way for the crection of an elevator for the specified purpose of storing from time to time the grain of the petitioners and of neighboring farmers, is to compel the railroad company, against its will, to transfer an estate in part of the land which it owns and holds, under its charter, as its private property and for a public use public use

I will not read further, save the last sentence:

This court, confining itself to what is necessary for the decision of the case before it, is unanimously of opinion that the order in question, so far as it required the railroad corporation to surrender a part of its lan! to the petitioners for the purpose of building and maintaining their elevator upon it, was, in essence and effect, a taking of private property of the railroad corporation for the private use of the petitioners. The taking by a State of the private property of one person or corporation, without the owner's consent, for the private use of another is not due process of law, and is a violation of the fourteenth articles of amendment of the Constitution of the United States.

It, of course, will be conceded that the fourteenth amendment of the Constitution has the same effect upon State legislation that the fifth amendment has upon Federal legislation in so far as the subject I am now considering is concerned. If you can ascertain any difference in principle between a State requiring a railroad company to allow an association of farmers to construct an elevator upon its right of way in order that the public might be better accommodated, and requiring a national bank to give a part of its property to the Federal reserve banks in order that the public may be better served or the bank be better safeguarded, I will be interested to know what the distinction is. I also call attention-

Mr. SHAFROTH. Mr. President, I will say that it seems to me that the distinction is very clearly set forth in the opinion of the court itself, to the effect that in the case cited it was the taking of property from one corporation for a purely private purpose, to be given to another private corporation, whereas the

banks are public corporations.

Mr. CUMMINS. Neither of these is a public corporation in the sense of the ownership of the property. They are both private corporations, and the taking of that property on the right of way of the railroad company in the case I have just read was declared by the Supreme Court to be taking it for a private use; but no more for a private use than you are taking the money of the banks in this instance. Both are intended to serve the public; both are connected with the business in which the respective corporations are engaged; both corporations were engaged in serving the public. I am utterly unable to distinguish between the two cases so far as the principle is concerned.

Mr. GOFF. Mr. President—
The VICE PRESIDENT. Does the Senator from Iowa yield to the Senator from West Virginia?

Mr. CUMMINS. I yield to the Senator. Mr. GOFF. In the Nebraska case did not the court consider as material the question that the railroad's right of way, independent of its other property, was essential to the public utility, and it was therefore necessary that the railroad company should protect its right of way?

Mr. CUMMINS. Undoubtedly; just as the capital of a bank is essential for the transaction of its business. I think the

cases are entirely parallel.

Mr. GOFF. Will the Senator permit an inquiry as to the matter he has just discussed?

Mr. CUMMINS. Certainly.

Mr. GOFF. Relating to the constitutionality of the proposed legislation, if I understand the Senator, he concedes that if the limitations imposed upon the banking system were stated now as an original proposition, not as yet accepted by the banks, the requirements of this proposed legislation would be constitutional?

Mr. CUMMINS. Why, Mr. President, when we are organizing a corporation the Congress can impose any condition. It can create provisions that are so absurd that no operation can take

place under them, and they will be entirely constitutional.

Mr. GOFF. Concededly. Now, I propose to follow that with this inquiry: If, under the original legislation under which the national banks now do business, it was distinctly understood that if they accepted the provisions of that legislation and organized banks under it, thereafter, if it became necessary, Congress could change those provisions and impose additional burdens, would not the legislation now proposed be construed by a court to be the addition of a burden that was contemplated in the original legislation?

Mr. CUMMINS. Certainly not, Mr. President. I have already gone over that field once, and I shall only refer to it briefly. that were true, every regulation that by any possibility could be imposed upon a corporation would be constitutional if there were reserved by the sovereignty that created the corporation

the right to alter, amend, or repeal.

I have just read from the decision of the Supreme Court saying that the right to amend, even when it is reserved, is not absolute. It can not be so exercised as to violate the fifth amendment of the Constitution. I said a few moments ago that if Congress in incorporating the Union Pacific Railroad Co. had reserved the right to alter, amend, and repeal, as it did, if it had wanted to say that that company should do all its business for nothing or for a tithe of what it was then customary to charge, it could have said so, and if the corporation was organ-ized that condition or regulation would be binding upon it. But suppose 20 years after the corporation was organized without such a requirement, and the capital invested, Congress had attempted to say that the Union Pacific Railroad Co. should transport merchandise and passengers for nothing, or for a rate that would return no interest upon the capital, that regulation would not be valid.

Mr. GOFF. Certainly not.

Mr. CUMMINS. Although it could be said that it was con-templated when the act was passed, that it was one of the things that was reserved and might be inserted by way of amendment,

just as fully and just as completely as in the case of the banks.

Mr. GOFF. If the Senator will pardon me for a moment,
would it not be almost presumptuous to conclude that the Congress of the United States ever would resort to such legislation? Mr. CUMMINS. Not more presumptuous than to presume

that Congress would do the thing we are now about to do.

Mr. GOFF. If I understand the argument of the Senator from Iowa, it is that the reasonableness of the change in the

legislation would be a question for the courts.

Mr. CUMMINS. That is my position.

Mr. GOFF. Very well. Then, looking to what our courts would be likely to decide, would a requirement that the national banks should take stock in the reserve banks be the imposition of such an additional duty as a court would consider unreasonable in the light of the legislation already referring to that

Mr. CUMMINS. The Senator from West Virginia can answer that question probably better than I. He was for many years a distinguished ornament of the bench. I never have been on the bench. If he were asking me what I would decide were the case to come before me as a judge, I could easily answer him. If he asks me what he would decide if he were on the bench and

the case came before him, I can not answer him.
